is, we believe, that there is a liability of 3*l*. per share upon them, and when this is removed we have every reason to believe that the value of the shares will be considerably increased, and with that improved state of affairs we should have no difficulty in placing the remaining 11,000 shares and obtaining a Stock Exchange quotation. The only argument against the extinguishing of the liability upon the shares is that it might possibly injure our credit in the City of London. This is a matter for consideration, and I feel sure that however much you gentlemen might wish to have the liability removed from you, you would not for a moment desire that it should be done if by doing so we should seriously affect the credit of the company, and there can be no doubt that a large uncalled capital does strengthen the credit of any company. The point for us to consider is, however, what advantages we shall gain by extinguishing the uncalled capital, and whether those advantages would more than compensate for the small diminution we might suffer in our credit. We are in a position to tell you to-day that with respect to our bankers, our financial position will be as good as in the past, providing that the management is continued on the same conservative and safe lines. We believe ourselves that bankers do not take much account of uncalled capital, and there is no banker in the City who would care to grant a loan against uncalled capital pure and simple. We have, therefore, no hesitation in commending the wiping out of the liability of the shares.

The CHAIRMAN then moved the first resolution as above.

Mr. F. C. IM THURN, in seconding the resolution, said that he thought there was no doubt that the course which was proposed would be advantageous to the shareholders. Their present shareholders were mostly men of very good standing, who would prefer to have no liability left upon their shares. If the liability were taken off he considered that they would be able to get further shareholders into the company of good standing, which would improve the position of the company.

INVESTING POWERS OF THE BOARD.

The resolution was carried unanimously.

The CHAIRMAN, in proposing the second resolution, said that the motion proposed was in connection with the investing power of the board. Under article 147 the board were entitled to invest in any business an amount not exceeding

ONE-THIRTIETH OF THE NOMINAL CAPITAL OF THE COMPANY.

The board now proposed that as the capital was to be reduced, that the one-thirtieth should be altered into one-tenth. The directors could exceed one-thirtieth of the capital by the consent of every member of the board, but considerable difficulty had been experienced by the board at times being prevented from going into good business owing to the absence of one or two members of the board, one being at the time in India. The board, therefore, proposed that it should be altered so that it received the consent of all the directors resident in England at the time the resolution was brought forward.

Mr. B. WHITE, in seconding the resolution, said that he thought it was a very necessary one, as he was once every two years obliged to be some 2,000 or 3,000 miles from England.

The resolution was then carried unanimously.

A vote of thanks to the chairman and board of directors closed the proceedings.

BULTFONTEIN MINING CO.

CLOSE OF THE LIQUIDATION.

A SPECIAL MEETING of this company was held on Wednesday, at the Cannon Street Hotel.

Mr. Dalton

presided.

The object of the meeting was the close of the liquidation.

The CHAIRMAN said: This meeting, gentlemen, is called simply to wind up the old Bultfontein Mining Co., and as the chairman you have appointed, I beg to move "That the account submitted to this meeting, and showing the manner in which the winding up has been conducted, and the property of the company disposed of, be received and adopted, and that the books, accounts, and documents of the company and of the liquidators be handed over to the liquidators of the Bultfontein Mining Co., Limited (1888)." It does not require any speech from me. I may simply say that the accounts showing the manner in which the winding up has been conducted are on the table.

Mr. DAVID CURRIE seconded the motion, and there being no discussion, it was carried unanimously.

The meeting then separated.

MYSORE NAGAR GOLD MINES, LIMITED.

THE COMPANY AT WORK IN THE TERRITORY OF THE MAHARAJAH OF MYSORE, AND UNDER THE AUSPICES OF A SETTLED GOVERNMENT—GOLD PROSPECTS.

THE first ordinary general meeting of the above-named company was held at the Cannon Street Hotel, on Thursday, Dec. 3, to transact the ordinary business of the company.

Genl. Cole

presided.

Mr. GEORGE MURRAY (the secretary) read the notice calling the meeting.

The CHAIRMAN: Gentlemen, I came here to-day prepared with an expression of regret for the absence of our chairman, Lord Conbermere, but I am sorry to say it must be an expression of grief, as his death you will see noticed in this morning's papers. He took the greatest interest in the company, and shortly after the sad accident which led to his death he sent for the secretary to ask him how the company was getting on. If I may be allowed to pay a tribute to his memory, I should say that all who had the pleasure of meeting him always found him a clear-headed man of business, courteous and urbane, a lover of horses and all field sports, and in every respect of the word a *beau ideal* of an English country gentleman, and we cannot too much deplore his sad loss. I have also to regret the absence of Mr. Wallace, who has conducted the duty of chairman ever since the accident to the late Lord Conbermere. As that gentleman is a barrister, and we have had his services upon the board in his legal capacity, added to those of our able solicitor, Mr. Barker, the shareholders may feel certain that their

LEGAL INTERESTS

are well looked after and cared for. As the secretary has just read out the notice you will see that this is a mere formal statutory meeting under the Companies Acts, and there is no business or accounts to lay before you. At the same time, however, we have much pleasure in meeting you to give you some information of the progress we have made in this short period. The property has been acquired and the company is actually in possession to-day. I, as vendor, took payment in full in shares, and the Government of Mysore also agreed to take their 10 per cent. "fine" on the purchase-money in fully paid-up shares too. You may presume from that, I think, that the Mysore Government has every confidence in the mine that has been discovered on their territory. As for myself and my confidence I show it in taking the shares in payment, and I can assure you that if I had had the money to work the mine by myself this meeting would never have been called. The board lost no time, upon acquiring the property, in selecting a capable engineer, Mr. Farquhar, and sending him out to the property. We can assure you that we have every confidence in him, and rely upon his reports. He has confirmed the opinions and reports of several experts, who previously reported on the property, Mr. Bruce Foot, the head of the Geological Survey in India, Mr. Lavelle, the discoverer of the celebrated Colar Gold Mine, and Mr. N. Smith, who all reported upon the property. I need hardly tell you, Mr. Bruce Foot's and Mr. Lavelle's surveys were made to the Government direct, they having been deputed to report on the several properties in that and in other parts of Mysore. As you probably know, India has just escaped from a great famine, and, as is usual in tropical climates, when the rain did come, it came more in floods than rain. This much delayed Mr. Farquhar in his operations, but at the same time notwithstanding that delay, he has

DISCOVERED ANOTHER REEF,

which he declared very rich, and running through the whole extent of the property. This reef is in addition to the one previously discovered. He has also traced the reef discovered by Mr. Bruce Foot and Mr. Lavelle for 1,500 yds., from

THE TEMPLE ON THE TOP OF THE HONNA GIDDA.

I may mention that the meaning of the words "Honna Gidda" is the golden hills, and the village in which the property is situated is called Honna Hatti, or the Golden Village. We may, therefore, presume that they did not acquire those names without some reason for it in the possession of the gold which we are now trying to find, and which they evidently had, as we can judge by the old workings, which have been found on both reefs, before by Mr. Bruce Foot, and now by Mr. Farquhar. It takes some time to test such an extent of alluvium with any degree of accuracy, as it may vary in its richness in different parts; but the development of the reef must take time, and our engineer has been instructed to concentrate his energies in first developing the alluvium, and we are waiting the result of his operations. We know that in the past history of India the country was renowned for its wealth, especially in gold, which was never imported into that country, and must have existed there, and which I believe we are discovering the source of by the old workings now being found in the reefs. Turning from the past to the present, we may congratulate ourselves that our property exists in a country where there is a settled Government. We have in the

MAHARAJAH OF MYSORE

one of our most enlightened princes in India, whose Government is administered by one of the most capable ministers in the country in the person of Mr. T. C. Sheshadri Iyer, C.S.I., I can vouch for this personally, having served for 22 years under that Government, and having known His Highness since he was a boy of five years of age. Mr. Farquhar has commenced the sluicing operations, and we hope ere long, to be able to communicate results that may prove satisfactory to you, and gratifying to the board. I may add that the board will always be very glad to see any of the shareholders, and I am sure our courteous secretary will be pleased to afford any information to anyone coming to the office for it.

Mr. BLAGDON: Unless any shareholder has any observations to make or any questions to ask, I beg to move a vote of thanks to the chairman.

The resolution was seconded and carried.

The CHAIRMAN: I thank you, gentlemen, for the vote, and can assure you that I and my co-directors will do all we can in your interests.

The proceedings then terminated.

DORMAN, LONG AND CO., LIMITED.

A LARGER QUANTITY OF MATERIAL SOLD THAN IN ANY PREVIOUS YEAR, AND THE NEW YEAR BEGINS WITH A GOOD ORDER BOOK.

THE ordinary general meeting of this company was held at Winchester House, Old Broad Street, London, E.C., on Wednesday, Dec. 2, to receive the report of the directors and auditors, and the balance-sheet for the year ended Sept. 30, 1891, to declare a dividend, elect directors and auditors, and for other purposes.

Arthur John Dorman, Esq.

(chairman of the company), presided.

Mr. ROBERT THOMAS (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said: Those shareholders who are conversant with the iron and steel trade, and have watched the course of it, will no doubt consider the report and balance-sheet, which we have submitted, a satisfactory one. Those, on the other hand, who are not familiar with the trade, may be seriously disappointed by the result, and the reduction of the dividend from 15 per cent. last year to $7\frac{1}{2}$ this year. I, therefore, think it better to give some

EXPLANATIONS

of the circumstances which have led to such a result, with a view to showing that they have been exceptional, and are unlikely to occur again. In the first instance, the financial collapse last autumn, especially affecting Argentine affairs, caused us a very considerable loss by cancellation or suspension of orders amounting to something like 100,000. These orders had to be replaced by others at prices which were fully 20 per cent. lower, involving a heavy loss. Then we have suffered, I believe, in common with nearly all other manufacturers in the country, by the fact that prices of finished articles have been steadily falling during the past year without any corresponding fall in the prices of raw material. This is partly owing to natural causes, such as difficulty in reducing colliers' wages, &c., which occur after every period of high prices, and partly to the pig iron market being kept up artificially. In the face of these difficulties, I feel that we may congratulate ourselves on being able to show so favourable a result, and there is one very satisfactory feature, namely, that in spite of so many orders being cancelled, we actually made and sold a larger quantity of material than in the preceding year, which shows the continual growth of our business. We can, therefore, have every confidence that under normal circumstances, our earnings will be considerably increased again. I have now to make a few remarks in explanation of the figures in

THE BALANCE-SHEET.

Of the expenditure, 17,928. on capital account, 5,140. is for the purchase of 4 acres of land which divided the Britannia from the West Marsh works. Both works now stand together on 29 acres of freehold land, with a river frontage, and are now as well situated as any ironworks in the country. The land we have purchased is adapted for stocking rolled joists, which is a large and increasing part of our business, for which purpose we were very short of room, and it is now being used in this way. We have also laid down about 3 miles of additional railway sidings, which were very much wanted, and which will not only simplify the traffic arrangements, but will also reduce the cost of transit of materials about the works. You will see we recommend the writing off of 10,000. for depreciation, and the placing of a further 10,000. to reserve account out of the year's profits. The reserve fund will then be 50,000., which I think you will admit is a respectable figure at the end of two years' working. That is what I have to say in reference to the accounts. The directors have decided to erect some additional steel furnaces, which with certain labour-saving appliances, which will be introduced, will raise the capacity of the steel melting department to that of the mills. The expenditure for these purposes is estimated at 40,000., and the effect will be to increase our make of steel by about 50 per cent., and to reduce the cost very materially by getting the full use out of the existing plant. We hope to complete these additions by about the end of March. The expense of the additions will be provided out of the considerable sums now lying at our bankers at a very small rate of interest, and I think you will agree that it is more advantageous to employ the money in adding to the earning capacity of the works. During the year we have secured the services of Mr. W. H. Pantou, as general manager. Mr. Pantou is a gentleman who has had extensive experience as an engineer, and he will be of great assistance to the directors, not only in the general management, but also in superintending the additions and alterations which are contemplated. Finally, I am glad to be able to tell you that we enter upon the new year with

AN EXCELLENT ORDER-BOOK;

that we have already effected considerable economies in the cost of manufacture, and that we shall by the contemplated additions and alterations effect such further saving as to be able to hold our own against all comers. I have, therefore, every confidence that when I meet you again next year I shall be able to give you a satisfactory account of our business. I now beg to move that the report and accounts, made up to Sept. 30, 1891, be received and adopted.

Mr. COOPER: I beg to second the resolution.

DISCUSSION.

Mr. PROBYN: You mentioned that the loss had been incurred by orders having been withdrawn by customers. Is it not customary when ordering to make some advance as a guarantee? It must be a great loss if it is in manufactured goods.

The CHAIRMAN: The loss was not in manufactured goods. We had not manufactured them, but it was a loss in contracts which we had on at the time.

Mr. PROBYN: Had you no security?

The CHAIRMAN: It is not customary. It is our business to see that we do business with responsible people. This was a very exceptional case.

Mr. PROBYN: Did it cause the heavy loss?

The CHAIRMAN: Yes, a loss of profits.

Mr. PROBYN: I beg your pardon. I thought it was an actual loss.

Mr. EDGAR: How much of the reduction in profits might arise from the fall in the value of the stocks?

The CHAIRMAN: We have taken the stocks at the present market price, which is lower than last year.

Mr. EDGAR: Yes; I thought that that was the case. The loss might arise from the lower price of the valuation made on the raw material and the finished article. Can you say what it is?

The CHAIRMAN: I should not care to give the exact figures.

THE RESERVE FUND.

Mr. TROWER: How is the reserve fund invested?

The CHAIRMAN: It is at our bankers.

Mr. TROWER: I thought perhaps it was in the business.

The CHAIRMAN: It is proposed that we shall invest it in the business. At the present time, however, it is at our bankers at a low rate of interest. It is now proposed to invest it in extending the works by which, as I stated, we shall materially increase the output of steel by 50 per cent.

Mr. SPENCE: Will the new manager cause any increase in the salary charges? as I think the shareholders ought to know whether there will be any increase under the head of expenses.

The CHAIRMAN: As you ask the question, I may say that Mr. Long and myself pay him three-quarters of his salary, although when the company was formed we contemplated engaging a manager.

Mr. SPENCE: Then we pay a quarter of the cost?

The CHAIRMAN: Yes.

ALL DEBTS GOOD ONES.

Mr. SPENCE: Are you satisfied with the value of the book debts?

The CHAIRMAN: Every one.

Mr. SPENCE: Nothing has been said of any bad debts.

The CHAIRMAN: They are all wiped off.

Mr. SPENCE: Have they been serious?

The CHAIRMAN: No; very small, and they are all provided for and written off.

The report was then adopted.

DIVIDEND.

The CHAIRMAN then proposed, and it was duly seconded and carried, that a final dividend of 5s. per share, making with the interim dividend 7s. 6d. per share for the year, be paid.

The CHAIRMAN proposed, and Mr. A. DE L. LONG seconded, that Mr. Henry Echallaz and Mr. A. S. Hay be and they are hereby re-elected directors of the company, which was carried unanimously.

On the motion of the CHAIRMAN, seconded by Mr. EDGAR, the auditors, Messrs. W. B. Peat and Co., were re-elected, at a remuneration of 150. per annum.

Mr. WRIGHTON: I beg to propose a vote of thanks to the chairman and board of directors. Although the results are not so satisfactory as last year, they are still very satisfactory, as has been shown by the explanations of Mr. Dorman. I think we have every reason to congratulate ourselves upon having a very valuable property and energetic management, and they had every reason to expect a successful future.

Mr. EDGAR: I shall be happy to second that.

The motion was carried, and the CHAIRMAN having replied, the proceedings terminated.

SOUTHERN COAL CO. OF NEW SOUTH WALES, LIMITED.

AN UNFORTUNATE YEAR—PROPOSED ACQUISITION OF A NEW PROPERTY.

THE third annual general meeting of this company was held at the Terminus Hotel, Cannon Street, on Monday, Nov. 30, to receive the directors' report and transact the general business of the company.

The Right Hon. Lord Kinnaird

presided.

The notice convening the meeting having been read,

THE POSITION OF THE COMPANY.

The CHAIRMAN, in moving the adoption of the report and accounts, said: Since the last meeting their managing director had been out to Australia and on his return a committee was appointed to consider his report. The conclusion that was arrived at by the directors and this committee was that it was useless to proceed further with expenditure upon the company's original field, and it was decided to get some additional coal field. The directors had been strongly urged to acquire another field, which was believed to be one of the finest in New South Wales. Their experience, however, in the case of the Mount Keiro had been so bad that they thought it useless to appeal to the old shareholders, and the directors had, therefore, obtained the offer of it to the end of the year with the object of forming a syndicate to buy it, and then lease it to the Southern Coal Co. They were now driven back upon the Corrimall Colliery, and would develop it to the best of their ability. Assuming a yield of 6,600 tons to the acre, they would have ample coal for 30 years if an output of 100,000 tons a year be produced. The position of the company would become worse month by month unless there was enough profit made to pay not only the general expenses, but the debenture interest. They were constantly being called upon for certain pressing payments, which could not be delayed, and for which the directors had personally to find money. There was an urgent need for waggons, and it had been decided to form

A SMALL WAGGON COMPANY.

Fifty waggons were now being built under the guarantee of some of the directors, but the number of extra waggons necessary was at least 200. The object of the company would be primarily to assist the Southern Coal Co., but should applications be received from other companies for the supply of waggons they would do their best to meet them. According to very careful calculations, the company would make a profit of at least 10 per cent., and he urged the shareholders to take up shares.

A CRITICAL POSITION.

Mr. GEO. BLAKE WALKER (director), in seconding the motion,

said he felt sure from what the chairman had said that the shareholders would realise that the position of the company at this moment was a most critical one. The expenditure which had been incurred upon the coalfield had exhausted the resources, and the question now was, can the company be continued with any chance of dividends to the ordinary shareholders. The Corrimal property was in itself a good colliery, but it was not sufficiently large, or capable of being made sufficiently large, to carry upon its back the whole of the expenses of this company with its large capital. He thought the Waggon Co. in itself was a sound undertaking, and urged the shareholders to subscribe for the shares. By doing that they would not only be going in for a 10 per cent. investment on its own account, but would also be doing something towards putting money into their pockets from the Southern Coal Co. The shareholders would, no doubt, fully realise that they must have more coal if they were to do the business necessary to make a profit, and the idea was to form a syndicate to purchase a large and valuable property, and having purchased it, to lease it to the Southern Coal Co. He believed it was not too late to retrieve their fortunes, and if they could get hold of this property, he believed they would be able to do very nearly as well as they anticipated when they came into this property.

The motion was then put to the meeting and carried unanimously. The CHAIRMAN proposed the re-election of Mr. F. D. Willis and Mr. G. Blake Walker as directors. Mr. H. A. BARCLAY seconded the motion, which was carried. Col. BLAKE proposed the election of Mr. John S. Purry as auditor, in the place of Mr. Christopher Hopkinson, resigned. Mr. SENIOR seconded the motion, which was carried.

SPECIAL MEETING.

The meeting was then made special for the purpose of passing the following resolution:—

"That there be added to the 82nd of the articles of association the following words:—'Provided always that the prohibition against voting contained in this article shall not apply to any contract or arrangement with the New South Wales Waggon Co., Limited, or with any company to be formed for the purpose of acquiring other coal fields to be worked wholly or partially by this company.'"

The SOLICITOR explained that the object of the resolution was to remove a restriction contained in the articles of association that no director should be party to any contract with any company or person with whom indirectly or directly he was interested. As the directors of the proposed Waggon Co. would be the same as this company the articles would necessarily have to be altered to meet the requirements of the case.

The CHAIRMAN moved the resolution.

Mr. LANCASTER seconded it, and it was carried unanimously.

After several shareholders had expressed their willingness to take shares in the Waggon Co. the meeting terminated.

THE POORMAN MINES, LIMITED.

ALTERATION OF ARTICLES AS TO SUB-DIVISION OF THE SHARES CONFIRMED.

AN extraordinary general meeting of the members of the above-named company was held on Saturday, Nov. 28, at the Offices of the company, Leadenhall Buildings, in the City of London, for the purpose of considering and, if deemed advisable, of confirming the following resolutions, passed at an extraordinary general meeting, held on Thursday, Nov. 5:—

"To amend article 3 by substituting '75,000' divided into 300,000 shares of 5s. each' for the words '50,000' divided into 50,000 shares of 1l. each." "To amend article 61 by substituting '400' for '100' wherever the same occurs in such article."

Mr. H. J. Fischel

presided.

Mr. D. OVENSTONE (the secretary) read the notice calling the meeting.

The CHAIRMAN: Well, gentlemen, the secretary having read out these resolutions, I beg to propose that they are confirmed; if someone will second it.

Mr. CAVANAGH: I will second it.

The CHAIRMAN: Those in favour will hold up their hands, please. The confirmation is carried.

The meeting then separated.

MOSMAN GOLD MINING CO., LIMITED.

THE GREATLY IMPROVED POSITION OF THE COMPANY EMPHASISED BY FACTS AND FIGURES.

THE report of the directors for the year ending Dec. 31 shows that operations have been confined principally to prospecting and development works. The most important of these works has been the new main shaft in the recently acquired lease, No. 1,089, known as the Wyndham shaft, which, at the end of the year, was down about 600 ft. Sinking has been continued throughout the present year, and the shaft, which is now 1,060 ft. deep, has recently been connected with the 1,015 ft. level of the Eastward Ho! Mine. This shaft was an absolute necessity, as the deep workings in the Eastward Ho! could not be carried on without it. The ventilation of the Eastward Ho! Mine is now perfect, and no obstacle remains to prevent the full development of the large area of the company's ground lying immediately in front of the shaft, comprising the whole of the Rainbow block and a portion of the Eastward Ho! properties. Several levels from the shaft have already been commenced, and these will now be extended rapidly. The expenditure on the shaft during the year and on mining and development works has been 19,058l. 14s. 7d. Towards this expenditure the mine has produced gold of the value of 11,387l. 10s. 2d., about 7,000l. being paid out of capital. A table is given showing the quantity of quartz raised during the year and the value of the gold extracted, by which it is seen that 2,326 tons of quartz produced 3,282 ozs. 10 dwts. 6 grs. of gold, of the value of 11,202l. 10s. 2d., or an average yield of 1 oz. 8 dwts. 5 grs. per ton. The mill has worked steadily throughout the year, crushing altogether 4,702 tons of quartz, viz., 2,326 tons belonging to the company, and 2,376 tons belonging to other companies. The quartz from the North

Australian Mine, although small in quantity, has been during the present year of very good quality, averaging nearly 2 ozs. per ton; and this has enabled the directors to complete the sinking and equipping of the Wyndham shaft out of the proceeds of the mine, without raising further capital. The directors congratulate the shareholders on the greatly improved position of the company's affairs. A year ago it was very doubtful whether they would be able, for want of funds, to carry the shaft down to the required depth. This, however, has happily been accomplished, and by persistent and systematic development, the mines are now in a good condition for working, and it may reasonably be expected that with the stoppage of these heavy development expenses profits will be henceforth realised for the shareholders.

MEXICAN EXPLORATIONS AND MEXICAN ASSOCIATION.

IMPORTANT CIRCULAR BY MR. CHARLES POND.

Nov. 28.—In compliance with the request of Messrs. M. Mocatto, Son and Browne, I have been in negotiation with the directors of the Mexican Explorations, Limited, and the Mexican Association, Limited, with a view to establish a working arrangement between, and for the mutual benefit of, the two companies. I am glad to be able now to inform you that the respective boards have recognised the many advantages which must arise from their working in union, and, as the result of the above negotiations, the Mexican Explorations, Limited, have removed to this address. It is intended that as far as shall be found practicable, new business shall be divided between the two undertakings; but this arrangement will in no way operate retrospectively, neither will one company become liable for the commitments of the other. Speaking as the largest shareholder in both the above companies, and expressing the views of friends who are largely interested in them, I have no hesitation in saying that the working arrangement which has been concluded is not only highly satisfactory, as necessarily resulting in greater economy as regards expenses of administration, but had become practically inevitable, in order to give effect to the deeply felt and oft expressed wish of the shareholders that the existing liability of 15s. per share in each company shall be removed. It is doubtless within your recollection that I succeeded in preventing a call being made upon the shareholders of either company without the previous sanction of a general meeting. This was a step in the right direction, but the time has arrived when it is necessary to remove the possibility of a call under any circumstances, and I am glad that action is about to be taken to this end without any further delay. To those conversant with the affairs of a financial company it will, perhaps, appear a truism for me to state that it is of vital importance that the shares in such an undertaking should be readily marketable at prices which are not materially lower than its position and prospects justify. But a large uncalled liability is always found to depress market quotations, and this principle has worked to our detriment in the cases under consideration. When, in the month of Feb., 1890, the Mexican Explorations, Limited, left these offices, its shares were easily negotiable at 150 per cent. premium on the amount paid up, and had they maintained this figure, and if there had been no outstanding liability, there can be no reasonable doubt that the prestige thereby established would have attracted much business which has been allowed to pass. Furthermore, good prices are naturally gratifying to shareholders, whose confidence is promoted thereby, and confidence begets co-operation, and this will be recognised as being of great importance when consideration is given to the fact that the shareholders in the two above companies aggregate upwards of 1,400.—

CHARLES POND.

P.S.—I cannot doubt that it will be of interest to you to know that the Tominil mines, in which the Mexican Exploration, Limited, and the Mexican Association, Limited, are both largely interested, afford the most promising outlook. Large discoveries of fabulously rich silver ore have been made, and development has, during the past year, been so rapidly and successfully prosecuted as to justify the immediate erection of a mill. The necessary capital of 50,000l. has already been guaranteed.

COPIAPO MINING CO., LIMITED.

AFTER PAYING 1s. 6d. PER SHARE DIVIDEND A PROFIT OF 16,848l. REMAINS.

THE profit and loss account for the year ending June 30 shows a credit balance for that year of 23,540l. 7s. 4d., to which has to be added the balance brought forward from last account, 808l. 11s. 2d.; making a total at credit of profit and loss account on June 30, 1891, of 24,348l. 18s. 6d.; from which has to be deducted the interim dividend of 1s. 6d. per share, paid on Dec. 23, 1890, 7,700l.; leaving an available balance of 16,848l. 18s. 6d. The directors now recommend the payment of a final dividend for the year ended June 30 last, of 3s. per share, payable on Dec. 18, making in all 4s. 6d. for the year (equivalent to 11½ per cent.); thus absorbing 15,000l. of the balance, and leaving 1,848l. 18s. 6d. to be carried forward. The directors feel they may fairly congratulate the shareholders on so satisfactory a result, more particularly in face of the disorganisation created by the civil conflict in Chili. Owing to that cause labour became even scarcer and provisions dearer than before, thus preventing operations being carried on to their full extent. Mr. Hall's report to June 30 last shows that the Dulcinea Mine never looked more promising than at present. In a recent letter, however, Mr. Hall mentions some little trouble with Fletcher's shaft, which doubtless has been overcome as no cable advices on the subject have since been received. The estate has given a profit for the year of 2,749l. 6s. 11d., which is 728l. 18s. 8d. better than in the previous year.—R. S. ARCHBOLD, Secretary.

THE NEW ORIENTAL BANK CORPORATION, LIMITED.

NOTICE TO NEW DEPOSITORS.

IN consequence of the plethora of money in the east, the directors give notice that the rate of interest they are prepared to allow to new depositors on deposits fixed for 12 months and upwards, is reduced to 4½ per cent. per annum. No reduction is made in the interest to be allowed on money already deposited.

THE MISCELLANEOUS MARKETS.

(From Duncan's December Report.)

BREWERIES.

AMERICAN BREWERIES.—The legacies of the Baring smash are still with us; distrust reigns supreme; there are few buyers about; and holders are weak, timid, and unreasonable. I have to bear the brunt of this, and, broad shoulders though I have, it is sometimes painfully discouraging. Of the 30,000 shareholders that there are in these companies, I am well within the mark when I say at least one-third are my clients or correspondents, and if their shares tumble in market value, with or without justification, they throw the blame upon me. It is quite impossible for me to regulate supply and demand. If a holder gets hard up (and I fear many have been in that position lately owing to their losses in other securities) I cannot prevent his selling, and although, feeling conscientiously as I do that this is by far the most profitable field for investment that at present exists, I do my best to bring fresh investors into it; in these distrustful times there is a limit to my powers. I have endeavoured throughout to deal entirely with facts, and while giving my view of these facts I leave them to the judgment of investors themselves. These facts I obtain with great trouble and expense from the fountain-head, and I know my readers give me credit for exercising every care in the matter. I may have been wrong at times in drawing my conclusions from these facts, but this I can conscientiously say that I have never yet expressed myself favourably about any investment where I did not fully believe every word I said, and in every case where I have advised investments I have invested my own money. I must apologise for these egotistical remarks, but they seem necessary under the circumstances.

There is no ignoring the fact that all American breweries have this year experienced very bad times—bad weather, bad trade, and dear materials, have put them to a very severe test. All the larger breweries have met the test magnificently, and have been proved sound to the core, but it has been undoubtedly too much for some of the smaller breweries, such as the Emerald and Phoenix, Hill's Union, Washington and Indianapolis. But because this is so in one very exceptional year, is it reasonable that we should lose all confidence in these undertakings? I think not. Surely all businesses, all men in trade and commerce, have their ups and downs, their good years and bad years; but as a rule it comes out satisfactorily over a period of year. So I fully believe will it be with these companies. Shareholders ought to exercise patience, and with patience I am satisfied all will come right. The reports of all the larger breweries will this week be in the hands of the shareholders, and will bear out the forecast I gave in my last report. They ought, under the circumstances, to give every satisfaction, and certainly justify the shares standing much higher in market value. This, I feel satisfied, will dawn before long on the minds of permanent investors. In this market hitherto we have had too much of the speculative investor, the man who looks more for immediate improvement in the market value of his property than actual income. This is really at the root of the present unsatisfactory state of quotations.

ST. LOUIS.—So many of my correspondents have constantly raised the question as to why these shares are not held more locally, that I am glad to be able to inform them that the only buying of any consequence that has taken place in this market during the past month has been on local account. I personally received an order for 1,000 ordinary shares from a most influential source, and the shares were all paid for, although by no means all delivered at the end of last month. Is it possible for me to give more practical evidence than this as to the prospects before the company? It is the practical expression of opinion of those best able to judge, because business men in America do not make investments of 9,000£ without knowing what they are about, and without the expectation of rapid fructification. I hope I will be forgiven if this is considered a breach of confidence, but it appears to me so much in the interests of the company that it should be known that I take the risks upon myself of disclosing that this order was for Mr. Ellis Wainwright, the president of the company, and that his name has been passed for all the shares.

SAN FRANCISCO.—On Nov. 5 I received the following cable from my correspondent in San Francisco, which I at once published in the financial papers: "Pool completed, expenses enormously reduced, net profits largely increased, shares worth par;" and I have had a further cable from the same correspondent, dated Nov. 21, as follows: "Pool working well, business now earning 10 per cent. on ordinary shares, management excellent." My correspondent is intimately associated with the local directors and manager, so this information ought to be reliable, although possibly he may be taking a somewhat rosy view. I fear to give my own view of the effect it ought to have upon the value of the shares, as my doing so would simply be misrepresented, and I desire therefore to confine my remarks as much as possible to facts and leave shareholders to form their own conclusions.

EASTMAN'S—I am blamed by a good many shareholders for having induced them to invest in this company, and as it is a fair sample of what we stockbrokers who try to do our duty to our clients conscientiously and straightforwardly have to contend with, I am going to endeavour to show how unreasonable they are. When this company was first established, and consistently up to the time the shares rose to 17-1/2, I strongly advised the purchase of the shares, and as my facts were sound and to be depended upon, I was largely followed. The shares subsequently rose to 22-23, and, as I had reason to believe, a re-action was setting in in the meat trade, I used all the influence I possessed with my clients to induce them to sell. In this I was, to a great extent, successful, although some proved very obstinate, and I did not like to over-persuade them, as undoubtedly those who were then buying the shares, as my transfer books will show, were best able to judge of the future of the company. The result of my advice to my clients up to that date was that they cleared profits amounting in the aggregate from £130,000 to £150,000. Then the shares fell rapidly, and I limited my comments to the actual position of the company, as it was from time to time, and for 1890 the result was fairly satisfactory, a dividend of 10 per cent. having been paid on the ordinary. As was to be expected, many of those who sold when the shares were high rebought as they fell, believing as I did myself in the thorough soundness of the property, and having before them the full reports of the company and the statements made by the chairman at the meetings. Then set in

the competition which has been so fatal to the company and to all in the meat trade during the past year. No one did or could foresee this, as it was the outcome of certain large and wealthy firms determined at all hazards to get a foothold in the trade, and with plenty of money behind them which they were prepared to risk, and which they have lost in doing so. Is it reasonable to blame me for all this? The matter has given me very grave anxiety, and I have spared no trouble and expense in endeavouring to keep my clients well informed as to the position from time to time; but while this abnormal state of affairs has existed, I have studiously avoided advising my readers to buy the shares. What I did do was that I went to the fountain head in New York—old Mr. Eastman—who has a 50-years' record there of being a man of undoubted honour and integrity, and I publish what he then said to me. This was in June last, and I think it is well worth repeating, as it bears upon the situation as it is at present. What he said was: "It is impossible to control markets, they will fluctuate and we must keep doing our business, whether it is at a loss or profit; but I have seen much worse times than we are having at present, bad though they be, and they have never caused me a moment's anxiety, because, although I may, in a bad two or three months, lose a quarter of a million dollars, I have always found the loss recouped and the average made up in course of the year. We can outstay all our competitors, but I admit I have more anxiety now that the business belongs to a company, because with my own money I knew what I was about, but I do not like losing the money of shareholders." He said further: "I cannot altogether understand you English shareholders, at one time buying the shares at 22 and now selling them at nine; you must take the good with the bad, and you will find on an average of years you have not done amiss. Anyhow, if the shares go much lower, I am prepared to buy every share, because if I am able to do so I would buy the property back for less than I got for it, and it is now in an altogether sounder and better established position than when I sold it." Things have gone from bad to worse since, but I appeal to every fair-minded man, am I in any way responsible for this? I put facts before shareholders and get them what information is in my power, and that is considerable, but they must judge for themselves and form their own opinion, and not haul me over the coals if in this uncertain world of ours things do not turn out all that was expected. I have by no means lost my faith in the future of the company; I believe the business to be a thoroughly sound one, with immense backbone in it, much more than sufficient to outlast all its competitors. Recently it has begun again to be profitable, and the bitter competition that has existed throughout the year has to a great extent died away, but shareholders will have to be patient, because there is no doubt the record of the year 1891 cannot fail now to be disastrous.

CALLAO BIS, LIMITED.

DIRECTORS GIVE AN ENCOURAGING RÉSUMÉ OF THE COMPANY'S PROGRESS SINCE THE MEETING.

The directors consider that it will be interesting to the shareholders to receive an account of the progress of the company's affairs since the meeting. The returns since the last annual report have been as follows:—

Date of Milling Return.	Days.	Tons.	Yield of Gold. Ozs.	Average Yield. Ozs. Dwts. Grs.	Amount Realised. £ s. d.
Apl. 24	17	414½	509½	1 4 13	1,865 7 3
May 23	23	425	543½	1 5 14	2,087 18 0
June 16	16	452	714	1 11 14	2,801 9 8
July 16	26	581	873½	1 10 1	3,421 7 6
Aug. 28	36	710½	1,041½	1 9 7	4,080 7 1
Sept. 25	24	488	645½	1 6 11	2,530 0 10
Oct. 23	23	405	504	1 4 21	1,953 2 4
I65		3,476½	4,831½	1 7 19	18,739 12 8

The comparatively low crushing for Oct. is accounted for by the shoes and dies requiring to be replaced. New ones have since been fitted. The crushing up to May 23 was carried on at the Union Co.'s mill, but since then the company's re-erected mill has been used with 10 stamps. The upper levels have already exposed a good supply of quartz, and the reserves are being largely increased, in so much that Capt. Gribble reported, under date Sept. 13, that he had been able to dispense with stopping—the quartz raised from development work being sufficient to keep the 10 stamps going. The mine is, as yet, comparatively a shallow one, the No. 4 cross-cut being only 190 ft. from surface. This cross-cut has, according to the latest reports, been advanced 26 ft. towards the lode, which it is expected to reach in about 85 ft. of further driving. Owing to the heavy outlay inseparable from starting work at Independiente (practically a new mine), the expense involved in the removal and re-erection of the mill and Cornish pump, the putting up of buildings, &c., and the necessity for fresh plant and machinery (including two new and powerful boilers, which are now on their way out), the expenditure has been very heavy. The exceptional outlay, chiefly on capital account, necessitated the call made in June last, but as the expenditure is now being reduced, and will very shortly be mainly confined to actual working cost, it is expected that, with the increased returns to be looked for when 20 stamps are running (the second head of 10 stamps are now nearly ready to be started), good profits will be made, which will, of course, be considerably augmented when the full number of 30 stamps, for which the mill is planned, are brought into operation. Consequent upon the lamented decease of Mr. W. Bell Davies (the late consulting engineer to the company), which occurred in May last, it became necessary to obtain other professional advice, and the directors consider themselves fortunate in having been able to secure the services of the firm of Messrs. R. J. and W. Frecheville. Mr. R. J. Frecheville, it may be stated, was, during several years, H.M. Inspector of Mines for Cornwall, Devon, &c., and has a special knowledge of the locality in which the company's property is situated, having formerly held the position of superintendent of El Callao Mine. In their last annual report the directors stated that it was in contemplation to start operations at Nueva Providencia Mine (which adjoins Independiente) as soon as the works then in progress would admit; and it has recently been suggested from the management at the mines that operations at Nueva Providencia might now be favourably commenced, by working

there conjointly with the work in progress at Independiente, as, the mines being contiguous (the shafts being only 100 yds. apart), both could be economically worked as one concern, and, at same time, good ventilation of all the workings be insured, and an increased scope of operations secured, all of which, it is submitted, would very considerably enhance the value and producing power of the company's property. The directors gave this question much consideration, and, having regard to its importance, and also to the desirability of having the present works inspected by their consulting engineers, duly arranged with Mr. R. J. Frecheville to proceed to Venezuela, and report fully as to this matter, and also generally upon the Independiente and the other properties belonging to the company. Mr. Frecheville left by the R. M. steamer from Southampton on the 28th ult., and his report, which may be expected early in the coming year, will be at once communicated to the shareholders.—J. H. THORNTON, Secretary.

The following are the latest advices received from the mines:—

Oct. 25.—Independiente: Since the 12th inst. the shaft has been continued a further distance of 2 ft.; total from surface, 203 ft., or 13 ft. below the No. 4 cross-cut. We shall commence at once to fix our plunger lift; the timbers are already in their place. The No. 4 cross-cut has been advanced 8 ft., or 26 ft. from shaft; ground still very hard. The No. 3 level south has been advanced 20 ft., or 120 ft. from cross-cut; lode 3 ft. wide, of fair value. I am very pleased to say this is the continuation of the same shoot of ore which we are working on in the level above. As I told you in my last, there was every hope of meeting it soon. Water is proceeding out of this level very freely. The No. 2 level south has been advanced 16 ft., or 210 ft. from shaft; lode, 2 ft. wide, of good value. Communication is made to the raise from level driven in bottom of the No. 2 winze. This has opened out a very good piece of stopping ground. The continuation of this level south of raise has been advanced 12 ft.; lode showing 4 ft. wide, of good value. Raise in the back of this level has been advanced 6 ft.; lode showing 4 ft. wide; good value.

CORRESPONDENCE.

[We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

WEST INDIAN GOLD MINING CO.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—What has happened to above? No reports published, and promises made at the extraordinary meeting apparently forgotten.—I am, &c.,

A SHAREHOLDER.

Nov. 30, 1891.

BERTHA CONSOLS.

SIR,—We used to get weekly reports from Bertha Consols, but since the new directors came into office not a scrap of information is published. They evidently believe in the motto, "Keep it dark." If they do not believe in it they seem to act up to it.—I am, &c.,

IN THE DARK.

Dec. 2.

EAST BLUE HILLS MINE.

SIR,—I beg to call your attention to the last two reports, especially on this mine. The last one, dated Nov. 25, 1891, gives the value of the lode in the 30 west for the last 15 fms. to be fully 12% per fm. The previous one, dated Nov. 4, states that the 30 west is being driven at 3% per fm., and 10s. in the £ for tin raised. The price for driving is at the rate of about 4 fms. per month, and the usual price for driving is about 4% per fm. A previous report by the same person stated it to be let at 3% 10s. per fm., or thereabouts, and, of course, if the last valuation is correct, the men were being paid for driving 3% + $\frac{1}{2}$ of 12% = 9% per fm., which is about double the usual price of driving in this mine. It is also very striking that no valuation per fathom was given until last week, after the publication of my letter on the 14th ult., and as the driving is at the rate of about 4 fms. per month, the meaning of it is that this end has been worth fully 12% per fm. for the last three and a half months at least, which seems to me to be distinctly contradicted in the previous reports, but even if correct, it has been a very common occurrence in East Blue Hills to have the lode valued at 12% per fm., and invariably followed by a call. This seems to me to be a desperate effort to rally the defeated shareholders to a hopeless conflict.—I am, &c.,

W. NANCE.

INDIAN MINES.

SIR,—I am very pleased to see, by the latest advices, that my opinion regarding the Colar Gold Mines has turned out, as I told you it would in former letters, so well. It is impossible to say what riches are contained in the leading mines, as they appear to increase in value the deeper the shafts are sunk. Also the reefs get broader; 8 to 9 ft. in the Ooregum and Nundydroog Cos. appears to be the width of the lodes, by the latest reports, *vide* MINING WORLD reports from the mines of Sept. 14 and 15.

I cannot understand why the shares in the Tank Block (Mysore West) are so low; it immediately adjoins Nundydroog on the line of the Champion Reef.

Goldfields of Mysore are also too low in price, so are Champion Reef.

Trusting to see an increased spurt in the companies mentioned,—I am, &c.,

W. H.

India, Nov. 9.

[Our correspondent and our readers generally will peruse with interest the article on Ooregum which appears elsewhere. ED. M. W.]

STATE OF TRADE.

SIR,—The figures of October trading are admitted to show the real position, the McKinley tariff no longer being pleaded as a reason

for the monthly falling off, which is undoubtedly due to the contraction of trade since the crisis of Nov. last, and the uncertainty, heightened by the strikes, which has since prevailed. The month's exports were valued at 21,166,000L., or a falling off of 10½ per cent. upon the corresponding period, making the reduction on the year 5½ per cent. The imports, valued at 36,873,000L., exhibit a decline of 2½ per cent., resulting in an increase of only 1½ for the year, while the re-shipments were 6,000,000L., or 2½ per cent. less, but giving an average decrease of nearly 21 per cent. on the 10 months. Much of the decrease shown, especially in our exports, is still clearly due to the restriction of trade with the River Plate, Chili, and Brazil, and other countries, with which business is only done on a cash basis. Apart, however, from these there is a falling off in the direction of the United States, India, and Australia, but markets which must be classed as Miscellaneous, being unenumerated, show up generally better, if not well.

Among our exports there is practically a diminution throughout, if we except apparel, &c.; while as regards the import summary, the only augmentation is in articles of food and drink, free or subject to duty, oils and foreign manufactures. Dealing with metals, &c., we find the total import value was 1,803,000L., or a decrease of 270,000L., and that the export (including manufactures) was worth 3,179,000L., or over a million decrease. In addition, machinery figures for 1,358,000L., and this is a reduction of 147,000L., while it is to be noted that there is a small increase in chemicals. Copper imports, although smaller, present improved value, and larger shipments have been made from the Cape and Canada. The exports, however, have fallen off—more in value—chiefly to France and Italy, but have increased to Holland. Arrivals of both tin and lead have been greater, with a slight improvement in value. The export of tin was maintained, but that of lead diminished. The shipments of hardware, tools, &c., fell off, together with iron and steel in their various forms, unwrought steel alone exhibiting any development, while exports of coal now show a decided decrease, with a falling off of nearly double in value. Apart from an increase in the coasting trade, the navigation returns are adverse.—I am, &c.,

COMMERCE.

ST. JOHN DEL REY.

SIR,—We appear now to be within measurable distance of the great gold lode in this famous old mine, out of which millions sterling have been taken in the past, and out of which many more millions are expected to be taken in the future.

Early next year—say Jan. or Feb.—every shareholder will be watching with eagerness for the welcome cable from Mr. Chalmers—"Cut lode," and then their admirable patience of the last three to four years will reap, I hope, a good reward. I would advise every shareholder not to part with a single share now, when on the eve of success, but buy as many more as possible, and insist upon prompt delivery of same.

It is now nearly 3½ years (July, 1888) since the meeting was held re-constructing the company, and the decision arrived at to sink the two new shafts in such a way that no fire or accident could in the future affect them in any way possible, so that they will be permanent through all coming years. Mr. Chalmers, the superintendent, and all the officials under him, have worked incessantly in a most praiseworthy manner at the mine. A stupendous work was undertaken, and is now on the eve of completion, and all eyes are now looking for the moment when Mr. Chalmers shall cable the electric words, "Cut lode." With the improved method of hauling, and with the enormously increased motive power at the surface—much more than sufficient in all seasons for all the requirements of the mine as the lode is worked deeper and deeper—and with all the most recent methods of gold extraction, it is expected that large dividends will be continuously reaped for the next 40 or 50 years at least—substantial and permanent dividends, which will amply repay the commendable patience of the shareholders.

It is quite expected that when during next year the mine is thoroughly opened out and developed, the output per week will be considerably larger than ever before, and, consequently, larger dividends should result, and this famous old mine will then assume its former proud position—"the king of mines."

I hope every shareholder will retain the whole of his or her holding and increase it as much more as possible, and thanking you, Sir, for kindly inserting this letter,—I am, &c.,

A SANGUINE SHAREHOLDER.

Nov. 28.

P.S.—Since writing this letter news has just arrived from Mr. Chalmers, the superintendent, as follows:—"Two small lines of mineral have been met with, much resembling the old Morro Velho lode, probably leaders to the lode, but so far they are of no importance."

MIDDLESBOROUGH TOWN LANDS CO.—The new certificates (for fully-paid shares only) in this company are now ready to be delivered in exchange for the old certificates for shares in the old Middlesborough Town Co.

AMONG the many Christmas annuals this year. Messrs. Cassell's "Yuletide" will occupy a high place in public favour. It would be sufficient to ensure a good sale if it was as good as usual, but we have no hesitation in saying it is better than usual. The two coloured plates, from paintings by Arthur Hopkins, R.W.S., are worthy of the highest praise, and the reading matter is equally good.

THE SALE OF THE SOCIÉTÉ DES MÉTAUX.—The factories of the Société Commerciale des Métaux, including its whole plant and machinery, together with the goodwill and all rights appertaining to the company, were put up for auction in one lot at two o'clock on Wednesday afternoon, in the auction room of the Tribunal of Commerce of the Department of the Seine, Paris. The upset price was 6,000,000f. The highest bid, 18,000,050f., was made by Maître Benoit, who, after making the necessary declaration that he was acting on behalf of a client, was declared the purchaser. Before the sale the Court gave its decision regarding the claims made by the Comptoir d'Escompte against the Société des Métaux at the time of the winding up of the latter company, and confirmed the decision of the Court of First Instance, which admitted the justice of the claims.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.]

SATURDAY, DECEMBER 5, 1891.

[ESTABLISHED 1871.]

REPORTS OF MEETINGS.

THE GOLDFIELDS OF SOUTH AFRICA, LIMITED.

AN EXHAUSTIVE STATEMENT BY THE CHAIRMAN AS TO THE POSITION AND PROSPECTS OF THE COMPANY—82 PER CENT. RETURNED IN DIVIDENDS IN FIVE YEARS—ISSUING SHARES AT A PREMIUM *VERSUS* PAR.

THE sixth ordinary general meeting of the company was held at Winchester House, Old Broad Street, on Monday, Nov. 30, to receive the report of the directors and the balance-sheet and statement of accounts to June 30, 1891, and to transact the ordinary business of the company.

Mr. Thomas Rudd

presided.

THE CHAIRMAN called upon the secretary to read the notice calling the meeting, and said that he had, first of all, to express the very great regret that they felt at the absence of one of their colleagues, Mr. J. J. Hamilton, a very valuable member of the board, and of much service to them as a director. He was very seriously ill, having had a relapse, and was quite unable to attend that meeting. He had been laid up by a severe cold, and had rheumatic fever or something of that kind.

Mr. H. D. BOYLE (the secretary) then read the notice.

THE CHAIRMAN then asked the shareholders to take the report as read (agreed.) He next asked the shareholders' indulgence, as he was suffering from a bad throat, which would not allow him to make the speech he would like to that day. He found that his voice would not reach half the gentlemen in the room. He had, therefore, very carefully prepared his speech, and had written it out, and he would, with the permission of the meeting, ask the shareholders to allow the secretary to read it. He thought this the best course to pursue, and trusted, under the present peculiar circumstances, it would be considered by the shareholders and everybody as the most satisfactory course to pursue. (Hear, hear.)

The SECRETARY then read

THE CHAIRMAN'S SPEECH,

as follows:—Gentlemen, last year, when I had the pleasure of addressing you, I commenced with a reference to the Witwatersrandt Goldfields; but as our company now hold such vast interests further afield, where we have gone hoping by being among the first to secure far larger profits than could ever have been secured at the present moment in the Witwatersrandt, I think I must now place these investments first. We have, in addition to our Witwatersrandt and other ventures, which I will refer to later on, three great investments, viz., De Beers, and Consolidated Bultfontein Mines shares, which we look upon as being steadily improving and dividend-paying companies, as the backbone of the company, and as a guarantee for a large portion of its capital. Next, we have directly, and through the United Concessions Co., our vast holding in the British and South Africa Chartered Co., which, although not at the present moment dividend-paying, is an asset which must steadily enhance in value as time goes on. The Chartered Co. administers a large and important territory, and its shares must have a great value even apart from gold, and consequently may be regarded as of a less speculative nature than the gold ventures which we were originally formed to acquire. I say confidently that these two assets are, and will always be, a guarantee for the capital of the Gold Fields of South Africa, Limited. Our third great investment is our holding of half the capital—viz., 100,000 shares—in the Johnson, Heany, and Borrow Co., particulars of which were fully explained to you by me at the extraordinary general meeting held in May last. Although the intrinsic value of our assets during the period under review has been in no way impaired, there can be no doubt that the past year has been to us one of

UNFORESEEN DIFFICULTY AND MUCH ANXIETY.

The market for shares has heavily depreciated, owing mainly to the discovery after 20 years of a diamond mine, which for a brief period might produce from the soft surface layer diamonds in sufficient quantities to yield at the present market value a profit on working. That no permanent competition need be dreaded is obvious from the fact that the relative production of diamonds per ton of ground of the Wesselton Mine to the De Beers is certainly not better than 15 per cent. The very fact, however, of the discovery of a hitherto unknown mine has naturally shaken the confidence of the public, who probably do not understand the very peculiar circumstances which led to the long concealment of the Wesselton Mine, or how extremely remote the chances are of any payable mine remaining still undiscovered. As to the present financial position of De Beers, their accounts published to Mar. 31 last, which we have for your satisfaction given you in full as an appendix to the report, speak for themselves, and it cannot be long before the company will be able materially to increase its dividends. The managing directors were unfortunate in the time at which the investment in De Beers shares was made, but their

opinion is in no way altered as to the value and safety of the security. With reference to the British South Africa Chartered Co., almost the entire work of the second year of their administration has been centred in protecting, provisioning, and developing the country. The development work has gone more slowly than was expected owing to difficulties on all sides, notably the belt of the Tsetse fly along the east coast, and the delay in the construction of the line of railway from there to the British sphere, which I hear has now been overcome. The long overland western route, cut by formidable rivers, has caused great difficulty, as in view of the immediate construction of the railway no organised system of transport has been arranged. In the face of these difficulties the British South Africa Co. has not felt justified in encouraging a large influx of population; but the latest returns, nevertheless, show a population of some 3,000 persons. With a view to avoiding as far as possible the privations of the past summer, advantage has been taken by the British South Africa Co. of the present dry season to forward to Mashonaland sufficient food supplies and medical comforts for 3,000 persons for the next eight months, and every effort has been made, by improving the condition of the roads and arranging for the crossing of the rivers, to insure communication being maintained during the ensuing wet season.

A LINE OF TELEGRAPH

is completed as far as Fort Charter, and there is every reason to hope that the extension to Fort Salisbury will be completed in Jan. next. Magistracies have been established at Fort Tuli, Fort Victoria, Fort Salisbury, Hartley Hills, and Manica. Pending a land settlement being arrived at, a committee of experienced farmers visited Mashonaland with a view to inspecting and reporting upon the suitability of the country for farming purposes, and their report is eminently satisfactory. In all, as stated in the report, 10,041 mining claims have been registered at the office of the administrator up to Sept. 30, and these are spread over a large area of country, and have mostly been located by following ancient workings. By far the larger portion, however, of the area covered by the company's original mining concession is so far entirely unprospected. The natives have been very quiet during the past year, and though very shy, and apparently unwilling to work at first, are becoming monthly more familiarised to white occupation, and more inclined to trade and earn wages. A threatened hostile Boer trek, having for its object the establishment of a Republican form of government within the company's operations, necessitated the maintenance of a considerable number of police being stationed on the Limpopo river for some time; the trek was attempted, but at the last moment the principals were dissuaded from attempting an armed entrance into Mashonaland, and never crossed the Limpopo. From the foregoing you will see what difficulties the Chartered Co. has had to contend with in its initial stages, but I am happy to say that they are all being gradually overcome. From all points of view it was very desirable that Mr. Rhodes should personally visit the country, and form his own opinion under local conditions, and also hear on the spot what those who have had now considerable local experience had to say. Immediately, therefore, he could be spared from his official work as Premier of the colony, he started at great personal inconvenience for a tour through the country, landing at Beira, with a view to passing through Manica, Mashonaland, and Matabeleland, returning by the Western route. Reports of his progress have appeared in the Press from time to time, and we are informed that although he is naturally adverse to putting his name to any special report *re* gold discoveries, the whole place being so very imperfectly prospected, so far, he appears to be very well pleased with his trip and with the country, and his telegram from Fort Victoria relating to the discovery of important rich gold-bearing reefs near there is most satisfactory, as the reefs in this locality have hitherto been regarded as of little or no value.

MR. RHODES REACHED CAPETOWN ON HIS RETURN ON TUESDAY LAST, NOV. 24.

Experts who have visited the country apart from those interested in the Chartered Co. and our own speak most hopefully of the gold prospects, and more particularly in the Hartley Hill district. The glowing reports of gold discoveries which came down during the early part of the year induced us to ask you for a further issue of capital for direct investment in mining claims, &c., and we then placed before you a provisional agreement entered into with Messrs. Johnson, Heaney, and Borrow, under which your company acquired half-interests in a vast holding of claims, rights, and other property belonging to that firm, and a considerable amount of money has been directly invested in Mashonaland in connection with the Johnson, Heaney, and Borrow Co. To inform this company in regard to these investments, the managing directors selected in the early part of the year an experienced miner to go to Mashonaland to specially investigate and advise upon our acquisitions. His report, together with the schedule of assays, is attached to our report, and you will have gathered from it the high opinion he has formed of our investments as a whole in Mashonaland. It is no small thing to be assured that we have at least 12 reefs which will average anything like 10 dwts. of free gold to the ton, more especially when we consider the

vast amount of water power available and the plentiful supply of wood for fuel and timbering purposes, which so much cheapens the cost of mining and amalgamating, and the want of which has proved such a drawback to the Randt. This brings me to the list of assays of samples sent home by Mr. MacWilliam; and, surprising as it appears to us from the satisfactory result of the assays, I am assured that the samples taken would show rather under than over the actual value of the mineral, as rich specimens have been rejected. It is evident to us, however, that we must wait for transport facilities before attempting to develop our interests on any great scale, and our policy for the present is, therefore, to minimise expenditure, throwing our energies into opening up the country. The basis of agreement with the British South Africa Co. under their mining laws, entailing no monthly licenses, as in the Transvaal, will greatly aid us in this policy. We cannot speak too highly of the energy and hard work exhibited by Messrs. Heaney and Borrow, under trying conditions. In addition to our holding in this company, we have, as you are aware, an interest equal to one-fifth in the Mashonaland Agency, which company is represented in Mashonaland by Mr. Herbert Leslie Stokes, as manager, and Mr. Phillip Wrey, as consulting engineer. These gentlemen are doing most excellent work, and our latest advices are very satisfactory. Their latest acquisition in conjunction with the Johnson, Heaney, and Borrow Co. and Lord Randolph Churchill and Mr. Reit, is a reef known as the Matchless reef, of which, without saying more at present, I think you will hear a good deal as time goes by. I see by a weekly paper that the reef is reported to assay from 5 to 6 ozs. per ton, and is nearly 10 ft. thick, carrying visible gold throughout. We have not yet received official confirmation of this. I have said before that our policy in regard to Mashonaland is not to attempt developments on a large scale for the present, but as the country develops I think you will agree with me that in our interests in the two companies I have referred to we have possibilities of profits, the magnitude of which I hesitate to predict. It is much to be regretted that the shareholders did not follow the example of your directors and managing directors, and subscribe for the *pro rata* proportion of the new capital, since, in addition to providing the full money required for the Johnson, Heaney, and Borrow Co., and our contribution to the Northern Railway, the construction of which will shortly be commenced, we should have been further enabled to take up profitable investments then offering in the Transvaal. Our board regret to state that, looking at their financial position in regard to the short fall in subscription, they have been compelled to pass investments promising at the time, and which since have proved very profitable. Our investments in the Transvaal, referred to in the report as properties and ventures on hand, which I have referred to in detail in previous reports, are situated in Malmani and Zoutpansberg, and await the advent of the Silati and Vryburg Railways respectively. In the meantime, the managing directors have no reason to alter the hopeful opinion they have entertained in the past as to their value when reasonably cheap mining can be carried out. Coming, last, to our Witwatersrandt investments, you will see by the report that they stand at a cost of 54,600*l.* The principal investment consists of the company's holding in the Luipaard's Vlei Estate and Gold Mining Co., Limited, a company in which your managing directors have full confidence. It has been somewhat under a cloud in the general depression which has swept over the Witwatersrandt district during the past two years, but we think it is now emerging from that position.

ABANDONED CLAIMS ARE BEING RE-PEGGED,

and the rich yield of gold on the Champ D'Or property, a company working the same reefs which pass through the Luipaard's Vlei mynpacht, gives us some indications of what we may expect as development proceeds. In connection with these, I may say that a trial crushing of 70 tons of ore has recently been made on the mynpacht; the average fire assay value of the ore was 17 dwts., while the actual amount of free gold caught on the plates was 11 dwts., 4 dwts. more being caught in the concentrators, leaving only 2 dwts. lost in the tailings. This may not sound big, but it is a yield equal to some of the most prosperous mines now working on the Randt, and one which, as that part of the Randt develops, will pay, and pay well. Our minor holdings are in shares of the Robinson, Ferreira, New Primrose, and various other companies, and although some of these have depreciated, the managing directors are of opinion, taken as a whole, they are collectively worth the balance outstanding against them, being 54,600*l.* I have now dealt to the best of my ability with the whole of our assets, excepting those set out in the balance-sheet in detail, which speak for themselves; and to satisfy you that the capital of our company is intact I will recapitulate them, and give you their aggregate value as represented, as far as I am able to judge, by the market prices of the day, which, however, I do not in any way for one moment admit equals their intrinsic values. Our whole subscribed capital about the date of our report was 396,939*l.*, and this is the sum which I have to account to you for, plus creditors, bills payable, and other items, which bring up the total to a round sum of, say, 455,000*l.* I am dealing in round figures. Against this, we have call premiums, since paid or payable, 70,000*l.*; cash, say, 25,000*l.*; loans which can be called in at any time, say, 20,000*l.*; sundry debtors, say, 15,000*l.*; freehold property and buildings, say, 3,000*l.*; Consols, &c., say, 30,000*l.*—making a total of 163,000*l.*, which represents what I may term our cash assets, and which exhausts the items in the balance-sheet, except the first. Taking this last in detail, I have stated that our Malmani and Zoutpansberg properties are, in the opinion of the managing directors, of full value, namely, 22,000*l.*, and our gold mining investments, viz., 54,000*l.*, which leaves a sum of 355,000*l.*, representing our investments in the De Beers, Consolidated Bultfontein, and Chartered shares, and our holding in Johnson, Heaney, and Borrow Co., and the Mashonaland Agency. Taking the De Beers at the market price, say 13*l.*, accounts for 130,000*l.* of this sum, our Bultfontein shares and 50,000*l.*, our fully-paid Chartered shares, represented by the United Concession shares (approximately 250,000 shares) at the market price of the day, 1*l.*, show the value of 280,000*l.*, and our holding in the Johnson, Heaney, and Borrow Co., 45,000*l.*; or a grand round total of 744,000*l.*, as against capital and liabilities of 455,000*l.*, not taking into account our partly-paid Chartered and Mashonaland Agency shares. I hope, gentlemen, that this will satisfy you that we have at least not over-stated the value of our assets in the accounts which we have put before you. Gentle-

men, I now have to touch upon a matter which I am sure foremost in all your minds; that is, the question of dividend. I have explained to you fully in the report why we feel unable to recommend a dividend to you, and

THE ARRANGEMENT WE HAVE MADE WITH THE MANAGING DIRECTORS' AND FOUNDERS BY WHICH THEY BECOME FELLSUFFERERS WITH YOURSELVES.

Gentlemen, it would be a very popular and satisfactory thing for I have recommended you a dividend, and would possibly have I this meeting an even more harmonious one than usual; but we that we cannot conscientiously take this course, as we feel assured would not be for the ultimate benefit of the company. Before co to this conclusion, anxious consultations have taken place, frequent communications have passed between the managing directors and your board. In conclusion, I would remind you that the pany has been established something under five years, during v period

WE HAVE PAID YOU 82 PER CENT., AN AVERAGE OF 16 1 CENT. PER ANNUM;

and I put it to you that a company of this nature, especially earlier stages, cannot be expected to give you regular dividend that, taking one year with another, I think you get a fair return your investment. Referring to the paragraph in the report relating to placing the balance of the last issue, the opportunity of subscription given to certain gentlemen in connection therewith expire tomorrow, and the board are unable to secure any immediate benefit the company by renewing the same. If, therefore, gentlemen, balance is not subscribed to-morrow at 1*l.* premium, the board resolved to issue the same at par *pro rata* to new and old shareholders alike, which is equal to a good dividend to you. I have endeavoured as far as possible in these remarks to anticipate any possible question that can be reasonably put to the chair, but if there is any point have overlooked, I will endeavour to reply to it to the best of ability.

The CHAIRMAN: Gentlemen, I beg to move "That the report accounts for the year ended June 30 last be and is hereby approved adopted, and that the balance to the credit of profit and loss be carried to the credit of the current year."

Sir R. POLLOCK seconded the motion.

The CHAIRMAN invited

DISCUSSION.

A SHAREHOLDER said: In an experience of many years I have read a more disappointing report than the one now before us. VOICES: No, no; and loud cries of dissent.

A SHAREHOLDER (continuing) said that the words of the report sufficiently smooth, as were also the words of the chairman, but were, in his opinion, merely "sounding brass and tinkling cymbals" (Laughter.) The report itself was cleverly—very cleverly—written as to draw attention away from the deficiency there was, also the shrinkage caused in consequence of rash investments in shares of diamond companies that in his opinion ought never to have been made. (Hear, hear.) The next point to which he wished to refer was the issue of the new capital of the company at a premium. (Hear, hear.) In his opinion the directors had allowed themselves to become mere tools in the hands of those in South Africa, and who might call speculative directors. ("Hear, hear," and "No, No.") Undoubtedly with them it was a case of *sic volo, sic jubeo*. He did not understand what services they got that they should pay the London expenses of 5,000*l.* a year, and especially when the shareholders were getting no dividend. He did not suppose that it would be any his proposing an amendment at that meeting, and therefore he did not propose to do so, because he knew perfectly well that the directors had armed themselves with proxies and could swamp the shareholders. He (the speaker) urged the shareholders to see that their only hope was to combine and to adopt measures to prevent further speculation with the dividends that belonged to them—(hear, hear) and which ought to be divided amongst them.

A SHAREHOLDER referred in detail to the accounts. He pointed out that the issue of shares at 1*l.* premium had so far had the effect of producing as premium no less a sum than 62,000*l.*—to be exact, 62,781*l.*—and yet the profits of the year—net profits—were only 16,000*l.* in the accounts now before the shareholders at 16,000*l.* odd. He did not understand how this was, or what became of the premium calculated that, with the amount brought forward, the net profit that they now had, they had enough to pay 18 per cent dividend on the present capital. He thought, therefore, that the directors should at any rate have paid some dividend, if only half that. (Hear, hear.) He was proceeding to deal with other items of the accounts in detail (but was met with cries of "Time, time, time," the meeting evinced signs of considerable impatience). He concluded by alluding to the paragraph in the report in reference to the election of directors, and was understood to express his objection to re-election.

A SHAREHOLDER stated that a year ago at their meeting he at some length upon the question of the issue of shares at a premium and his remarks upon the subject could be read in the printed report of the meeting. It would be remembered that at that meeting the chairman very strongly advocated that the new capital should be subscribed for by the shareholders at 1*l.* per share premium, and that (the speaker) was adverse to it. They did not know till they got into the room at the last meeting of the managing directors' telegrams urging the shareholders here to take up the shares at 1*l.* premium. Now they had a large quantity of these shares left, and it was proposed after to-morrow (Dec. 1st) to offer these at par. Well, his opinion was that just as the other shares did not go off at 1*l.* premium, these would not go off at par when they could be bought on the Stock Exchange that day cheaper. (No, no.) Well, he said "Yes," and he told them that they would have these still left on their hands.

Another SHAREHOLDER said that there could be no doubt that the directors had made mistakes in the investment of the money of the shareholders. But they did not wait to go into what was past. They wanted to turn their attention to the London affairs, and he contended that the expenses here were far too high. Especially was this so when the shareholders were not in the receipt of any dividend. The London establishment cost them 5,000*l.* a year, or, to be exact, 5,548*l.*, and the South African outlay was 3,913*l.*, making together

9,461l., and yet they only showed a profit of 16,000l. It seemed to him to be an enormous expense to have to face for such a profit. He further complained of the lumping together of directors' fees, auditors' remuneration, &c., &c. He next referred in strong terms to the question of

PROXIES.

He said that he considered that this, being an ordinary general meeting, the directors had no right to send out proxies with a penny stamp affixed, and also a stamped envelope for reply. If it was an extraordinary general meeting it would be a different thing, but for an ordinary meeting he greatly objected, and he felt that some resolution should be moved on the subject. It was not right for the directors to send out proxies to obtain power to overthrow anything that the shareholders assembled at an ordinary general meeting might desire to do. (Hear, hear.) He trusted the directors would be more careful and discreet in this matter in the future.

Another SHAREHOLDER said that he wished to be allowed to offer a few remarks, and especially with regard to the observations of the chairman with reference to the suggestion in regard to the shares offered originally at 1l. premium, which, as the chairman had stated in his speech, it was proposed after Dec. 1 to allot to all shareholders *pro rata* at par. He thought that a decided preference should in some way be given to the shareholders who had taken up their proportion of shares at 1l. premium, and had given thereby support to the board. (Hear, hear.) The directors could not expect shareholders to support them if supporters and non-supporters were to be placed upon an equal footing. He claimed, in justice to those who had subscribed at 1l. premium, that they ought to have some advantage over the other shareholders. Mr. Fergusson, the first speaker, had been, perhaps, a little strong in his remarks, but he (the speaker) concurred with him, and felt, as one who had paid 1l. premium, that it was hard on those shareholders to thought, too, that the shareholders were entitled to look to receive some see others who had not done the same to have equal benefits. He dividend, however small. He argued also that they had followed the views of the managing directors in the issue of these shares at 1l. premium, and he maintained that those in South Africa were not able to judge like a London board were of the chances for or against the success of any issue of shares at any particular price.

Another SHAREHOLDER wanted to know why they could not divide some of the money they possessed. The directors seemed to wish to keep on making investments. It looked as if they wanted to

BUY UP THE WHOLE EARTH.

(Laughter.) They had better develop some of their possessions instead of investing the money of the shareholders in further speculations. If the shareholders wanted their money invested in speculations—diamond mines and the like, they were quite able to do it for themselves without the assistance of any board of directors. He complained of the high fees paid, and thought that as many hundreds that the directors received thousands would be very good pay. Many boards of English railway companies with millions of capital received less in fees for much more work.

Another SHAREHOLDER maintained the same views expressed by previous speakers as to the issue of shares at par, and said it was not fair to those who had paid a premium.

SUGGESTIONS.

A SHAREHOLDER: Why cannot we put them up to tender, Mr. Chairman?

The CHAIRMAN said that he would call upon Mr. H. E. M. Davies, one of the directors, to reply to the various questions.

Another SHAREHOLDER said that he saw one clear way out of the difficulty, and that was not to issue the shares at less than 1l. premium, and that would make it fair to shareholders, like himself, who had paid 1l. per share premium on their new shares.

After further remarks, in the course of which the London directors were called "puppets" in the hands of the South African board,

Mr. H. E. M. DAVIES proceeded, at the request of the chairman, to reply to the various remarks that had been made, and, first of all, he said he would like to allude to the statement that had been made that the London directors were "puppets," worked by the South African managing directors. He denied this entirely. He assured the meeting that the London directors were the representatives of the ordinary shareholders, but their desire was to work amicably with all, and as a proof of that he might state that only that hour they had received a cablegram from South Africa (the result of much negotiation by wire between London and South Africa) giving sanction to the issue of the balance of the shares to the shareholders at par. As to the question of their investment in De Beers diamond shares, he felt that the fall in price was not due to the De Beers Co., but really to the state of the financial markets in London and on the continent. As to this matter, it was, of course, a question when the shares again reached what they paid for them whether they would realise or not. As to the point of why they did not deal with the sum of 60,000l. odd, received as premium on new shares, the answer was a very simple one. It would be seen from the balance-sheet that they had placed this sum of 60,000l. as a capital asset, and this was greatly to the advantage of the shareholders, because as it now stood the money could not be participated in by the managing directors, which would be the case if they included it in the profit of the year. As to

WHY THEY DID NOT PAY A DIVIDEND,

he must state that at one time they indulged in the hope that they would be able to do so, but the state of their finances, as disclosed from the other side, had shown liabilities of something like 164,000l. It was true that this included one liability in connection with the railway referred to in the chairman's speech, which they might never be called upon to contribute, but still they must hold the money in respect to it. It was far wiser to exercise a little self-denial and not to divide the money they had now, than at a future period, in order to meet some pressing liability, borrow or raise the money on onerous terms. He denied that they adopted the Johnson agreement on telegraphic orders from Africa. Their decision was only arrived at after the most careful consideration in their board room, in London, with Mr. Rhodes personally. As to the question of proxies, he would like to call to the shareholders' remembrance what happened about

three years ago. At that time the directors asked the shareholders to grant them power to make a new issue of shares at such price as they might deem right, but the shareholders refused them that power and carried instead a resolution that the issue should be at par. At that very time the directors had an offer for these shares at 3l. each, which, had the board been able to accept, would have given the company such a sum as would have enabled them never to come to shareholders again; but, although the directors had the support of the majority of the large shareholders in the company in this matter, a lot of small shareholders in the meeting voted against it, and no poll being demanded, the directors lost the day. It was to guard against a recurrence of anything of this kind that the directors had issued proxies in order to prevent the large and responsible shareholders being outvoted by small holders. At the same time the board would not dream of using proxies in opposition to the wishes of the large shareholders present at the meeting, and the expense was borne by the board. Having replied to various matters of account, he proceeded to deal with the question of the

DIRECTORS' FEES,

and stated that there was a very great deal of work to do in connection with the company in London, and if any shareholder would do the same work for the money he did, he might gladly take his place; but, the board were not greedy, and were always willing to discuss the question fairly with shareholders. He regretted the lumping of the expenses together, but it was with no desire to conceal anything. They had nothing whatever to be ashamed of, and the accounts had all been passed by the auditors.

A VOICE: What is the auditors' fee?

Mr. DAVIES: 50 guineas. Continuing, he said that as to the issue of the shares at par, and allowing a privilege over other shareholders to those who had subscribed for the last issue, the directors would be only too glad to do this if it could legally be carried out, and was resolved upon by the shareholders.

Some shareholders here tried to raise a further discussion upon this subject, but were met with cries of "Vote, vote."

A SHAREHOLDER asked who were supreme in power—the managing directors in South Africa or the board in London?

The CHAIRMAN, in reply, said that the managing directors were of considerable value to the company.

THE BOARD WAS SUPREME,

but they would at the same time hesitate to do anything to cause the managing directors to resign their position. They were independent men, and if they found things in connection with the company becoming an annoyance and trouble, they might throw the matter up.

The resolution was then put and carried.

FORMAL BUSINESS.

Mr. W. M. M. FARMER then proposed in eulogistic terms the re-election of the retiring directors, Mr. H. E. M. Davies and Sir Richard Pollock.

Mr. L. HOSKYNs seconded the motion, which was carried.

The CHAIRMAN then proposed the appointment of Capt. Ernest Rhodes as a director of the company, on the nomination of his brother, the Hon. Cecil Rhodes.

Mr. DAVIES, in seconding the motion, said that Capt. Rhodes had assured the board that if elected he would be a representative of the interests of the shareholders, and that he did not come upon the board as the nominee of his brother only. There would be no increase in the fees. It was

A GRACEFUL COMPLIMENT

to the Hon. Cecil Rhodes (one of their managing directors) to accept his nomination. (Hear, hear.) They wished to work harmoniously with their managing directors. (Hear, hear.)

The motion was carried.

Mr. GODFREY moved the re-election of the auditors.

Mr. OGLE seconded.

The motion was carried.

Mr. OGLE moved a vote of

THANKS

to the chairman and directors of the company.

A SHAREHOLDER seconded.

The motion was carried.

The CHAIRMAN briefly responded.

The meeting then separated.

THE TRANSVAAL MORTGAGE, LOAN AND FINANCE CO., LIMITED.

A YEAR OF UNPARALLELED DEPRESSION AFFECTS THE COMPANY—IMPORTANT SPEECH BY MR. G. H. THOMSON AS TO THE COMPANY'S PROBABLE FUTURE—OPINIONS EXPRESSED THAT ITS SUCCESS IS ASSURED WITH THE PROGRESS OF TIME—EXPENSES REDUCED, AND IMPORTANT CHANGES MADE.

THE ordinary general meeting was held at Winchester House, on Monday, "to receive and consider the directors' report and statement of accounts; and to transact the other ordinary business of the company."

Mr. W. J. Thompson

(chairman of the company) presided.

Mr. C. F. MACNICOL (secretary) read the notice of meeting.

BUSINESS CRISIS.

The CHAIRMAN: Gentlemen, we meet you to-day after a crisis which has been more severe than any known by most men of the present generation—the worst I think since 1848. Houses of the highest eminence have collapsed in other countries; banks, long established, have been swept away; revolution has been rampant in some lands, and the depreciation of property, bad as well as good, has been enormous—so much so that some have even said, "Happy those who have nothing left to lose." You, probably, will have seen the estimates in the *Times* of the aggregate losses of the country would be something like 250,000,000l., though we are able to add for our

satisfaction, as business men, that the savings of the country would be equal to that amount, and that, therefore, as a community, we were to-day in a sounder commercial position than we were a year ago. Satisfactory as that statement is to the general future of business in England, unfortunately it

DOES NOT COME IN TO HELP INDIVIDUALS.

Now, the field of our finance, although, as a country, it has been spared from all political outbreak, has suffered as much as any from the unexampled depression. Inflated expectations once formed have burst, intense depression succeeded all speculative collapse, enterprise was checked, property became unsaleable, and men, willing to meet engagements, were paralysed for the moment, whilst others who, despite the storm, still calmly believed in the future of the Transvaal, seemed almost to have abandoned hope. In speaking of the financial troubles, I allude also to imperial undertakings, but the material advance of the Transvaal has not been delayed. The very sums of British capital which have been poured in, though at present unproductive, and even to individual pioneers leading to ruin, have prepared the ground. To-day most assuring

SIGNS OF MATERIAL PROSPERITY ARE SEEN ON ALL HANDS

in the steady output of gold, which, after all, is the main point, the revival of industry upon sound business principles as distinct from wild speculation and ignorant adventure, and the improvements in real property, along with the commencement of railways. The mistake that we all in London made was that we did not allow for time and development. We did not realise what a country the Transvaal was and the difficulties attending its development, and too many investors assumed at once that if they planted the acorn to-day, to-morrow it would flourish an oak. Now, as regards the recent views freely circulated about our company, I should like at once to say that while no business man in this room could expect that in a trade like ours—the advancing of money—we could escape all loss, yet the idea of such a loss as the total paid-up capital (100,000*l.*), as indicated in the fall of the shares last week (though they have advanced since), was altogether an exaggerated view, due to fear in the absence of information, and to those influences to which all shares on the Stock Exchange are from time to time liable. The report speaks of the interim dividend we paid, and some have said it would have been better to have postponed it, or to have paid one of 5 per cent. for the year to-day. (Hear, hear.) We quite agree with those criticisms, and if we had thought at the time we should not have been able to give you an extra dividend we should have done so. However, the result to us is the same as regards the receipt of money, only that paid dividends are forgotten, and dividends to be paid are something tangible. For the future we will be guided by the past, but I will ask you to remember that during the existence of this company you will have received 7½ per cent. on your investment. We have

NO PRESENT INTENTION OF MAKING A CALL.

Another paragraph has reference to the African Banking Corporation, which has taken over the banking business of this company. The transfer took place on Aug. 17, only a fortnight after the accounts were made up in the statement before you; but that transfer materially affects items that appear in this balance-sheet. We drifted into a banking business, and, though profitable, we had not the adequate capital to carry it on satisfactorily, and so the change we consider most desirable. We have now reverted purely to the business of a mortgage company—only lending others, and able to wait for payment, with current expenses largely reduced. As to the item of salaries, directors' fees, &c., I hope in the future these expenses will be reduced by 10,000*l.*, or 12,000*l.* at most. Our new manager, when he came to take the transfer to prepare for the African Banking Corporation, was greatly hampered by the acts of our late manager at Pretoria, who, against the direct orders from home, had used banking funds which should have been kept liquid, and so locked up funds which the company would otherwise have had in hand. In addition, our company having had to provide, suddenly, for certain payments, the value of the goodwill, that we should otherwise have obtained, was reduced. Other advances made were injudicious both as to persons and men, and in one case we have reason to believe that Mr. Lawrence exceeded his powers altogether. Mr. Haines has been directed to take whatever steps he considered necessary. We cannot yet say that the advances will involve the company in loss, as they may depend on general realisation, but they have caused anxiety to your manager and also to the board when the facts were known. The next point in your balance-sheet is the retirement of Mr. Dimsdale. We all congratulate him on his honours, though we miss his presence. Mr. G. W. Thomson, who has a most intimate knowledge of all your accounts, has been elected to the vacant seat subject to your confirmation to-day. (Cheers.) I think I may now ask you to

TURN TO THE BALANCE-SHEET.

The first items (capital and debentures) require no comment. The next, 61,821*l.* bills payable, have run off since this statement was prepared. Of the 30,000*l.* fixed deposits, the bulk has run off, and the bankers' account was paid a few days since; and as regards current account—158,004*l.*—the bulk of that was taken over by the corporation. At the close you will see a contingent liability for 21,705*l.* calls on shares, but 12,000*l.* of this is reserved (5*l.* per share) on the shares of the Banking Corporation, which cannot be called up unless the bank is liquidated. Therefore, practically, that 21,705*l.* is reducible by this amount. On the other side, you have cash on hand, &c., 71,439*l.*, and you have bills receivable 33,218*l.*, and bills discounted 31,814*l.*. Those have chiefly run off in paying the 61,821*l.* and the 31,677*l.* and the 25,000*l.* on the other side, and the balance (20,000*l.*) is in the general account. As regards the Pretoria premises, which have cost us more than we anticipated when we began, I am glad to say that they are a most favourable asset, and if the whole of our assets were equally good, I should have a host of smiling faces before me. They give us a return at the present time of 5,700*l.* a year, and there is one-third of the site, which is the best in Pretoria, that has not yet been built upon. I am told by another institution that the premises could be sold at a profit to-day if we desired it, and that they are likely to increase in value as the prosperity of the Transvaal increases. Another freehold I may refer to is one in Johannesburg, which cost us 7,000*l.*, and we had to take it to secure a debt due. We

are informed that it is the very best business site in the town. (Cheers.) Now, I will come to the important item of 154,700*l.*,

ADVANCES ON CURRENT ACCOUNTS,

advances on mortgages, 97,235*l.*, and the 50,764*l.* balances on open account. The advances range over 500 clients, and the securities consist of mortgage bonds, bonds, promissory notes, mortgages on houses, lands, farms, shops, business premises, and some advances upon the scrip of the different companies. We have received from Mr. Haines a detailed report of the position of every advance, and as he took over these accounts at a painful time to himself, he is not likely to have taken a too favourable view of them. We have set aside 7,000*l.* already for contingencies out of the receipts of this year. Mr. Lang, our former inspector, who was over here a short time ago, and has now returned, has gone over Mr. Haines' accounts, and expresses the opinion that if the business of the company should improve, and time and care are given to their gradual realisation, the accounts are on the whole likely to come out satisfactorily. (Cheers.) Among the investments in London, we hold shares in the New Belgium Co., in the flotation of which we obtained considerable profit, and thereby became shareholders. It is a company for which we are at present receiving a full remuneration for the management in London, reducing our London expenses by those receipts. Those shares show a considerable depreciation, but we have no intention of realising them at present. (Laughter.) We have other shares on which we have reason to expect ere long a considerable profit—a profit which should make up for any loss we might have when we realise (as we do not intend to do) the New Belgium shares.

A SHAREHOLDER: Are they fully-paid?

The CHAIRMAN: Those to which I refer are, but there is a liability on others as shown in the last balance-sheet. We will now come to investments in the Transvaal, and one of them in particular (7,000*l.*) occurred from our having been compelled to close a loan and take a security, which was the Albion Mine. We had every belief in and good accounts from it, and are confident we are only to have to wait for an improvement in business, when that which is a doubtful asset may turn out to be one of profit. Only this week we have concluded a sale, after 12 months negotiation, with gentlemen in London, who have paid 500*l.* down and are to pay 5,000*l.* in cash and 5,000*l.* in fully-paid 15 per cent. preference shares as soon as they float this company. They have every belief they will be able to do so, the company. They have every belief they will have a considerable profit. sequence of which will be that you will have a statement of the I think I have now given you as clearly as I can a statement of the present position of our company. It is based upon the details that we have received, and the opinions formed by those who ought to be able to take the soundest view. All depends, of course, upon the realisations, and that again depends upon the future of the Transvaal. That future seems to be improving month by month. We had a telegram from Mr. Haines, our manager, on the 26th, saying:—"Prospects good and improving." We desired to have the latest information so as to lay before you to-day. The output of gold is increasing month by month, and is not confined to any one special district. The growing riches of the Randt, which may now be considered to be confirmed, seem secure, and with the prosperity of the Randt, real property in Johannesburg and Pretoria will improve also. Railways are commencing, and are every year likely to show progress. Some six lines are now projected.

WE ARE NOW A SIMPLE MORTGAGE COMPANY,

emancipated from banking risks, subject to no sudden calls, able and ready to wait for that general improvement of which there are such certain signs, and which we trust will facilitate our getting in our old loans without loss, and give us capital for future good and sound business. The views upon which this company started were perfectly sound in principle, but, unfortunately, we commenced a year too soon, when the current inflation became a dangerous element. Now that it has passed the ground is all the safer for the future. Whatever the past, we may hope in the future, and I trust our future balance-sheets will be of a character that will give each of you full satisfaction. I propose, "That the report and balance-sheet be received and adopted, and entered on the minutes."

Mr. PASTEUR (director): I second the motion.

Mr. W. S. CUFF: You have 39,000*l.* odd advances on loan. In what state is that amount now?

The CHAIRMAN: It is all done with, and out of the account.

VOICE OF THE OPPOSITION.

Mr. REID: I rise to oppose your motion as a protest against the extravagant way this company has been conducted. So far the shareholders have allowed the directors a free hand, and what has it led to? It has led to this, that within the last month the shares of this company have been offered in the streets of London to responsible holders for anything to relieve them of their liability. I do not agree with you that this company has been earning badly. I think 17 per cent. is a very good amount to earn for a financial company, if the business is being done in a sound way, on 100,000*l.* paid-up capital, but, unfortunately, the expenses have, from the start, been on such a magnificent scale that no financial company could stand them. (Hear, hear.) Last year the expenses of running this company were 22,000*l.*, or 22 per cent. on the capital, of which amount

THE DIRECTORS RECEIVED 5,000*l.*,

within a few pounds. Why, sir, one of our great English railways, with 24 directors, only charges about that sum, where there are hundreds of millions involved, and I think it infamous, for a small company like this, to be charged 22 per cent. This year the expenses are reduced, and the directors take 2,000*l.*

The CHAIRMAN: We took 500*l.* last half-year.

Mr. REID: I got the information from the office that the directors during last year took 2,000*l.*, whereas the Scottish Australian Investment Co., with a paid up capital in shares and debentures of 1½ millions, has been paying dividends for a number of years, and the directors receive but 600*l.* in all. That is an example for this company. I am speaking as an individual, and have not consulted anybody. I am sorry to see the position in which the shareholders find their property, for I dare say many, like myself, bought at 2*l.* 10*s.*, and now see a fluctuation in the shares of 400 per cent. They were at high as 3*l.* two years ago, and now are being offered for nothing. That might be all very well in the case of a mine, or a patent medicine company, but for a financial company there should be no such fluctua-

tion with good management. (Cheers.) I feel very strongly about this matter, and that it is time for the shareholders to take some steps. I respect the directors, and believe them all to be honourable men; but they commenced so extravagantly, that now they have not the moral courage to put in the pruning knife where it is needed, and I understand the salaries this year have amounted to 7,500%. It seems to me unnecessarily large salaries are paid, and I hope the directors will take the matter seriously into consideration. We have very expensive offices here, but the chairman has told us that we are now relieved of many expenses by the Bank Corporation, though, of course, our income will be reduced, and the expenses will go on. I hope shareholders will support me in pressing economy upon the board, for 17 per cent. for expenses on a capital of 100,000% is something disgraceful. (Cheers.)

FACTS SHAREHOLDERS SHOULD REMEMBER.

Mr. SEABER: I think there are one or two facts we ought to bear in mind, namely, that every successful institution passes through a time of trial. Our time of trial has overtaken us at an early stage, and I think we must all be satisfied with the statements put forward by the chairman. (Hear, hear.) As far as I can gather, the company is in a sound position, and there is no necessity to part with shares. Mistakes have been made, and we are all subject to them, but I hope directors will be more careful, particularly in entering upon mining speculations which have not been tested by experts. As far as the expenses are concerned, I think they ought not to exceed a third of the present amount, but I have no doubt that that can be explained. Fortunately, we have only issued a small portion of our capital and only a few debentures, none of which fall due for two or three years. Hence,

THERE IS NO NECESSITY TO MAKE A CALL,

and three years later this depression may have passed away, and we may be able to issue new capital at a premium. I hope if future debentures are issued that they will be made permanent and not terminable. I do not see any reason, even yet, why this company should not be successful. (Cheers.) There are signs of improvement on every hand, and we should be unwise as shareholders if we disregarded them. (Cheers.)

Mr. HENDERSON called attention to the lumping of large items in the account, and received the assurance of the chairman, later in the meeting, that these would be given in fuller detail in future balance-sheets.

Mr. WILLIAMS: What is the nature of the investments, apart from the new Belgium company already explained?

The CHAIRMAN: Mr. Reid, who has not now proposed a motion, did us the honour to pay us a visit to the office, and enquired of our secretary the salaries paid to our various clerks. I believe he left

SATISFIED WITH THE COURTEOUS RECEPTION HE RECEIVED,

and in good feeling with our secretary, even though he was not able to give him certain details which he did not feel justified in doing. In one matter Mr. Reid, in his kindest way, intimated that probably the secretary was getting 1,000% a year, but, as a matter of fact, I have his permission to state that he receives but 250%, though I shall be glad when this company becomes more prosperous to be able to pay him upon the scale he deserves. I am sure our expenses here are as reasonable as we can expect them to be, having regard to the services as qualified men. I will now ask Mr. Thomson to speak.

Mr. REID said, in explanation, he only wished to know the salaries of the principal officers, and thought that quite within his right, but the secretary was justified in stating the figures.

IMPORTANT ADDRESS.

Mr. G. W. THOMSON (director): Although I am fully alive to the golden character of silence, especially in business, I cannot refrain from saying one or two words on this occasion. Those who were present at the last meeting may remember that I gave an account of a recent visit to the Transvaal, and the conclusions I had arrived at with regard to the future of that country. Since then a year had elapsed, and I see no reason to alter in the smallest degree any of the statements that were then made. I said, for instance, that I believed the Transvaal possessed great mineral wealth, and that every succeeding year would prove this more conclusively. What is the evidence of the past 12 months? We find that a year ago the monthly output was 45,000 ozs.; it has now reached the considerable total of 72,000 ozs. Surely that is a fact that may be allowed to speak for itself. I said also that I believed that many of the difficulties that are met with in the treatment of tailings were on the high road to solution by means of the McArthur-Forrest process. What do we find in regard to it? During the last few months a company has been formed for working this process, and the result of its operations so far has been, I am told, of the most encouraging nature. I said also that I believed as soon as the railway reached Johannesburg the expenses of gold production would be lessened by 20 per cent., and that many mines now dormant would wake up into vigorous life. Sufficient time has not elapsed for the fulfilment of this prophecy, but I now re-affirm it with equal emphasis. Railways are being rapidly re-constructed. I was told the other day by a gentleman who has just returned from the Orange Free State, that the line from the Cape by Bloomfontein has been completed, the half way between Bloomfontein and Williams' drift, to a point on the Vaal River only 37 miles from Johannesburg. But why should I pursue this line of argument, for everyone who has kept his eyes on the development of the Transvaal must admit that there is no cause for apprehension with regard to the solidity of its business future. At the meeting a year ago, to which I have referred, a vote of thanks was passed for my service in connection with this company, and when I recall that compliment in the light of the report now laid before you, I am conscious, as you may imagine, of great chagrin and disappointment. It is right, however, to state emphatically that the directors have not been wanting in their duty to this company, but that all that the most assiduous attention and care could do has been done to advance its interests, and if their orders had only been obeyed, the report now in your hands would be more pleasant reading. After the luminous speech of the chairman it is not necessary for me to dwell upon details; and I will confine myself to vindicating, in one sentence, the general policy of the

board, for which I consider myself, to a large extent, responsible. When I joined the Mortgage Co. two years ago I found that it was

CULTIVATING TWO CLASSES OF BUSINESS--

mortgage and banking. To work these harmoniously is as difficult as it would be to unite a man and woman of uncongenial tastes—for all sound banking business is of a liquid character, whereas mortgage implies the probability of prolonged advances. My first thought then was how to affect "a separation on the ground of incompatibility." There were two ways in which this could be done—either by turning the Mortgage Co. into a bank, or by founding an independent corporation to which the banking department of the Mortgage Co. might be transferred. To the former of these there were several objections. In the first place, as you are aware, by the constitution of this company there are two classes of proprietors—the founders and the ordinary shareholders. However popular founders' shares may at one time have been, it has always been my conviction that they are wrong in principle, and that it is a mistake for any company, and especially for a bank, to have two classes of shareholders whose interests under certain circumstances might become antagonistic. Various expedients were suggested for

GETTING RID OF THESE FOUNDERS' SHARES,

and eminent counsel was consulted on the subject, but it was found to be impossible. This, then, was one reason against turning the Mortgage Co. into a bank. Another reason was that it was believed the general public would be less likely to deposit with and offer business to a mortgage company than an institution that was ostensibly a bank, and another reason was that it was thought best to leave well alone—to allow the Mortgage Co. to develop on the lines originally laid down for it; for I believed then, as I believe now, that there is ample scope in the Transvaal for such a company—one combining mortgage business, pure and simple, with mercantile agency, and in London the bringing out of public companies. For these reasons the other alternative was adopted, and

IT WAS DECIDED TO FOUND A BANK.

Last autumn, winter and spring, owing to the Baring cataclysm, and other financial disasters, fresh in your memory, there was a period of exceptional depression, and there was much delay in carrying out our project, but at length the African Bank Corporation emerged from the dim region of possibility into the daylight of accomplished fact. I may remark that the heavy charges you see in the Mortgage Co.'s account are due, to a large extent, to the delay to which I referred; for it became necessary for that company to maintain the expensive machinery of a bank for eight months longer than was anticipated, without any corresponding expansion of profit-earning power. As soon as it was definitely decided to found a bank, the managers of the Mortgage Co. in Johannesburg and Pretoria were instructed to work their branches as a bank, to keep their resources liquid—in short to have

THEIR LOINS GIRT AND THEIR LAMPS BURNING

in anticipation of the coming of the bank's representative. The manager at Johannesburg carried out these instructions, and the result was satisfactory. The manager at Pretoria, with a folly for which it is impossible to find an adequate expression, went directly in the teeth of the instructions he had received both by letter and cable, and while as a banker, on the one hand, he received deposits repayable at call or short notice, with the other he locked them up in mortgage business, some of which appears to have been of a doubtful character. The consequence was that when the bank's delegate arrived at Pretoria he wisely declined to accept any but a small portion of the so called banking business submitted to him. In this way there was a large lessening in the value of the goodwill transferred, and the Mortgage Co. suffered accordingly. Our general manager, who is now at Pretoria, a gentleman of wide experience and excellent judgment, although he prudently declines to permit himself to precise predictions, does not appear from the recent letters to anticipate serious ultimate loss from the action of the manager at Pretoria, though it has already caused much inconvenience and anxiety. Looking, however, at the situation generally, bearing in mind that the value of other property is decidedly improving, and that our interests in the Transvaal are at length, we believe, in capable hands, I still look forward to the future with a fair measure of hope.

A SIMILE.

Perhaps the present position of this company may be described most simply by the time-honoured simile of a ship. This little craft, in company with many noble vessels, has passed through a great cyclone. She has been buffeted by the winds and waves; one of her most trusted officers has failed to come up to expectations; but, notwithstanding all misfortunes, the hull is still sound, the crew are faithful and trustworthy, the weather begins to grow brighter, and the fog is clearing off. I do not despair of seeing the sun shining on her sails, and the good ship speeding proudly on her prosperous way. I thank you for the patience with which you have listened to these remarks, and for your confirmation of my appointment as a director should you see fit to confirm it. (Loud cheers.)

The resolution was carried unanimously.

The CHAIRMAN, replying to the question of investments, said: They are chiefly in rent, houses and farms, and in addition to the mine already named, by which we shall probably make a profit of 3,000%. The investments in London consist chiefly of shares—in New Belgium, already mentioned; in another company, 1,000%; in Rosencrantz, 1,800%; in West Randt, 790%; in the Banking Corporation, 6,800%; 4,500% in the funds; and 5,000% in the African Estates Agency Co.

Mr. BURT: The founders' shares are extremely important to get rid of, for they take half the profits after 8 per cent.

Mr. THOMSON read out a detailed list of the company's expenditure.

Mr. TANNER said the investments in Pretoria were 48,191%, and what did they represent?

The CHAIRMAN: Our premises at Pretoria, where we receive 5,700% rental, although we have only covered two-thirds of the land, and it is exclusive of the part of the premises the company occupy.

Mr. DICK: I have lived in the Transvaal for many years, and can say that the freehold premises in Pretoria are a good asset. The new

Belgium investment I know nothing of, but the West Randt shares are of a nature that if the other assets are like them I ought to get out of my shares as quickly as possible.

The CHAIRMAN: We have only 790% in that company.

Mr. REID: I only opposed the report to ventilate my views.

CRITICISM WELCOMED.

The CHAIRMAN: We welcome criticism, but claim to have done our best under untoward circumstances. (Cheers.) To say that our shares have fallen by 100,000%, as has been done outside, is a gross exaggeration, for which there never was the slightest ground.

The SOLICITOR: We took the opinion of Mr. Buckley, and he advised that there was no way of getting rid of founders' shares, and a company is unable (as suggested) to buy its own shares.

Mr. BIRT: Could they not be transferred to the directors in trust for a nominal consideration?

The SOLICITOR: The company is unable to reduce its capital without common consent, and the only way to get rid of the founders' shares would be to liquidate altogether, which is impossible as you have debentures.

Mr. SEABER: Is it not possible to buy up the vendors' shares? 20% was the last price quoted.

The CHAIRMAN: They were once 700%, and the last price we know of is 80%.

A vote of thanks to the chairman closed the meeting.

SAN JACINTO ESTATE, LIMITED.

CHANGES IN THE MANAGEMENT OF THE ESTATE, AND THE DEVELOPMENT OF THE TIN MINE—A RICH PROPERTY—ENORMOUS RESOURCES.

A GENERAL MEETING of the shareholders in the above-named company was held at Winchester House, on Wednesday.

Sir John Stokes

presided.

The SECRETARY (Mr. D. L. Schönberg) read the notice convening the meeting.

DEVELOPMENT OF THE TIN MINE.

The CHAIRMAN: Gentlemen, you have all received the report of the directors, which accompanied the notice of this meeting—the report and accounts for the year ending June 30, 1891. In that report the directors informed you of the change they have thought it incumbent upon them to make in the management of your property in California, and not only a change in the management, but a change in the system of developing the mine, which was recommended by the former manager, and which, in the opinion of the expert we sent out, was not the best calculated to give an early return from your property. The old idea was to construct reduction works in the valley, and to take the ore down to the works to be there reduced, but considering that the road had not been made, and that the machinery could not be got to that point for want of roads, we adopted our expert's advice, and have had the machinery erected at the mouth of the mine. The main efforts of the management there for the last four months has been towards the development of the mine itself—(hear, hear)—without regard to the dam, which we considered to be a diversion of your means to an object which, although eventually likely to be of very great value, was not the main and principal object that we ought to have in view—viz., the development of the tin mine. The result of this change has been that the machinery has been erected at the mine's mouth, and properly housed. Of the stamping power we have in the country, one battery only has been erected. We have four batteries, but it was not considered advisable in the first instance to erect more than the one, which is sufficient for crushing the ore which you can at present raise from the mine. That machinery has been erected, and additional concentrators have been procured and also housed in, and the

WORK DONE

in the mine since our present manager has been in charge is shown to you on this diagram. You will observe that the blue colouring represents the old workings. I may say that before the company took over the property there was scarcely any work done in the mine. All the attention of our previous manager was devoted to putting up buildings and constructing the dam. You will observe the main shaft and the Williams shaft—the two old shafts. The main shaft has now been cut down 15 ft. to this lower level, and 60 ft. below that to another level which has since been begun. The Williams shaft has been sunk 30 ft. to meet this level, and 30 ft. below it, and is still going down. This winze, of which 65 ft. was sunk, has been carried 55 ft. lower, and it has got into a paying lode with a very good prospect. This gallery has been driven up to the Williams shaft and beyond it 65 ft.; it passed through very good ground here, but the quality subsequently fell off, but it has now got into very good ground again at the extremity of this gallery. These two old shafts merely show you the sections of two other shafts which have been sunk, and which are situated to the south. Through one of them a gallery has been driven to meet the workings shown on the section here. In the same way these round spots are cross-cuts being driven from this section in a westerly direction to meet some of these workings. So that you see a considerable amount of work has been done in developing the mine. It is not, however, sufficient just to have these few galleries and shafts that you see, but it is necessary to cross-cut and intersect the lodes in order to get at the full value of your property. You will naturally want to know what work is being done, and what is likely to be done in turning the ore into tin. At present, as I have told you, we have only one battery at work, and the furnaces have given us a good deal of trouble. The furnace originally put up was too weak for its purpose, and we are now building a much stronger one—in fact, it is completed, and they hope to begin smelting next Monday.

25 TONS OF TIN.

Capt. Harris's confident expectation is that he will turn out 25 tons of tin this month—Dec. The original furnace was an experimental one, and it was not calculated to bear the strain of the heavy quantity of ore

that we put into it. Then we are building a second furnace near the first one, in order that in case of any accident occurring to the one we will have a second one to fall back upon, and as our quantity of black tin crushed and dressed is increasing, we hope that the two furnaces will in a short time be at work. Our manager insists that we should "direct our main efforts at present to developing—to getting as much ore exposed and ready for work as possible." Therefore, we are driving these extra shafts and galleries in order to have a larger field from which to draw the ore. We have put up one battery, but the engine that works it is sufficient to work four. This battery is capable of crushing 48 tons of ore daily, which, at a very moderate percentage, say 5 per cent.—some is richer and some poorer—ought to give us nearly 2 tons of metal a day. Two tons of metal a day, which sells at 100% a ton, means a very fair result for the present.

A SHAREHOLDER: 2 tons per battery?

The CHAIRMAN: Yes, per battery; but we have on the ground four batteries. Therefore you will see that as we develop the mine and increase the quantity of ore that we bring to the surface, we have the means at hand of crushing four times 48—in other words, of producing very nearly 8 tons of metal per day. When that moment arrives I am quite certain that

WE SHALL HAVE A VERY SATISFACTORY REPORT

to make to you. The amount of work we are doing now is so devoted to development, that I could not tell you exactly what it costs to turn out a ton of tin, but I do not believe that it is at the outside more than one-fourth of the selling price. Now, as regards the dam. As we have told you in our report, we have, unfortunately, been misled as to the solidity of the foundation on which it rested. We do not think it wise at the present moment to spend any more money in further prosecuting the dam. We must wait until we have got the mine in full swing, and then it will be time to turn our attention towards procuring that great water supply which lies at our door, and which is a valuable property, and will be one of our great sources of revenue at a future date. Naturally, to fully develop the mine we must have

MORE MONEY.

We hope to place more debentures. We are not asking for a fresh issue, because we have not yet placed the whole of the debenture issue of 50,000% authorised in July last, but it is necessary, in order to properly develop the mine, that we should have further sinews of war, and I can only hope that the remaining 6 per cent. debentures will be taken up to enable us to prosecute it to its full extent. There is no doubt that the mine is everything that has ever been said of it. The metal is under our feet, and it merely wants bringing to the surface. We have had the most convincing proofs of that, and I shall introduce to you presently a gentleman, who is a civil engineer, just over from California, where he has lived for many years. He is also a mining engineer, and has fully inspected the mine, and he will confirm, I am sure, every word I have said to you, and every word that Capt. Harris has ever reported to us as to the value of the mine. There are one or two other sources of revenue which are beginning to tell. We have leased a portion of the grazing ground for over 1,000% a year, and we have now a good prospect of the Gavilan Gold Mine being properly worked. It has been transferred from the hands of those who first took it over to a company. We hear they are now at work, and we hope in time to be getting 20 per cent. of their gross returns. I have now said everything that occurs to me at present, and I shall be very happy to answer any questions to the best of my ability. I now beg to move, "That the statement of accounts and report submitted to the meeting be approved and adopted." (Applause.)

QUESTIONS.

A SHAREHOLDER: Have you anything to tell us with regard to the town lands in the new River Side?

The CHAIRMAN: Nothing has been done so far with regard to the town lands.

Col. SURTEES (director): I have great pleasure in seconding the motion.

The Rev. F. TAUNTON: I should like to ask a few questions. I wish to know how, when, and by whom the first directors are appointed in a company like this? Are they self-elected; and do they vote their own remuneration?

The CHAIRMAN: Excuse me, but you are hardly speaking to the point. (Hear, hear.)

Mr. TAUNTON: What do you mean by "the point?" I asked for the information.

The CHAIRMAN: The directors are named in the articles of association.

Mr. TAUNTON: Why? Oh! (Laughter.) I think I am right in saying that they hold office until July next, when it will be the duty, and probably the interest, of the shareholders to elect their own directors. (Laughter.)

The CHAIRMAN: Will you speak to the resolution before the meeting?

Mr. TAUNTON: A question has cropped up recently, as to how companies like this are placed in respect of holding land in the United States. As you are probably aware, a case was tried in Texas, I believe, as to whether the right and title of an alien or foreigner was good, and in that case it was decided in favour of the foreigner—the Englishman—but it was given upon purely technical grounds.

The CHAIRMAN: I must beg you, sir, to speak to the point. We are not on that subject at all.

Mr. TAUNTON: It affects the interests of this company. The CHAIRMAN: I put it to the meeting, whether this is the point before us. (Cries of "No.") If any gentleman wants to ask about the report and accounts I shall be most happy to answer him. Perhaps it would be as well if I asked Mr. Purcell, the engineer to whom I alluded just now, to tell you what he knows about the mine. (Hear, hear.)

IMPORTANT STATEMENT.

Mr. PURCELL: At the request of the company I visited the property several times during the months of Sept. and Oct. Of course, I had heard of your property, and I was conversant with the neighbourhood before that. I found that you had between 45,000 and 49,000 acres of land there, consisting partly of hill land and partly of land suitable for agricultural purposes. In the hill land your tin deposits exist. Of course, it is a very vital question with us in California to know whether this tin industry is going to

be as valuable as we all hope it will; consequently, it is a matter much discussed there. The tin lodes themselves number in all about 30, running parallel north and south, and extending about $4\frac{1}{2}$ miles across. Of these lodes only one has been worked so far in the low part of the mine. I went down into it with Capt. Harris and I heard his views, and he is a most experienced tin miner. The question that always troubled us there was

THE QUESTION OF WATER,

because these mines are on the top of high hills, and there was a doubt as to whether enough water would be got for the purpose of cleansing and reducing the ore. I looked into that matter very carefully, at Capt. Harris's request, and, from my knowledge of water in that country, I came to the conclusion that he would find no difficulty in that respect. I told him I thought the water would increase as he went down, and that probably they would soon be running that water to waste. Since I have been here his communications have endorsed the view I took; the water is increasing, so that all trouble in that direction may be set aside. There was then at work the experimental five-stamp American mill, doing very good work with a small amount of labour, and they had just erected the new pneumatic stamps, which went into operation about a week before I left. The machinery itself struck me as the most perfect that I had ever seen, and I anticipate that its work will prove most satisfactory to the company. The machinery is quite a new idea in our section of the country working that class of stamp. After the ore was stamped it was run over American vanners for the purpose of concentrating. These were of three varieties, and it answered exceedingly well.

THE AMERICAN TIN MARKET.

Of course, after the metal is produced the question of marketing is very important, and on that point it is well to remember that the present American Ministry have what is called a Tariff Bill, which will in 1893 put a duty of 4c. per lb. on every ton of foreign tin imported into the United States. That will make your mine about the only source of supply for the American tin market, which is a very important matter. To the south-east of your property there are fruit lands, which consist, I believe, in from 10,000 to 15,000 acres. I drove over it, and found that it is the same class of country that has made the celebrated River Side Orange district, the value of which reaches very high figures. Of course, the first thing you need in order to make that of value is irrigation, but there are several sources from which that can be obtained. There are to the north-east two reservoir companies, and another is in contemplation. These companies charge \$14 per acre bonus for putting the water on the land, and \$2.80 annual rental for the service, so that it would not increase the price of your land very much when you come to put it on the market. There is, however, no immediate necessity for the development of that particular portion of the estate, because the mines of your neighbours are earning you what John Stuart Mill calls "the unearned increment," and when you do bring it forward in a few years hence you will have a better market than now. The company own also

A WATER CLAIM OF 2,000 MINER'S INCHES,

a very valuable asset, which will in the future bring the company a large amount of money. In our part of the country water sells at from \$1,000 per miner's inch to \$5,000. The question of interest as far as regards tin, and the one that seemed the most important to solve, was whether it was going to be a permanent thing—that is to say, if, after going down, the ore field was to remain or continue to increase both in extent and value. So far as Capt. Harris's investigations have gone, everything has tended to give that impression. I, myself, picked a piece of ore out just below the lower level—they were in with the cross-cut about 25 ft.—and the result of that mine was most magnificent. Capt. Harris felt greatly elated. Since he has proceeded, however, the ore has fallen off somewhat, but that is characteristic of all mines—you cannot work a mine without finding in some sections the lode is a great deal more valuable than in others. It is quite possible, as he goes on further, he will get to the higher grade again. Meantime the average of the ore there is higher than it is in Cornwall, consequently, from the amount of the ore taken out, the return is greater.

A SHAREHOLDER: What was the average of the ore that you saw at the end of that level—the 55?

Mr. PURCELL: Capt. Harris thought it would go 30 per cent.

A SHAREHOLDER: Do I understand that Capt. Harris is driving a level to intersect the shaft?

The CHAIRMAN: Yes; but he has not intersected it yet. He expects, however, to do so in the course of a few days. He is 114 ft. from the old workings and 120 ft. from the other workings.

The SHAREHOLDER: What has he in ore itself in the shaft?

The CHAIRMAN: At that time he had not made any test of it.

Mr. PURCELL: Capt. Harris told me that he was satisfied this was

GOING TO BE A PERMANENT AFFAIR.

A SHAREHOLDER: What about the water?

Mr. PURCELL: The water was increasing, and has increased very much since I left. It was my opinion that it would do so.

The CHAIRMAN: Telegraphing on the 28th—five days ago—Capt. Harris says: "Sufficient water available to run all the machinery working day and night; water increasing."

A SHAREHOLDER: That was from one battery?

Mr. PURCELL: When I was there he had sufficient water to run all the batteries of the five stamp mill—any increase there is in excess of that.

Mr. ALFRED CONDER: I think the names of the directors should appear upon the report. In looking over the balance-sheet I have been struck with the enormous outlay on buildings, &c., and the very small outlay upon the development of the mine. It is not my intention to cry over spilt milk. Mr. Robinson seems to have played

DUCKS AND DRAKES

with the capital of the company, and all the money that might have gone to develop this magnificent tin property appears to have been expended upon works that will return nothing for the present—7.033%—which for the present is to lie idle. That, however, is done, and we have to bear the brunt of it. Nevertheless, I think the experience you have had will teach you that it is

very important that you should devote all your attention to the mining interests, and if the mining interests are such as have been stated by Mr. Purcell, I think we have sufficient in that one property alone to make a magnificent return, irrespective of our other properties. There is no question whatever of the value of the tin, because we have it on the clearest evidence that the average percentage of tin ranges about 5 per cent. Anyone acquainted with Cornish mining knows that the average there for all the Cornish mines is about 2 4-10ths per cent.; therefore, if we only have an average of 5 per cent., that tin property will be one of the most magnificent that the world has ever seen. Mr. Purcell, however, says that they came upon tin which gave as much as 30 per cent. It seems to me almost incredible—it is like solid tin. I understand you have a man in Capt. Harris who is thoroughly acquainted with tin mining—a Cornish miner himself—and I think the shareholders have every reason to be satisfied that we are now on the road to fortune. With regard to the water, 2,000 miner's inches are spoken of as being in the property of the company. Is anything being done towards getting some return for that?

Mr. RAPIER: It seems to me that we have got a splendid property, and it only requires a little energy, applied in the right place, to send over a good many sovereigns for distribution as dividend—a point which we all desire. I understand that one battery turns out 2 tons of ore per day.

The CHAIRMAN: I said it deals with 48 tons, which, at 5 per cent., yields nearly 2 tons of metal.

Mr. RAPIER: At what period do the managers expect to have the four batteries, which they already possess, at work? They have the batteries and the engine power, and with all these shafts and adits and galleries and tunnels, it seems to me that there ought to be a considerable face of ore very soon exposed; and to haul 48 tons of ore out of the mine per day is child's play. Can you give us any idea when we shall be able to haul 500 or 1,000 tons of ore per day?

Mr. FREEMAN: Mr. Purcell has referred to

THE MCKINLEY TARIFF ACT,

which, if I understand rightly, provides that if 5,000 tons of tin can be produced before July 1, 1891, the duty referred to will be imposed.

The CHAIRMAN: It refers to black tin, not tin metal.

Mr. FREEMAN: If it does not produce that amount the terms are, I presume, null and void. We have seen enough of the McKinley Tariff Act to know that if there is a chance of this law becoming null and void it will never be passed again. Therefore, the question we, as business men, have to look at is what steps shall we take between this time and the time specified to make certain that we have sufficient product. I need not say that the imposition of this duty on foreign tin would treble the value of our property. I heard a few days ago that there were some Americans anxious to purchase this property. I think if we could get a downright good offer, which would ensure the capital of 100,000£, it would be only child's play on this estate. We should look twice before we refuse such an offer. If we cannot get such a bid from America, let us form a subsidiary company here to take it up and work it. As regards Mr. Robinson—I have little doubt he is the scapegoat for his own sins. I notice in the accounts the item of mines development, 1,594£. for the year; the money spent on machinery and plant, 16,000£.; buildings, 10,000£.—in all upwards of 30,000£. I wish to know if Mr. Robinson misappropriated the monies that the directors intended for the development of the mine, or whether the directors left him to "go as you please" without any direction. We bought this property as a tin property—not as a land speculation, and we want to develop it as a tin property. I say that before we spent 30,000£. on putting up machinery, we should have developed the mine and ascertained what there was on our property. However, we are

ON THE RIGHT TACK

at last, and I hope we shall stay there. A leading tin manufacturer and smelter from the South of England told me the other day "If the facts are as you state them, the San Jacinto Mine is not the mine of a year—it is the mine of a century," and I believe, gentlemen, we have, as far as tin goes, the mine of the world. (Cheers.)

A SHAREHOLDER: When ordering the machinery, was any date given when it should be delivered; and was any penalty attached to its non-delivery at that date? I understood from you once before that the great delay in the development of this property arose from the machinery not having arrived in time, and when it did reach America it was delayed by floods and other accidents. I think the shareholders should know if there was any fault which would lie at door of the manufacturers.

A COMBINATION TO CAPTURE THE PROPERTY.

Mr. ROSS: With reference to Mr. Freeman's remarks, I may say, knowing the property very well myself, that during the last year or year and a half there has been a combination in France, Belgium, and the United States to capture this property. They evidently thought that if the money put out in good sovereigns by English shareholders here could be wasted in development—leaving the property alone—as they knew the actual value of the mine—they thought they might get hold of it on easy terms. I do not want to impute anything to Mr. Robinson; he is known as a good manager, but an extravagant man. I know there are people in America who are sufficiently interested in our property to come on the market and invest in it. A syndicate has also been organised which has sent out two medical men to examine South Riverside for putting up a sanatorium. They have reported favourably upon it, but their report has not been made public, as they hope to get the land at a low price. The Californian people have known this property for a good many years. It was originally the property of an old Spanish marquis, who had grazing upon it, and he was quite content to sell it for a very moderate sum of money. Eventually it was brought to this country, where it was purchased, much to the annoyance of parties on the other side.

THE CHAIRMAN REPLIES.

The CHAIRMAN: I should like to draw your attention to the fact, that although the item of 1,594£. is set down for mines development, the permanent works, including machinery and plant, were all put up for the purpose of developing the mine. I am asked if we had any return for our water. No; we have not, because the works that we put up to catch the water proved to be utterly inefficient and

badly founded. The water ran through the wall, and we could not possibly have proceeded to build a dam upon it. We shall have to pull the wall down when we have money enough to build a dam. As regards the gold mine, it is leased for 10 years at a low rental, but we are to have 20 per cent. of the gross profits of the gold workings. As to irrigation—of course we cannot irrigate till we get our dam. Mr. Purcell has told you that there are existing reservoirs from which the fruit lands may be irrigated, but we have not gone into that point yet. Mr. Rapier asked when the four batteries would be at work. It depends upon two circumstances—when we get ore, and water enough to work them, and when we have enough money to complete them. We have the batteries on the ground for every head that is put up, but we have to get a certain number of concentrators for dressing the ore, which involves expenditure. Mr. Freeman is quite correct about the 5,000 tons and the McKinley Tariff. 5,000 tons of cassiterite means a great many more tons of ore.

MR. ROBINSON'S POSITION.

I have been asked if Mr. Robinson misappropriated the money, or was allowed to spend it unchecked. Mr. Robinson, as you are aware, came over here 14 months ago, and made a report, in which he laid down certain plans for developing the mine. He recommended us to erect our reduction works in the valley, to be worked in the most economical manner by the water we could get from constructing the dam. The dam, therefore, was to have a double use—it was to help to work the tin, and to give you the value to be got from these 2,000 inches of water, which, when we can get it to work, is worth thousands a year to us. Therefore, the expenditure seemed to be justifiable. Mr. Robinson was instructed, point by point, as to the amount of expenditure he was to make, and was told to send us home month by month a detailed account of how he was spending the money that was sent to him. I may say that the board were not entirely responsible for the appointment of Mr. Robinson as general manager. He was a part of the purchase; the agreement under which the estate was bought stipulated that he was to be the general manager, and thus he was saddled upon us. To all appearance he was a most capable man; his reports at that time, and the conversations we had with him, were of a nature to make us believe that we had the right man in the right place, and, naturally, when you trust a man with a duty you do not interfere and meddle with him at every turn. Finding, however, that we could get no reports, or satisfactory returns from Mr. Robinson, we sent out Capt. Harris in the month of Feb. We believed that the mine was being developed, as Mr. Robinson had been instructed to develop it. Mr. Robinson, here in this very room, promised you that by Mar. 15 you would be turning out 200 tons of ore a day. We gave him all the means of doing that, and it was only when we got the first idea that the mine was not being worked as it should have been that we sent out Capt. Harris. I say that we have done the right thing, and I do not know what more, directors could have done. I do not believe Mr. Robinson misappropriated any of the money, but that he mis-spent the money, I am convinced.

MACHINERY.

Mr. Mozley has asked a question about the machinery. The machinery was delayed in its transmission, late in 1890, from Cornwall to Liverpool, for shipment, by the bad weather preventing its being forwarded, as Messrs. Harvey and Co. had expected. Nor could it be hastened by rail to Liverpool—the traffic was so congested. The delay was about two months in arrival of the first parcel. In Feb. the floods came (22nd); the roads were then impassable. Nor were the foundations ready when the machinery did arrive. I will ask my colleague, Mr. Mitchell Henry, to say a word or two in reference to Mr. Ross's remarks.

Mr. CONDER: You did not refer to my question as to the names of the directors appearing on the reports.

The CHAIRMAN: You are quite correct; it is an oversight. I may tell you, gentlemen, that Mr. Mitchell Henry has come on the board to fill a vacancy. We consulted him, as one of the largest shareholders and debenture-holders, and we thought him a gentleman who could represent your interests. He has proved a most valuable colleague.

A DIRECTOR'S VIEWS.

Mr. MITCHELL HENRY: Mr. Chairman and gentlemen, before I deal with what Mr. Ross has said, I should like to be allowed to inform you, as the chairman has done, that I had nothing to do with the direction of the company up to the time that these accounts represent. Mr. Robinson was the manager, and I myself had a good deal of interest in the company. I had means, which I might call unusual, of learning from America what was the real value of the San Jacinto Estate. I, therefore, put money into it, and made many enquiries in the office of the company. Like other people, I was greatly dissatisfied with the expenditure. I looked to the development of the tin mine, and I could not, for the life of me, understand why money was being diverted to something that appeared to be other purposes—that is to say, to the building of this very expensive dam. I am bound to say that since I have been a director I have made it my duty to go through every letter and memorandum that had been made before I became a director, and I will say this, that, in my belief, directors never before were placed in such a position as yours were by Mr. Robinson. I believe that they were

UNABLE TO AVOID OR CONTROL

what was being done. With respect to the dam, it must be remembered that for the development of the mine itself Mr. Robinson maintained then, and he maintains now, that the erection of the dam is absolutely necessary. He said that the mine could not be worked except by that dam, which is situated many miles away from the place in which the tin is. He believed the tin mine would be a dry mine. He holds that view now, and, therefore, one of his objects in erecting the dam was to work the tin mine. When Capt. Harris was sent out from Cornwall, he differed altogether from Mr. Robinson in that view. He said, "I believe this to be a wet tin mine, and if it is not a wet tin mine you will have no tin." He therefore proposed that the machinery, which had not at that time been erected at the dam, should be removed to the mouth of the mine. Well, that was done. Mr. Purcell, who is especially a water engineer, has told us that he knows it to be a wet mine because it is a water bearing

strata, and you will see the enormous importance of this discovery, if I may so call it. Mr. Robinson said you could not work your mine unless you had the Temescal dam several miles off, and he proposed to run a tunnel from this dam up to the mountains at a cost of several thousand pounds. The directors, however, accepted Capt. Harris's view, and have put the machinery at the mine's mouth, and they are now getting plenty of water to work it. The property is of

ALMOST UNTOLD VALUE.

It was in litigation for many years, and, therefore, the efforts of American gentlemen to purchase it did not succeed. We have purchased it and we now know its value. The Americans would be very glad to buy it and develop it, not merely for commercial, but also for political purposes. As to the McKinley tariff, they even say that the Presidential election turns upon this property. (Laughter.) If you can find tin enough at the San Jacinto estate to give a large production in America, you will have the McKinley tariff putting a duty upon all foreign tin, and that is the object of one great party in America. The object of another party, the Democrats, is to prevent that being done, and they have constantly circulated accounts to the detriment of this property; but it is now admitted that *there* is the production of tin if you take it out. During the month of Dec. there will only be 22 working days, because the furnace will not be ready, but Capt. Harris telegraphed yesterday that he would turn out 25 tons during the month. Now, 25 tons of tin is one-fifth short only of the whole amount of tin that has been produced from the whole of the mines, not merely during the time this company has had them, but when they were worked by other people. The deeper the mine is going, the more valuable it is becoming, and I should be very sorry to see this property slip out of the hands of Englishmen. We shall have plenty of offers for it, and if offers are made to such an extent as will give you a great value for your shares and still enable you to have an interest in the property, I, for one, as a business man, shall favour them, but I hope we shall not sell it for an old song. Every attack will be made by cajolery and other means to get this property out of your hands. I think I ought, if you will permit me, to pay

A TRIBUTE TO MY COLLEAGUES.

When I came on the board I was very much dissatisfied, and I thought the directors were not sufficiently alive to what ought to be done. After an experience of six months, however, and after inspecting all the correspondence, my respect for the directors has been increased immensely. I know no chairman who is more careful or more skilful than the gentleman who is now in the chair. He is a practical engineer, he has had vast experience, and he is so conciliatory, so wise and so diligent, that I do not think you could replace him by anyone I know. Everyone of my colleagues is most attentive to his business, and we have on this direction Mr. West, who has immense experience in Cornwall as to tin properties. At the present moment we have three things in our favour. We are working the tin deposits; we have Capt. Harris—probably one of the best miners that ever went out from Cornwall; we have Mr. Stephens, the purser, an accountant of very great skill, and of whose integrity Mr. West can bear testimony; and we have had the good fortune to secure the services of Mr. Purcell as superintending engineer. He is thoroughly acquainted with every inch of ground, and, what is more important, every inch of man, that is to be found in that place. He is able to put his finger on the people with whom we ought to do business, and will defend us where necessary. With regard to what Mr. Ross said about the combination in Belgium—I am very glad to hear it. The more suitors there are for our property the better it will suit us—(laughter)—because the better price we shall get. But let me entreat you not to be content with simply playing with your property. We have only one shaft, 170 ft. deep. There ought to be five or six mines open on that property, and if you give the money to your directors you will have them.

A PROPHECY.

If we are supplied with the funds to do it, I have no hesitation in saying that by this time 12 months you will all have made your fortunes, and have permanent fortunes in the development of this tin property; but you must supply money to open fresh mines. If you do that, the erection of the dam, and the selling of the water power, and the irrigation will follow, and will be a very secondary matter, in my opinion, to the great mineral wealth which is at our feet. (Cheers.)

The resolution previously put and seconded was then carried *nem. con.*

Mr. LEWIN MOZLEY moved the re-election of Messrs. Monkhouse, Goddard and Co. as auditors for the ensuing year, the fee to be fixed by the board.

Mr. CONDER seconded, and the motion was carried.

A vote of thanks to the chairman and directors terminated the proceedings.

THE NEW PIERREFITTE MINING CO., LIMITED.

A DISCUSSION RESULTS IN A DECISION TO CALL A FRESH MEETING.

AN extraordinary general meeting was held at the Offices of the company, 154, Palmerston Buildings, on Wednesday, for the purpose of considering, and, if thought fit, passing resolutions for the transfer of the business, property, estate and effects of the company, with such exceptions as the directors might think fit, to a company about to be formed with a capital larger than the capital of the New Pierrefitte Mining Co., and for the approval of the terms of the agreement under which it is proposed to carry the transfer into effect.

Mr. William Grover Ashby

(chairman of the company) presided.

Mr. J. R. COOMBS (secretary) read the notice of meeting.

SLIGHT MODIFICATION OF MR. BULLIVANT'S SCHEME.

The CHAIRMAN: Gentlemen, the extraordinary meeting held this day fortnight was called, as you are aware, for carrying out a scheme which was most fully explained at that meeting by Mr. Bullivant. The resolution, I believe, was passed unanimously, and as it gave the directors power to make such modifications as they thought desirable,

I may state that they have since considered it better, in the interests of the company, to slightly modify the terms which Mr. Bullivant then laid before the meeting. The alteration is but a simple one, namely, that instead of the present company retaining any amount of cash that might be in hand at the time of the liquidation, it is all now to be handed over to the new company, with all stock in trade and everything else; and instead of our receiving four and a half shares for each one of 5*l*., we now suggest that

WE SHOULD RECEIVE FIVE SHARES FOR EACH 1*l*. SHARE.

This will materially simplify the matter. There will be no cash transaction necessary to be carried out. It would have been difficult to have divided the cash in hand *pro rata* amongst the shareholders, and our legal adviser has most strongly recommended our adopting this plan. I think that there is no other alteration we intend asking the meeting to agree to, and, therefore, it only remains for me to move the first resolution, as above.

Mr. M. W. BULLIVANT: I have much pleasure in seconding the resolution, and will just add that the changes made meet with my hearty approval. After a consultation with our solicitors, we are advised by counsel that it is desirable to carry out the distribution of cash in the way now suggested—that is, instead of dividing any cash at all, to hand that cash over at the time the new company is formed entirely to the new company, taking for that a proportionate number of shares. The shares now given will be 175,000, and we shall form a new company in 250,000*l*., which will leave us a large margin of cash to call up, as we may require it for the development of our further concessions.

The CHAIRMAN: I omitted to state that the other alteration is that our capital in future will be 250,000*l*., and we purpose calling up the additional capital, that is to say, 175,000*l*. of share capital transferred from the old to the new, and 25,000*l*. cash to be for working capital. We shall have also in hand such capital as the old company may hand over for the purposes of the new company.

Mr. BULLIVANT: It will be from Dec. 31 instead of Sept. 30, and those terms are embodied in the agreement now to be submitted.

Sir ROBERT HARDING: The notice intimated that an agreement would be submitted to the meeting.

The CHAIRMAN: That is here now.

A PROTEST.

Sir ROBERT HARDING: I have, with great respect to the directors, to offer my formal protest against that resolution being put to the meeting. I take objection to this meeting as being informal, and have reason to believe the notice convening it, although sent out apparently by order of the board, was never before you as a board of directors. I venture to say, with great respect to your legal advisers, that the course you propose to take is erroneous. The article referred to in the articles of association, as I read it, contemplates a *bona fide* sale of these properties. Now, no such *bona fide* sale is contemplated, but you are going (and I read Mr. Bullivant's circular with very great care) to sell to yourselves. The word I am about to use must not be taken in an offensive or personal sense, but I characterised this as not an honest receiving. You propose to put before the public shares as if they were 1*l*. paid, whereas no such payment has been made. I again venture to say that the process of re-construction can only follow destruction. You must first, as I think, proceed under the statute to re-construct. You must pass resolutions to wind-up, and the liquidator then can sell. I venture to say that if you proceed in any other way, I am advised to

APPLY TO THE COURT FOR AN INJUNCTION

to restrain you. With some of the gentlemen of the board I have been acquainted with for a good many years, and, therefore, I tell them what they might do, and if they did it I should not take any hostile action. The object, as I understand it, as sought by the gentleman who has moved in this matter, is to make the shares of a more marketable value at a reduced price, because I take it, and am so advised, that these shares at the present time, having regard to the dividends paid, are worth 6*l*. each. I am told you cannot get 6*l*. a share for them, but I am not a seller. I am content to let well alone. I am content to take such dividends as may arise from time to time, but I am not content to become a member of a new partnership. If you had proposed from that side of the table to reduce the shares to 4*s*. or 5*s*., to give the present shareholders four or five shares for every 1*l*. that they now hold—that is a proceeding I, as a shareholder, could not have demurred to, and that would have accomplished the object which the mover of this scheme has had in view, because the shares would then have been of a reduced value, and saleable at 1*l*. or 25*s*., if a proper market were kept for them. If that course were adopted it appears to me it would be competent for the directors to sell the Estaing concession to a company, taking payment for it in shares, and if the capital were 100,000*l*., and they took payment in 35,000*l*., part of the other capital being called up to work it, that would leave the Pierrefitte intact, and would not interfere with the dividends the mine would give. It is very important for those who have only a life interest in shares, because by your contrary proceeding you are going to water that capital, so that the dividends which have hitherto been paid must be reduced to pay capital with in the new company, which will not be productive for years. I have paid for my experience in mining, so I know something about it, and I think there is no gentleman familiar with the Pierrefitte Co. who can differ from the view that it will take several years to develop Estaing before it can pay dividends. These are some of the points I desire to bring to your attention to-day.

The CHAIRMAN: I think, with regard to one observation you have made, you are incorrectly informed. There was a resolution, and it is on our minutes, that this meeting should be called. With regard to the other matters, I must leave our legal adviser to speak.

Mr. NORTH: There was a resolution that the meeting should be held to-day, at which the resolutions, which were come to at the last meeting, should be submitted formally, but Sir Robert Harding is right in saying that these resolutions submitted to-day have never been before the board in the form in which they now are until now. That has been because we have had no board meeting until to-day.

A SHAREHOLDER: They have been adopted.

The CHAIRMAN: Yes, to-day.

Sir R. HARDING: And you send out your notice "by order" before

these resolutions have really been adopted by the board. You must forgive me if I am technical, and take technical objections, but I am a trustee, and must consider what I ought to do to protect myself. If any injunction has to be taken other technical matters will have to be gone into.

Mr. SUMNER: Would the shareholders suffer?

Sir R. HARDING: I cannot tell what they will suffer. You are asked to approve of the agreement, and it can hardly be supposed that shareholders could follow an agreement read in this room of this important character, depriving shareholders of their property, and purporting to sell it to new persons. I have not heard yet whether any new company has been incorporated. I do not know who are to be the purchasers, or directors, or anything about it. It is all in the air. I might find, if I were not to protest against this, that the scheme was one which was to be condemned on every point. Under the statute a dissentient shareholder is, as your directors will be advised by their solicitor and counsel, entitled from the new company to have

PAYMENT MADE TO HIM OF THE VALUE OF HIS INTEREST

in this concern, and I ask, Mr. Chairman, this question—do you in this new scheme provide the 30,000*l*., or 6*l*. per share on the shares I represent? (Laughter.) That is something like the amount I am advised I shall recover from the company.

The CHAIRMAN: I can give a negative answer to that at once. In the first place I do not know how you arrive at 6*l*., for no such sum has been talked of.

Sir R. HARDING: We have been in receipt of dividends of 40 to 60 per cent., and allowing the difficulty at making an investment at 7½ per cent. I do not think 6*l*. per share is a high price.

Mr. SUMNER: This year the dividends are 40 per cent.

Sir R. HARDING: The year is not over yet, and I am not disposed to vary my position. I am satisfied with it. As a trustee it is good enough, but I do not know where I may be lauded if it is altered.

THE ONLY DISSENTIENT.

Mr. BULLIVANT: I am happy to say that Sir R. Harding is the only shareholder who has raised the slightest objection to this scheme that I have proposed. For the first time he has proposed a scheme of his own.

Sir R. HARDING: This is a suggestion. I think when anyone finds fault to a proposal he should, if possible, be prepared with an alternative.

Mr. SUMNER: This is the first time you have done it, though you had the opportunity before.

Mr. BULLIVANT: Sir R. Harding suggests that instead of our proposal of putting the shares, as I proposed to do, in such a form as they will represent somewhat the value of our property, you should have our share capital divided into shares of 4*s*. to 5*s*. each, which will not anything like represent the value of the property. I think that is a very great mistake. He would suggest that we should still keep our capital at 35,000*l*., but, instead of making the shares 1*l*. he would divide them into four shares—still keeping the same value. I say that does not anything like represent the real value of our property, and my aim was to do this when I submitted my proposition. As far as the suggestion goes that we might afterwards form Estaing into another company, and call up fresh capital for the purpose, I think that, at the present time, most impracticable. The mining market is in such a state now, that to bring out anything new which people know nothing about, which has never paid a dividend, and which has done nothing, would only be to waste our time and money. My object was to get capital together by the scheme I proposed, and work these other properties, which,

WE ARE TOLD, ARE VERY VALUABLE,

The only way I can see to do that was to put before the public a scheme which, if they liked to take shares in, will from the start, and supposing we do no better than heretofore, pay them from 10 to 12 per cent. I think that a much more likely proposal than his, and I think so still. We are more likely to get our capital that way than by putting before the public a totally new mine of which they know nothing, and whose record is *nil*. I think the scheme I proposed is certainly a much more practicable one than that of Sir R. Harding. I adhere to it, and I am happy to say

WE HAVE THE WHOLE OF THE SHAREHOLDERS WITH US, EXCEPT HIM.

I can understand his objection as a trustee—that in holding a trust of this sort, it is natural he would like to keep things as much as possible in the same groove as at present. It is always unpleasant for trustees to sanction these alterations, but we are owners of our shares, and we feel that we should like to make something better of them. Now, I think my scheme is very much more likely to prove of advantage to the shareholders than the one that has now been suggested.

Sir R. HARDING: I did not make any proposal—simply a suggestion, that there was another way of meeting your requirements. As a trustee,

I MUST PROTECT MYSELF FROM PERSONAL LIABILITY;

at the same time taking care that the estate I represent is not damaged by the course of action the directors are pursuing. You can carry on your scheme under the statute, but the interests which I and others represent will have to be paid for in cash.

The SOLICITOR: We are not proceeding under section 161 which you seem to be referring to, but under the special provisions contained in the articles and memorandum (which he then read).

Sir R. HARDING: I consider that it contemplated a *bona-fide* sale, and am advised that this is not one. I am afraid you will be, compelled to proceed under section 161. This company will have to be wound up. I am very plain with you, and think you will admit I am likely to know something about the position of joint stock companies. You sell the property, and the company will have ceased to carry on business, which will be one ground for objection. A winding-up order must be obtained, and you cannot escape it. There is no purchaser, and there is no company formed; these have to be provided, and if you proceed I am advised this afternoon to apply for an injunction. It will be regrettable if legal proceedings are commenced.

The CHAIRMAN: You will cause them.

Sir R. HARDING: Yes, because I do not choose to be coerced into a position which may involve me in personal liability. You are going to issue shares as fully-paid for a large amount, when the actual amount paid is 35,000 shares at 1*l*.

Mr. BULLIVANT: We are putting a property before the public which is worth more than the capital called up, and even you say the shares are worth 6*l*., which we propose to offer at 5*l*.

Sir R. HARDING: You are converting that which I have into something I do not want.

Mr. BULLIVANT: That is a different matter. You say we are putting our shares into another company at too low a price, but my object has been to do that so that the shares might always stand at a premium. I look upon it that next year we shall pay double what we have done this year. (No.) Well, what I say I think; and then our shares of 1*l*., if we put them on the market to-day, will be worth considerably more. In any way you look at it I feel convinced that what I propose now is the only practical way in which we put our property before the public at its fair value. Do you not think it very absurd to keep our capital at 35,000*l*. when you say the mine is worth 210,000*l*.? I think you answer your own argument.

5,000 AGAINST 30,000 SHARES.

Sir R. HARDING: 1*l*. shares are marketable in many companies at a much higher price. I am not dissatisfied with my present position, and I represent nearly 5,000 shares.

Mr. BULLIVANT: We represent 30,000 shares.

Sir R. HARDING: I am partner in a certain concern with you and others, and am not satisfied with your new scheme. You may carry it out, but pay me out.

NEW MEETING TO BE CALLED.

The CHAIRMAN: I do not think it any use prolonging the discussion. (Hear, hear.) I am glad Sir R. Harding has given timely notice of what he intends to do, and as it is doubtful whether we may not have made a technical mistake about the meeting, it will be our duty to dissolve the present meeting without submitting the resolutions, and to call another which will be perfectly legal. (Hear, hear.) We shall only act under the best advice. After the meeting Sir R. Harding says he will apply for an injunction. Then the thing will be argued out, and if we are wrong there will be an end of our scheme, and if we are right we will go on with it.

THE JOHANNESBURG GOLD FIELDS, LIMITED.

A SPLENDID 15 FT. SEAM OF COAL IN THE ABSOLUTE POSSESSION OF THE COMPANY—THE PROSPECTS OF THE ZIERVOGEL PROPERTY AND THE RIETFOONTEIN FARM.

The second ordinary general meeting of this company was held at Winchester House, Old Broad Street, London, E.C., on Thursday, Dec. 3, 1891, for the following objects:—1. To receive and adopt the directors' report and audited accounts to June 30, 1891. 2. To elect three directors. 3. To elect, and fix the remuneration of, an auditor or auditors for the ensuing year. 4. To transact the ordinary business of the company.

Major J. W. M. Cotton

presided.

Mr. GEO. N. JONES (the secretary) having read the notice calling the meeting,

The CHAIRMAN said: Gentlemen, I conclude you will take the report and accounts as read. (Yes.) We have sent out circulars as regards what we are doing in South Africa, so that I need not occupy your time by going into details to-day, but I should just like to mention a few facts as to what we have been doing for the company. I may tell you that on our farm Rietfontein we have three homesteads, let at a rental of 100*l*., 50*l*., and 50*l*. a year respectively. Also one is let to a tenant on a five years' lease, who, in lieu of rent, undertakes during that period to plant and keep in good growing condition not less than

12,500 BLUE GUM TREES.

He is expected, however, to largely exceed that number, as by last mail advices he had already about 15,000 seedlings in the ground. All trees so planted and grown are to be the property of the company, less a small royalty at the expiration of the lease to be paid to the tenant. Our manager estimates that trees four years old will be worth 10*s*. each, and in one of his letters he writes:—"I hope you will let our owners (shareholders) see that the estate is going to become of great value." The company has reserved the mining rights of all the estate. All the tenants are planting gum trees, and one of them has 400 fruit trees planted. Now, as to the Bethlehem claims, which you will remember were handed over to us by the vendors on account of our not finding payable reefs on the Rietfontein property. I may state that this property of Bethlehem consists of 10 claims, six of which have been leased for coal at a rental of 19*l*. 10*s*. per month, but owing to breach of covenants, the lease has been forfeited by us, and the company is now in possession of a proved seam 15 ft. thick, and as regards quality, our manager writes:—"It is

REAL GOOD-LOOKING COAL,

as good, if not better, than any found at Boksburg." I may tell you with regard to the Ziervogel battery, which consists of 20-stamps, that 10 of these stamps have been leased to a neighbouring company, and that the terms are 12*l*. 10*s*. per week, running day and night, or 6*l*. 5*s*. day shifts only. One of my co-directors, who has been connected with the Ziervogel property I believe for a long time, will give more detailed information as to that property than I can give you, and I will ask him to give you that information. The crushings hitherto, as you are aware (we have published them), are disappointing, but we still hope when depth has been attained that it may turn out better, but our great hope, I may say at present is in the coal at Bethlehem block, which no doubt is

A VALUABLE PROPERTY.

I will now ask Mr. Elgood to give you the information which he has about the Ziervogel property. And afterwards, if any shareholder has any question to ask me, I will answer him to the best of my ability. (Cheers.)

VIEWS OF MR. ELGOOD.

Mr. E. C. ELGOOD: I may say that, as one of the old directors of the Ziervogel, we invited the shareholders of that company to come to this meeting to-day, thinking, as we did, that they have as much right to take an interest in the affairs of the Johannesburg Co. as have the old shareholders of that company. It is just as well that they should be here while I say something about the amalgamation of the Ziervogel property. The Ziervogel Mine was, as you know, one of those mines which we are continually coming across, where we find some ore which gives very good hope of rich crushings, and when we have assayed them and found them to contain a large amount of gold, it is subsequently found that there is not anything like that amount of gold in the mill. That led us, then, to the conclusion that our mine was like a great many others in the Randt, full of pyritic and refractory ore. Until a few weeks ago, there was no entirely satisfactory mode of treating that ore, but a machine is now in existence which is superior to anything that has yet been discovered. It has been invented by a Mr. Crawford, and, for treating the ores of the yellow reef, and other similar reefs in the Randt, it is believed to be superior to anything that has ever yet been tried. Of course, we, as a company, cannot afford to lay out large sums of money for the purpose of experiments, and we thought it wise not to go to an expenditure of from 300*l*. to 500*l*. in laying down a plant until we were quite certain that the machine will do all that is claimed for it by the inventors, and I am sure that you shareholders will approve of that policy. Meanwhile, as we do not desire to be in any way negligent or accused of standing still, which is a most fatal thing in all companies, and a certain current expenditure being necessary all this time, we have given the instructions to which your chairman has alluded, and which have resulted in the finding of this coal mine. At the first blush you may be disposed to think that we are departing from our original purpose of being a gold mining company and are becoming a coal mining company. It is as well sometimes to state one's opponent's argument for the purpose of demolishing it. The first thing we have to do is to live until those times which are certainly coming to the Randt, when cheaper production, increased railway facilities, and the fact of our learning, by the misfortunes, the inexperience, and, to some extent, the bad management of the past, will enable us to work with profit a very much lower yield of gold than has ever been possible in the past. But if we stand still, let our machinery rust, while paying current expenses all the time, we shall not be in a position, as a company, to meet and take the field when the good times come. Therefore it was that we instructed our manager out there—and he has loyally followed out our instructions—to make money in any case, and wherever he could. And what, gentlemen, has been the result? He has got somebody else to develop our coal mine for us; somebody else is sinking shafts and paying us 19*l*. 10*s*. per month for the privilege of doing so, while we have the right to take as much coal as we like from him, provided it does not interfere with his other orders, at as low a price as 9*s*. a ton. I do not think any better bargain could have possibly been made. I am sorry for his sake, though glad for our own, that he ever entered into that, because, unfortunately, he has found the terms too onerous and has failed, and we, as directors, are bound to be hard upon him, and to compel him to fulfil the terms of his lease. As has been told you by the chairman, he was unable to keep up his payments, and he forfeited what was once a piece of land of no particular value, but has now been developed into a coal mine. In so doing we have consulted the interests of the shareholders to the very fullest extent. With regard to this estate, when a year ago the amalgamation between the Johannesburg and the Ziervogel was resolved upon it was an arid plain, absolutely unproductive; in fact, I think the only thing that was happening out there was that somebody was paying a caretaker so much a year to see that it did not run away; now it is productive, and bringing us in 400*l*. a year. That is not a large sum, but what is far more important: under terms with our various lessees on the property they are planting these gum trees at a rate which I think Major Cotton understated. Whatever they are bound to do under the terms of their leases, they are, in fact, doing this—they are planting at the rate of 12,000 a year—not 12,000 during the whole term of the lease, and you, gentlemen, who are arithmeticians, can see the value of that at something like 10*s*. a tree. This estate, when the town of Johannesburg resumes its old success and prosperity, will be an outlet for the rich inhabitants, who will find there the only convenient and available spot for a residential property. To show you how very excellent this site is, I may tell you that we have had recent information that there are proposals to start on a considerable scale an aerated water establishment on our farm, because the water is so excellent and so abundant that it will be the very finest spot on which such a manufactory can be erected. We heard a year ago that there was no water at this place. I think the strongest comment that I can make upon such a statement or misstatement is that a resident in the Transvaal wishes to go to the expense of starting an aerated water manufactory, because of the

EXCELLENT AND LARGE SUPPLY OF WATER.

Gentlemen, I do not think I need occupy your time any longer. The chairman has promised to answer any questions on any other points. A discussion followed.

Mr. WATSON said that he had gone carefully through the accounts presented to them, and he thought that the shareholders should have had a profit and loss account, showing the expenditure of the company and its earnings. He thought the directors ought to husband the resources as much as possible, and he complained of the amount of the directors' fees. He considered that the fees of the London directors, as shown in the accounts, 1,125*l*., were far too much.

Mr. HULL said it would be interesting to the shareholders to know the exact amount of the unpaid calls. He had paid his own, and he considered that, in justice to those shareholders who had paid up, efforts should be made to make those who were in default pay up at once.

Mr. HIBBERT dealt with various matters of accounts, and asked for explanations thereon.

Mr. WATSON said that he would like to know the full amount of the unpaid calls which it was considered were good.

Mr. GRAY also spoke on the same subject, and urged that the secretary should be instructed to get in these calls as soon as possible, or that those shareholders who would not pay their calls should have

their shares forfeited by the company. He would be prepared to move a resolution on the subject.

A SHAREHOLDER said he would be willing to second such a resolution.

The CHAIRMAN: I am quite with you.

Major WEST complained of the London expenses in comparison with the South African. He did not think there could be a great deal of work in London. He noted that the cost for the auditors at Johannesburg was 5*l.*, and here 30 guineas. He thought there should be some diminution, and the resources made to last as long as possible.

Mr. HIBBERT asked a series of questions in regard to the Development Co.

In reply to these and other questions,

The CHAIRMAN explained that the sum of 99*l.* appearing in the accounts by cash at bankers and in hand was easily explained. That was the amount as at June 30, 1891, which was a few days before the final call became payable, amounting to 5,022*l.*

"LENDING OUT MONEY GRATIS."

He did not wish to blazon forth what he had done, but when the company was specially in want of funds some little time back, he put his hand in his pocket and found the necessary money, and when the call was made, he was repaid and did not ask any interest. As to the question of the directors' remuneration, what was put down in the report now presented was for a period of 18 months. Up to the end of Oct. of last year the directors were drawing 1,000*l.* a year, but the present directors had voluntarily waived half their fees, although under the articles they were entitled to 1,000*l.* a year, and they had only been drawing 500*l.* a year since October of last year. The directors could not afford to work for nothing as there was a great deal of business to do, and a great deal of trouble involved in looking after the interests of the company. In addition to having reduced their fees by 50*l.*, they had reduced the office expenses, which under the previous administration were 400*l.*, to 200*l.*. The auditors' fee used to be 30 guineas, but their auditors, Messrs. Cooper Brothers, have very kindly come down to 15 guineas. (Applause.) This would show that they were trying to keep the expenditure down as much as they could. Having referred to matters in connection with the Development Co. and the De Kaap Co., he stated that these matters were very carefully gone into in the fullest detail by the committee who were appointed, and Mr. Evans and Mr. Murray Griffiths had seen all the books, and had gone thoroughly into the subject. If Mr. Hibbert, who had raised this question, would like to go into details and see the books, he, the chairman, was willing to oblige him. It was the wish of the directors that everything should be known to the shareholders. They had nothing to keep back.

Mr. WATSON asked whether the chairman could say which of the directors had signed the cheque for the money sent out to the Development Co.

The CHAIRMAN, in reply, said that that cheque was signed by the old directors, but the money was not sent to the Development Co. It was sent to their manager (the Johannesburg Co.), Mr. Dale, and was misapplied over there. He could show any shareholders, who desired to see them, the whole of the cheques, and also the cables that their manager had sent home demanding money to be sent to him to carry on their property. They sent out that money, and he did not see how the directors were to blame, or how, in any way, they could take any responsibility in that matter. At the present moment the calls unpaid, including the present call, were 4,695*l.* 15*s.*, and the reason they had not pressed the shareholders generally had been because one of the shareholders had been fighting the company, and they wished the matter to rest until this case was settled so that it might be

A TEST CASE.

A SHAREHOLDER again raised the question as to the money sent to the Development Co., and

The CHAIRMAN, in reply, repeated that they had not sent any money to the Development Co. He could only repeat that all the money was sent to the manager, Mr. Dale, on the other side. He would be happy to show the shareholders, books, cheques, and everything.

A SHAREHOLDER wished to know whether the chairman could give them any idea as to when these arrears of calls would be paid.

The CHAIRMAN, in reply, said that it was a matter of disappointment to the board that they had not got these in before, but in reply to the question, he could only repeat that they had been engaged in litigation with one shareholder, and they wished this to be a test case with reference to other people. Mr. Elgood would give further details on this matter.

Mr. HULL: When is it likely to be settled?

Mr. ELGOOD said that the action was brought by a shareholder to have his name removed from the share list of the company on the ground of misrepresentation in the prospectus, which apparently he was now satisfied he could not prove. This shareholder had now evinced such confidence—or, rather, want of confidence—in his action, that although the statement of claim was preferred in May, yet despite all their solicitor's efforts they had been unable to get him to file the next pleading, and at this moment the company had a summons before the Chief Clerk to dismiss the petition unless the pleading in the case was filed within the next seven days. As the chairman had said, they could not proceed with other cases until this was settled, because other shareholders would have gone to the Court and would have obtained permission to defend while the present case was *sub judice*. That was the reason why they had not pressed shareholders until this case was settled. All the unpaid calls had interest running on them at the rate of 10 per cent., and that would have to be paid in addition to the call itself.

A SHAREHOLDER said that the poor shareholders in the country were not aware of this, although it might be well known in the City of London.

Mr. ELGOOD said that it would come heavily on those shareholders who did not pay their calls, because they would obtain the 10 per cent. interest as well as the call. When they had won that case they would go for these shareholders who had not paid their calls, and would give them very

SHORT SHRIFT.

The question had been raised as to the Development Syndicate, but

he appealed to the meeting that that was a thing past discussion now. It was gone into at very great detail at the meeting held last Oct. It had mainly to do with the previous board, whose action was then commented upon and found fault with. The present management had done all in their power to further the interests of the company, and, speaking for himself and Mr. R. A. Tiessen, who represented with himself the Ziervogel property, he assured the shareholders that they had done their best from Oct. last, and they were not in a position to speak of what was done 12 months ago. Complaints had been made as to the largeness of the London expenditure, in comparison with the African, but he wished to point out that during the first year of the existence of the Johannesburg Goldfields, money was sent out there which was misdirected in its use, and devoted to the Development Co. The affairs of the Development Co., were fully gone into by the members of the committee selected for the purpose, and Mr. Hibbert had ample opportunities in this direction. They could not draw any fair comparison between the 18 months' expenditure in London, shown in the accounts, and the expenditure in Africa. As to the amount of the unpaid calls, the money was owed by some of their largest shareholders, including some members of the Stock Exchange and first rate firms in the City of London, and that, he thought, was a good answer to the question as to whether these calls were likely to be paid. As to their claim upon the Development Co., and the claims upon

OTHER COMPANIES

into which their money had been misdirected, he assured them that he would use every effort in his power to obtain that money for the benefit of the shareholders. During the past year no time or trouble had been spared, and no steps left untaken in the direction of its recovery. He happened to be one of the members of what was known as the Creditors' Committee of Investigation of the liquidation of the Development Co., and also one of the committee of creditors in the bankruptcy of Cloete, and with what little assistance that position gave him, he assured them he would press forward their claims for such dividend as could be recovered. (Applause.)

A SHAREHOLDER suggested the directors should work without fees for say one year. (No, no, and hear, hear.)

The CHAIRMAN said: I am willing to retire, for I have already had to put my hand in my own pocket.

Mr. ELGOOD thought it unfair to attack the new board for the misdeeds of the old, and for what was past and done with.

Mr. WATSON: How many board meetings are held?

Mr. ELGOOD: One or two a week.

Mr. WATSON: Have you the attendance book?

Mr. ELGOOD: You can see it if you doubt my word.

Mr. WATSON: I don't; I only wanted it confirmed.

Mr. ELGOOD: You must doubt it, or else you would not want any confirmation.

The CHAIRMAN said the secretary had prepared a statement which enabled him to reply to this question, and he found that since Oct. 7, 1890, two of the directors had attended no less than

88 BOARD MEETINGS EACH,

and many of these had lasted several hours. One director had been ill and not able to attend so many.

A SHAREHOLDER thought the difficult times were over, and not so frequent board meetings would be needed.

The CHAIRMAN said that such was not the case; constant meetings were needful.

Mr. WILSON (a shareholder in the Ziervogel Co.) suggested the appointment of a committee of investigation.

Mr. R. A. TIESSEN (director) replied at some length, and pointed out the unwisdom of such a course.

Replying to some further desultory discussion,

Mr. TIESSEN said that the idea of the company was to make it pay where they could, and they looked to derive profit from the coal fields first, then the Rietfontein, and then the Ziervogel properties. He pointed out what work had been done so far, and how an arid plain had been rendered fertile, and he alluded fully to the better prospects before them.

The CHAIRMAN thought that to save time he might be allowed to move now the adoption of the report.

Mr. ELGOOD seconded.

The report was unanimously adopted.

FORMAL BUSINESS.

The CHAIRMAN said that on the matter of the retiring directors, Mr. M. S. Vanderbyl retired by rotation from the board, and offered himself for re-election. Mr. E. C. Elgood and Mr. R. A. Tiessen, having been appointed since the last ordinary general meeting, retired in accordance with the articles of association, and offered themselves for re-election. He spoke in eulogistic terms of the services rendered by all three gentlemen, and moved their re-election.

Mr. OPPENHEIM seconded the re-election of Mr. Vanderbyl, and spoke from his knowledge of that gentleman to his being a valuable member of the board.

The motion was carried.

Mr. GREY seconded the re-election of the other two directors named, which was also carried.

Mr. OPPENHEIM moved, and Mr. CHARLES J. LEE seconded, the re-election of the auditors of the company, Messrs. Cooper Bros., at a fee of 15 guineas, which was unanimously carried.

On the motion of Mr. OWEN, a vote of thanks was accorded to the chairman, and the meeting separated.

WESTERN ANDES MINING CO., LIMITED.

IMPROVED POSITION OF THE COMPANY—IMPORTANT DEVELOPMENTS—MINE NOW MAKING A PROFIT.

THE ordinary general meeting of the shareholders in this company was held at the Offices, No. 10, Blomfield Street, London, E.C., on Tuesday, Dec. 1, for the purpose of receiving the directors' report

and statement of accounts, and transacting the ordinary business of the company.

Mr. C. O. Rogers

(chairman of the company) presided.

Mr. SYDNEY A. COBBETT (secretary) read the notice calling the meeting, and the report and accounts were taken as read.

A RETROSPECT.

The CHAIRMAN: Gentlemen, although on the report you do not see it mentioned, I may inform those of you who have not been with us from the commencement, what the original shareholders already know, that this is the 18th annual report of this company. Those original shareholders will also know that during the first 13 years of the existence of this company considerable profits were made year by year. In fact, during that period upwards of 75,749*l.* was the profit made at the mine, which, considering the capital is only 74,000*l.*, was sufficient to return to the shareholders the whole amount of their subscriptions. Four years ago there came a sudden cessation of those profits, and a temporary collapse of the company's operations in Colombia. This was brought about principally by the way in which the mine was conducted in Colombia. At that time the property was managed by an aged Cornish captain, who received a very small salary and a very large commission, and it was therefore to his advantage to work the mine so that he could make large returns, to pick out the eyes, and trust in Providence for anything to go on with. Consequently, when a falling off took place in the value of the lodes there was nothing to fall back upon, and the company immediately began to make losses, and for the last four years it has been our task to open out reserves of ore, so as again to be able to enter the dividend list. The first thing we did was to obtain the best report we could upon the property, and what prospect there was of making further profits. For this purpose we employed the superintendent of the Tolima Mine, which is known to every one of you, I daresay, as a very successful company. Mr. Green was despatched to the mine, and he made his report. That report was printed and sent to all the shareholders. Our capital was very small, otherwise we could have done more than we have done. We took up most of the points recommended by Mr. Green, and during the last four years we have been endeavouring to open up the mine in a proper manner, and to-day we find ourselves in a very different position to what we have been for some time. The superintendent reports, both at the gold and silver mines, that

VERY LARGE RESERVES OF ORE ARE OPENED UP,

and it only requires to be judiciously taken away to bring the company into its original position of making large profits. Some of those profits will have to be devoted to continuing these exploration works which Mr. Green recommended—some of them very important indeed, such as the cross-cut in the San Antonio Mine, which has not yet been reached, the lode of which underlies our property. Mr. Green, in his report speaking of the extent of the company's property, says: "The company's property comprises thousands and thousands of acres of an enormous extension on the lodes. In fact, there is enough to engage the capitals of many companies instead of only that of the Western Andes Co."

A GOOD RECORD.

The produce of this company consists of two classes of mineral, one gold and one silver. The gold mines were commenced to be worked in 1825 or before that; 1825 is the earliest record, so that they have been working at least 60 years. They are situated on the side of a very high mountain, which rises many thousand feet from the valley. The works were commenced about three parts up the mountain, and it was always supposed the ore gave out below that depth, but the explorations lately made have shown that that is not the case. Our resident director, Mr. Brandon, writes, and says:—

"I have now proved ore richer below mill No. 4 than above, and if Marmato was ever worth 100,000*l.* it is now worth 10 times that amount."

I know for a fact that these mines have never during those 60 years made a real loss except during the year of the revolution. In regard to the silver mines, they have opened up in a most encouraging manner during the last month or two. I consider that the turning point came about July, when the mines made a profit of \$624, that has been increased in Aug. to \$2,825, and in Sept. \$2,022. These results were obtained under exceptional difficulties. There was a scarcity of water, and the machinery was in anything but a good condition. The total produce of the mines, according to the balance-sheet, you will see during the last year was 16,445*l.* From May to Sept. of the present year it has been 8,358*l.*, which would be at the rate of over 20,000*l.* a year. The last letter from Mr. Brandon, written on Oct. 7, is to the following effect:—

"Cost and returns: I am glad to be able to report a profit for Sept. of \$2,022 (400*l.*), and I am determined never, if possible, to send another account of a loss. The Aguas Claras returns failed slightly during Sept. owing to the minerals being slightly poorer, and to their being poorly dressed through scarcity of water, but I hope that things will be better this month, although some of the assays from the mine are bad. I am afraid that the Marmato Gold Mines will want more efficient machinery to make them produce better results, but now there is abundance of mineral, and what I want is where to treat more mineral, and a method of treating the pyrites."

Whilst on that subject I should like to remind you that at the meeting held a year ago we created a certain number of debentures, and we determined at that meeting to issue 5,000 of these debentures only. I think, in view of the fact that Mr. Brandon will probably want a little more money to put the Marmato machinery into a little better condition, and while we are at perfect liberty to issue the other debentures, I should suggest, as the limit of 5,000*l.* rather emanated from the shareholders, we should take a resolution from the shareholders upon the point, and I would suggest for some shareholder to move a resolution to that effect.

FINANCES.

One of our principal sources of profit, or, rather, one of the items that diminishes our costs, is the exchange of the country. I am glad to say that has now improved again, or has risen in our favour, and the last exchange is about 100 per cent. premium. That means the costs of the mining are reduced 50 per cent. I maintain that our accounts are not prepared as they ought to be, for the profit on

exchange ought to be deducted from the costs instead of making a separate credit item for it. You will see on the credit side of cost and product account there is an item of 14,686*l.* for exchange. The proper way to state it would be to place that amount against the 31,705*l.* 17*s.* 8*d.*, thus reducing it to about 17,000*l.* With regard to the balance-sheet, the only item on the debit side that, perhaps, requires explanation is sundry creditors, London. That consists almost entirely in fees due to directors, which they have not taken for the past four years. On the other side the mines and machinery account remains the same. The exploration account has been there for some time, and I think it would be desirable one of these days to write it off. The whole of the work done during the past four years on exploration account has gone into the cost and product account. Sundry debtors in London consists principally of taxes. We have paid 20 years' advance of taxes on the mine, so as to secure a sort of freehold. The cash and stores at Marmato have been lumped this time. Mr. Brandon has been most economical in ordering stores. Of the cost and product account there is nothing to say, except that I think you will agree with me that the loss of 57*l.* 4*s.* 8*d.*, considering the work we have done, is very small indeed. I beg to move, "That the directors' report and accounts to Apl. 30, 1891, as circulated amongst the shareholders, be and the same are hereby received and adopted."

Mr. F. J. HESELTINE (director) seconded the motion.

GENERAL BUSINESS.

Mr. HANKEY proposed the re-election of Mr. C. O. Rogers and Mr. F. J. Heseltine as directors of the company.

Mr. H. STUART SANKEY (director) seconded the motion, which was carried unanimously.

Mr. HANKEY moved, "That the sanction of the meeting be and the same is hereby given to the directors to issue from time to time such portion of the debentures unissued as they may deem expedient."

The CHAIRMAN seconded the resolution, which was carried.

The auditor was then re-elected.

The CHAIRMAN moved a vote of thanks to Mr. Brandon for the manner in which he had worked the mines.

Mr. SANKEY seconded the motion, which was carried unanimously, and the proceedings then closed.

At the ordinary general meeting of La Société des Mines et Fonderies de Pontgibaud held in Paris, on the 30th ult., a dividend for the year 1890-91 was declared of 20*f.* per share, payable in exchange for the No. 11 coupon, on and after Dec. 5th inst., at the Offices of the Company, 17, Rue de Grammont, Paris, or at the London Agency, No. 6, Queen Street Place, E.C. The payments made in England for such dividend will, after allowing for French tax and exchange, be at the rate of 15*s.* 5*d.* per share, subject to deduction of income-tax.

NOTICE.

On view at 48, QUEEN VICTORIA STREET, E.C.

ONCKEN PATENT STAVELESS BARRELS.

This remarkable Invention, which enables barrels to be made in one piece by a new process, has excited the greatest interest among engineers, coopers, and others, in England and the Continent. 20 per cent. economy in wood and 50 per cent. in labour. Barrels, tubs, and other articles can be seen daily between 10 and 5 o'clock.

An influential Company is being formed for working the Invention, Prospectuses of which will be forwarded, when ready, upon receipt of name and address, by the undersigned,

ARTHUR L. FOLEY,
Secretary (*pro tem.*).

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

A LIGHT SETTLEMENT—DIFFICULT TO BE A BROKER WHEN PRICES ARE LOW—STEADINESS OF INDIANS ALL THROUGH THE DEPRESSION—COURSE OF THE MARKET.

THE settlement was light, and brokers soon terminated the labours it entailed upon them. They would rather have been more busy, but in these days, when the public turn askance from every description of investment, they are thankful even for small mercies. At times like the present it is not enviable to be a mining broker. You get scant justice from your clients, and if you are spared "stingers," in the way of sharp letters from disappointed speculators, your case is the exception rather than the rule. You may do your best in their interests, but you will not receive the customary vote of thanks. Only in an active state of the market does the mining dealer find himself a public favourite. It is his endeavour to put his client into shares at the commencement of what looks like a boom, but when, after all, it turns out there is no boom, the position is not very pleasant. This has been very much the case with most classes of mining shares during the current year. At the opening many of them looked uncommonly cheap. The most experienced broker said "they are good to buy," but the year finds his calculations upset by a concatenation of circumstances over which he could possibly have no control. That is a position which is not likely to be altered in the present year of grace.

We note in the midst of all the depression in mining a remark that fell from Lord Ribblesdale at the Goldfields meeting, in which he indicated the steadiness of Indian shares, despite the untoward circumstances which have been persistently at work to lower them. If Indian shares had fallen in the same proportion as almost every other description of enterprise has done prices to-day would not be half what they are. But the reports and returns have been too much even for the despondent public to get over, and consequently they have been steadily sustained, principally by a class that has bought them for investment. We publish this week *verbatim* reports of the meetings of various Indian companies, the facts connected with which go far to justify the public in the faith they place in these constantly improving concerns. Whilst, on the subject of Indian mines, we would call the special attention of our readers to the following sentence in the last received report from the Mysore Mine, to which considerable importance is attached by those who follow minutely the workings

week by week: "The winze in bottom of the 290 south of Tennant's shaft has been sunk 8 ft. in a lode 2 ft. wide, and assaying 1 oz. 17 dwts. 6 grs." This paragraph, of course, should be read in connection with the rest of the report which will be found in the usual place, but it seems to indicate a decided improvement in the mine.

The meetings of the week have been somewhat heavy, and we publish a 12-page supplement in order to do justice to our reporting department. The leading facts of most of them are specially set forth in other parts of this issue.

The returns from the Kaffir Mines are rapidly coming to hand, and will be found quite equal to the average. The statement is now made that the Robinson Mine alone has produced one million sterling.

Coming to the general business of the week, we are free to confess that the market has not responded to the improved position of the various mines. In the Kaffir section there has been a good deal of buying of De Beers which are up considerably on the week, and Transvaal Golds have been 17s. 6d. buyers to-day. Other slight improvements are noticeable, but generally the public do not seem to be rising to the bait of the African returns in the sense of buying the shares. They are watching the game rather than playing at it.

The Indian market has been without feature, although after the Goldfields and Champion Reef meetings there was active inquiry for the shares. Indian Consolidated shareholders were relieved to hear that the rumour of re-construction has no foundation, and that the worst that could befall them was the calling up of the final 6d., which will almost immediately be done.

The record for Australian shares has been rather miserable. With hardly an exception they are weaker than when we last wrote. Returns from numerous mines, of which our readers have heard with the hearing of the ear, but in which they have not been allowed to join, continue to come to hand, and to justify the observation that the Australians keep the best things to themselves, and allow us to do what we like with the rest.

In the Copper section there have been ups and downs—the latter predominating, but the buying has been chiefly in France.

In the General Foreign section there has been some active business in such mines as Colou, Tolima "A" and "B," Elkhorn (which has declared a dividend), Maid of Erin (which has also declared a dividend), El Callao, Pinos Altos, which are up on better reports from the mine, and Jay Hawk, but Pahangs have not sustained prices, neither have Flagstaffs nor St. John del Reys. The Montana return for Nov. was \$57,300, and the working expenses \$43,700. This is better, but the shares have not responded to the return.

Big Creek Antimony has declared a dividend of 1s. per share. This is the second during the last six months. The mine is reported to be opening well.

Colombian Mine shares have been in demand, but except in the cases of Tolimas and Colons, which have risen, are unchanged. The Tolima Company announces this week another splendid profit—6,500*l.* for November—and has declared a further dividend of 10s. per share on the A shares. These close at 10*l.* to 10*l.* 10s. cum div., and the B shares at 6*l.* 10s. to 7*l.* Dealers are very "short" of Colons, which close this week at 4s. 6d. to 5s. We hear good accounts of the prospects of the mine, from which it may be mentioned a cablegram is shortly expected announcing a clean-up. Should this be only moderate in amount it will be more than satisfactory, as this clean-up will be the first after a considerable period of idleness, resulting from attempts at blackmailing now happily overcome. Colombian Hydraulic close at 22s. 6d. to 23s.; Gravel Gold at 10s. 6d. to 11s.; and Orita at 12s. 6d. to 13s. 6d. Lomas have been dealt in at 2s. to 2s. 6d., at which figures some large transactions have taken place. Enthusiasts are heard to style this mine the "richest in Colombia," and confidently prognosticate an advance in the price. A cablegram announcing another return of gold is expected. Tesoros have been very depressed upon the announcement of a call, but will possibly soon recover, as a call was expected, and we learn the mine is "all right," and now "washing."

In the Home Market there has been some buying of Dolcoaths, and a good deal of crowing in consequence in "the county." We

are glad to hear this, but cannot forget the big prices from which Dolcoath shares have fallen.

Devon Great Consols shares have changed hands at 15s. to 17s. 6d., with more buyers than sellers. Several weeks ago we pointed out the gradual improvements which were being made by the present directors since the change in the management, viz., the present directors since the change in the management, viz., less costs and increased mineral returns. We learn that two or three individuals connected with the recent agitation have been very busy in trying to induce shareholders to part with their interests, but if shareholders will follow our advice they will consign such communications to the waste-paper basket.

The Home market has not offered many features for comment.

In regard to the outlook it ought to be good for next week, but the week after will bring us so near to Christmas that any further improvement must be relegated to the New Year.

KAFFIRS.

Remarks.—There has been a fair amount of business transacted, and to-day prices have hardened somewhat on the announcement of the crushings for Nov. The most favoured have been City and Suburban, Ferreira, Mays, Robinsons, and Wemmers, but Pigg's Peak Preference and Jubilee are lower.

Business.—A rise is shown in Sheba of 6d.; Bothas Reef, 6d.; City and Suburban, $\frac{1}{4}$; Croesus, 6d.; Durban Roodepoort, $\frac{1}{8}$; Ferreira, $\frac{1}{4}$; Henry Nourse, $\frac{1}{4}$; Heriot, $\frac{1}{8}$; Jumpers, $\frac{1}{8}$; Langlaagte, $\frac{3}{8}$; Langlaagte Block B, 6d.; Main Reef, 6d.; May Consolidated, 6d.; Moss Rose, 1s.; Pioneer, $\frac{1}{4}$; Robinsons, $\frac{1}{8}$; Stanhope, $\frac{1}{8}$; and Wemmer, $\frac{1}{8}$. The only falls are in Pigg's Peak Preference of $\frac{1}{8}$; Great Gold Zone, 6d.; Johannesburg Waterworks, $\frac{1}{8}$; and Jubilee, $\frac{1}{8}$.

AFRICAN LANDS.

Remarks.—A large business has taken place in Transvaal Land Shares, the company having declared another 6d. dividend. The shares at one time changed hands at 17s. 6d., but close lower.

Chartered Company's shares are lower, as it is expected a great many will be thrown on the market when De Beers distribute their holding in this company among the shareholders. Explorings have again been pressed for sale, and Oceana and Read's Drift close lower.

Business.—A rise is shown in Moodies of 1s.; ditto 15s. paid, 6d.; Sutherland Reef, $\frac{1}{8}$; Transvaal Gold, 3d.; whilst a fall is noted in British South Africa Chartered, $\frac{1}{8}$; Exploring, $\frac{1}{4}$; Goldfields of South Africa, $\frac{1}{8}$; Oceana, $\frac{1}{8}$; Read's Drift, $\frac{1}{8}$; and Transvaal Estates, 6d.

DIAMONDS.

Remarks.—The features of the week have been the strong demand for De Beers and the continued buying of North-East Bultfontein. The shares of the latter company, however, do not show any rise.

Business.—A rise is shown in Consolidated Bultfontein of 3d. and De Beers $\frac{1}{8}$; whilst others remain unchanged.

$\frac{1}{2}$	Burma Ruby Mines 15s. paid ...	$\frac{1}{2}$ — $\frac{1}{8}$

INDIANS.

Remarks.—The market for this class has been somewhat restricted, with the exception of Mysore Harnhall shares which have been the subject of another rig. The price jumped from 2s. 3d. to 4s. 6d., but have again fallen to 2s. 3d., 2s. 9d.; Ooregum Ordinary are slightly firmer.

Business.—A rise is shown in Ooregum Ordinary of $\frac{1}{8}$; whilst a fall has taken place in Balaghat of 3d.; and Nine Reefs, 6d. Others remain as last quoted.

COPPER.

Remarks.—The chief movement this week has been the fall in Rio Tintos, which, however, do not close at their lowest. Mason, Namaqua and Quebrada are slightly firmer.

Business.—A rise is shown in Mason and Barry of $\frac{1}{8}$; Namaqua, $\frac{1}{8}$; Quebrada, $\frac{1}{8}$; whilst a fall has taken place in Capes of $\frac{1}{8}$; Copiapo, $\frac{1}{8}$; Rio Tinto, $\frac{1}{2}$; and Tharsis, $\frac{1}{8}$.

AUSTRALIANS.

Remarks.—Broken Hill Proprietary shares have continued to fall, notwithstanding that last week's returns were 176,120 ozs. silver, from 714 tons of ore. Australian Broken Hill Consols have been somewhat forced, and close lower. New Queens and Day Dawn are in slightly better demand.

Business.—A rise is shown in New Queen of 3d.; whilst a fall has taken place in Australian Broken Hill of $\frac{1}{8}$; British Broken

Hill, $\frac{1}{2}$; Broken Hill Proprietary, $\frac{3}{4}$; Gympie Great Eastern, 3d.; Scottish Australian, $\frac{1}{2}$.

GENERAL FOREIGN SHARES.

Remarks.—A fairly good investment business has taken place—Colon, Elkhorn, El Callao, Jay Hawk, and Pinos Altos being firmer. Linares have been pressed for sale, and fell 10s.

Poorman shares have been enquired for on the announcement of a dividend at the rate of 13 per cent., with sufficient to pay another 16 per cent. carried forward.

St. Augustines have changed hands in large numbers, but remain without change. Tolima A and B are firmer, buyers coming in on the good return from the mine.

Business.—A rise is shown in Colon of 6d.; El Callao, $\frac{1}{2}$; Elkhorn, $\frac{1}{2}$; Gravel Gold, 3d.; Jay Hawk, 1s.; Pinos Altos, 1s. 6d.; Silver Mines of La Luz, 3d.; Tolima "A," $\frac{1}{2}$ (now ex. div.); and Tolima "B," $\frac{1}{4}$. The falls are as follows:—American Belle, 3d.; Balkis, 3d.; Flagstaff, 6d.; Golden Feather, 6d.; Golden Gate, 3d.; Linares, $\frac{1}{2}$; Montana, 3d.; Pahang Corporation, 1s. 6d.; St. John Del Rey, 6d.; and Yankee Girl, 3d.

The following list shows the principal changes which have taken place:—

	Last Week.		This Week.

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT-MYSORE.—The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Oct., which realised 2,411l. 14s. 9d.

MYSORE.—A telegram dated Dec. 5 gives the return of gold for the month of Nov. as follows:—"3,450 tons of quartz produced 5,101 ozs. of gold, also 514 ozs. were obtained from tailings, making a total of 5,615 ozs. of gold; scarcity water tailings." The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Oct., which realised 23,152l. 10s.

NUNDYDROOG.—The directors have sold through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Oct., which realised 9,090l. 3s. 10d.

OOREGUM.—The company has sold the gold produced in Oct. for 11,991l. 7s. 8d.

COLONIAL MINES.

BRILLIANT.—A cablegram from Charters Towers, dated 5th inst., announces that this mine has cleaned up for three weeks crushing 1,711 tons for 2,873 ozs. smelted gold, value, 10,793l. The usual dividend of 2s. per share has been declared.

BRITISH BROKEN HILL.—During the week ending Dec. 3, 470 tons were treated, including 184 tons of iron ore, yielding 70 tons lead, containing 5,170 ozs. silver.

BROKEN HILL PROPRIETARY.—During the week ending Dec. 3, 4,760 tons of ore were treated, yielding 714 tons of lead, containing 176,120 ozs. silver. The cable also states that the shares are 6l. 14s.

CUMBERLAND GOLD.—Cablegram from the manager:—"Sinking the shaft completed. At the bottom of No 2 shaft there is quartz coming in. No. 8 level north started promising.—PIPER."

DAY DAWN BLOCK.—The company has received the following cablegram from the general manager at Charters Towers, giving the result of the crushing for the fortnight ending the 5th inst.:—"Tons crushed 650; yield of gold, 1,031 ozs.; approximate value, 3,550l.; fortnight's expenses, 1,200l." The directors are also advised by cable of a shipment of bullion valued at 8,600l.

DAY DAWN P.C.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold ex s.s. Duke of Argyll, which realised 3,795l. 5s. A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending Dec. 5, viz.:—"1,040 tons, 1,042 ozs." (Estimated value, 3,647l.)

GOLDEN GATE.—(Dec. 5). Crushed 300 tons, giving 546 ozs. gold; value, 2,055l.; crushing continues.

MILL'S DAY DAWN UNITED.—Cleaned up Nov. 28, 1,173 tons, yielding 1,366 ozs. gold; value, 4,710l.; crushing continues.

MIDAS.—Cable from the mine:—"Yield for week ending Dec. 5, 50 ozs."

MOUNT LEYSHON.—A cablegram, dated 8th inst., from the manager at Charters Towers, gives the fortnightly crushing:—"1,000 tons crushed, 290 ozs. gold; 30 stamps mill ran 288 hours. Estimated profit for fortnight, 100l."

NO. 7 NORTH-EAST QUEEN.—(Dec. 1). Crushed 260 tons for 466 ozs.; value, 1,750l. Dividend of 6d. per share declared.

SUNBURST.—(Dec. 5). Crushed 233 tons, giving 350 ozs. gold; value, 1,312l.

VICTORY.—The company has received the following cable from Charters Towers, dated Dec. 4:—"Believe the Victory Gold Mining Co. have cut the vein of Brilliant reef 1 ft. in width."

WENTWORTH PROPRIETARY.—Cablegram from the manager:—"The sinking of the winze below the 300-ft. level, Crinoline vein, continues in rich arsenical pyrites. We have commenced a stope on this vein in rich ore. The 240-ft. level south of the Shamrock shaft is in 550 ft. from shaft. We have driven a cross-cut across the vein which is 30 ft. wide, composed of quartz and calcite, producing gold throughout. The vein in the winze below the 200-ft. level north of Phoenix shaft improves as it goes down. The sinking of winze on No. 2 Phoenix vein is being proceeded with. Good progress is being made in 300-ft. level north of Reform shaft, and in the winze below 400-ft. level same shaft. The mill is now running on second-class ore."

FOREIGN MINES.

BIG CREEK.—The directors have declared a second interim dividend of 1s. per share, payable Dec. 21.

DE LAMAR.—Cables from the mine:—"Have cut the 77 ft. vein in the Wahl Tunnel; have entered it 30 ft., but have not yet cut the hanging-wall. The average value of the quartz is low, but the vein is traversed by streaks of shipping ore stringers from 1 to 3 ins. thick, and sections 2 ft. 6 ins. wide, averaging \$35 per ton." "During the month of Nov. mill ran 27 days; 1,160 tons were crushed, yielding \$34,500; estimated value of ore shipped, \$17,200; miscellaneous receipts, \$3,200; total production, \$54,900; total expenses on revenue account, \$25,868; estimated profit, \$29,032. Cable has been delayed by broken wire."

ELKHORN.—The directors have declared an interim dividend for the three months ended Nov. 30 last of 1s. 6d. per share, making a total distribution for 1891 of 7s. 6d. per share. Cable from the mine:—"During the month mill worked 26 $\frac{1}{2}$ days, and crushed 980 tons. Shipped bullion amounting to \$36,950. Smelting ore sold 350 tons of the value of \$32,250. Expenditure on revenue account, \$23,894. The 1,250-ft. level south is in 490 ft., and shows a body of ore 4 ft. wide, assaying 90 ozs. to the ton. Estimated value of bullion produced for week ending Dec. 5, \$3,805."

ELMORE.—The manager cables under date Dec. 5 that during Nov. he crushed 300 tons of Vishnu ore, which yielded \$1,800.

GOLDFIELDS OF URUGUAY.—Telegraphed result of milling for Nov.:—"2,850 tons of ore crushed, 525 ozs. of bullion produced, value \$6,800; 55 stamps running 29 days."

LA PLATA.—The manager reports that the profit at Leadville for November month is \$635.00. There is a great improvement in the mine during the last few days. Large reserves of low grade ore remain untouched, pending a reduction in smelter's charges. White Cloud (Red Mountain district): The westerly drift, going through soft ground, looks well for ore.

MACATE.—Cable:—"Important discovery (San Pedro) has every appearance of continuing. Average sample from all the stopes has given by small crushings 5 ozs. gold per ton. La Escocia Mine looking well. Mill is erected, and trial proved satisfactory. Rope-way did not give satisfaction on trial, but can be put right. Will telegraph again as soon as everything is ready."

MAID OF ERIN.—Mr. John T. Graham, a member of the American Advisory Board, has been unanimously elected to a seat on the London board of this company. Cables from the manager:—"In the developments in the lower levels have struck a valuable ore body. Mine is looking well." "Gross yield for the week ending Dec. 5: 1,100 tons, estimated value, \$15,000. The shipment of sulphide ore has stopped temporarily."

MAMMOTH.—The manager, Capt. Johnston, cables as follows:—"Shipped bullion amounting to \$6,700; total amount for the month of Nov., \$13,300. The mill has run 29 days 9 hrs. Total amount crushed is 2,570 tons. Expenses for the month are \$10,800."

MESQUITAL DEL ORO.—A cablegram gives the result of the Nov. mill-run from the mine:—"50 stamps ran 685 hrs. (28 days 13 hrs.); quantity of ore crushed was 3,170 tons; bullion produced at clean-up 1,338 ozs.; value about 4,500l."

MONTANA.—The manager at the mine informs the directors that the total output for Nov. was \$57,300, and the working expenses for the month \$43,700.

NEW PIERREFITTE.—The company has sold 150 tons silver-lead, ore to the Pontgibaud Co. at 11l. 12s. 2d. per ton, f.o.b. Bordeaux.

OURO PRETO.—The company has sold, through Messrs. Johnson Matthey and Co., Limited, the gold and bismuth obtained in the month of Sept., which realised 4,017l. 4s. 5d.

PITTSBURGH CONSOLIDATED.—Cablegram from superintendent :—"Total cost for Nov. at mine and mill, \$5,300; bullion shipped, \$4,300."

RED MOUNTAIN.—The manager reports having found grey copper ore in the tunnel, and that the vein continues to improve as the drift advances.

RUBY.—Cable:—"25 tons tribute ore shipped; 35 tons tribute ore smelted, producing to company \$144. No company's ore shipped; 60 tons company's ore smelted, producing \$620."

SAN LUIS.—The following is an extract from a cablegram received on the 9th inst. from the manager at the mines:—"Bullion shipped Nov. Assay value, 2,100l.; 305 tons of ore crushed; mill running 28 days."

ST. JOHN DEL REY.—Telegram from the mine:—"17 fms. sunk during the month of Nov." This low rate of sinking was due to a wire rope being blocked in the harbour at Rio from the beginning of Sept. to the end of last month. This rope was despatched from Rio by rail on the 27th ult., and should before this have reached the mine.

TOLIMA.—Cablegram from the superintendent respecting the estimated Nov. returns:—"The gross returns are 10,000l.; the nett profit is over 6,500l."

ZARUMA.—The produce for Sept. has been sold, and realised 473l. 19s. 5d. nett.

HOME MINES.

PHOENIX UNITED.—At a recent meeting this resolution was passed:—"That in the opinion of the committee it is thought desirable not to proceed any further with reference to the formation of a limited liability company."

TIN TICKETING.—A tin ticketing took place at Redruth on Tuesday last, when 294½ tons were offered, and realised 15,171l.

WEARDALE.—The year has been one of great anxiety and disappointment to the directors, as the mines have been very poor, producing only 4,336 tons of ore, as against 5,453 tons last year. Killhope produced 1,433 tons last year, and only 656 tons this year. Greenlaws last year produced 1,387 tons, and this year 1,123 tons. Grove Rake last year produced 1,918 tons, this year 2,088 tons. Boltsburn and Mary's Vein last year produced 400 tons, and this year 275 tons—the total quantity raised from all the mines being 1,117 tons less than last year. Application is again to be made to the Ecclesiastical Commissioners for a reduction of royalty.

WHEAL CREBOR.—The resolution submitted to the meeting on Thursday, to discontinue operations and terminate the lease, was not carried, the shareholders preferring to work the mine for another 16 weeks at least. The circumstances certainly did not warrant them in abandoning the mine at the present moment.

COPPER SALES.—The next sale of copper ores at Redruth will take place next Thursday, when the following quantities will be offered:—Devon Great Consols, 427 tons; Levant, 200 tons; Callington United, 115 tons; Tincroft, 55 tons; Devon United, 55 tons; Westlake's ore, 55 tons; and Wheal Crebor, 40 tons; total, 947 tons.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

ROODEPOORT.—Cable:—"Nov. crushing, 754 ozs."

SALISBURY.—The crushing for last month was 1,300 ozs.

CRÆSUS.—The crushing for last month yielded 598 ozs. of gold.

FERREIRA.—Operations for Oct. resulted in a gold revenue of 14,405l.

WORCESTER.—Cable:—"Result of last month's crushing is 1,590 ozs. of gold."

CITY AND SUBURBAN.—Cable:—"Result of last month's crushing is 1,230 ozs. of gold."

CHARTERED CO.—It is announced that this company's telegraph tariff will be 3d. per word.

NEW PRIMROSE.—Cable:—"November crushing, 1,945 ozs., from 4,195 tons; 50 stamps, running only 24 days."

GLENCAIRN MAIN REEF.—Cable:—"Nov. crushing, 857 ozs. from 2,008 tons; 30 stamps crushing 27 days."

JUBILEE.—Cable from the secretary in Pietermaritzburg:—"The result of last month's crushing is 621 ozs. of gold."

MOODIE'S GOLD.—Cable:—"246 claims rented or leased; 1,100 tons crushed by claimholders yielded 496 ozs. of gold."

WEMMER.—Cable as to Nov. work:—"1,418 tons crushed; 1,347 ozs. of gold won; 20 working days; 25 stamps; 155 ozs. from tailings."

BULFONTEIN.—A dividend of 5s. per share has been declared by the liquidators, payable by them on and after Monday, 14th inst., at 16, Holborn Viaduct.

STANHOPE.—Cable:—"Result of last month's crushing is 1,088 ozs. of gold. Have declared a dividend of 25 per cent., payable to all shareholders registered on Dec. 11, 1891."

The gold crushings at Witwatersrandt for Nov. were 73,393 ozs. Mr. Laurence W. Cloete has, we are informed, resigned his position as a director of the Graskop Mill and Mining Co., Limited.

TRANSVAAL GOLD EXPLORATION AND LAND.—Cable:—"Ore mined, 750 tons; ore treated (Theta and Nu), 625 tons, yielding 1,500 ozs; tailings, 50 ozs.; total for Nov., 1,550 ozs.; expenses, 1,720l."

ROBINSON.—The company has produced gold to the value of 1,000,000l. sterling. It is said the chlorination works are being greatly increased. Cable from Johannesburg:—"7,296 tons of ore crushed last month. Total output, 11,018 ozs. of gold."

MAY CONSOLIDATED.—Oct. report:—"Mills (total 70 stamps).—Number of working days, 29; tons of ore milled, 6,701; yield smelted gold, 2,582.90 ozs.; value of gold, 9,361l. 10s.; average yield per ton of ore, 7 dwts. 17.02; crushed per stamp per day, 3.33 tons."

TRANSVAAL MORTGAGE, LOAN AND FINANCE.—Cablegram of crushings at the May Deep Level and Princess Estate and Gold Mining Cos. for Nov.:—"May Deep Level Gold Mining Co., 23 days milling; 491 tons crushed; yielding, 472 ozs.; estimated value of concentrates, 270l. Princess Estate and Gold Mining Co., 930 ozs. gold."

SHEBA.—The quantity of quartz crushed by the company's 60-stamp mill during the past nine months, and the yield of gold have been as follows: 20,787 tons; yield, 23,718 ozs. 15 dwts. 10 grs.; value, 92,388l. 11s. 4d. The total yield of gold to date has been 295,603l. The average yield of gold per ton of quartz crushed during these nine months is 1 oz. 2 dwts. 19 grs. The total cost per ton was 1l. 4s. 11d.

CERRO DE PASCO.—Advices dated Barberton, Nov. 9:—"Block F extension: South-east cross-cut has been driven 9 ft., making total distance 397 ft. This cross-cut is in very hard rock. Drive south on 10 ft. reef has been driven 15 ft., making total distance 194 ft.; ore extracted, 30 tons. Air shaft No. 1 south: At 90-ft. level we commenced to cross-cut east, to prove lode known as 4 ft. reef. This work has been driven 10 ft. Block 12: North-east cross-cut has been driven 18 ft., making total distance 286 ft. At 274 ft. we cut a reef 3 ft. wide, which is gold bearing. This cross-cut continues in schist."

COETZEESTROOM ESTATE.—The manager, writing on Nov. 10 confirms his former telegram that the deposits of banket on the western side of Button's Creek were looking well, and that the last two or three days show an improvement. Only five stamps were working owing to want of water, but a water-race had been constructed, taking up a stream that was running to waste, which, with improvements at the old dam, he hoped would enable him to start a larger number of heads on the 16th. A telegram arrived on the 4th inst., announcing that 220 tons had been crushed since last telegram, averaging 4½ dwts. per ton of free gold.

DURBAN-ROODEPOORT.—Crushings since Nov. 5.—3,205 tons crushed; 25 working days; 2,311 ozs. retorted gold. The 4,035 tons crushed during Oct. were composed of 2,765 tons of south reef, and 1,265 tons of main reef, all taken from block 2 (13 claims). The smaller tonnage for last month, now advised, is probably owing to the full battery not having worked continuously. It is satisfactory to note the improvement in the quality of the gold, the average per ton being 14.42 dwts., as against 11.42 dwts. in Oct. The work on the 10 claims block progresses steadily, as reference to the summary will show; we are advised that 1,640 tons of main reef is now in stock on these claims. The news generally from the mines is favourable.

TRANSVAAL GOLD EXPLORATION.—Manager's report, Nov. 9:—"Summary for Oct.—Mined during month, 886 tons; average assay, 2 ozs. 14 dwts. per ton. Battery working 553 hours crushed 417½ tons Mu, Delta and Kappa ores, yielding 173 ozs. 15 dwts. retorted gold, equal to 8 dwts. 8 grs. per ton. Pans working 454 hours treated 60 tons; tailings yielded 123 ozs. 15 dwts., equal to 2 ozs. 1 dwt. 6 grs. per ton; 64½ tons rich Nu ore, yielding 355 ozs. 16 dwts., equal to 5 ozs. 10 dwts. 7 grs. per ton, and 61 tons 17 cwt. rich Theta ore, yielding 266 ozs. 6 dwts., equal to 4 ozs. 6 dwts. 2 grs. per ton. Total for month, 919 ozs. 12 dwts. The company recommends a dividend of 7½ per cent. for the year ending Sept. 30 last, of which an interim dividend of 2½ per cent. was paid on July 20, 1891."

PIGGS PEAK ESTATE.—Report for week ending Nov. 7:—"Devil's Reefs.—Prospecting drives: Drove for two weeks 104 ft.; ground getting harder, and passing through small veins of quartz; 270 ft. of cuttings; average depth, 2½ ft. Two boys getting stuff at shoot for battery. Five boys cutting wood and stacking same for battery. Battery: Roof frame finished, all iron on and windows fitted. Engine: Boiler lagged. Engine ready except l.p. piston, steam jacket, valve, and pump eccentric, which are being made in camp. Trestle work: All the longest poles in; now working short ones for ore shoot. Dam: Finished. Have laid about 100 ft. of pipes. Ballcock valve not here yet. England's Reef Battery: 20 stamps taken down, and removed to new site. Battery excavations nearly finished."

HORO CONCESSION.—The manager's report for Oct.:—"I beg to send you the report of work done here in the month of Oct.:—"Intermediate tunnel: This has been driven 20 ft. in the month. The last 5 ft. has panned from 2 to 2½ dwts. of gold, the first 15 ft. driven hardly showing more than colours; the rock continues very hard. Second cross-cut north from No. 2 west drive: This cross-cut is marked on the plan herewith sent. We have driven 17 ft. to the west in rock averaging about 5 dwts. of gold in the pan, the width of the gold-carrying rock being about 6 ft. First cross-cut to south from drive 35 ft. down No. 1 shaft: This cross-cut was continued to the south, and at 38 ft. to 44 ft. from the drive cut through rock, carrying about 5 dwts. of free gold; we shall drive east and west on this. Open cutting by No. 1 shaft: This open quarry is now a long line of reef for 25 ft. to the west of No. 1 shaft, and to a depth of 35 ft. from the surface. Battery: The 20 stamps ran 19 days 14 hrs., crushing 1,170 tons, and yielding 213 ozs. 18 dwts. gold. Shortness of water, due to the length of time any appreciable quantity of rain has fallen, has prevented our crushing more ore."

COMMERCIAL NOTES.

METALS.

THE Metal Market has been quiet during the current week.

BANK RATE was reduced yesterday to 3½ per cent; bar silver

declined to 43½d., improving again to 43¾ and closes at 43¾d. per oz.

COPPER has been easier in consequence of lower prices from America. G.M.B. warrants have declined from 46l. 15s. to 44l. 15s. cash; three months has ruled 12s. 6d. to 15s. per ton premium over cash. To-day's prices are 44l. 15s. cash, and 45l. 7s. 6d. three months. We quote English tough, 48l. 10s. to 49l. 10s.; best selected, 49l. 10s. to 50l. 10s.; strong sheets, 59l. to 60l.; India sheets, 56l. to 57l.; yellow metal sheets, 5¾ to 5½; sheathing, 5½ to 5¾; ore, 8s. 9d. to 10s. per unit.

TIN has been dull, and values have declined from 91l. 5s. to 90l. 5s. cash, recovering to-day to 90l. 12s. 6d. cash, and 91l. three months; three months has ruled 12s. 6d. to 15s. premium over spot. English ingots has declined to 94l. 10s. The Dutch market is easier; banca, 55fl.; billiton, 54½fl.

TINPLATES are dull and easier. We quote ordinary coke 12s. 6d. to 12s. 9d. Liverpool.

SPELTER has been quiet, and is quoted 22l. 7s. 6d. to 22l. 10s. for ordinary brands ex-ship here.

LEAD has been dull and easier. We quote soft Spanish, 11l. 5s. to 11l. 7s. 6d.; soft English, 11l. 7s. 6d. to 11l. 15s.; L.B., 12l.; sheets, 12l. 10s. to 12l. 15s.

QUICKSILVER better demand. Rothschild's price is still 8l.; second hands, 7l. 14s. 6d. to 7l. 15s.

ANTIMONY quiet. Smelters quote 58l. to 60l., according to time of delivery; second hands, 55l. to 56l.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING DEC. 12.

Arnold, Perrett	10 per cent.
Assam Railway, Preference "A"	8s. per share.
Alliance Marine Assurance	18s. per share.
Brewers Investment Corporation	6 per cent.
Belgravia Dairy	8 per cent.
Bodega	5 per cent.
Brahmapootra Tea	8 per cent.
Bombay, Baroda, and Central India Railway	4½ per cent.
Chelsea Waterworks	10 per cent.
Charles Ogleby	5 per cent.
Great Indian Peninsular Railway	1l. 16s. 6d. per cent.
Guardian Fire	25s. per share.
Henry Bentley and Co.	12 per cent.
Jhauzie Tea	4 per cent.
La Guaira and Caracas Railway	5 per cent.
Milner's Safe	5 per cent.
National Provincial Bank of England	14 per cent.
Norwich and London Accident Insurance	8s. per share.
Newcastle Breweries	6 per cent.
Royal Niger Co.	5 per cent.
Rudge Cycle	20 per cent.
St. Pauli Breweries	11s. per share.
St. Louis Breweries, Preference	8 per cent.
St. Louis Breweries, Ordinary	10 per cent.
Spiers and Pond	4s. per share.
Tokai Tea	5 per cent.
Walter Showell and Sons, Preference	7 per cent.
Walter Showell and Sons, Ordinary	8 per cent.

CORRESPONDENCE.

[We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

THE SAPPHIRE AND RUBY CO. OF MONTANA, LIMITED.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—I have the pleasure to inform you that we have received from the directors, sent out from London by this company to view and report upon our mines, the following cablegram:—

"Examination of the Sapphire Mines completed. We are perfectly satisfied on every point. The great value of the property cannot be questioned. We approve the purchase."

I should be much obliged if you would insert this in your next issue.—I am, &c.,

HERBERT MOIR,
Secretary.

20, Abchurch Lane, London, E.C.,
Dec. 11, 1891.

EAST BLUE HILLS MINE.

SIR,—In your issue of the 14th ult. you inserted a letter from William Nance, who was captain at this mine from Aug., 1890, until June last. He began his letter by saying, "At the meeting held on the 5th inst. an attempt was made . . . to puff up this worthless concern at the expense of my reputation." There are reputations and reputations, and I will ask Mr. Nance where he achieved his reputation? Was it at the Gold Hill Mine in North Carolina, or was it at the Stanly Freehold Mine in the same State, and, if not at either of these mines, where did he build up this reputation, of which he is so tender?

Mr. Nance stated in his letter that the local agents "all condemned the mine;" this is not so. Capt. Mitchell was laid aside by illness just before and at the time Mr. Nance took charge, the latter said that Capt. Mitchell wanted to return to the mine, but that he (Mr. Nance) did not want him.

He says he took up the shares on condition that he "should have the management of the mine," and he contends "that the committee had no right whatever to interfere with my management, as they had most distinctly contracted it into my hands." I was not a member of the committee at the time, and do not know of my own knowledge

what passed, but it is open to Mr. Nance to produce the contract in support of his contention, which I challenge him to do. But the thing is too preposterous that shrewd men of business should voluntarily efface themselves and become mere puppets in the hands of any mining autocrat.

Mr. Nance says "the next thing I discovered was that the banking account had been overdrawn 1,100l. or more," but I am informed that a balance-sheet was given to him when he offered to take the shares, and that his statement is incorrect that "at the time I took my shares I was informed that there were no liabilities whatever." He says "when I left about a year's merchants' bills were owing;" that also is incorrect. He says "our credit stopped, and, being threatened to be put into the Stannaries Court for debt, I came to London to see the secretary." I am not aware that our credit was ever stopped; at all events, no one has refused credit to our present captain; and as to our being put into the Stannaries Court, this is another of Mr. Nance's half truths.

He says "the day after I left Mr. Wagstaff arrived, and put the men to work in the forbidden ground." This shows how reckless Mr. Nance is in his assertions. Mr. Wagstaff was amply justified in setting the men to work, as the ground had been ceded to the company by the shareholders of Blue Hills, and the permission of the Duchy had been obtained.

He says that he relinquished all his shares, "finding that the tin did not extend into the new ground," but he had only driven it a few feet, and, therefore, could not have proved it.

At the meeting of shareholders on Feb. 26 last, Mr. Nance, in the chair, said: "Well, gentlemen, although the lode has fallen off from 20l. to 5l. a fathom, I hope in a day or two it will be of the same value again, and possibly better. . . . I think it is a very promising prospect to continue driving the 30-fm. level. . . . We have some prospects in the western part of the mine, which, I think, will give a little encouragement to the shareholders;" and he "proposed a call of 1s. per share," which he has not paid, and which he refuses to pay. Contrast this with what Mr. Nance says in his letter that the mine is "worse than worthless." Contrast it with the letters he wrote which appeared in the *Mining Journal* of June 28, July 12 and 19, 1890, when he was trying to be appointed captain of East Blue Hills. In the first of these letters he said: "It appears in East Blue Hills after the great heave they lost the main lode . . . and it turns out the discovery in Blue Hills indicated where the main lode was in East Blue Hills." In the second letter he said, "The explorations are very extensive . . . and run alongside of this the main lode, which admits of putting in four or more cross-cuts at various points for 70 fms. in length and 30 fms. in height, at a very little expense, which would be almost certain to find the lode better than it was before the heave took place, and it is with these prospects before you that you are advised to shut down by a gentleman largely interested in the adjoining mine;" and in his third letter he said, "The shareholders will be glad to hear that there is not the slightest probability of East Blue Hills being abandoned. In fact, I think there is a better chance now of resuscitating the mine, and making it as good, or even better, than Blue Hills during the next four months. During the last three years they have been working on a dummy and not on the main lode;" and further on he said "there are various other highly important points to be tested before the mine will be abandoned;" yet he now describes the mine as "this worthless concern," "worse than worthless," and says, "I strongly advise all the shareholders to relinquish their shares," advice, I am happy to say, they have not taken, and they will now be able to apply the epithets "worthless" and "worse than worthless," in a manner that will require no great amount of penetration on their part.

His letter hardly deserved any notice, only that there are timid and unreflecting, and therefore credulous, shareholders in most industrial concerns, who believe anything they see in print, and it is necessary that such persons should be put upon their guard.

The fact is, Mr. Nance is surcharged with venom because his services were dispensed with. He strikes out wildly, beating the air, but he may rest assured that his puny efforts will not meet with the success he wishes, and if his future attempts to injure the mine in the estimation of the shareholders and the public should have no more fibre in them than those he has hitherto essayed, he will prove himself to be a "most forcible feeble."

It will hardly be believed that a few days after he took charge of the mine he discharged the clerk, and from that time forth, until he himself left the mine, not an entry was made in any of the mine account books, but various memoranda were made on sheets and scraps of paper, and all left in the most chaotic condition, so much so that it was next to impossible to evolve order out of them. How could any concern hope to succeed under such conditions?

With reference to his letter which appeared in your last issue, where he says the report of the 4th ult. "states that the (3) west is being driven at 3l. per fm., and 10s. in the £ for tin raised," he omitted the other and succeeding part of the report, viz., "the lode here is looking better, and, when ventilated, we have several fathoms of stopping ground, which will pay for working;" and he also omitted to state what he knows, or ought to know, that one-eighth is deducted for returning charges from the tribute, as well as the cost of drawing and sundry other charges. The same rancorous spirit, however, pervades both his letters, the object being to damage a concern the management of which, in his hands, was a conspicuous and melancholy failure.—I am, &c.,

THOMAS NICOLLS ROBERTS.

2, Torrington Street, Russell Square, W.C.

Dec. 10.

HOLLOWAY'S PILLS AND OINTMENT.—During piercing winds and excessive variations of temperature everyone is more or less liable to internal and external disease. Throat, chest, liver, bowels, kidneys, and skin all suffer in some degree, and may be relieved by rubbing in this Ointment, aided by proper doses of the pills, for administering which full directions accompany each box; in truth, any one who thoroughly masters Holloway's "instructions" will, in remedying disease, exchange the labour of an hour for the profit of a lifetime. All bronchial, pulmonary, and throat disorders require that the Ointment should be thoroughly well rubbed upon the skin twice a day with great regularity, considerable briskness, and much persistence.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Dec. 10.)—Watson's engine shaft: In the 172-fm. level east, the lode is 3 ft. wide, and is yielding saving work of copper and mundic ores. In the 160-fm. level west the lode is 3 ft. wide, and is producing 1 ton of copper and mundic ores per fm. In the 148-fm. level east, the lode is 3 ft. wide, and is yielding a little copper and mundic ores. All the stopes throughout the mines are yielding the usual quantities of copper and mundic ores.—W. CLEMO.

HEXWORTHY.—Mine agent's report for four weeks ending Dec. 5:—Low's adit level has been extended 26 ft., by four and six men; the lode has been 2 ft. wide, and is now 2 ft. 6 ins. wide in the end, and is yielding tin in paying quantities, the level being 40 fms. 1 ft. 6 ins. south of Low's engine shaft. Low's back stope: 6 fms. 1 ft. has been stoped, by four men; the lode is 20 ins. wide, and fairly good for tin. Low's 12-fm. south level has been extended 21 ft., by four men and six men; the lode is 2 ft. 6 ins. wide, and looking better for tin; the level is now 5 fms. 5 ft. south of Low's shaft. Low's 12-fm. north level has been extended 16 ft. 6 ins., by four and six men; the lode is 16 ins. wide, and very good for tin. After we have driven this end a few fathoms further, and the lode continues as it has been during the past month, we shall have a good stope in the back of the level. This tin ground is also making down in the bottom of this level. Seeing this, we shall resume the sinking of Low's engine shaft another 13 fm. lift as soon as possible. This level is 4 fms. 3 ft. north of Low's shaft. We have commenced sinking a small shaft to communicate with the adit level for ventilation, 43 fms. south of Low's engine shaft. Taylor's engine shaft and 12-fm. west level: This level has been extended 27 ft., by six men. We have a good improvement in the ground for driving, and if the ground continues we shall soon get underneath the tin ground in the adit above. This level is 12 fms. 5 ft. west of Taylor's shaft. Owing to the inclemency of the weather we have been unable to complete the covering of the dressing-floors, but are making fair progress, and when completed it will be a good piece of work, which will enable the floor's work to be carried on in wet weather.

PHOENIX UNITED (Dec. 8).—Setting report:—We have at various points 22 pitches, at tributes varying from 5s. 6d. to 13s. in the £ for tin.—J. WILLIAMS, J. RUNDLE, W. MANLEY, J. HOSKIN.

WEARDALE.—Report on Weardale Co.'s mines for week ending Dec. 5:—Ore raised for week, 61 tons; ore dressed for week, 93 tons; ore and slag smelted for week, 139 tons, producing 71 tons of pig lead.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Report from the superintendent Nov. 7.—Mining exploration: Sinking winze, No. 13, from drift west of Mina Graude open-cut, 460 ft. above tunnel level, 39.5 ft.; total, 39.5 ft. This winze is on the horse east of the 100 lode, the latter being too soft at that point and requiring timber. After sinking a few feet further, the lode will be intersected and a short drift will place us below a small ore-body standing in this section. Driving south from long San José west cross-cut tunnel level, on the 10 lode, 24.8 ft.; total from cross-cut, 110.2 ft. We drove through partially mineralised ground in the last few days, carrying nearly enough ore to pay for stoping. Driving north-east from north end of 12-fm. level, main lode, 11 ft. with machine drill; total, 14.4 ft. This drive was on hard and barren ground, but the breast is improving in appearance. Driving the 36 level north on 100 lode, 44.3 ft. with machine drill; total extension beyond the short west cross-cut, 115.8 ft. All the drive was on unproductive ground. The breast reached the requisite point for communication to No. 12 winze overhead; total exploration, 119.6 ft. Development: Driving loop tunnel west of Tirito and Providencia old workings, 54 ft., 30 ft. by hand, 24 ft. with machine drill. The breast is 88 ft. from the Providencia west cross-cut, the point of communication. Driving north end on the 100 lode, 12-fms. level north of No. 11 winze, 21.3 ft. on a branch of black ore, varying from 1½ ft. to 2½ ft. in width. Rising from 36 north end, 100 lode, 11.1 ft. on scattered black ore; the level was connected to No. 12 winze; sunk from the 24-fm. level on the southern part of the ore shoot; total development, 97.5 ft. Ore extraction: The ground stoped out during the month is estimated as follows:—From back of main stope (north of No. 4 winze) southern section stoped out 18 fms. From stripping east wall at 24-fm. level, main lode, between Nos. 6 and 7 winzes; ground extracted, 14 fms. Understopping 12-fm. level, 100 lode, north and south of No. 11 winze, 17 fms. Stoping back of 24-fm. level 101 lode, north and south of No. 11 winze, 8 fms.; total stoped out, estimated, 57 fms. The amount of rough ores extracted was 946 tons, which, after cobbing, yielded 572 tons of cleaned ore. Ore reserves.—On 100 lode: The stope in back of 24-fm. level over No. 12 winze is 111 ft. long, of which 98 ft. is paying ground, 6 ft. wide and 25½ ft. high above the 24 rail; worth, in ore, 8 tons per linear fm. The understope in floor of 12 fm. level:—1. North of No. 11 winze, stoped out 25 ft. in length, 5 ft. in width and 24½ ft. in depth; the ground in sight is worth 7 tons per linear fm. 2. South of No. 11 winze, stoped out 22 ft. in length, 5 ft. in width, and 6 ft. in depth; the ground in sight is worth 5 tons per linear fm. The ore ground below the 24 on this shoot is standing intact. The stope over 36-fm. level is 60 ft. long, 12 ft. wide and about 28 ft. thick to the 24 level; worth, in ore, about 30 per cent. On main lode: No ore ground is left standing below the 24-fm. level. The main stope contains paying ground for a length of only 59 ft.; average width, 15 ft.; height above the 24, 57.5 ft. in its southern part and 49.5 ft. in the northern end; the ore is very scattered. The stope in back of the 24, between Nos. 4 and 5 winzes, stands the same as before. Reduction: The cobbled ores sent to the mill during the month (five weeks) amounted to 597 tons, with an average ley of 40.83 ozs. per ton, against 34.71 ozs. the previous month. The stamped ores chloridised were: 1,475 furnace charges at 900 lbs., 663.8 tons, with an average assay value as follows:—Before roasting, 36.75 ozs. per ton; after roasting, 33.54 per ton, against 24.79 ozs. and 22.19 ozs. respectively, for the previous month. The average chlorination in the roasted ores, as per daily tests, was 93.04 per cent., against 92.10 per cent. for the previous month. The roasted ores served to the leaching vats amounted to 570 tons, with an average ley of 29.46 ozs. per ton, against 23.62 ozs. the previous month. Tailings thrown to the dump, 240 tons, averaging 2.92 ozs.; tailings deposited for subsequent treatment, 260 tons, averaging 4.96 ozs. silver per ton. The

precipitate cleaned up was 9,765 lbs.; gross assay value, \$15,439.27. Silver produced: Six bars sold at the Alamos Mint, \$5,919.73; 11 bars deposited for shipment to London Mint, value at \$39.109 per kilog. fine, \$12,886.41; total, 17 bars, Mint value, \$18,836.14. Financial result: The value of silver obtained was \$18,836.14; we collected for 15 bars (1,011 lbs.) pig lead, \$117.61; receipts from bullion, \$18,953.75; from other sources, \$1,161.44; total receipts, \$20,115.19. The expenditure for the month (five weeks) was \$20,545.49, so there was an excess of disbursements over receipts of \$430.30; but the value of argentiferous stocks in hand was increased by \$2,699.00, consequently there was a nett profit of \$2,268.70, after charging to profit and loss account the following:—\$1,171.10 expended on mine plant, mostly consisting of drilling and other machinery put into use in the mines; \$1,303.89 expended on development account; and \$1,625.77 expended on exploration account—\$4,400.76 in all, not belonging to revenue account. In the expenditure is included \$1,851.70 paid for outside ores purchased.

AUSTRALIAN BROKEN HILL CONSOLS.—The manager reports for the fortnight ended Oct. 29:—Block 9:—Engine shaft: 280 level west driven 15 ft. for fortnight; total, 582 ft.; no change in formation. The present contract for driving having been completed, have let fresh contract, to include cross-cutting into footwall to prove source of water mentioned in last report. Incline from 230 level west: Sunk 16 ft.; total, 211 ft. 6 ins. below 280 level. A cross-course was met with during the fortnight, which narrowed the lode. An improvement is, however, taking place, and we are now getting into settled country. The lode continues to dip steeper, and occasionally shows a little fahlerz and galena; water continues strong. Intermediate level No. 2 west from rise: In stoping from this level towards the main rise a quantity of fahlerz, with a little sulphide and native silver, was broken. The quantity raised has been sampled, and yielded 12½ cwt. of these ores, containing 3,138 ozs. of silver. Stopes off main rise: No change having occurred, the men are now being transferred lower down, to test the country below the footwall. Rise from intermediate level No. 2 east from incline: Risen 14 ft.; total, 26 ft. The vein here has improved, and now shows fahlerz, as well as native silver, and looks as if making for a good body of rich ore. Rise from 280 level east: Risen 6 ft.; total, 47 ft. No change of importance. The 180 stopes: An improvement has come in here, and we are now stoping good carbonate of lead associated with canary ore and high-class galena. No. 4 shaft: Sunk 7 ft. 6 ins.; total, 37 ft. 6 ins. Following down a promising lode formation, at present 1 ft. wide.

BRATSBERG.—Report for week ending Nov. 28:—Hoffnung Mine: The lode in the present end of No. 2 adit level is now about 1½ ft. wide, and carrying a leader of ore, showing a good appearance, but without value. No. 1 rise in the back has fallen off in value lately, being now worth only ½ ton per fm. No. 2 rise is still unproductive, but there are signs of improvement especially in the western end. We have suspended driving the mid-level east in the back of No. 2 adit level. There is a good lode in the winze sinking below No. 2 adit level; worth 1 ton per fm. The bumpy character of the lode at No. 3 adit level continues, for the time being it is poor. The rise in the back here is worth ½ ton per fm., and the winze sinking in the bottom a similar value. Johannes Mine: The level east on Howard lode is worth about ½ ton per fm., but the rise continues to yield about 1 ton per fm. The western level is looking very much better than it has for some time past, and we hope soon to be able to report value here. We have recently intersected Howard lode by a cross-cut from the shallow workings on Johannes lode, striking it about 70 metres shallower, although about vertical with the present deep workings on this lode; the appearance is very good, and worth close upon ½ ton per fm. We have to lay a tramroad, in order to get rid of the accumulated stuff before much more can be done here to prove the level east and west of the cross-cut, which work will be started and completed as soon as possible; 97 miners employed this week. Surface work and remarks: Sorting and dressing ore has gone on fairly well, and a large quantity of stuff has been treated, but on an average of low grade which applies to the whole month, and is, in a great measure, due to the present unusually low value of the explorative points, and opening up of new stopes by the new hands recently engaged, hence the estimated produce for Nov., 115 tons, 20 per cent. ore, is below the usual yield of the average stuff produced from the mine.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING WORKS.—Report for week ending Nov. 28:—We were engaged during the early part of the week in lime burning, and burnt the remaining stock on hand. We had tidings yesterday that the steamer had arrived at Bondatid with two barges limestone, and being Sunday, we sent down men specially to unload them, so as to get them back to Skien in time for the coke vessel, which is expected daily, but according to advice from Skien, the wind has been and still continues due east, or dead against her, which is most unfortunate. We have remade the furnace bottom and forehearth, and are ready for a start at a moment's notice. Electro depositing is proceeding as usual, and we have now commenced to prepare for enlarging the plant, and have just completed building a lean-to shed for doing preparatory work, making available the whole of the tank house for depositing if necessary.—T. F. SMITH.

CASTILLON (Nov. 30).—We have to-day sampled 52½ tons of lead ore. To date we have got together 173 tons blende towards next shipment. We hope to make this cargo up to 300 or 350 tons. All stopes fully maintain the yields given in my report of 9th and machinery is working well.—J. EDWARDS.

CHIAPAS (Nov. 3).—Nov. report.—Mine: As I have already informed you, a very heavy fall of ground occurred in the Santa Fe Mine on the 5th inst., covering a part of the ore already broken and piled up ready to be trammed to the mill. The work since that date has been principally confined to repairing the flume and uncovering the ore. The flume has been re-dug, and is now being masoned up, extra heavy bulk heads being put in to prevent, as far as possible, any damage that we may run from floods. The debris from the top of the pile of ore is also being trammed away, and we have already uncovered enough ore to keep the mill going as soon as it is ready. Tunnel No. 2: The mouth of this tunnel was completely blocked up by the loose ground hanging after the slide occurred, and which we had to take down in order to work below it. Consequently this tunnel has not been driven during the month. Tunnel No. 3: Has been driven 1.70 metres, at \$70.00, by four men. It continues in white spar. Mill: Nearly all the machinery is now on the ground, and the

crusher is being put up, and also the water wheel. I, however, miss some important pieces, and I shall probably have to send down Mr. Worcester to look them up. The freighters report that they have not arrived in Ermita. All the jigs are made, and are, I think, a good job. I am exceedingly sorry I did not get the mill going in Oct., as I fully expected I should. It is now simply a question of getting the pieces that are short and putting the whole thing together. All that has arrived is being rapidly put up by Mr. Lloyd and his assistants. Tramway: All the ties for placing the rails are delivered, being 400 in all, and as soon as Senor Arciga can get the rails up, the tramway will be laid from the mine to the mill for the delivery of the ore. Ore house: A good store house is being made for storing and sacking the ore; it measures 20 metres by 8 metres, and is let on contract at \$9.00 per cubic metre, contractor to find lime, sand, &c. One-third of the house is divided off, and will be used as an oil and lamp room, also for storing any spare pieces of machinery. This house will be covered with zinc, and be connected with the drying room by a tram-road. Shop: Being very short of space for storing provisions, I have had to build an addition to the present shop. This addition measures 10 metres by 5 metres, and will also be covered with corrugated iron. This is the only class of building suitable to the country.—A. H. STOCKDALE.

DAY DAWN P.C.—Report for fortnight ending Oct. 24:—The output of quartz is 959 trucks. Sent to the Excelsior mill 1,038 tons. No. 13 level has been extended a further distance of 10 ft., making a total distance of 133 ft. from the shaft; the formation is about 14 ft. wide, carrying 3 ft. of stone on the hanging-wall and 1 ft. on the foot-wall, of fair quality. The leading stope over this level is carrying 4 ft. of stone on the hanging-wall and 2 ft. on the footwall, of good quality. In the No. 1 stope we have 2 ft. of fair quality stone. No. 12 level (footwall drive) has been extended a further distance of 15 ft., making a total distance of 475 ft. from the shaft. In the face of this level there are 3 ft. heavy mineral stone, of good quality. No. 10 level—The stope over the hanging-wall drive: The stone will average 2 ft. of fair quality. No. 2 shaft—No. 5 west level: I have started a footwall drive on this level at a point 263 ft. from the shaft, to connect with the end of the footwall cross-cut, which has been extended 20 ft.; this will also hole through to the No. 3 winze now being sunk on No. 4 level. No. 4 west level: The No. 3 winze on this level has been sunk a further depth of 13 ft., making a total depth of 88 ft.; the stone in the bottom of this winze is 5 ft. thick of good quality. No. 3 straight shaft has been sunk a further depth of 18 ft., making a total depth of 143 ft. from the surface; the country passed through has been a hard grey granite with red floss. The number of trucks of quartz hauled from each level is as follows: At No. 1 shaft, No. 13 level, 145 trucks; No. 12 level, 351 trucks; No. 10 and 11 levels, 435 trucks; No. 2 shaft, stope under No. 5 level, 8 trucks; No. 1 winze, 20 trucks; total, 959 trucks. Lease 1,280: The eastern drive has been extended 5 ft., making a total distance from shaft of 37 ft. There is no change with the exception that diorite is making in the footwall. The western end has been driven 4 ft., making the total distance from shaft 41 ft.; the formation here is about 2 ft. wide, and the walls are well defined, but the ground between them still keeps hard. Some very heavy mineral made on the footwall for a short distance, and in one place it was 5 ins. thick, but in the present face it has almost pinched out again. The machinery and everything is in good working order.—T. LESTER.

EAST BROKEN HILL CONSOLS.—Manager's report for fortnight ended Oct. 29: Block 98, main engine shaft: Sunk 10 ft. for fortnight, total, 155 ft. Country still continues hard and lode small in consequence. Connections for rock-drill plant progressing satisfactorily. South engine shaft: Chamber driven 4 ft.; total, 11 ft. This completes chamber, and contract has been let to drive a cross-cut west 100 ft. to intersect the cross lodes. Compressor bedded, receiver finished and tested. Connection for working rock-drills now being made.

GYMPIE GOLDEN CROWN.—Report for fortnight ending Oct. 22:—Lease 777, Two mile: I have to report that during the past fortnight the shaft on the All Sereue reef has been sunk a further depth of 22 ft.; total depth, 224 ft. The grey diorite rock was sunk through at a depth of 215 ft., being 29 ft. in thickness. The sinking is now through black rock; the reef is fully 2 ft. thick, of splendid quartz, and is underlying a little to the east. The slate should be met with at a further depth of 20 ft. The balance of stone raised from the Peter and Paul reef (30 tons) has been crushed for a yield of 7 ozs. 11 dwts. 18 grs. smelted gold. About 20 tons of the above were from the eastern shaft and 10 from the main shaft. The mill is engaged on stone from the Crown and Phoenix, Union Extended, and Great New Zealand Cos. (five-head of stampers each).—T. RAMAGE.

HARRIETVILLE (Oct. 30).—Fortnightly report:—Mons Meg Mine: Shaft on main shoot below tunnel J advanced 12 ft.; total, 87 ft.; the lode, which is 1 ft. wide and somewhat auriferous, is now more upright than it has recently been. The rise at back of north drive 100 ft. above tunnel J has communicated to the 170-ft. level: the portion of the lode which this rise has followed being 2 ft. wide and poor. It is now evident, however, that the rich stone which we are obtaining above continues in the hanging-wall of this rise. North drive 170 ft. above tunnel J advanced 15 ft.; total, 200 ft.; the lode is 6 ft. wide and payable; about one half of lode producing very good stone. Drive on lode bearing north-east of drive north of tunnel K extended 3 ft.; the lode is 12 ft. wide, consisting of ferruginous shale and sandstone, traversed by veins of quartz and carrying a little gold. Guerdon Mine: Rise at back of drive north of tunnel J advanced 16 ft.; total, 79 ft.; the lode is 3 ft. wide and payable, the hanging-wall portion producing some rich stone, showing gold very freely. Drive north of rise 50 ft. above main level extended 14 ft.; lode 3 ft. wide and payable. Tunnel K has advanced 26 ft. towards the Guerdon lode; total, 177 ft. from No. 2 Mons Meg lode. We have just passed through a belt of quartzite which is slightly auriferous. Tiddledee Mine: Drive south of tunnel D towards Mons Meg advanced 20 ft.; total, 1,373 ft.; the lode is 4 ft. wide but poor. The rise at back of tunnel B on new shoot has advanced 7 ft.; total, 64 ft.; the lode is 4 ft. wide, and continues to produce payable stone. Returns: We cleaned up on the 21st inst. for the following yield, viz.: Mons Meg, 730 tons; Guerdon, 324 tons; yielding together 215 ozs. of gold. Tiddledee Mine, 110 tons for 20 ozs. gold; pyrites, 35 tons for 55 ozs. gold; total yield for four weeks, 291 ozs. melted gold. The present month's crushing will show an improvement on

account of the improved prospects on the Guerdon lode.—T. G. DAVEY.

JAY HAWK AND LONE PINE CONSOLIDATED (Nov. 25).—My last report was dated the 18th inst. The incline shaft is sunk to a depth of 40 ft. No change in the value of the vein since last week. The 700-ft. level is in good ore, even better than last week. The stopes are producing the same quality ore. I have so arranged the workings that in future the ore treated in the Lone Pine mill will be of a much better class than that treated in the Jay Hawk mill. I have done this because I have no concentrating machinery at the Jay Hawk mill, which is necessary for the richer ores. The tunnel driving under the hill has improved in value. We have found and cut into the main lode, which is at present 2½ ft. thick, the best portion of which assays 77½ ozs. per ton, and the poorer 15 ozs. Altogether the mine has improved since last week. The mills during the past week crushed 250 tons. I estimate the value from our assays at \$6,000. This will leave us a nett profit of \$4,000 per week, after paying all costs. We have melted and shipped six bars of bullion, 3,511 ozs., making a total to date of nine bars. I shall melt again in a day or two, but will not clean-up the mill until after the 1st of next month. I expect to make a profit of two-thirds of our gross produce of bullion and concentrates. The latter will be sold early in the coming month. I am now sending samples to the different smelters, and asking what price they will pay for it in 10 or 12 ton lots. All the machinery at the mines and mills is in good working order.—H. PRIDEAUX.

KAPANGA.—A lengthened report has been received from the manager, the particulars of which were mostly given in the full statements of the chairman and Mr. Henry Wilson at the recent meeting.

KILKIVAN.—New property.—The ground contains a good deal of water, and pumping appliance will be necessary from the outset; it is of no use to commence sinking the shaft until the machinery is on the ground. The method with which I propose developing the ground is as follows:—That we erect on the site of the shaft a winding and pumping engine, find all tools and timber necessary, then let the actual labour of sinking 300 ft. by tender to local contractors, who find explosives and candles, we doing the winding and pumping for them. This will, without doubt, be the cheapest and speediest way of doing the work. The estimated cost of 4,300%. I apportion in this way, sinking 300 ft. at 6½ per ft.—1,800%, and the balance for the machinery, tools, timber, rent, supervision, &c. The time necessary to bring the property to an ore crushing point will be from nine to 12 months. I estimate we shall be able to crush 20 tons per day.—W. M. VIVIAN.

LA LUZ.—In the course of an interesting progress report, the manager writes:—The machinery ought to be here in less than 60 days, but it is a bad road, and with upwards of 500 pieces it will necessarily move slowly. As to the time required to erect the mill and start the same, it will depend a great deal on the man whom Messrs. Risdon and Co. may send. Had we had the usual amount of rain this season I would now have on hand quite a lot of silver, but as it is, I have in the neighbourhood of \$1,000 worth of ore ground, and more than that amount crushed ready for grinding, which I will be unable to treat unless I use mules for the grinding of same, as the Hacienda has been shut down for the want of water. In addition, on Oct. 1 last, Mr. Hilton sold 940 ozs. of silver to the Guadaluajara mint, equal to \$1,008 28-100ths.

MAID OF ERIN.—Letter from the general manager:—I have had no trouble whatever in outputting the requisite quantity of ore to pay for the called dividends since the new company was organised. I have not been compelled to exhaust any of the known ore bodies, and may say that the new developments have discovered quite as much ore as we have taken from the known ore bodies, at the time of Mr. Hooper's examination, prior to the formation of the new company. We still have large areas of unexplored ground, both in the Adams and Henriett, while in the Maid the known ore bodies have not been followed to their boundaries, while the value of the ore remains unchanged, and I see no reason why the present output should not be kept up for a long time to come. The new lease with the Adams Mining Co. for five years, from May 14, 1894, the date of the termination of the present lease, on terms quite satisfactory to us has now been signed. During the present lease we have made quite heavy outlays for plant and machinery for this property, putting on a complete first-class equipment, which will be used to our benefit in the additional time secured. The proposition of the new smelting company, now starting here, if carried out successfully, will reduce the cost of smelting our sulphide ores, approximately \$5.00 per ton. This means to us from \$750.00 to \$1,000.00 per day, or from \$250,000.00 to \$300,000.00 increased profit per annum. I have great confidence in the success of this undertaking, and have contracted with them for the control of the establishment. I made this arrangement with them in order to secure a place for our sulphide ores in preference to any outside ores.

MOUNT ZEEHAN.—The manager writes, for week ending Oct. 23:—Argent section, Block 2, No. 4 lode: Drive, 72-ft. level south end: Extended further 16 ft.; total from cross-cut, 148 ft.; lode formation, 3 ft. 6 ins. wide; all second-class ore, mixed with siderite; a very strong lode, and good enough at a depth; 16 tons of second-class ore raised. The 72-ft. level, stoping south from rise, back of level, 9 ft.; stoped by two men; total stoped, 18 ft.; lode formation, 2 ft. wide; good second-class ore, mixed with siderite. This stope I have discontinued for some time. 9 tons second-class ore raised. Queen Extended section, Block 5, main engine shaft, sunk further 1 ft., making total depth from plat, 52½ ft.; or from surface brace, 162½ ft. Work has been retarded here on account of wind-bore being broken and breakage to bucket-rod in connection, getting the wind bore from the Argent and putting the same in the extended shaft. Country rock, hard graphite slate. Air shaft, No. 2 lode, driven and stoped 7 ft.; making total from shaft south, 20 ft.; lode formation, 2 ft. wide; 3 ins. of which is solid galena, the other part being mixed with hard light slate and iron pyrites; the lode is rather pinched at present. 3 tons 2 cwt. of first-class ore raised and bagged; 1 ton of second-class ore raised. No. 2 shaft at 65-ft. level cross-cut, driven 7 ft., and one opening set of timber put in. Country rock, hard white slate, mixed with siderite. Montana, Block 9: Winze on No. 3 lode, south end, stoped 8 ft. at 14-ft. level; total stoped at this end, 15 ft.; lode formation, 4 ft. wide; composed of first and second-class ore, mixed with a little graphite slate. 2 tons 5 cwt. first-class ore raised and bagged, and 4 tons of second-class ore raised. Winze, No. 3 lode, north end, stoped 7 ft. at 14-ft.

level; total from winze, 13 ft.; lode formation, 4 ft. wide, composed of first and second-class ore. In my opinion we shall finish this shoot of ore to bottom of level next week, and then we have done with Montana block until we get a main shaft down. 2 tons first-class ore raised and bagged, and 2 tons of second-class ore raised; total ore raised for week, 7 tons 7 cwt. first-class, and 32 tons of second-class.

MYSORE.—Mining report for the fortnight ending Nov. 16:—We have resumed the driving of the 890 cross-cut west of Rowse's shaft to intersect the lode recently cut in the rise in the back of this level, where it is over 2 ft. wide, carrying two regular walls, and containing gold-bearing quartz of low quality. We expect to meet the lode in this level in about 20 ft. further. The 620 south of incline shaft on the west lode has been driven 17 ft. 3 ins.; total distance, 250 ft. 10 ins.; the lode is 3½ ft. wide, and assaying 8 dwts. 16 grs. Glen shaft: The 250 north of Glen shaft has been driven 22 ft. 4 ins.; total distance, 582 ft. 1 in.; the lode is 2 ft. wide, but very much disordered, and I have put the men to cross-cut east a little way to prove if any part of the lode has gone off in that direction. Tennant's shaft: The 360 north of shaft has been driven 23 ft. 5 ins.; total distance, 722 ft.; the lode is 1 ft. wide, and yielding saving work for quartz, but I think it will improve very soon. We have commenced to clear through the ancient workings in the 290 north of Gilbert's shaft, and we hope to get into unwrought ground to the north of these workings very soon. In clearing we find a good deal of low-grade quality standing between the walls of the lode. Schaw's shaft: The 450 cross-cut north of shaft has been driven east 27 ft.; total distance, 97 ft.; the character of the rock is looking very congenial for gold, and we are expecting every day to cut the run of quartz driven on in the upper levels about McTaggart's shaft. The 450 south of shaft has been driven 6 ft.; total distance, 150 ft.; the lode is 1 ft. wide, and yielding quartz of low quality. The 320 north of shaft has been driven 3 ft.; total distance, 202 ft. 6 ins.; the lode is small and unproductive, and the ground very spare for progress. The 320 south of shaft has been driven 5 ft. 6 ins.; total distance, 279 ft.; the lode is 1 ft. wide, and assaying 17 dwts. 3 grs. The lode in stope in back of the 780 north of Rowse's shaft is 3 ft. wide, and assaying 2 ozs. 6 grs. The lode in No. 2 stope in back of this level is 2 ft. 6 ins. wide, and assaying 3 ozs. 8 dwts. 9 grs. The lode in stope in back of the 700 north of Rowse's shaft is 2 ft. wide, and estimated to be worth 1 oz. 10 dwts. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 1 oz. 8 dwts. 3 grs. The lode in stope in back of the 700 south of Rowse's shaft is 2 ft. wide, and assaying 1 oz. 12 dwts. 16 grs. The lode in stope in bottom of this level is 3 ft. wide, and assaying 6 dwts. 12 grs. The stope in the back of this level on the wide lode is 2½ ft. wide, and assaying 1 dwt. 23 grs. The lode in stope in back of the 620 north of Rowse's shaft is 1½ ft. wide, and assaying 19 dwts. 14 grs. The lode in stope in back of the 550 north of Rowse's shaft is 3 ft. wide, and assaying 8 dwts. 14 grs. The lode in stope in back of this level south of shaft is 2 ft. wide, and assaying 5 dwts. The lode in stope in back of the 400 north of Rowse's shaft is 2 ft. wide, and assaying 9 dwts. 2 grs. The lode in stope in back of the 700 near incline shaft is 2 ft. wide, and assaying 1 oz. 2 dwts. 20 grs. The stope in back of the 400 north of Taylor's is 3 ft. wide, and assaying 6 dwts. 12 grs. The lode in stope in bottom of this level is 2 ft. wide, and assaying 1 oz. 6 dwts. The lode in stope in back of the 400 south of Taylor's is 2 ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in the 360 north of Plummer's is 2½ ft. wide, and assaying 1 dwt. 7 grs. The lode in back of this level south of shaft is 2 ft. wide, and assaying 6 dwts. 12 grs. The lode in stope in back of the 296 north of Plummer's is 2 ft. wide, and assaying 17 dwts. 6 grs. The lode in stope in back of the 296 north of Rowse's is 3 ft. wide, and assaying 2 dwts. 14 grs. The lode in stope in the 236 north of shaft is 2 ft. wide, and assaying 6 dwts. 12 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 15 grs. The lode in stope in back of this level south of shaft is 2½ ft. wide, and assaying 3 dwts. 22 grs. The lode in stope in back of the 360 north of Tennant's shaft is 1 ft. 6 ins. wide, and assaying 6 dwts. 12 grs. The lode in stope in back of the 290 north of shaft is 2 ft. wide, and assaying 6 dwts. 12 grs. The lode in No. 2 stope in back of this level is 2½ ft. wide, and assaying 2 ozs. 12 dwts. 6 grs. The lode in stope in back of this level south of cross-cut, north of shaft, is 3 ft. wide, and assaying 5 dwts. 5 grs. The lode in stope in back of the 180 north of shaft is 3 ft. wide, and assaying 1 oz. 17 dwts. 6 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 13 dwts. 1 gr. The lode in stope in back of the 235 south of Gilbert's is 2½ ft. wide, and assaying 9 dwts. 18 grs. Rising: The rise in back of the 890 west of Rowse's has been put up 3 ft. 10 ins.; total distance, 27 ft. 4 ins. After meeting with lode matter this rise was suspended, and the men put to drive the 890 cross-cut west, as referred to in the beginning of this report. The rise in the back of the 890 south of winze, north of Rowse's shaft, has been put up 10 ft., and has just come into the lode above the disordered ground, where it is 2½ ft. wide, and assaying 4 ozs. 12 dwts. 6 grs. Sinking: Rowse's shaft has been sunk 12 ft. 2 ins.; total distance, 85 ft. 6 ins. below the 890; the ground is mixed with small branches of quartz, and presenting a very promising appearance for gold. The winze in bottom of the 890 north of Rowse's shaft has been sunk 10 ft.; the lode is 2½ ft. wide, and assaying 1 oz. 2 dwts. 20 grs. The winze in bottom of the 620 south of incline shaft (on the west lode) has been sunk 17 ft.; total distance, 26 ft.; the lode is 2 ft. wide, and assaying 3 dwts. 6 grs. The winze in bottom of the 290 south of Tennant's shaft has been sunk 8 ft. in a lode 2 ft. wide, and assaying 1 oz. 17 dwts. 6 grs. Gilbert's shaft is communicated to the 290, and the men have commenced to sink the shaft below this level in a lode 1½ ft. wide, and assaying 6 dwts. 12 grs. I regret to say the weather keeps unusually dry for the time of year, and we are beginning to experience a scarcity of water for our dressing operations, and I am afraid the tailings machinery will have to go idle again unless rain comes very soon. The health of the camp is very good, and the work is progressing generally in a satisfactory manner. Mill samples: New mill, 2 ozs. 9 grs.; old mill, 15 dwts. 6 grs.; tailings, 5 dwts. 15 grs.—J. GILBERT.

MYSORE HARNHALL.—The directors say they submit their third annual report, together with a statement of accounts to June 30, 1891, on which date the connection of Mr. Robert Sheridan with this company ceased, and he was replaced by Mr. Duxford, a miner of considerable experience, who has up to date given satisfaction to the resident director. Annexed to the present report is the annual statement drawn up by the resident director, giving particulars of the

work carried on during the year under review. From this it will be seen that a payable lode has not yet been struck. Great difficulties have been experienced owing to the heavy flow of water in the mine, and the resident director reports that the machinery now at his disposal is inadequate to cope with the same. To remedy this the board has sent out a powerful Deane pump, as recommended by Mr. Evans. The directors entirely endorse the policy advocated by Mr. Evans, and approved by the resident director, of confining the future operations at the mine, as much as possible, to sinking the shaft to a greater depth. This policy, in the case of some of the Colar gold mines, has been attended by the most gratifying results, and the directors hope that if a similar policy be adopted by this company, equally good results will follow.

MYSORE REEFS (Nov. 18).—Fortnightly report:—Harvey's shaft: During the past two weeks this shaft has been sunk 9 ft. 6 ins., which now makes a depth of 9 ft. 8 ins. below the 520-ft. level. The rock is exceptionally hard, and difficult to blast. The lift has been sent down once, which somewhat hindered us. I shall do my utmost to get on a little faster in the coming fortnight. Rise above the 520-ft. level north has been put up 7 ft., now 20 ft. above the level. The whole of the rise in quartz and arsenical pyrites assaying 2 dwts. 14 grs. of gold to the ton. I expect this will be communicated with the winze below the 460 before the morning. The men can hear each other shout. Winze below the 460-ft. level has been deepened 3 ft., now 41 ft. 3 ins. below the level. The whole of the winze is in quartz and pyrites, assaying 6 dwts. 12 grs. of gold to the ton. I hope in a day or two to remove these men to the 520-ft. level to commence a winze there. The 400-ft level south has been advanced 11 ft. 9 ins., now 239 ft. 9 ins. from shaft. The rock is still very hard with some stringers and branches of quartz running with it, which shows a little gold, but nothing to value. Cross-cut east of the 400-ft. level north: This has been extended 15 ft.; the rock is very hard, but it contains stringers of quartz, and is letting out a little water. The machinery throughout the mine, both underground and surface, is working well.—M. SCANTLEBURY.

MYSORE-WYNAD CONSOLIDATED AND MYSORE WEST.—The mining manager reports by mail for the fortnight ended Nov. 18:—Tank mine north shaft: This shaft has been sunk 11 ft., making a total depth of 226 ft. 3 ins.; there is no change in the bottom. 173 ft. level: The drirage south has been advanced 3 ft.; total distance from cross-cut, 23 ft. 6 ins.; there is no change in the end. The winze north of the cross-cut has been sunk 3 ft. 6 ins.; total depth, 12 ft.; the lode is smaller in the bottom, but I hope it will open out again very soon. The cross west has been advanced 1 ft.; total distance, 7 ft.; the rock is so hard here that the coolies make very little progress by hand, and I have stopped it until I can get a rock-drill to drive it; I have put the men to drive the cross-cut east a little further, in case a part of the lode may be standing in that direction. South shaft: The shaft has been sunk 7 ft.; total depth from surface, 145 ft. 3 ins.; there is no change in the rock, we have cut more water, and the shaft is very wet for working in now; we shall put in a cistern and take up some of the water early next month, it will then be dryer in the bottom. During the fortnight the compressor was stopped for two days to repair the steam chest, which has been done satisfactorily. All our machinery is working well.

NUNDYDROOG (Nov. 18).—Report of work done for the fortnight ending Nov. 16:—Taylor's shaft: Depth sunk, 10 ft. 6 ins., by one Italian with two rock-drills. We have been stopped here for four days, owing to a breakdown with the pumping-engine; we shall push on the sinking as rapidly as possible; present depth of shaft, 658 ft. The 600 south: Distance driven, 26 ft., by one Italian with a rock-drill; total length of level, 165 ft. 6 ins.; the lode is still a very fine one, 4½ ft. in width, but the assay value is rather less at present; it is worth 1 oz. 7 dwts. 6 grs. per ton. The 600 north: Distance driven, 24 ft. 6 ins., by one Italian with a rock-drill; total length, 78 ft. 6 ins.; the lode is 2 ft. wide, and the assay value 2 ozs. 8 dwts. 18 grs. per ton. The 520 north: Distance driven, 20 ft., by one Italian with a rock-drill; total length, 348 ft. 6 ins.; the lode is 1 ft. wide, and is worth 14 dwts. 6 grs. per ton. The 520 north winze in bottom: We started this on the 6th, and have sunk 10 ft.; one Italian and a rock-drill employed; the lode at present is about 2 ft. wide, but it looks as if it would soon open out; the quartz assays 16 dwts. 6 grs. per ton. The 450 south, stope in bottom: Ground stoped 5 fms. during the first week in the month, when we suspended it; the lode was 2 ft. wide, and worth 2 ozs. 1 dwt. 6 grs. per ton. The 370 north: Driven 20 ft., by one Englishman with a rock-drill; total length, 484 ft. 6 ins.; there are still a few strings of quartz in the end, but no change in the nature of the rock. Kennedy's shaft: Sunk 5 ft. 6 ins., by two Italians with a rock-drill; total depth of shaft, 191 ft. 6 ins.; there is no change in the rock, but there is still a large quantity of water. The hand-labour stopes, &c., are as follows:—The 520 north—No. 1 stope in back: Lode 2 ft.; assay, 3 ozs. 3 dwts. The 520 south—No. 1 stope in back: Lode 2 ft.; assay, 3 ozs. 16 dwts. The 520 south—No. 2 stope in back: Lode 3½ ft.; assay, 2 ozs. 8 dwts. The 450 north—No. 1 stope in back north: Lode 2½ ft.; assay, 13 dwts. The 450 north—No. 2 stope in back north: Lode 2 ft.; assay, 1 oz. 5 dwts. The 370 south—Stope in bottom: Lode 2 ft.; assay, 2 ozs. 4 dwts. 12 grs. The 370 north—Stope in bottom: Lode 2 ft.; assay, 1 oz. 14 dwts. 18 grs. The 370 north—Stope in back: Lode 1½ ft.; assay, 16 dwts. 6 grs. The 300 north—Stope in back: Lode 1 ft.; assay, 14 dwts. 6 grs. Kennedy's 160 north: Lode 1 ft.; assay, 12 dwts. Kennedy's 160 north—Winze in bottom: Lode 1 ft.; assay, 17 dwts. 6 grs. Kennedy's 160 south: Lode 1½ ft. wide; assay, 18 dwts. 12 grs. Main shaft: Sunk 13 ft., by 3 coolies; present depth, 48 ft. We are close timbered down to the bottom now the ground is getting much harder. Health: I am glad to say there is no sign of sickness on the field. Mill samples:—Rough quartz, through stonebreaker, 2 ozs. 10 dwts. 18 grs.; smalls, 2 ozs. 4 dwts. 12 grs.—F. W. GREY.

NEW EBERHARDT (Nov. 23).—Manager reports as follows:—Eberhardt: No. 3 cross-cut west advanced for the two weeks 23 ft., making a total of 135 ft.; the face of the drift is now quite mixed with clay and spar. North drift from No. 2 upraise advanced for the two weeks 8 ft., making in all 80 ft. South drift from No. 2 upraise advanced for the week 3 ft.; total length, 78 ft. Cross-cut east advanced for the two weeks 15 ft. Beecher cross-cut east advanced for the two weeks 17 ft., making in all 102 ft. Monitor: Total weight of ore extracted and assorted for the two weeks, 18 tons; assay value of the same, as per mine samples, \$33 per ton; the prospects are more

favourable. Capt. Read will return shortly from San Francisco, where he has been on company's business, and will write, giving full indications of present workings.

NEW GOLD HILL (Nov. 28).—Our new mill will be a great improvement on the old one for the following reasons. It is nearer the ore supply, has more gold-saving appliances, can be operated at less than half the cost, and will extract more gold per ton. Aside from these advantages, it is so located as to give plenty of fall for additional machinery, whereas the old mill was so situated that it was impossible to make any additions or improvements. We hope to have this mill ready for operation by Jan. 1, and are now having six men underground taking out ore. So far, the ore we have in stock is of a better quality than that we last milled, so that we may expect better results, and I have no doubt of it. The past week we have completed the engine room to new mill, and made and erected the frame of rocker house, 60 by 24. The stamp mill frame is complete and ready to erect. I have put in most of the week prospecting, and find some very promising veins on the north east part of the property. They were opened and worked years ago. I have information from one old man in our employ that the ore yielded him at the rate of 15 dwts. per ton. I find exposed in these workings some ore that will pay to mill, and if I were sure the quantity would justify us I would do some mining later on with your sanction. In the mine I have changed the two men from the Miller north-east drive and put them with two other men from the 160 ft. upraise breaking ore from a pillar and striking on very good ore on the 380-ft. level in Barnhardt. They have just made a start and we have some fine ore but the average is low as the ore has not concentrated itself in the vein. It is split up and run into the slate, all of which has to be mined with the ore. I stopped the Miller north-east because I felt the necessity of using my men to accumulate ore for the new mill. The vein in the north-east Miller drive is looking better than ever, but it is still low grade in gold. To men have risen 1 ft. for the week, and produced 8 tons of good ore that shews some free gold as also does the ore we are just striking in the 350-ft. level. In an old working, 50 ft. south-west of Mauney shaft in my prospecting, I have discovered ore in a small string that will run 20 dwts. to the ton. It is small, but has every evidence of uniting with the large vein we are on in the upraise. I am going in to take this ore out as long as it lasts. At present it is only a prospect, but, being in the location it is, I look for it to grow larger, and hope it will retain its present value. Taken altogether, I think our prospect for a lot of ore this winter is better than it has been for some time past. Aside from this we will be working in ground where we may come on to rich ore at any time.

—R. EAMES, jun.

PINOS ALTOS.—Under date, 18th ulto., this company's assistant superintendent writes as follows, viz.:—Last week the 11½ drift was run 4½ ft., and I have discontinued it for the present. The 13th east drift was advanced 4 ft., with no apparent change. In the 13th east cross-cut they made 5½ ft., and, as they cut the hanging-wall, I stopped it. The 17th east drift was driven 2½ ft.; as mentioned in my last, I am turning this drift so that it will cut the ledge again. We have finished levelling in the 17th west, and shall be able to run our ore to either the tunnel or winze, as soon as they are finished. The 17½ winze was sunk 3 ft., and the 18th west raise advanced 4½ ft.; there still remains about 5 ft. to break in order to communicate, and I expect to do that to-morrow. It will then take a few days more to square up and put in the ore bin, when we shall be ready to take ore out through the tunnel. I hope to be able to state in my next letter that the change has been made. The 13th west drift was run 5 ft., and is in very fine ore, assaying above \$50. As mentioned in my last, this is the only one of the upper western drifts that I think best to continue for the present, as we cannot stope the ore to advantage until we have finished with the 14th west stope at the west end. All the timbering needed for the present in the tunnel has been finished, and only 500 ft. of track remains to be re-laid; but as that particular piece of road is pretty good, and I am anxious to take ore out of the tunnel, I intend stopping that work for the present. We can finish it at odd times, when we have an opportunity. The following is our estimate of the mill work for the week ended Nov. 14:—588 tons of ore milled, at \$26.59, equal to \$15,634.92; 36 tons of slimes, at \$12.03, equal to \$433.08; 552 tons of tailings, at \$7.61, equal to \$4,200.72; total, \$4,633.80; mill product, \$11,001.12. Lost time on batteries, 5 hours for general repairs. The governor of the State and the merchants of the town have expressed their sympathy for the loss of the late manager, and their desire to assist the company in the future as they have done always in the past.

SOUTH-EAST MYSORE (Nov. 18).—Fortnightly report:—For the past two weeks the level north from the bottom of winze below the 500-ft. level has been extended 27 ft. 9 ins., now 48 ft. from winze. This, I consider, fairly good speed, considering that all the *débris* has to be hauled 100 ft. with a tackle. In future I will call this the 600-ft. level north. During the past two weeks the lode on the whole is improved, being about 2 ft. wide; from 9 ins. to 1 ft. is dark blue quartz, assaying 6 dwts. 12 grs. of gold per ton. In my next I expect to be able to report an improvement, as the level will then, in all probability, be sufficiently north to come in contact with the richer portions we met with in sinking the winze.—M. SCANTLEBURY.

REPORT OF MEETING.

JOHANNESBURG COAL CO., LIMITED.

THE POSITION OF THE COMPANY AS TO ITS COAL AND BUILDINGS—PROSPECTS OF A DIVIDEND NEXT YEAR.

The second annual general meeting of the shareholders of the Johannesburg Coal Co., Limited, was held at the Offices of the company, No. 8, Old Jewry, yesterday, to receive the balance-sheet of the company to June 30, with the report of the directors, and transact all other business appointed to be done at ordinary general meetings.

Mr. G. Elphinstone Keith

presided.

Mr. WALTER F. ANDREWES (the secretary) read the notice calling the meeting.

The report of the directors stated, "Your directors are glad to inform you that the receipts from rents have already enabled them to reduce this amount by 400*l.*, which is nearly equal to 2 per cent. on the whole capital of the company. They hope that the corner has now been turned; all expenses have now been reduced to as low a level as possible, and they hope the time is not far distant when they may be able to propose the declaration of a dividend."

The CHAIRMAN: Gentlemen, I presume you will take the report and accounts as read. (Yes.) I now propose "that the report be adopted and the accounts passed." The business of this company may properly be divided under two heads—the coal property and the town buildings. Before the development of the Boksburg and Brakspan collieries, our coal property seemed to promise most satisfactory results, but for the reasons which I laid before you last year, it was thought advisable to discontinue working it for the present. I look on the property as one that, at any time, may be of great value.

THE QUALITY OF THE COAL IS REPORTED TO BE EXCELLENT,

and with the prosperous future that seems to be secured for Johannesburg I think we may look forward either to selling the property at a fair price, or else letting it to be worked at a royalty on the coal put out. These may be early days to think of such points, but there appears to be no doubt that the time will come when we shall have to do so. Now, as to the town buildings, as will be seen by the report which is before you, we have been able to reduce our loan by 400*l.* This has been done by the receipts subsequent to June 30. The expenses, both in London and Johannesburg, have been reduced as much as possible, and your directors have again taken no fees this year. If the cost of the buildings had not exceeded the first estimate we should have now been earning a dividend out of the rents derived from the buildings. We are receiving about 1,500*l.* a year for rents, as shown by the accounts for the last six months. As to the accounts, I think they sufficiently explain themselves. The value of the two "stands" on building sites is now included in the cost of the town buildings. I shall be happy to reply to any questions that may be asked.

Mr. G. W. PAINE seconded the motion.

Mr. A. J. KING wished to know if the chairman could hold out any hopes as to their profitably working their coal in the future with the possible advent of railways.

The CHAIRMAN, in reply, said that there was no doubt that railways would be a great advantage, but they had not yet found out which way the railway would run.

Mr. KING said that in the prospectus that was issued a 20 per cent. dividend was foreshadowed. They had now been working for two years and had not yet received a dividend, which he did not consider satisfactory.

THE QUESTION OF RAILWAYS.

The CHAIRMAN, in reply, said that the difficulty was, as he had already stated, that they had not this railway communication. When this company started the Boksburg and Brakspan collieries did not promise to turn out as they had done. The fact was that those collieries were in a much better position than this company, they having only to carry the coal by railway 15 miles, while this company had to carry their coal no less a distance than 50 miles. There was no doubt also that the coal of the Boksburg and Brakspan collieries was inferior to the coal of this company.

Mr. KING thought that the matter of railways should have been more carefully considered at the time of the formation of the company.

The CHAIRMAN, in reply, said that it had always been understood that railways would exist in the district.

Mr. PAINE said that the advantage of the other two collieries mentioned was the possession of a tramway.

The CHAIRMAN said that there could be no doubt that a railway would be built, but he could not at present state which direction it would take, but his opinion was that it would be to the advantage of the railway company to run it in the direction of this company's colliery so as to obtain traffic for themselves. The improved condition of Johannesburg necessitated railway facilities.

Mr. KING expressed the hope that with the advent of railways the company would achieve great success.

The resolution was then unanimously carried.

The CHAIRMAN said the only other business was the re-election of the auditors Messrs. Fuller and Wise which was a matter for the shareholders.

Mr. KING then moved the re-election of the auditors—Messrs. Fuller and Wise.

Mr. ANDREW seconded the motion, which was carried.

The CHAIRMAN stated that concluded the business of the meeting.

THANKS.

Mr. ANDREW said that he wished to propose a vote of thanks to the chairman for presiding that day; also to return thanks to the directors for what they had done; and, further, to express the acknowledgment of the shareholders that these gentlemen had continued their services for another year without charging any fees. He could only express the hope that when they next met they would receive a more satisfactory statement.

Mr. KING seconded the motion, and endorsed the remarks that Mr. Andrew had made.

The resolution was unanimously carried.

The CHAIRMAN returned thanks on behalf of himself and colleagues, and said that he re-echoed the hope that they would show a better condition of things when they met that time next year. At any rate he hoped that he would be able to give the shareholders a small dividend, if not from the working of their coal property, from the rents derived from the town buildings. He thanked them for their attendance and for their confidence in the board.

The proceedings then terminated.

THE MONTANA CO., LIMITED.

MONTHLY RETURN.

The secretary of the Montana Co., Limited, begs to state that, by cablegram from the manager at the mine, the directors are informed that the total output for Nov. was \$57,300, and the working expenses for the month, \$13,700.

GOLDEN LEAF, LIMITED.

FAVOURABLE TELEGRAM FROM THE MINES.

MR. J. HENRY LONGMAID, the company's general manager, has cabled the company as follows:—"Empire: 60 stamps ran 27 days, crushed 4,700 tons, producing in gold bullion \$14,000, concentrates and sundries \$870; revenue cost for month, \$9,000; total capital expenditure, \$2,750." Golden Leaf: During month the mill crushed 700 tons, yielding \$10,600; expenses, \$5,500; estimated profit from store and sundries, \$650. Note.—This return is for one month for Golden Leaf, as compared with two months (Sept. and Oct.) in previous report. The manager's reports upon Empire and Golden Leaf for the month of Oct. are of an encouraging nature.

MYSORE-WYNAAD CONSOLIDATED, LIMITED.

WORK CONFINED TO THE TANK BLOCK PROPERTY.

THE directors, in submitting their fifth statement of accounts for the year ending Sept. 30, give an inventory of the whole of the company's possessions, and state that the mining operations are being confined exclusively to the development of the Tank Block, and the mining and development expenses upon this block are borne equally by this company and the Mysore West Gold Company, and the receipts from this property will also be equally divided between these two companies. It already "gives indication of great value." The uncalled capital of the company at the date of this report was 6d. per share, or 5,000l. We regret to see that Col. G. B. Malleson, C.S.I., the chairman of the company, retires, but does not offer himself for re-election.

ROYAL COMMISSION FOR THE CHICAGO EXHIBITION, 1893.

THE secretary of the Society of Arts has issued the following:—

The Royal Commission for the Chicago Exhibition are anxious to comply with a request made to them by the executive authorities of the exhibition, that a typical collection of economic British Minerals may be included in the British section, and they trust they may rely upon the co-operation of owners and managers of mines in carrying this proposition into effect. I am therefore desired to express the hope of the Royal Commission, that you may be willing to favour them with a typical specimen of each of the principal minerals raised at your mines. Mr. B. H. Brough, the Instructor in Mine-Surveying at the Royal College of Science, South Kensington, has kindly undertaken to classify and arrange the collection; and such specimens as

you may be good enough to present may be addressed to him. It should be borne in mind that what is required is not specimens of special value or rarity, but samples of ordinary ores, &c., so that the collection when complete may be fully illustrative of the mineral resources of the kingdom. At the close of the exhibition the collection will be presented to an American Museum, so that it will have a permanent value. The specimens may be of such size that they may lie upon trays 6 in. by 4 in.

THE ISLAND BLOCK GOLD MINING CO., LIMITED.

THE PROFIT MADE IS PLACED TO DEPRECIATION ACCOUNT.

THE accounts for the year ending June 30, 1891, show that after the payment of 637l. 19s. 1d. for royalty, there remains a sum of 1,736l. 5s. 2d., which on this occasion it has been thought advisable to place to the credit of depreciation account. Sluicing has been carried on for 6,610 hours, showing an average of about 21 hours per day, excluding Sundays. This includes a very large amount of opening-up work, which has necessarily reduced the profit considerably. The yield of gold was 2,045 ozs., representing a gross value of 7,771l. 15s. 10d., as compared with 2,823l. 19s. 5d. previously. Up to the present time the gold won from the property of the company has been of the value of nearly 12,000l.

THE ELKHORN MINING CO., LIMITED.

REPORT BY CAPT. J. W. PLUMMER.

IN the course of an exhaustive report on the position of the mine, Capt. Plummer writes:—"We cannot predict how far the rich section will extend, but at present it has the appearance of continuity; and while it retains its present soft condition (it is partially rotten and easily broken) there will be no sand-rock to mar its productiveness. We have strong hopes (judging from this find) that we have reached a plane where the vein will assume more regular, settled, and reliable proportions. The developments on this ore are too limited as yet to allow of the introduction of any theories regarding its origin, &c. In a short time we shall know more about it, as it is the intention to develop it in every direction (especially ahead of and above the level). The lead contents of the new section are large and satisfactory in value, and at present we are breaking large quantities of good shipping ore from this level. The increase of lead ore in the bottom levels is in accord with our views of what would happen in depth."

THOMAS THOMPSON,

STOCK AND SHARE DEALER
ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,
And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN
and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read
Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR,
free on Application.

Shares sold at Special Prices for forward delivery (One,
Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

MINING SHARE CO-OPERATIVE SOCIETY,

15, COPTHALL AVENUE, E.C.

TELEGRAPHIC ADDRESS: "SIGHTSEER."

BANKERS: LONDON AND NORTH-WESTERN.

MINING AND MISCELLANEOUS SHARES are somewhat in
demand for new account; prices have improved to-day, and heavy
buying was perceived by shrewd operators, who as usual make it a
speciality to accumulate shares standing at low prices before the
termination of the year, and it would be prudent for the speculative
public to take advantage of present prices.

Special price list will be forwarded on application, also terms of
business and advantages offered.

MINING SHARE CO-OPERATIVE SOCIETY.

THE MEXICAN ASSOCIATION, LIMITED,

Undertakes all classes of business in
connection with Mexico, and by means of
established Agencies can furnish Reports
upon Mines and other Properties through-
out the Republic.

Code: Assuefacio, London.

Offices: 31, Lombard Street, E.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

W.E.—Afraid there is not much chance of an early revival, but an improve-
ment in general affairs would soon usher it in. As to the mine you mention, it
is purely speculative, but, in our judgment, will improve, as the returns have
recommenced.

Spangle (M. D. R.)—They are all of the speculative class, but there can be very
little lost by holding.

Security—There is a probable rise in them in the near future. Hold.

Democrat—You have quite sufficient at stake for the present we should
think.

Suspense—The fall is only temporary. It appears to be a good chance of
averaging.

J. H. D.—They have recovered now, as the rumour has been contradicted.
Should go higher.

B. A. (Grimsby)—Yes. Mysore Reefs and Mysore West should both be
bought.

Citizen—Nos. 1, 4 and 8 are likely to improve, but Nos. 2 and 3 we consider too
high and speculative. Nos. 5, 6 and 7 do not touch.

S. W. B. (Bournemouth)—A better tone for all of them, and they are likely to
have a spurt any moment. Hold those named.

J. Paulkner—By writing you will stand a better chance.

Dabbler—Quite unsaleable.

W. B. R. (Preston)—You are liable for all calls from the date you purchased
the shares.

Transatlantic—By selling now you would get very little. Under the circum-
stances we advise you to keep them for the present.

Hopeful—Take them up. They are likely to improve, but you may have to
wait.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCHE, Esq., Chairman.

Sir CHARLES METCALFE, Bart.

Major J. W. M. COTTON.

L. BALFOUR BURNS, Esq.

RICHARD SMITH, Esq.

Sir STUART S. HOGG.

BANKERS.

THE LONDON AND SOUTH WESTERN BANK,
LIMITED, LONDON.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING-
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—
The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

LONDON: SATURDAY, DEC. 12, 1891.

The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.

PROGRESS OF THE INDIAN MINES.

GOLDFIELDS OF MYSORE CO.

THE shareholders of this company met in high spirits on Thursday
last to receive the report and balance-sheet of the directors. They
were there to hear that although only one-ninth of the property has
already been sold the proceeds have more than equalled the total
capital of the company, whilst they themselves have received the
substantial instalment of those profits represented by 18s. 3d. per
share. Some persons thought at the last meeting that Lord
Ribblesdale was a little sanguine when, as he himself pithily
remarked, he "made an expedition into the dark continent
of prophecy," but he posed on Thursday in the novel position
of a prophet who hath honour amongst his own shareholders by
reason of the fulfilment of his predictions. We may remind him in
this connection that the close of the meeting found him again en-
veloped in the proverbial mantle, and speaking once more with the
tongue of prophecy, when he ventured to forecast a future as pros-
perous as the past 18 months had been. In his justification it must be
mentioned that although mining rights have been sold over 712 acres in
the last 18 months, this is but a small slice out of the property, con-
sidered as a whole, which at the start represented nearly 9,000 acres.
Of course, all of it may, and most likely will not, be equally
as valuable as that which has been disposed of, for, as
his lordship again remarked, "it is too large a cake to be all plums;"
but there is very little doubt that much valuable ground remains,
and a glance at our map of the Colar Goldfields will show this to
any observer with eyes to see and a head to understand. At these
meetings the *pièce de résistance* is always a speech from Mr. John
Taylor, and the shareholders would not willingly be without it. Mr.
Taylor has the happy faculty of condensing into a few sentences the
whole facts of the mining position of any company with which he is
connected. Master of the details himself, he conveys them to his
hearers in clear and terse language, and in this way anticipates the ques-
tions that would otherwise be put. One can understand the immense
satisfaction it must be to him, a satisfaction which he expressed,
the extraordinary development of the various mines under his care
in India, as, for example, in the Mysore Mine, where the

Champion Reef has been followed to a depth of 900 ft., with the veins still large and rich, and "speaking volumes for the permanency of the mines in the Colar Goldfield." The mining work done by this company has been chiefly of a prospecting character, and Mr. Lavelle, who has it in hand on the spot, appears to think he is on the eve of making some important discovery, particularly in the northern-most shaft of the south block. We are quite of Mr. Taylor's opinion that it is surprising more of these blocks of land in this proved goldfield are not sought after by purchasers, but perhaps the explanation is to be found in the general depression which has characterised all classes of enterprise for many months past. We cannot help thinking, with Lord Ribblesdale, that though the prosperity of the company has been great in the past it is quite possible it may be equalled in a future that is neither dim nor distant.

CHAMPION REEF CO.

The Champion Reef meeting will be read with great interest by those who desire to follow with care the progress of Indian mining. The interest of the gathering here, as in the previous case, centred mainly in Mr. John Taylor's speech, in the course of which he described the workings with great clearness and ability. We do not propose to follow him into their ramifications, but note his remark that there are no fewer than five shafts now being sunk which are provided with powerful winding machinery, and, in four cases out of five, with pumping machinery as well. There is also air-compressing machinery to satisfy all requirements, a battery of 20 heads of stamps, and engine power calculated to work double that number. Moreover, the company has a run of 3,000 or 4,000 ft. on the Champion Reef, with the Mysore Mine on the one side and Oregum on the other. If, under these circumstances, Champion Reef Co. does not soon take a front place amongst the most successful of the Indian mines, mining experience must go for little, and logical deduction for less.

INDIAN CONSOLIDATED.

At the Indian Consolidated meeting there was little to be said that differed from the statements made at the former meeting. Operations in the Wynaad have about paid their expenses; but, as Mr. Malcolm Low, M.P., the chairman, said, the hopes of the shareholders rest chiefly in their Colar property. Here mining, although pursued under the experienced advice of Capt. Plummer, has not been without its usual vicissitudes. Two disappointments have been sustained which the board with characteristic frankness "do not attempt to ignore or minimise." The ore has been capricious and uncertain, and though large quantities of it are standing in the levels it will not pay to put through the mill. The quartz, indeed, is there in abundance, and all that is wanting is that it should be a little richer. The surroundings of the company warrant the assumption that this want will be supplied, and we note the remark of Mr. Low, that if in the Champion Reef in this property there be any value at all, the works are so devised that they cannot fail to find it in the 1,500 ft. Indian Consolidated owns on its course. To continue the explorations, the remainder of the capital will have to be called up, but this, of course, was expected. The position, as a whole, though not devoid of encouragement, was not one of which the chairman of the Oregum Co. could have felt much pleasure in setting forth, but we take it as a distinct mark of the sympathy of the shareholders and their confidence that the best that is possible is being done, that they adopted the report without discussion, and conveyed thanks to the management with absolute unanimity. We quite agree with the remark of Mr. Jones that "the directors are showing the right sort of spirit whilst contending against great odds." If Indian Consolidated can be brought to a legitimate success we feel sure that Mr. Low and his colleagues are the men to achieve that result.

We gather generally from the meetings of the foregoing companies further indications of the steady progress of Indian gold mining as an industry. To a large extent these concerns are losing the speculative features that appertain to most mining enterprises, and are being looked upon by the public in the nature of dividend-paying investments. We have always held that even the best of mines are too speculative to be regarded from the point of view of absolute investments, but if ever we were led to depart from this opinion it would be by the facts and figures that are now forthcoming with regard to the chief mines of the Colar Field.

COPPER AND COPPER SHARES.

AFTER the publication of the Nov. statistics, and the sale of the assets of the Société des Métaux last week, which, as our readers have been informed, included about 15,000 tons of manufactured or partly manufactured copper, the price of the metal suddenly advanced to 47l. a ton, a recovery of nearly 3l. a ton from the lowest quotation recently touched. This week, however, there has been a renewed relapse, causing some not unnatural uneasiness among the holders of copper shares. The decline has been mainly due to the receipt of lower prices from the United States, and a lessened demand here, the impression having got abroad that the stock of copper taken over from the Société des Métaux will be put upon the market *en bloc*. We have every reason to believe that this impression is an entirely erroneous one. The syndicate upon whose

behalf the purchase was made is quite strong enough to hold the stock for a much better price than that now ruling, and we are strongly of opinion that the "bears," who have again come to the front in Paris, will find this out to their cost. From the United States the information reaching this country lately has been decidedly mixed. In some cases the outlook has been described in somewhat gloomy terms, while from other, and, apparently, better-qualified sources, the confident belief is expressed that the American demand for the metal will show a considerable expansion in the near future. Here at home the demand for electrical purposes, and for the manufacture of machinery, is exhibiting a marked improvement, and the outlook in both directions seems to us full of hope. And what is the statistical position of copper? At the end of last month the stocks in England and France and afloat thereto amounted to 57,720 tons, a smaller total, with one exception, than in any month since the early days of the great French gamble of 1887-89. This is certainly a healthy condition of things. And yet with a stock smaller by about 8,000 tons than at the corresponding date last year, the price of bar copper is about 10l. a ton lower. It is clear that such an anomalous state of things cannot continue, and if, as we believe, the development of the electric-lighting industry in this country is about to show marked progress, the recovery in copper will be more rapid than the operators, for the fall in the metal and in the shares of the producing companies would have us imagine.

In view of the decline in the price of copper, it would not be surprising if copper shares had followed suit to a larger extent than they have done, but we do not anticipate that the existing depression will continue beyond the opening of the new year at the farthest. Let us see how copper shares have moved lately. In the following table we show the quotations of the leading shares at recent dates, together with the highest and lowest prices touched this year, and the approximate yield to an investor at the present quotations upon the basis of the dividend distributions of the last twelve months:—

Company.	End of			Highest and		Yield
	Nov.	Dec. 4.	Dec. 10.	Lowest in	1891.	
Cape Copper ...	2½	2½	2¾	4¾	— 2½	4½
Copiapu ...	2½	2½	2¾	2¾	— 1¾	9
Libiola ...	2½	2½	2¾	3½	— 2½	8½
Mason and Barry	4¾	4¾	4¾	7½	— 4¾	5½
Namaqua ...	1½	1½	1½	2½	— 1½	13½
Quebrada ...	2	2	2½	2½	— 1½	7½
Rio Tinto ...	16½	18½	18	23½	— 16½	8½
Tharsis ...	5½	5½	5½	6½	— 5½	8½

From this it will be seen that the declines, where they have occurred, have only been slight, and that Tharsis, and, what is more strange, Mason and Barry have improved. It will also be observed that, apart from the Cape Copper Co., which has only just re-entered the dividend list after an absence of six months, and Mason and Barry, whose shares seem to us to stand at an absurdly high price, the yield upon the leading copper shares at present prices is a good one, ranging from 7½ to 13½ per cent. There are not many industrial securities with equal prospects which afford such an excellent return to investors as the shares with which we have been dealing.

THE EMMA MINE.

IT is impossible to dismiss the faith one has in this mine, and yet futile would it be to deny that it has been provocative of disappointment for many years past. Ever on the eve of striking some great ore chamber, similar to that which enabled the original vendors to float it upon this market at a million sterling (of course, long before the present board had anything to do with it), it has never done so. The only step taken within the last 12 months in that direction has been but the moderate one of selling more ore than it has ever done in any previous year since the first chamber was exhausted. But what can one say to facts like the following:—Here is Mr. Bennett, of Salt Lake City, living close to the mine, and holding 27,000 shares—5,000 more, if we mistake not, than he held a year ago. Then there was the late Mr. Park, who felt so confident that Emma would justify its previous reputation that he gave 25,000l. to work the mine, all of which has been spent in searching for the expected bonanza. We also find Mr. Snell and his colleagues for nine years giving to the company their wholly unpaid services as directors, in which capacity they have visited the mine on one or two occasions. Here is Prof. Keyes, one of the most notable experts in the United States, telling the shareholders in all but as many words that it would be madness to abandon the concern at the present juncture, and Mr. Obed Palmer, the manager of a successful mine, not far off (as distances go in America), equally confident of success. We have spoken in favour of Emma in former issues, but must confess that the foregoing facts have influenced us very much in what we have said. We now appeal to our readers whether they do not in combination form a reasonable basis upon which to speak well of any mine. Will the bonanza yet be struck? We cannot say, but the ground upon which one stands in believing that it will appears to be solid, and, frankly, we must own that after all these years of toiling and moiling of re-construction and trouble, we have not lost faith in the old mine yet. Neither have the shareholders, for despite the price to which the stock has fallen they appeared at the meeting

on Monday as determined as ever to prosecute the workings with unabated vigour.

CANTABRIAN COPPER MINES.

THE multitude of witnesses who have testified to the value of the property owned by this company is certainly a fact that should not be lost sight of by the shareholders. The curious point is that in this case the doctors do not differ, for "all who have seen the property speak of it in the highest terms." There were several facts brought out at the meeting on Thursday which speak very well for the future of the company. Mr. Francis Fowler, in a report upon the property, says: "The lode is evidently a true fissure vein," while Mr. Roskilly (the late manager), says that depth only is required to make the property a great success. At the present time the company is producing 10 tons of copper a month with a steadily increasing output, and it is estimated that 15 tons will pay all the expenses at the mines. The ore averages over 20 per cent. of copper, and 40 tons of ore are now ready for shipment, which it is estimated will average over 25 per cent. Mr. Belmonte, another gentleman who has reported upon the property, is of opinion that if the shaft is sunk another 25 metres from 8 to 10 tons of ore can be raised daily, averaging 30 per cent. of copper. Should this prove to be the case the success of the company will be assured. On the whole, we do not think the shareholders have any reason to be dissatisfied with their investment, for the prospects are certainly encouraging.

EAST GRASSINGTON.

THE shareholders of East Grassington met on Thursday to deplore the present unsatisfactory state of the lead market. Twelve months ago the prospects of a dividend were good, and a dividend would, no doubt, have been at least in sight were it not for the above circumstance, coupled with extremely bad weather. The mine itself was never in a more satisfactory condition; the ore is improving, and the disturbances are becoming less frequent, and, in fact, a rich discovery may be made any day. Some very good samples of ore were exhibited at the meeting from the lowest level (the 60-fm. level). It is proposed to sink the shaft another 15 fms., when important results may be expected. Perhaps the most interesting thing which occurred at the meeting was the report of Mr. Bonser, of Leeds, which was handed to the chairman during the meeting. This gentleman inspected the property privately for one of the shareholders, and spoke of it in the highest terms. It also bore testimony to the excellent manner in which the property was being worked by the manager, Capt. David Williams. There is one thing the shareholders may be assured of, and that is that their property is being worked with such energy and skill as is not often met with. Capt. Williams has always been devoted to the company, and is, if we mistake not, one of its largest shareholders.

IMPROVEMENT IN THE MOSMAN MINE.

IT would seem, from the remarks of Mr. George Hopkins at the meeting of the Mosman Gold Mining Co. on Monday last, that this property, if not actually on the eve of a great success, is at any rate to participate in the general improvement which is taking place in the mines of the Charters Towers Goldfield. A year ago the company had practically exhausted the whole of its working capital, and the directors feared that they would have to resort to re-construction as the only means of raising the necessary sinews of war with which to develop the property. Fortune, however, smiled upon the company—the mine began to improve, with the result that sufficient profits were made during 1891 to enable the directors to carry on large and extensive development works. The Wyndham shaft has now reached a depth of 1,060 ft., and an important connection has been made with the 1,015-ft. level of the Eastward Ho! Mine, by which the latter has now a perfect ventilation, and a large area of ground is opened up. The mines are reported to be in a good condition for working, and appearances point to this company entering the dividend-paying list at no very distant date. The latest news by cable from Queensland states that in the Byerley level of the North Australian Mine—where the richest and best quartz has been found—they have struck 12 ins. of rich ore, and there are 4 tons of quartz on the surface. Our readers should carefully note the reports from this property, as the price of the shares cannot fail to rise if the improvement in the mine continues.

AFFAIRS IN SOUTH AFRICA.

(From our Own Correspondent).

Kimberley, Nov. 16, 1891.

THE RIVER DIGGINGS.

THE fluctuations of the Vaal River diggings are really very surprising. For several years the industry had only a spasmodic sort of existence, but within the last six months things have been looking up, and especially at Klipdam things are looking quite rosy. Diggers are finding well, and prospecting operations and new rushes disclose an enormous area of diamondiferous ground. Some of these diggers are no doubt unlucky, but the majority of them are averaging from 10% to 30% a week, which, seeing that their appliances are of the most

primitive description, is a very fair profit. Diamond buyers run down from here for the river every week, and leave something like 3,000% behind them, and this is in striking contrast to 12 months ago, when it did not pay them to go more than once a fortnight.

THE PRINCE ALBERT GOLDFIELDS.

Mr. Hirschfield, a resident of Kimberley, and who was really the means of the Commissioner of Public Works sending up a diamond drill to these goldfields, has just returned, after working there for some weeks. He does not by any means go into ecstasies over the prospects, but he contends that at the alluvial deposits alone the working man can obtain a very fair living, with the off chance of striking something good. He is an old digger, and evidently knows what he is talking about. With regard to the reefs, he declares that all that is wanted to make them payable is "capital, dynamite, and plenty of elbow grease."

MASHONALAND.

Our latest news from Mashonaland is dated "Fort Salisbury, Oct. 21," and is interesting principally on account of a reported meeting between Mr. Cecil J. Rhodes, the managing director, and the pioneers and diggers. I may here observe that soon after the promulgation of the Cape Parliament it became known that the Premier, Mr. Rhodes, had determined to visit the territory acquired by the British South Africa Co., and it was generally conceded that it was high time he should do so, inasmuch as it was well known that considerable dissatisfaction existed amongst the pioneers, the diggers, and the police. Mr. Rhodes left some two months ago, proceeding to Fort Salisbury by way of the Pungwe River. On reaching the fort, the residents, traders, prospectors, and diggers of Umtali interviewed Mr. Rhodes, and presented him with an address, in which, *inter alia*, they set forth that there had hitherto been considerable dissatisfaction among them, because of dearth of food supplies, want of clear definition as to certain regulations the necessity for a rebate on taxation and licences, and, further, they thought that the time was ripe for a settlement, as far as possible, of the land question; and while their thanks are due to the company for promising to grant farm land for cultivation, they pray that reasonable conditions, so as to secure tenure, will only be imposed. Mr. Rhodes replied to the following effect:—He assured them that the company had provided for the approaching wet season by spending 50,000% in the colony to get food supplies up, and there would shortly be sufficient food supplies at Fort Salisbury to last through the coming season; certainly, sufficient for 2,000 or 3,000 people, besides the police. Then, after referring to the rapid progress of the telegraph line, and the arrangements which the company had made with the Portuguese Government for the construction of the railway from the Pungwe River to Fort Salisbury, he referred to the gold prospects. He admitted that the alluvial appeared to have been to a great extent worked out by some ancient people, but with regard to reef working, he thought the company would be able to assist them by bringing, *via* the coast, batteries at a very reasonable rate, cheaper than they had been landed in the Transvaal. He could understand that there had been cause for some dissatisfaction, but they should bear in mind that if the Chartered Co. had not been in existence the country would not have been opened as it was. The company had spent more than 6,000,000% sterling in the work, and they might now reasonably expect to make some use of it, and get some return. It was an interest in the mining prospects that had induced him to open up the country, and they were bound to respect that interest. He thought that they must admit that they were being very fairly, if not liberally, dealt with. When the company gave them a free half of 10 claims for their work, and then on there being good prospects, and providing they were payable, the company agreed to float a company in return for the other half of 10 claims, it was a matter of great importance and advantage to be able to prospect at only a nominal charge, and after they had sunk a 30-ft. shaft, to retain their claims free of charge, instead of being taken up by monthly licences as they were in the Transvaal. A man could have a block of 10 claims, and, if necessary, wait for years without expense or annoyance, since no jumping would be allowed. He thought the jumping system was absurd, because after the shaft had been sunk they could not work their property until they got a battery. With reference to the land question, there was now no difficulty in the giving out of land titles, and he thought they would agree with him that the small quit rent charged was not excessive. What he wanted was for them to get something out of the land. He expected more people, and they would want food. They would admit that the company had not been idle, and they were prepared to do much more. Of course, they would understand that they could not put gold into the reefs. They had not yet, perhaps, found a Robinson or a Langlaate Mine, but some reefs were showing very well, and no one could tell what they would find in the future. They had at present but few tools, and they could not do anything without batteries.

This is all very well, and probably as much as one could expect, but I have a few observations to make. The expenditure of 6,000,000% sterling seems enormous, and has been the cause of much criticism here since we received the information. Indeed, in some quarters it is freely remarked that there has been a shamefully lavish waste of money, if not anything worse. At the present moment all that the company has got to show for the money is the transport, feeding, and

wages of some 500 men for 12 months, and the construction of some 600 or 700 miles of telegraph. The statement by Mr. Rhodes that there is now no difficulty about the giving out of land titles has taken everyone by surprise. This is the first time we have heard of it, and as it is known that Mr. Rhodes has had no interview with Lo Bengula, the King of the Matabeles, the statement puzzles everybody. That the occupation of the country has been a peaceful one is a great point in the company's favour, but everybody knows that from the first it has been understood that the King granted the cession to the company to dig for gold and other minerals, but under no circumstances was there to be a settled occupation. I may add that there is a strong rumour afloat, since we received this intelligence, that the company's flag has been taken down at all the forts, that the Union Jack has been hoisted instead, and that the company has made over the country to the Imperial Government.

THE TOMINIL MINES, LIMITED.

THE prospectus of this company is issued at a time which is generally regarded as bad for the introduction of new ventures, but its appearance now shows, at least, the faith of the directors in the soundness of the property they offer, and their confidence that the perusal of the prospectus will commend the enterprise to the public. There are certain features about the document which are original and deserve to be noted. In the first place the allotment of shares will be strictly *pro rata*—in other words, kissing will not go by favour, but equal justice will be meted out to all applicants. In the second place, the whole of the purchase-money of the properties is taken in shares, and any money that is provided by the public will be applied to the actual working of the mines. Again, only one-half of the intended issue of 20,000 shares will at present be made. Then we observe amongst the names of the directors that of Mr. Charles Pond, the able and well-known managing director of the Mexican Association and the Mexican Explorations, Limited, and there are associated with him gentlemen of influence and position who have extensive commercial relationships with Mexico in which the mines are found. The prospectus is short and frank—it tells the public how the 25,000*l.* capital, with which the properties have been brought to their present state of development, was subscribed and expended. It states also how, when wishing to secure the best mining experts available, the choice of all concerned fell upon Mr. Grothe, the consulting engineer of the United Mexican Mining Co.; how he proceeded to the mines at Tominil, four and a-half days' mule back journey from the port of Mazatlan, and wrote the report which verified those upon which the properties were first taken over by the syndicate that provided the capital above mentioned, and that now offers them to the public. As the result of this expenditure, "the mines opened out are now sufficiently developed to justify the formation of this company, the reports received from the managers of the syndicate proving the veins of ore to be of great magnitude and exceptionally high-grade, and these reports can be inspected at the company's offices."

The total capital of the company is 500,000*l.* in 100,000 shares of 5*l.* each. It enters into possession of what is practically a going concern, with machinery, stores, reserves of ore, and the like. As we have said, the purchase-money is paid wholly in shares, and from the evidence forthcoming there appears every prospect that the money now to be subscribed (which will wholly be devoted to the working of the property) will give a handsome return to the shareholders.

HYDERABAD (DECCAN) CO.

THE directors' report and statement of accounts will not, we fear, be regarded with satisfaction by the shareholders. The leases of the Singareni Coalfield, the Raichoor Goldfield, and the Partyal Diamondfield are still unsettled, and His Highness the Nizam does not appear willing to let the company have them on the terms they desire. The matter has now been submitted to the arbitration of Lord Herschell, who no doubt will give a decision in accordance with the facts.

FRONTINO AFFAIRS.

FRONTINO is an instance of success following a company's reconstruction. Under the careful management of the present board, the concern continues its prosperous career, and last year the directors divided 3*s.* 3*d.* per share amongst the shareholders. The returns made last year (40,492*l.*) were the largest of any announced since the original formation of the company in 1864, and in that year also the largest profit of all was made 13,669*l.* Much of the undivided profit has been devoted to permanent improvements at the mine, of which the shareholders will reap the benefit later on. Generally, the position of this company was never so good as it is at the present moment.

THE AMERICAN ASSOCIATION.

It is always unfortunate when, owing to some unforeseen contingency, a company is under the necessity of raising additional capital, for it is frequently difficult to decide whether it is better to "throw up the sponge" or to increase one's stake in a given undertaking. In the case of the American Association, however, there can

be no doubt about the response which the shareholders should give to the invitation to provide a sum of 198,000*l.* upon advantageous terms. It will be remembered that in July last the board were authorised to raise 300,000*l.* by the issue of debentures, to recoup the association for the outlay which it had been obliged to undertake in the construction of the Knoxville, Cumberland Gap, and Louisville Railroad, an essential element to the success of the concern. The shareholders, however, only subscribed 24,500*l.*, although Mr. Pollock and his friends were able to secure subscriptions for 83,575*l.* Hence the scheme which is to be submitted to the shareholders on Monday. The railway is now completed, and from the rapid growth of the traffic it is anticipated that it will shortly be self-supporting; while the situation in Middlesborough itself, which, during the last eight months, has been very critical, has greatly improved, and there is now nothing in the position of affairs there to cause the directors any uneasiness. The coal areas leased by the association now amount to 6,290 acres, and one of the companies in particular, the Mingo Mountain Co., is making large shipments of coal and foundry coke. The development of the iron ore deposits is proceeding satisfactorily, and, in short, there is every indication that in the not distant future the American Association will be making substantial profits and distributing handsome dividends. In these circumstances it would be exceedingly imprudent if the shareholders allowed the future of the undertaking to be imperilled for lack of funds. It should be remembered that the scheme does not propose to increase the capital beyond the point decided upon in July, but is simply designed to raise the funds required by more attractive means.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

REDUCTION OF THE BANK RATE.

FROM the position of the market, and the quietude of the bullion movement, it was expected that, despite the period of the year when it is usual rather to maintain the value of securities, the directors of the Bank would reduce the minimum by $\frac{1}{2}$ per cent., and the directors have endorsed this view by their action, making the rate $3\frac{1}{2}$ per cent. A 1 per cent. reduction at once might have been dangerous, considering the advanced season of the year, for although the bullion demand up to the present has been moderate it might at any moment become strong and defy control, and the market think the Bank might just as well have left the rate at 4 per cent. This, however, is not the view the public will take of the matter. At Christmas 4 per cent. in London is a stiff rate when unnecessary, but in the provinces it means 5 per cent. for accommodation; hence the reduction of only $\frac{1}{2}$ per cent. is a real boon. The discount market has fallen right away, until now the quotation is no better than $2\frac{1}{2}$ per cent., while Treasury Bills, taken early last week at $2\frac{3}{4}$, $\frac{1}{8}$ per cent., have changed hands at 2 per cent., and money offers at 1 to $1\frac{1}{2}$ per cent., with 2 per cent. up to the end of the year. The banks have followed the discount houses, and fixed their deposit rates at 2 per cent., and the Bank return is favourable with a proportion of 43 per cent., the reserve having been improved by 375,000*l.* to 15,000,000*l.* by a reflux of notes and coin from circulation.

At the Stock Exchange the settlement has been in progress this week, and the markets, except for a little investment business in some of the soundest securities, have been idle. At the close last week there was some indication of a fall, but with the approach of the account there was a strong desire to close bear accounts, as money promised to be cheap and backs were feared. This supported the markets for the time until the arrangement of the account developed a better supply of stock than operators for the fall expected, and the consequence was that the backs, which at first were stiff, disclosed a tendency to run off. Money, although $3\frac{1}{4}$, $\frac{1}{4}$ per cent. was asked and obtained, proved plentiful and easy at $3\frac{1}{4}$, $\frac{1}{2}$ per cent. and rates of continuation were light and something like 1 per cent. cheaper than last time, so that, under the circumstances, prices gave way. Apart, however, from Foreign securities, which suffered from weaker bourses on the Continent, this was checked, and a better tendency has since prevailed, particularly in the Foreign and American markets. The Funds, helped by the reduction in the rate, have been firmly supported, and other securities of the same class have participated, and even Colonial have been at length a better market. In Foreign stocks Spanish, Portuguese, Argentine, Uruguay and Brazilian have fallen, otherwise prices show improvement. The leading Home rails show a rise of 1 to 2 per cent., and this is similarly the case with American. Trunks have risen as much as 3, and Mexican 1 to $1\frac{1}{2}$. Allsops have fallen 1 to 2, but Peru rose 2 to $2\frac{1}{2}$.

The Bank of England received to-day 14,000*l.* in sovereigns from Portugal. Although bullion continues to flow inward from the Iberian Peninsula, we also understand that besides the 500,000*l.* en route from Brazil, and now nearly due, over 150,000*l.* in coin has just been sent from Lisbon to England. Discount terms remain weak, three months bills being 2 to $2\frac{1}{2}$ per cent., and money did not exceed 2, notwithstanding an increased demand for accommodation to complete the settlement. Bar silver advanced to 43*d.*, and Mexican dollars were quoted beyond 42*d.* Rupee Paper showed firmness.

The settlement has passed off quietly to-day at the Stock Exchange, and money was abundant. The markets have maintained the better tendency of the last few days, and show a more general rise. The Funds were firm, Consols being 95*½* for money, and 95*½* for account. Other investment securities were better, including Local Loan, India Three per Cent. and Colonial stocks. In the Foreign market there has been considerable fluctuation in Spanish and Portuguese bonds, the latter at one time having fallen to 32*½*, but recovered, closing $\frac{1}{2}$ higher, and the former 1 per cent. Egyptian and Turkish series, Italian, Greek, 1884, and the Scrip of the German Loan, all improved $\frac{1}{4}$ to $\frac{1}{2}$, the Bourses being rather firmer. Argentine, 1886, and Funding Loans fell 1, although the premium on gold is practically the same at 168 per cent. Brazilian stocks have been flat and $\frac{1}{2}$ lower on the advices and fall in Leopoldina and Minas and Rio Railway issues. English Railway stocks were good, Brighton "A" taking the lead with a rise of $2\frac{1}{4}$ to 151*½*. Great Eastern have risen

over 1 per cent. South Eastern "A" and North-Eastern $\frac{3}{4}$, and others $\frac{1}{4}$ to $\frac{1}{2}$. The exceptions being a relapse in the Underground and Chatham lines. American stocks were steady, the rise or fall scarcely exceeding $\frac{1}{8}$ or $\frac{1}{4}$. Erie and Louisville were weak, but some second-class Bonds rose $\frac{1}{2}$. Grand Trunk stocks advanced 1 to $\frac{1}{4}$, and Mexican $\frac{1}{2}$ to 1 per cent. Central Argentine fell 3, and Suez Canal improved $\frac{1}{4}$, and Peru issues $\frac{1}{2}$ to $\frac{1}{4}$.

Annexed are the final quotations to-day:—Consols Account, 95 $\frac{7}{8}$, 95 $\frac{1}{2}$ xd.; Egyptian Preference, 89 $\frac{1}{2}$, 90; Egyptian Unified, 95 $\frac{1}{8}$, 95 $\frac{1}{2}$; French Four-and-a-Half per Cents., 103 $\frac{1}{2}$, 104 $\frac{1}{2}$; Hungarian, 90, 90 $\frac{1}{2}$; Italian, 90 $\frac{1}{2}$, 90 $\frac{3}{4}$; Mexican, 85 $\frac{1}{2}$, 86 $\frac{1}{4}$; Peru Five per Cents., 9 $\frac{1}{2}$, 9 $\frac{3}{4}$; Peru Six per Cents., 29 $\frac{1}{2}$, 30; Russian 1889, 94 $\frac{1}{2}$, 94 $\frac{3}{4}$; Portuguese, 33 $\frac{1}{2}$, 34; Spanish, 66 $\frac{1}{2}$, 67; Turkish, 1871, 92, 92 $\frac{1}{2}$; Turkish Defence, 89, 89 $\frac{1}{2}$; Caledonian Railway, 121 $\frac{1}{2}$, 121 $\frac{3}{4}$; Great Eastern, 89 $\frac{1}{2}$, 89 $\frac{3}{4}$; Great Western, 159 $\frac{1}{2}$, 159 $\frac{3}{4}$; Brighton "A," 151 $\frac{1}{2}$, 151 $\frac{3}{4}$; North Western, 174 $\frac{1}{2}$, 174 $\frac{3}{4}$; Metropolitan, 90 $\frac{1}{2}$, 91 $\frac{1}{4}$; Metropolitan District, 31 $\frac{1}{2}$, 31 $\frac{3}{4}$; Midland, 163, 163 $\frac{1}{4}$; North British, 44 $\frac{1}{2}$, 44 $\frac{3}{4}$; North Eastern, 159 $\frac{1}{2}$, 160; South Eastern "A," 86 $\frac{1}{2}$, 87 $\frac{1}{4}$; Mexican Ordinary, 29 $\frac{1}{2}$, 29 $\frac{3}{4}$; Nitrate Railway, 17 $\frac{1}{2}$, 17 $\frac{3}{4}$; Grand Trunk, 11 $\frac{1}{2}$, 11 $\frac{3}{4}$; Grand Trunk First Preference, 73 $\frac{1}{2}$, 73 $\frac{3}{4}$; Grand Trunk Second, 53 $\frac{1}{2}$, 53 $\frac{3}{4}$; Grand Trunk Third, 28 $\frac{1}{2}$, 28 $\frac{3}{4}$; Canadian Pacific, 91 $\frac{1}{2}$, 93 $\frac{1}{4}$; Denver Preference, 46 $\frac{1}{2}$, 46 $\frac{3}{4}$; Erie, 31 $\frac{1}{2}$, 32 $\frac{1}{4}$; Milwaukee, 80 $\frac{1}{2}$, 81 $\frac{1}{4}$; Lake Shore, 130 $\frac{1}{2}$, 130 $\frac{3}{4}$; Louisville, 83 $\frac{1}{2}$, 83 $\frac{3}{4}$; Atlantic First, 38 $\frac{1}{2}$, 38 $\frac{3}{4}$; Ontario, 21 $\frac{1}{2}$, 21 $\frac{3}{4}$; Ohio, 22 $\frac{1}{2}$, 22 $\frac{3}{4}$; Norfolk and Western, 52 $\frac{1}{2}$, 53 $\frac{1}{4}$; Reading, 19 $\frac{1}{2}$, 20 $\frac{1}{4}$; Reading Bonas, 86 $\frac{1}{2}$, 87 $\frac{1}{4}$; Union Pacific, 42 $\frac{1}{2}$, 42 $\frac{3}{4}$; Wabash Preference, 28 $\frac{1}{2}$, 28 $\frac{3}{4}$; Ottoman Bank, 11 $\frac{1}{2}$, 11 $\frac{3}{4}$; Anglo-Telegraph, 49 $\frac{1}{2}$, 50 $\frac{1}{4}$; National Telephone, 4 $\frac{1}{2}$, 4 $\frac{3}{4}$ xd.; Hudson's Bay, 15 $\frac{1}{2}$, 15 $\frac{3}{4}$; Suez Canal, 107 $\frac{1}{2}$, 108; Guinness, 319, 321; Allsopp's Ordinary, 24, 26; Bryant and May, 13 $\frac{1}{2}$, 14 $\frac{1}{4}$ Eastman's Ordinary, 4, 4 $\frac{1}{4}$; Elmore's, 2 $\frac{1}{2}$, 3.

EXHIBITS AT THE SMITHFIELD SHOW.

IN 1869, Messrs. Robey and Co., of Globe Works, Lincoln, exhibited at the Smithfield Show the first portable engine fitted with automatic expansion gear which had up to that time been made.

This was illustrated in most of the technical papers, and gave very good results. The engine had a single valve worked by a governor which revolved with the crankshaft, and which was the precursor of most, if not all, the shaft governors which have since been made.

Many of these engines were made and gave very excellent results, so far as economy of fuel was concerned, but the manufacture was for some time discontinued, owing to the difficulty at that time of getting a driver, who would give the necessary attention to any kind of automatic expansion gear.

At present, automatic expansion gear is almost the rule rather than the exception, and Messrs. Robey and Co.'s portable engine exhibited at this Show is one of the best examples of its adoption.

The governor is of the spring type and the same principle of governor formerly alluded to, but of considerably improved construction. It is very powerful, but its resistance being a spring and not a weight, it takes scarcely any power to drive, and it is so sensitive that a variation of less than 3 per cent. in the speed will take it from the bottom to the top of its travel.

The governor controls a separate valve working on the back of the main slide valve, and actuated through a link from a separate eccentric, giving a range of cut off from zero to three-quarters of the stroke.

All the steam and exhaust connections are outside the boiler, and all the valves are very easy of access for examination and adjustment.

All the fittings are of gun metal of large size, and all the gauge and drain cocks are asbestos packed.

The boiler and firebox are of Siemens-Martin steel plates flanged and riveted by machinery, all the rivet holes being drilled in position by special plant erected for the purpose.

Among the rest of Messrs. Robey and Co.'s exhibits are the following:—

Compound Robey Engine and Locomotive Boiler combined.—This description of engine is very largely used for electric light installations, and for driving other machinery where perfectly steady running is required, for which work it is specially adapted.

It is very powerful for the space occupied. It works with perfect regularity with very varying loads. It is extremely economical in fuel, consuming under 2 lbs. of best Welsh coal per indicated horse power per hour.

The working parts are perfectly balanced so as to run safely at high speed. They have large wearing surfaces of ample size and run cool under heavy loads. It is well lubricated for long runs.

High Speed Vertical Engine.—This has been specially designed for working electric light machines on board ship, and in flour mills, but it is equally suitable for any other purpose where great power is required in small space.

It is designed to work with a high steam pressure, and may be arranged to run at various speeds as may be most suitable for the work it has to do. All the wearing parts have very large surfaces, and it is fitted up with means for self-lubrication so that it may be run continuously without any risk of heated bearings.

While every part of it is thoroughly well lubricated, it is so arranged that no oil is wasted. When used for electric lighting it is mounted on a cast-iron bedplate, the other end of which carries the dynamo. The baseplate is provided with lugs and adjusting screws so that the driving belt can be tightened without stopping the machinery. The engine is perfectly balanced so as to run at a high speed without excessive wear, and the whole forms a strong, durable and compact motor, which can be thoroughly relied upon to work economically and safely during long runs without giving trouble.

Long Stroke Horizontal Fixed Engine.—Fitted with patent automatic expansion gear. This engine is designed for high pressures of 80 lbs. to 100 lbs., and is provided with steam jacketed cylinder, with liner made of specially hard close grained metal, extra long crankshaft with long bearings, solid and connecting rod, and all working parts of ample size and strength to work continuously with pressure of from 80 lbs. to 100 lbs. steam.

It is fitted with Richardson's patent automatic gear and governor, which gives a range of admission from zero to three quarters of the stroke, and a very perfect distribution of the steam.

Horizontal Fixed Engine.—Fitted with patent trip expansion gear. Class E.

When steam engines are of large size and work with steam of high pressure, the working of the slide valves becomes an appreciable part of the load upon the engine, and to obviate this various kinds of equilibrium valve gear have been introduced, the best known among them being the Corliss, with rotating valves, and the Sulzor, with Cornish double beat valves, a variety of which is known as Proell gear. All these gears are manufactured by Robey and Co., and can be fitted to their engines when required, but their large experience with the different varieties has enabled them to discern the weak points in each kind, and, as a result, they have produced a patent trip expansion gear, which is the simplest, most effective, and most easily worked, and gives the most satisfactory results of any hitherto made.

OURO PRETO GOLD MINES OF BRAZIL, LIMITED.

YEAR OPENS WELL, BUT THE QUARTZ FALLS OFF IN THE LATER MONTHS.

THE year ending June 30 is that dealt with in the directors' report just issued. The sales of gold realised 58,127*l.*, showing an increase of 9,262*l.* over the previous year. The other items on the credit side of the revenue account amount to 110*l.* 16*s.* 4*d.*, making the total receipts 58,238*l.* 7*s.* The expenditure has been 46,262*l.* 13*s.* 2*d.*, leaving a balance of profit of 11,975*l.* 13*s.* 10*d.* to be carried to the credit of profit and loss. But for the large amount of 9,500*l.* brought forward from last year, there would have been an actual divisible balance of 4,808*l.*, which represents the net profit on the year's working. The expenditure on capital account, consisting of buildings, watercourse, machinery and plant, chlorination plant, &c., has amounted to 4,336*l.* 3*s.* 3*d.* The returns for the first six months of the year under review led the directors to hope for a much better result, as they showed an increase of nearly 10,000*l.* over that of the corresponding period of the previous year. Unfortunately, however, since January last a considerable falling off took place in the quality of the ore treated. In addition to this, great difficulty has been experienced in obtaining labour, and the result is that for the second half of the year the returns have been 7,223*l.* 17*s.* 8*d.* less than the first half. The condition of the mine is satisfactory in every respect.

ST. JOHN DEL REY MINING CO., LIMITED.

UNPARALLELED RAPIDITY IN SHAFT SINKING.

THE work of sinking the shafts has progressed without interruption, and with the following very satisfactory result:—Total sinking to Oct. 31 in the D, or hauling shaft, 322 fms., and in the C, or pumping shaft, 315 fms., leaving only 60 fms. in the hauling shaft and 43 fms. in the pumping shaft to sink at that date. The unparalleled rapidity with which the sinking (193 $\frac{1}{2}$ fms. in the six months) has been effected is very encouraging. After allowing for the uncalled capital, Mr. Chalmers estimated nearly 120,000*l.* would be required, and nothing has since occurred to call in question the accuracy of this estimate. Up to the present time 62,210*l.* of mortgage bonds have been issued in accordance with the powers taken at the extraordinary general meeting of Jan 8, 1891; but the amount receivable thereon, and the funds available are only sufficient to meet the expenditure to the end of Feb. To meet the outlay from next Feb. for labour and materials in Brazil, and for machinery in England, together with London expenses and bond interest, about 6,000*l.* monthly will be needed. The directors trust that the shareholders will realise the absolute necessity of providing this money without delay. The usual half-yearly report from the superintendent has not yet come to hand. The directors hope that it will be received in time for communication to the proprietors at the next general meeting.

THE GUADALCAZAR QUICKSILVER MINES, LIMITED.

IMPORTANT REPORT FROM MR. JAMES MACTEAR, F.C.S.

Nov. 21.—I arrived here on Tuesday, riding to the mines by the new road from Peotillas. This road I found to be for the greater part of the way practically a good high road, and the new portion only is somewhat steep, in some places about an incline of 1 in 5. Mr. Mackenzie deserves much credit for the finding of this pass over the mountain, as it is a most unlikely one, and the idea of making it the road was a bold one. The road itself is well made, and suited to all our wants at the present time; later it can be made quite practicable for wheeled traffic if required, so that heavy machinery for pumping can be got to the mines if it should be wanted in the future. We at once tackled the question of the furnaces and work connected with them, and it is being vigorously pushed forward. There has been some little delay in the carriage of water for the mixing of the mortar, as barrels are not to be had here, and have to be made or brought from San Luis Potosi. The place looks like a beehive now, and the masons seem to do really good work. No delay will be allowed now, and the work will be pushed on with the utmost vigour. The work done on the mine since my last visit has surprised me, and the developments show much larger amounts of ore than I had believed from Mr. Mackenzie's letters to be the case. The theory I adopted (when I made my report), as to the general character of the deposits is being well borne out, and I have no doubt now that the recent working has fairly opened up one of the geyser chambers, with very large quantities of ore in it, as I believe these chambers are in chains or series. I have great hope of the future of the mine at this point. In other parts it also looks well, but development work is needed, as you well know, to open up the enormous amount of ground we have before us. I wired you through my London office of my arrival, and am also wiring you in same way to-day. I do this, as Moring's Code, which I use, gives me a much greater command of words. My message to-day is:—"Have been in the mine to-day, and think the recent developments show the mine looks splendid. Furnace work is being pushed ahead, which I estimate will be completed sooner than Jan. 14.—MACTEAR." I shall have more to tell you by next mail.—J. MACTEAR.

REPORTS OF MEETINGS.

THE FRONTINO AND BOLIVIA (SOUTH AMERICAN) GOLD MINING CO., LIMITED.

COMPANY CONTINUES ITS PROSPEROUS CAREER—3s. 3d. PER SHARE PAID IN DIVIDENDS IN 12 MONTHS—MINES LOOKING WELL—4-OZ. QUARTZ.

THE annual meeting was held at Winchester House, Old Broad Street, on Wednesday, for the following purposes:—To receive the report of the directors, and the audited statement of accounts of the company for the six months ending June 30, 1891; to declare a dividend; to elect a director; to elect an auditor; and for other business.

Mr. Richard Donagan

(chairman of the company) presided.

Mr. J. JAMESON TRURAN (secretary) read the notice of meeting.

The chairman and directors, on entering the room, were received with applause.

LARGEST PROFIT YET MADE.

The CHAIRMAN: Gentlemen, I beg to move the first resolution—"That the directors' report now presented be received and adopted, and that the accounts of the company to June 30, 1891, having been duly examined and audited, be now passed and allowed." The accounts which we present to you to-day possess the peculiar features that they show the largest return that has ever been made by the company since its original institution in 1864, viz., 40.492%, and the largest profit that has ever been realised—13.669%. Of course, this is not altogether attributable to the mines themselves during the half-year under review, because the accounts in question comprise the results obtained from the windfall of which I spoke at the last meeting, viz., that some old amalgamating plates no longer in use had been found to have a good deal of gold on them, and had been scraped and melted into bars for sale in England. This auriferous copper was sold for 4,750%, and the expenses about it amounted to only 209%, so that there was a special extra profit from this source alone of 4,541%. Independently of this, there was, in fact, a small drop in the returns—that is, the mines gave 762% less gold than they did in the previous six months. The expenses were very nearly the same—indeed, after allowing for the expenses about the plates, they were 343% more, and that, although not quite so much, has had to be written off for depreciation. At our last meeting a dividend of 9d. and a bonus of 6d. were declared, and since then, viz., in Sept., we had an interim dividend of 6d., and we propose at this meeting to declare a further dividend of 6d., and it will probably occur to many to ask why with a profit of 13.669% we cannot come forward to-day with a larger dividend than 6d. per share. Well, in the first place, the bonus of 6d., though declared at our last meeting, was a bonus in respect of the profit on the copper plates matter, which now comes into the half-year under review, so the bonus was a division of 6d. out of the profit now being spoken of, and that, and the interim dividend, and the dividend now to be proposed, make altogether three distributions of 6d. each, and as each 6d., with the amount carried to the reserve fund, absorbs 3.516% 11s., you will see that the three distributions will amount altogether to 10.549% 13s. out of the 13.669% profit. As to the difference, allow me to remind you of what I said at the last meeting.

A REMINDER.

After explaining the various things required to make matters complete, I said:—"So you must not be surprised if you find a portion of the profits expended in this machinery. Eventually it will be spread over several half-years, and indeed the machines may be expected very soon to pay for themselves; but in the first instance current remittances must provide the money for them." Well, that is just what has been done. You are aware that the new Californian mill for Silencio Mine was originally sent out as a 12-head mill, though so designed as to be capable of extension at any time. As soon as Mr. Eustice had satisfied himself as to the water power available, the capabilities of the site selected, and the probable resources of the Silencio Mine in the future, he determined to double the capacity of the mill. We therefore, had to order (and pay for) what was practically another Californian mill, barring the water-wheel. After much consideration, he arrived at the conclusion that Frue vanners for re-treating the tailings from the new mill were the best for the purpose, and six being required and two having been already furnished, the order was given for the remaining four, and a few weeks ago we received evidence of the machines having been shipped from New York for the mines, together with a little bill for 551%, net cash down, against bill of lading, and which we accordingly paid out of the profits, which we are now speaking of. Again, it was necessary to have shafting for working these machines, and belting to take off the power from the water-wheel shaft, which all helps to swell the amount.

PROFITS UTILISED TO INCREASE FUTURE RETURNS.

There were other things—a weighing machine and the like, but without enumerating minor points, I think I have said enough to show you that the portion of the profit made, which we cannot divide, because we have spent it, has been well laid out for the almost immediate advantage of the company. Whilst I am upon this branch of the subject, I may as well bring the story of the Silencio mill up to date. It was expected that the mill as a 12-head would be finished in a few months. Then Mr. Eustice announced he would have 16 heads going towards the end of Sept., and on Oct. 18 he sent us a telegram, which reached us on the 21st, that 20 heads were running satisfactorily. At first sight it may look like a bit of magic that a 12-head mill should go to work as a 20-head before the extended portions could have reached the spot; but the probable explanation is very simple. Before it was determined to enlarge the mill, Mr. Eustice wrote for some additional mortars,

heads, stems, and tappets, as duplicates for the two mills, so these things were in course of manufacture when the instructions for the extension reached us, and these were despatched much earlier than the extension was, so he must have utilised these parts in making the mill of greater capacity before the arrival of the extension. How he managed about the shafting we do not know; it is, we suppose, another case of "where there's a will there's a way." We now hear that this is not all, for as the mill is designed for 24 heads, a stone-crusher not yet fixed, and six Frue vanners not yet ready, and as only 20 heads are as yet at work, and as the mill is found to require rather less water than was provided for it, there was no necessity yet to stop the two old native-made mills of 12 heads and nine heads, so that at the date of the last letter, namely, Oct. 21, they were all working. Consequently, on the day upon which we received the telegram that the new mill was working 20 stamps, there were, in fact, 41 stamps going on—the 20 referred to and the 21 stamps of the old native mills. This cannot continue, of course; indeed, the mine is not ready yet to supply 41 stamps permanently, and if it were these old mills must be dismantled as the works go on, but the fact remains that we shall for a time, at all events, have the advantage of this, and for all I know the 41 stamps may be bobbing up and down at the present moment, while we are assembled here, and while the millmen over there are probably having their breakfasts. Later on Silencio mill will have not only its 24 heads, its stonebreaker and the six vanners, but doubtless some arrastres which are talked of as to be put when the water supply is arranged from the Dona Theresa stream, and when these appliances are all going, Mr. Eustice expects to have a large return, and to use his own words in his last letter, "I hope to be able to save over 85 per cent. of the gold by this method." It will be observed that the yield per ton has declined somewhat; it has dropped from 1 oz. 17½ dwts. to 1 oz. 9½ dwts.—a fall of 7½ dwts. in the average. This was only to be anticipated, because the exceptionally rich ore, which we had in the latter half of 1890, could hardly have been expected to be absolutely continuous. In the 220-ft. level in Silencio there was a point which yielded 6 ozs. to the ton in Oct., 1890; 10 ozs. in Nov., and 8 ozs. in Dec., and then reached the cross-course, and the driving there was suspended, so this rich ore came into the returns for that half-year, while in the half-year under review we had none of it, and other points were not so rich as before. But changes must be expected; and there is a point in Silencio at the 286-ft. level which in Oct. was only producing 12 tons of mineral of 2-oz., and had in the last advice improved to 20 tons of 3-oz., and one in the 150-ft. level which was only producing 4 tons of ¾-oz., but is now producing 24 tons of 4-oz. mineral. With regard to the mines, the report brings the information up to a late date, but we have received one letter since it was issued.

SILENCIO.

At Silencio Mr. Eustice reports that in sinking the shaft below the 340-ft. level the ground still continues exceedingly hard, but, allowing for this, very good progress has been made. At the 340-ft. level the report is:—

"Good headway has been made. The walls of the lode are now well defined, and the formation is entirely free from intrusive matter, consisting of about 18 ins. of congeal crystalline quartz, with numerous small spots of pyrites."

This, of course, is a very interesting point, and it will not be long now before the actual lode is reached. Mr. Eustice fully expects it to be as good as he found it in the 286; if it is, then after a few weeks of congratulations we shall be looking forward to what there may be at the 400-ft. level. There is a short reference in the report to a suggestion that the south shaft, which is down a little below the 150-ft., should be sunk deeper. This shaft was being sunk when Mr. Clemes and myself were there in 1884, and Mr. Clemes in his report said that this was a most important point of the mine, and ought to have more men engaged on it than there were. It was sunk about 26 ft. below the 150, and was going down on the lode, when it was stopped by the revolution in 1885, and has not been resumed, the operations having since been confined to the north shaft, and, indeed, chiefly to the levels north of such north shaft. The water having now been taken up from the south part of the mine by the adit at the 103, it will be easy to make an examination here, and we fully expect to have such a report upon it as that the work may be put in hand. At Cordoba the results just at present are not so good as they were. In last half-year's report the reduced returns were from lack of water, but when the water came, and the 16-head mill was briskly at work, it was found not to be possible to continue keeping it fully supplied. This, however, is regarded as only temporary; indeed, Mr. Eustice, in his last letter, says:—

REASSURING LETTERS.

"It has been unfortunate, having plenty of water, to be unable to break ore sufficient to keep the whole mill at work. After a few weeks we shall again be able to mine mineral sufficient for the mill, and of a quality which will yield good returns."

At this mine a discovery has been made since the last half-yearly report which may be of importance, viz., a lode about 200 yds. from No. 6 level, which is supposed to be a continuation of the Cordoba lode. It was described as about 2½ ft. wide, of kindly quartz, freely spotted with soft pyrites. The latest advice, dated Oct. 21, states that the level driven on this had advanced but little, owing to scarcity of workmen, but it says:—

"The mineral maintains its encouraging character, and there is every indication that as development progresses productive ground will be opened out."

This matter is of importance, because it was a long and expensive business to bring in the No. 7 level, and a deeper one, if practicable at all, will certainly not be less so; therefore, any extension laterally is of great value, because if it opens up well it may postpone indefinitely the necessity for going deeper. The level in question was producing 9 tons to the fathom of 1-oz. mineral. At Cecilia things are beginning to get into shipshape again, though still we have to contend with very low yield. It will be recollected that the lode was attacked below the No. 7 level by means of winzes, in order to get at the ore before the No. 8 level reached the lode, but in these winzes there was a great deal of trouble with the water, and Mr. Eustice decided that it was of no use tid-faidding with them any longer, but to suspend them and proceed to get under them by the No. 8 level, and so simultaneously to get that level into the lode, and to unwater the winzes. He therefore confined his work to driving the level. Winzes 1 and 2 have thus been unwatered, and when the

water was got rid of, the level was advanced further. The latest advice is—

"During the last week the appearance of this end has considerably improved and there are indications of further change. The lode is 7 ft. wide, between walls, 4 ft. of which is milling ore." The return is 12 tons to the fm. of $\frac{3}{4}$ -oz. mineral, and Mr. Eustice in his letter says:—

"At present eight heads only are quite sufficient for all requirements. Shortly the 16 heads will again be constantly supplied, but this must depend upon the progress made in the mining work." At Tigrilo Mr. Eustice says:—

"The explorations mentioned in my last report are still continued with very satisfactory results. Nothing has yet been done to prove the value of the ore by crushings, but as construction expenses have considerably lessened, some proof will shortly be made in this and other operations in exploration, which could not before be made owing to the enormous current expenses."

OTHER POINTS DEALT WITH.

The news from the mine is that the exploration has gone through old Indian workings, but it was expected to strike whole ground shortly. The operations of the tributaries have gone on regularly. We have written to have the tributaries' gold sent in future in bars, kept separate from the company's gold. We shall then be able to ascertain the precise sum which the tributaries' gold fetches, which we cannot do when the gold is mixed, and at some future time we shall be able to say what the tributaries' gold sells for, what it costs us, and, therefore, exactly what the profit is. It is a source of great regret to us that the company's large holding in the Antioquia Co. has not yielded anything this half-year. It is a disappointment, as we regarded the preference dividend, at all events, as assured. Although the main lode is not looking well at present, steps are being taken to get out the poor ore cheaply, so that there may be a profit upon it. The level to reach the Gruperio lode, where it has not yet been worked on, is within 6 ft. of the lode, and there has been a new discovery, where nature, in some mysterious way, has performed the part of a sort of self-acting mill, the consequence being a narrow string of sponge gold and gold dust, all ready for taking away without crushing. Some of this stuff has been sent to England just as it was taken out, and some opinion regarding it will be sought before it is sold for the company, and this discovery may be very valuable by and by. I think I have now run through my budget of news, and we shall be happy to hear any remarks, and to answer any questions. (Cheers.)

The Hon. F. C. DRUMMOND (director): I second the motion.

DISCUSSION.

Mr. PETER WATSON: I see in the report (page 5) two Frue vanners for concentrating purposes have arrived at the mines, and that four more have been shipped from New York. Have you had any information as to whether they have arrived?

The CHAIRMAN: No; we had a bill of lading sent us, but it takes a good deal of time to convey machinery from New York to the mine—longer than it does to send a letter from New York to London. They were shipped on Oct. 20, and it takes 15 days to get down to Savanilla, but how long it takes from there to the mine it is impossible to say, but I should not think it would be a long time. The two Frue vanners took a long time to arrive, because there was a drought in the river, and the ships could not get up; but the other four will not be so long, as transit arrangements are now improved.

A SHAREHOLDER: What is the distance between the north and south shaft and Silencio Mine?

The CHAIRMAN: I can tell you exactly by reference to the plan; but, as a guess, I would say not less than 120 ft., or more than 150.

A SHAREHOLDER: What is our total stamping power, and how far is Cordoba from Silencio?

STAMPING POWER.

The CHAIRMAN: The number of stamps we have at present is about 80, including the old mills; but, of course, there are other stamps belonging to us which have been lent to the tributaries. For instance, Palmachala has 27 heads; San Joaquin has a capital mill of 12 heads, and Marmajito has also a 12-head mill. We used to have 120 at one time, but now we have rather less than 80, because the others have been let. It is about $\frac{1}{2}$ mile between the two mines, as the crow flies, but it is considerably more as the traveller would have to go, as he would have to proceed round the hills.

A SHAREHOLDER: I suppose we cannot use the Cordoba mill at the north and south shaft?

The CHAIRMAN: No; that at Cecilia Mine would be more practicable. The expense is large, and in one of our letters when we thought that Cecilia was going to stop, we suggested the possibility of reaching that mill by means of a tunnel run through the hill, but he replied by saying—"Cecilia is going on."

Mr. PETER WATSON: How wide is the new lode? At what depth was it cut, and is it in whole ground to surface, or have any operations previously taken place?

The CHAIRMAN: The lode is 2 $\frac{1}{2}$ ft. wide, with kindly quartz yielding 1 oz. to the ton. They hope that it is in whole ground.

A SHAREHOLDER: Have you received the returns for the present month?

The CHAIRMAN: No; only a letter dealing with the mine in general. We shall have the returns on the 15th or 16th.

The report was unanimously adopted.

JUSTICE TO MR. DONAGAN.

Sir GEORGE HARRIS (director): It devolves upon me to move the next resolution. The duty is not an onerous one, but it gives me very great pleasure to perform it. It is that of proposing the re-election of Mr. Richard Donagan as one of the directors of this company. (Cheers.) I think I may spare myself trouble and you time by not dilating upon his merits, because he is so thoroughly well known to you, but as it is in most companies customary to propose the re-election of a director from this side of the table, in order to show that he is in sympathy with his colleagues, I can assure you that our chairman is in the most perfect harmony with us. We try him very severely. We discuss every paragraph of every letter of importance which goes to the manager or anyone else, and I believe probably ours is the only company where that is done. You will, however, understand that in a concern such as this, working such a property as ours in Colombia, it is really one of the most important of all

things, because we cannot keep our managers with us for a great number of years. They remain there two or three years and then return home, and we have to scrutinise matters carefully—not only the letters we receive from there, but the letters we send to the manager, because things have occurred in previous years of which the new manager knows nothing, but which we have to bring before him and keep him in constant recollection of, in order to carry on the business properly.

MR. DONAGAN KEEPS COOL.

Now, this is very trying to any chairman, but I can only assure you that, as you have found Mr. Donagan a model chairman in this room, we find him an equally model chairman at the board table. I have never known an instance during the several years we have now been working together in which he has once shown the least petulance, and that is very rare. I have much pleasure in proposing the re-election of Mr. Donagan as a director of this company, and I daresay a shareholder will be good enough to second it. (Cheers.)

Mr. PETER WATSON: I shall have much pleasure in doing so, because, as almost an original shareholder, I know the deep interest Mr. Donagan takes in this concern, and how he re-organised it at a time when the shares were not selling for as many pence as they are shillings at the present time. (Cheers.) He took the company in hand, and with his colleagues has brought it to its present position.

GOOD DIVIDENDS.

So far as the year before last was concerned, I think 1s. 8d. per share was given in dividends, and 12 months ago I predicted that instead of 1s. 8d. we should for the next year receive something nearer 4s. a share, and, as a matter of fact, I think we have received 3s. 3d. (Hear, hear.) I hope that with the new stamps we shall have an even improved state of affairs in the next 12 months, and there is every reason to believe that such will be the case. I think we are very much indebted to the chairman for what he has done, and hope that in the future we shall have dividends equally as good, if not better, than those we have had during the past year.

The motion was carried by acclamation.

The CHAIRMAN: I am sure, gentlemen, I am very much obliged to you for the kind way in which you have re-elected me on this occasion, and I hope that the expectations I have ventured to shadow forth from time to time may be to a greater or lesser degree realised—and the greater the better; so that a time may come in which we may not only have the profits we are now making, but have them for immediate distribution. This heavy development work that is now going on must come to an end, and the period must come when we shall only have ordinary repairs and replenishments to deal with. We may then be able to divide closer than we have hitherto done, and I hope the dividend will be larger. (Cheers.)

FINAL DIVIDEND FOR THE YEAR.

I have now to propose that a dividend of 6d. per share be this day declared, payable on Dec. 12, making, with the bonus of 6d. per share declared on June 12, and the interim dividend of 6d. on Sept. 12, a distribution of 1s. 6d. per share for the half-year.

Mr. ELDRIDGE seconded the motion, which was carried unanimously.

The CHAIRMAN: The warrants will go out on the evening of the 11th.

Mr. ELDRIDGE proposed, and Mr. WATSON seconded, the re-election of the auditor, Mr. John Henry Tilly, which was carried unanimously.

GRATITUDE.

Mr. PETER WATSON: I beg to propose a vote of thanks to the chairman, and to the officers of the company at home and abroad. I think that we should recognise the services of all those connected with the management.

The motion was carried by acclamation, and was briefly acknowledged by the chairman.

THE IMPERIAL BANK OF PERSIA.

ENORMOUS RESOURCES OF THE PERSIAN EMPIRE—FRIENDLY RELATIONS WITH THE SHAH'S GOVERNMENT—NO BAD OR DOUBTFUL DEBTS AS FAR AS THEIR EXPERIENCE HAS GONE.

The second ordinary general meeting of the members of the Imperial Bank of Persia was held on Tuesday, Dec. 8, at the Cannon Street Hotel, in the City of London, for the purpose of receiving the directors' report and the accounts made up Sept. 20, 1891, declaring a dividend, electing directors and auditors, and for ordinary business.

Mr. W. Keswick

presided.

Mr. GEORGE NEWELL (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said: Gentlemen, with your permission, we shall consider the report as read. It has been in your hands for some days, and I trust that, although it may not come up in all respects to your expectations, you will regard the progress it shows in establishing banking in Persia as satisfactory, and the results as, on the whole, favourable. When, 12 months ago, we met to consider the first report submitted to you of the bank's operations, I mentioned that it would not be prudent to look for rapid development or for any very sensational success, and I cannot but think that you, gentlemen, on looking back upon the past year—a year of depression, shrinkage, and, more or less, of universal disappointment—will agree with the board in viewing the work of the year with some degree of satisfaction. (Hear, hear.) You should not overlook the tentative manner in which we have had to proceed, and that occasionally the results we looked for from many promising operations proved disappointing, or were not realised as promptly as was expected. I would mention, as illustrating what I wish to express, that there were indications during last summer that money would be much wanted in Persia, that an early movement of crops would take place, and that an active export business might be regarded as certain. The bank made preparations for an active campaign by increasing its funds in Persia, and by making provision to meet the financial requirements of commerce. We imported considerable amounts in silver, bought fortunately at low

prices, and otherwise increased our balances; but famine in Russia, a fall in the value of the rouble, and unusual delay in beginning export business found us at the end of our financial year with a more adverse exchange than we expected, and with a large amount of money unemployed. Subsequent, however, to Sept. 20 the activity we had too early looked for set in, and the large amount mentioned in our statement as cash in hand became invested to advantage, and is, we are assured, likely to be permanently and profitably employed. (Hear, hear.) We had hoped, too, that the introduction of the tobacco régime into Persia would have early created an increased demand for money; but delay in this also occurred, and it has only been recently that the régime's operations have had the development and effect we looked for. The board learned with much satisfaction that the difficulties which the régime at first encountered are being gradually overcome, for the introduction of new enterprises and the development of fresh industries must necessarily extend the business of the bank. From my observations you will understand that the bank is now employing on remunerative terms a large portion of its funds in what seems likely to prove permanent local banking. The question will occur to you, Is the security sufficient? and on this vital point I would say that the experienced officers of the bank are perfectly satisfied, and, in the opinion of your directors, rightly so. The experience of the bank, notwithstanding

THE IRRESPONSIBLE CHATTER OF PARAGRAPH WRITERS

in the Press, is in this respect absolutely satisfactory, and, so far, our experience is that we have not one single bad or doubtful debt. (Applause.) Of course, punctuality is not a characteristic of the Persian trader; but with the security we possess, and the observance of the conditions we enforce, the bank's officers are quite satisfied with the security they possess and with the safe character of our business. (Hear, hear.) In exchange operations we are now, also, experiencing improvement; but of course we have had, in the declining value of silver, an adverse element to contend with. This remark on silver has a natural application also to our investments in Indian Government securities, in the value of which fluctuations have been frequent and extreme, and are likely to continue. When regard is had, however, to the low price at which rupee paper is now quoted, I think we may conclude an advance in its value is more probable than a further depreciation. You will observe that these securities are entered as representing 377,361*l.*, but I should explain that of this sum 80,000*l.* are on account of the Bombay agency, and on Sept. 20 awaited transfer to India, where the rupees had already been sold, and further, that in the amount are included the reserve fund of 100,000*l.* and the special reserve of 50,000*l.* The next item on which I would remark is the amount expended on the road concession (48,000*l.*), which your board regard as a perfectly good asset, and one which they hope will before very long become liquid. In connection with this undertaking, I used the following words at our meeting on Dec. 18 last:—"You will remember, gentlemen, that, at our special meeting in Mar. last, mention was made of a road and transport concession, and I am happy to state that your board have no reason to think an over-estimate was then given you of the importance of improved communication, and the establishment of a fairly rapid and reliable transport service. We know that in Persia the work is regarded as of extreme consequence, and as calculated to develop commerce materially by enabling traffic between the interior of the country and the Persian Gulf to be very greatly facilitated. The progress made is considerable for the time the engineers have been in the country, and we expect soon to have a report on the whole route to be traversed, and before long to be in a position to put before the public a company to control and manage the business; and I am happy to say that in Persia we have received support and promises of monetary assistance that will greatly facilitate the formation of the intended company. An additional value is given to the concession by the fact that it is announced Persia has come under a promise to Russia not to permit the construction of railways in the country for the next 10 years." Well, gentlemen, since these words were spoken everything which has come to your directors' knowledge confirms the opinion I then expressed, and Mr. Hotz, one of the members of the board, has visited Persia, gone over the greater part of the route to be opened, and otherwise made himself acquainted with the country to be traversed, and studied the prospects of success, and we have his assurance of the value and importance of the undertaking. The Teheran-Kom section was, in an experimental manner, opened last autumn, and the report we received upon it was as follows:—

"We are happy to inform you that, so far, the passenger traffic has been quite beyond expectation. Our omnibuses, of which, unfortunately, we have but three, are literally taken by storm, and there are daily three times as many passengers as places, notwithstanding the incomplete arrangements, and consequent discomforts of the journey. Not only is a passenger traffic likely to succeed extremely well, but Geul. Schindler is confident that a goods traffic, even on this short section, will be considerable and remunerative."

We are now negotiating with the Imperial Government for a modification of the terms of the concession, and for additional advantages whereby the revenue of the concern should be increased. We trust these will be granted, and that, with an improved money market, we shall next year be able to form a company that will relieve the bank of a work which, according to its charter, can only be prosecuted until the concession can be satisfactorily disposed of. I have regretted to see letters in newspapers, and also public comment, disparaging

THE BONA-FIDES OF THE PERSIAN GOVERNMENT,

and calling in question the action of H.I.M. the Shah. Gentlemen, the subject is one which I will only touch upon to the extent of saying that, so far as the experience of the directors and the officers of the Imperial Bank has enabled an opinion to be formed, nothing could have exceeded the spirit of fairness, of intelligent interest, and of hearty desire to support, extend, and to develop the satisfactory working of the bank, and of every enterprise connected with it, which is calculated to promote confidence and to establish on a firm basis their permanent success. (Applause.) I am sure you will note with satisfaction the increased amount of deposits made with the bank in Persia, as their growth indicates the confidence with which the bank is regarded, and, I am pleased to say, our advices lead us to expect that they will steadily increase. It is

hardly necessary to state that an increase of deposits in Persia is of great advantage to the bank, as supplying funds which are not subject to exchange fluctuations, and as also affording a security in connection with native business, which we should not otherwise possess. You will remember that I expressed an opinion when we last met that time would be necessary to extend our note issue to an important amount, and this view our experience has confirmed. Since our accounts were closed, however, the circulation has expanded, and we have now about 50,000*l.* in circulation. (Hear, hear.) We do not look, however, for any very rapid increase, but we do expect a steady and progressive development of this important branch of banking business. The shares held by the bank in

THE MINING RIGHTS CORPORATION.

are entered, you will not have failed to observe, amongst the assets of the bank at their nominal value of 650,000*l.*, but have not been excluded into account; for until the corporation has made more assured progress, and a quotation indicating a reliable value is obtained, we fear it might be misleading to include them in what we regard as assets of a more or less liquid character. In Persia we have added to our agencies by appointments at Hamadan, Kasvin, Sultanabad, and Yezd, and at Bombay we have opened an agency under the management of Mr. Thomas Payn, who has had many years experience of Eastern banking. These extensions, which your board have only made after mature consideration, have necessarily added to the expenses of the business; but if the bank is to fulfil the obligations of its charter and become the bank of the nation, it must extend its borders. In the form of the accounts you will notice that the wish expressed at our last meeting by some of our shareholders has been complied with, and that the gross receipts are entered, the expenses stated, and then the net earnings extended. I have only now to say, gentlemen, that, although your board cannot but regret that the over-sanguine expectations of some shareholders have not been realised yet, we are satisfied with the progress the bank has made in the two years of its existence. The board had an unknown country to exploit; for, however much the promoters of the bank might believe, and rightly believe, in the field that was to be opened to financial and banking business, we had no past knowledge of the country to guide us, and no experience to guard us against dangers. We know that our very able chief manager and his staff, our excellent managers and agents, and, indeed, the *employés* generally of the bank, have shown good judgment and exercised a prudent caution that deserve to be appreciated by the shareholders as they are with satisfaction recognised by your board. I do not care, gentlemen, to give an opinion as to the future of the bank lest I should express too favourable a view of its prospects, and I believe it to be wise for the direction, no less than for the shareholders, to be reserved, and to indulge in no optimistic forecast. Of the present, however, I can speak with confidence. Your bank is an institution sound and prosperous; it has made its mark already in the country in which its business chiefly centres; it enjoys the confidence of the Government, and is quietly gaining the support of the people. It is assisting in

MEETING THE WANTS OF A NATION

in many respects backward, but which is assuredly moving forward, and which will certainly in time develop its material resources to its own great advantage, and to the furtherance of the prosperity of your bank. I beg to move: "That the report now presented be adopted, and the accounts to Sept. 20, as rendered, accepted; and that a dividend of 10*s.* per share, free of income-tax, be and is hereby declared."

Sir LEPEL GRIFFIN seconded the resolution.

Mr. ROMER said he was disappointed with the result of the year's work. The balance-sheet presented a year ago for the 10 months that the bank had been in existence showed a net profit of 67,000*l.*, but the profits of the year under review were only 47,000*l.*, and the expenses had very much increased. It seemed to him that 900,000*l.* was too large a sum to have in hand, at call, and invested in securities, and he concluded with a proposal to the effect that the directors should call an extraordinary general meeting for the purpose of considering the advisability of discussing the reduction of the capital of the bank to 500,000*l.*, which with their reserve fund of 150,000*l.*, would give them a total of 650,000*l.*

Mr. T. J. LAWRENCE said the chairman had just informed them that a large quantity of silver had been purchased. He desired to know the price paid for that silver. They had also been informed that a large amount of their cash had been lent since the date of the balance-sheet, and he desired to know what amount had been lent. He also inquired the rate allowed by the bank for deposits, and the rate charged for advances. He likewise asked whether it was in the power of the directors to declare interim dividends. Interim dividends, he said, were paid by most banks. As the board had not trenched upon the 50,000*l.* set aside for the equalisation of dividends, he assumed that they might only expect 5 per cent. for some years to come. He was of opinion that 10,000*l.* or 20,000*l.* should have been taken from that equalisation fund in order that the shareholders should have an adequate return for the money they had invested.

Mr. WILSON asked the price at which they took their rupee paper on Sept. 20—was it cost or market price?

After further remarks from Mr. PIKE and other shareholders,

The CHAIRMAN said that as to the price they took their rupee at, it was within a trifle of its value on Sept. 20. He believed that there had been some slight depreciation since then. As to the suggestion for a reduction of the capital of the bank, he did think with the prospects before them that it was simply

A SUICIDAL SUGGESTION,

and not calculated to advance the interests of the bank. It would imply that they could not profitably employ the amount of capital they had, and that was not the case. There was ample room for the profitable use of all the capital that the bank had. As to the price that they paid for silver, it was, he believed, 44*s.* 4*d.* per oz. The present quotation was about 43*s.* 4*d.* or 44*s.*, but at the time of the purchase they bought at a low figure. As to the question of the payment of an interim dividend, they felt that in a young concern it was unwise at first to enter into engagements and promises that they could not be sure of fulfilling. (Hear, hear.) Still, he had to ex-

press in this particular the hope (without prophecy) that before six months elapsed they would be able to declare

AN INTERIM DIVIDEND.

(Cheers.)

A SHAREHOLDER asked the amount of interest they allowed on deposits in Persia, and what they got on loans.

The CHAIRMAN said that they allowed 6 per cent. and got an average of 12 per cent. Continuing, in reply to further questions, he said that his remarks as to interim dividend applied also to their not having, on this occasion, trenched on the reserve for the equalisation of dividends. He thought it better not to use that fund to build up dividends now, but to keep it in case a time should arrive (which God forbid) when they wanted to pay a dividend, and had not earned it in the period then under review.

The report was then unanimously adopted.

FORMAL BUSINESS.

The retiring directors, Sir Lepel Griffin and Mr. Stewart, being eligible, were re-elected.

Messrs. Deloitte, Dever, Griffiths and Co., chartered accountants, who retired, and offered themselves for re-appointment as auditors of the company, and their re-election having been proposed and seconded,

Mr. NELSON suggested that another auditor (a shareholder) should be associated with them as a shareholders' auditor, as was done, he said, in some other companies.

The CHAIRMAN said it was entirely a matter for the shareholders to decide. The board would be willing to give the matter consideration if desired to do so.

A SHAREHOLDER said that Mr. Griffiths had been present at the meeting, and could answer any question desired. He was a shareholder, and the firm a well-known one.

Mr. NELSON said that he meant no insinuation to the merits of the firm. (Hear, hear.)

The resolution for the re-election of the auditors was then carried.

A vote of thanks to the chairman and directors closed the meeting.

LE CHAMP D'OR FRENCH GOLD MINING CO., LIMITED.

A FIVE HOURS' MEETING ENDS IN A VICTORY FOR THE BOARD AFTER A POLL—A UNIQUE MEETING FOR THE CITY OF LONDON—PROCEEDINGS CARRIED OUT IN ANGLO-FRENCH.

The first ordinary general meeting of this company was held at Winchester House, Old Broad Street, on Monday.

The proceedings were conducted in French and English alternately, each speech being translated French into English, and *vice versa*.

Monsieur C. Duconrau

presided.

The SECRETARY (Mr. Alfred Lightoller) read the notice convening the meeting, and also the directors' report, dated Nov. 4, 1891, and the audited accounts and balance-sheet of the company made up to Aug. 31, 1891.

The CHAIRMAN then addressed the meeting in French, and (his remarks were then translated into English) the gist of them being as follows: Gentlemen, the company is an English one, but the majority of the shareholders are Frenchmen, although there are some English shareholders. Your directors beg to submit their report on the company's transactions and balance-sheet for the 18 months from the incorporation of the company on Feb. 24, 1890, to Aug. 31, 1891. Before placing them under your examination your directors desire to make a rapid statement of the progress of the undertaking from the time when they acquired, on behalf of the company, the mining property and other assets of the

KING SOLOMON'S MINES,

Limited, in liquidation. Your directors convened, Jan. 27 last, an extraordinary general meeting of the shareholders in order to submit to them for their approbation the purchase of this property. They think that you have now every reason to congratulate yourselves on having ratified a negotiation by which you have acquired a mine considered at present as one of the richest of the Witwatersrandt. The formalities appertaining to this sale agreed to on Aug. 13, 1890, did not permit your manager, Mr. L. Chouan, to take possession of the mine until the 1st day of the following Oct. From that time your manager has been obliged to devote all his efforts to repairing and strengthening the then existing works at that time entirely flooded and greatly deteriorated by water. This long and difficult task, hindered moreover by rains of exceptional abundance and duration, has at once demonstrated his energy and skill. It was not until Jan. 3 last that he could reach the bottom of the mine at the level of 100 ft., and not until Feb. 1 that he could commence the actual working of the mine. To-day, owing to the activity employed, the mine is no longer recognisable, and its transformation, already a matter of surprise in the district, will soon be complete. As many of you know, gentlemen, your property, which is of nearly rectangular form, and which consists of about 38½ acres, divided into 29 claims, arranged in two rows, is traversed from east to west by two perfectly defined veins, viz., the Botha's reef, or the principal vein, which is the continuation of the Witwatersand main reef; and the south leader, a secondary vein. The two veins are parallel, separated by a distance of from 13 to 20 English ft., and, sloping down to the south at an angle of from 55 to 60 degs., occupy very nearly the whole extent of the property. The works executed by the former company had demonstrated neither the extent nor the richness of the veins. The discovery of these facts has now re-called round the Champ d'Or the activity which had disappeared from the district. Up to the present the ore is being crushed by a battery of 10 stamps included in the property of the King Solomon's Mines, Limited. It is situated on marshy ground, and at a distance of 1 mile from the mine. These circumstances have sensibly increased the working expenses, but your directors have judged it prudent to wait, until authorised by certain results, before adopting a plan calculated to obviate this difficulty and gradually give to the undertaking all the extension of which it is capable. Its present situation then will not be of long duration.

A new battery of 10 stamps with all the necessary accessories, bought on very favourable terms, is in course of erection and should now be in operation. The old battery will also be removed and put together again beside the new one. The development of the mine is more than sufficient to secure the regular supply of ore to these 20 stamps, which will all be in operation before the end of the present year. A new house for the manager, now building near the new battery, will facilitate the superintendence of the working of the mine. The profits realised from the treatment of the ore have in great part covered the expenses of these various works, as well as those of the increase of the machinery and plant. The establishment of a branch line connecting your property with the Johannesburg and Krugersdorp Railway has already caused great economy in the costs. Your directors have been encouraged in their task by the opinion of an eminent French engineer, Mr. Porcheron, of Pretoria, who was willing to place his great competence at their disposal and make a careful examination of your property. His report confirms in every point all the good that your directors thought of the mine, and approves entirely the direction given to the works. Basing his calculation on the thickness of the veins, Mr. Porcheron estimates at 2½ million tons the body of profitable ore, a quantity sufficient to supply 40 stamps during many years. Your directors have yet to acquaint you with

THREE IMPORTANT MEASURES

taken by them, with a view to facilitating in the Transvaal transactions in the shares of your company, and to giving perfect security to these transactions: 1. They have made an application for and have obtained an official quotation in Johannesburg of the shares. 2. Your manager has been granted the proper authority to establish a transfer office in Johannesburg and to keep a local register of members there. 3. The necessary steps are being taken to have your company registered and incorporated in the Transvaal as a company with limited liability. The accounts now before you, accompanied by the report of the auditor, show a net profit of 4,709*l.* 15*s.* 7*d.* after writing off a sufficient sum for depreciation of machinery, plant and buildings, and for redemption of mine development, all of which remain well within their value. They trust that now the production of the ore continues in progress, to be able to declare regularly a quarterly distribution. From the motives previously stated, the working expenses have amounted to an average of 2*l.* 17*s.* 4*d.* per ton. Deducting exceptional bonus granted to the manager, say, 4*s.* 7*d.*, there remains, per ton, 2*l.* 12*s.* 8*d.* When the ore is crushed at the mine itself these costs will be greatly reduced. It will be seen further on, however, that they leave still a profit of 1*l.* 14*s.* 10*d.* per ton.

RESERVE SHARES.

Your directors have under consideration a most interesting scheme, which has been imparted to them by the engineer above-named, and to carry which into effect will require the issue of part of the 19,900 shares in reserve. Still, as it is of the utmost concern for your company that your board should keep for the present the most absolute secrecy in the matter, they simply have to request you to authorise them to issue these shares, for which they have a very advantageous offer. This issue will place your company in a most prosperous situation, as, with the balance already in hand, it will constitute a cash reserve representing a great percentage of the company's capital. As to the cash in hand and bank accounts, the company's working capital to Aug. 31 in Johannesburg, London and Paris, amounted to 20,828*l.* 14*s.* 6*d.*, from which must be deducted 2,116*l.* 1*s.* 3*d.* on account of recent acquisitions. Machinery and plant: To the machinery and plant proceeding from the King Solomon's Mine, Limited, consisting principally of:—One 10-stamp battery (Saudycroft) with boiler of 16 h.-p., pump, tanks and shed; one extracting engine of 16 h.-p. and boiler of 20 h.-p. and shed. There have been added: Two Berdan amalgamating pans; one 10-stamp battery (Saudycroft) complete with steam engine of 25 h.-p. and boiler, capable of operating 40 stamps; one 16 h.-p. elevating machine; one steam pump.

THE TRAMWAY PLANT

has been increased according to the progress of the workings. Buildings: The old buildings, consisting of a house for the manager and several houses for the Europeans and the Kaffirs, have received indispensable repairs. It has been already mentioned that a new house for the manager is in course of construction at the mine. Development of the mine: The mine has been developed 1,448 ft. up to Aug. 31, viz.:—Botha's reef 120 ft. and South leader 1,328 ft. The total production of gold for the six months ended Aug. has then been 4,460 ozs. 31 dwts. for 3,687 tons of ore crushed, that is an average yield of 1 oz. 4.19 dwts. per ton.

ASSAYS.

The assays have given an average of 1 oz. 12.0 dwts. per ton, viz.:—Yield, 1 oz. 4.19 dwts.; in tailings, 7.81 dwts.; total, 1 oz. 12 dwts. These results show that in the crushing by the battery 75 per cent. of the value of the ore has been extracted, a fact which is very rare since the best companies of the Randt obtain from 60 to 65 per cent. only. The product of the gold obtained has been 16,144*l.* 6*s.* 3*d.*, viz.:—Gold realised, 9,864*l.* 6*s.* 3*d.*; advance on consignment, 6,280*l.*; total, 16,144*l.* 6*s.* 3*d.*, equivalent to 4*l.* 7*s.* 0.690*d.* per ton; the working expenditure, depreciation and redemption included, having cost 2*l.* 12*s.* 0.848*d.* per ton, there remains a net profit of 1*l.* 14*s.* 1.044*d.* per ton.

TAILINGS.

The tailings remaining from the crushing amount to about 4,000 tons, and treated in their turn in different ways, will yield the greater part of the gold that they contain. A very low estimate fixes the profit to be realised from this source at 5*s.* per ton.

PREVISIONS FOR THE PERIOD 1891-1892.

Your directors are anxious not to compromise the encouraging results already obtained by your company during the first period, through showing an exaggerated optimism in their provisions for the current period. They, nevertheless, feel it their duty to communicate to you their plans and hopes, only begging you to take into account, as they do themselves, the unforeseen circumstances which may modify these provisions in a favourable or unfavourable way. Let them say that they have authorised your manager to effect the necessary development of the mine and to purchase 10 further stamps, which with the 20 existing ones will make 30 stamps in operation. They are unable

to fix the exact date when these new 10 stamps can be started, yet they believe that it will be in the course of Apl. next. The 30 stamps, when running at the same time, will crush about 2,500 tons each month, and, if the ore maintains its present richness, the monthly production will attain 3,000 ozs. Your directors thus contemplate to increase gradually the number of stamps to 40, which at present seems to them a maximum. The production of the mine would then place your company on a level with the largest ones of the Transvaal. As you are aware, it out-distances them already for some months past as to the richness of its ore. Your directors will use their best endeavours so that all these provisions may be realised when next year they have the honour to appear again in your presence, and they hope also to have brought to a successful end the scheme above-mentioned, from which they look for the best results. He concluded by paying a tribute of praise to the manager and moving the following

RESOLUTIONS.

"1. That the report and audited accounts and balance-sheet of the company for the period dating from the formation of the company to Aug. 31, 1891, submitted to the members at the meeting, be and are hereby approved and adopted." "2. That Mons. Bourbon, accountant, of Paris, be and is hereby elected auditor of the company for the current year." "3. That a dividend of 10 per cent. (2s. per share) be sanctioned and paid to the members on account of the dividend for the current year." "4. That the directors be and are hereby authorised to acquire on behalf of the company such mining properties in the Transvaal or interests in any mining property here, and upon such terms as they may in their absolute discretion think fit." "5. That the directors be and are hereby authorised to issue and dispose of the 19,900 reserve shares of the company, or any part thereof, at such prices above par and on such terms as they may think fit and most advantageous in the interests of the company."

These resolutions were seconded by Mons. HERLA.

A long and animated discussion ensued, an ENGLISH SHAREHOLDER (Mr. Foss), who said he was ignorant of the French language, demanding a translation of the remarks of some of the speakers. Mr. CHARLES ESCHWEGE (another English shareholder) who stated he had the interests of the company at heart, also addressed the meeting. Eventually an amendment was moved to the effect that the report and accounts should be adopted sans the paragraph as to reserve shares, and on a vote being taken, there appeared for the amendment eight votes, and seven against.

The original resolutions were put to the meeting with a similar result in the voting, and some confusion and excited discussion ensued eventually.

The CHAIRMAN declared, on a show of hands, that there were seven votes in favour of the resolutions and eight against. He thereupon demanded

A POLL

by writing, signed by seven shareholders, present personally or by proxy, holding shares for upwards of 5,000% in value, and it was determined to proceed with the poll immediately.

Messrs. Abrahams and Foss were appointed scrutineers.

The poll was proceeded with, and declared at about 5 p.m. to have had the following

RESULT:—

Twenty-four thousand votes and upwards were recorded in favour of the resolutions, and 2,721 against—Foss (5 votes), Pisani (2,000 votes), Bojano (1 vote), and C. Eschwege thereupon withdrew their votes against the resolutions, and declared that they wished to vote in favour thereof.

The CHAIRMAN thereupon declared the resolutions to be carried.

The other

FORMAL BUSINESS

was duly transacted, and a vote of thanks to the chairman terminated a protracted meeting.

THE HENDERSON AND FORBES GOLD MINING CO., LIMITED.

A DISAPPOINTING YEAR RESULTS IN THE ADOPTION OF A WAITING POLICY.

The annual general meeting was held at the Offices, 6, Queen Street Place.

Mr. John Harvey

(chairman of the company) presided.

Mr. HENRY WARD (secretary) read the notice of meeting.

DIRECTORS DISAPPOINTED.

The CHAIRMAN: Gentlemen, as I came to the City this morning I thought that the depressing state of the weather was not out of harmony with the character of the report we have been obliged to circulate amongst you, and which probably you have read. There is no doubt it is a very great misfortune that the Henderson and Forbes Co. has not proved a prize among mining ventures. The disappointment may be great to you shareholders generally, but that disappointment is felt far more keenly by us who sit on this side of the table, for not only have we a very large amount of money invested in this venture, but we have also had the practical management from the commencement, and it is not pleasant to have one's name associated with anything not successful. During the past year we have confined our operations to exploiting a portion of our property, and a large amount of work has been done where we have deemed it advisable to continue operations. The disappointment is more tantalising, because, wherever we have sought gold we have always found, not only partial evidences, but its actual existence, though, unfortunately, in such small quantities as not to prove remunerative. Last year, you may remember, I told you that we had sunk several shafts on various reefs, and that, after attaining a certain depth we were met with

A HARD BAR OF SOAP-STONE,

which impeded further operations. It was then considered advisable to invest in diamond drilling machinery to test this, because, as a matter of fact, the geological formation of that country is little

known. These drills did good work, but, unfortunately, when passing through the soap-stone they did not prove the existence of reefs on the other side. Of course, what we have done is only a very small matter when considered in relation to the vast extent of our property. It extends something like 34 square miles.

A PROPERTY THREE TIMES THE SIZE OF LONDON.

I do not know whether you have a good idea of what that area is, but when you consider that London occupies only 12 square miles, and that we have a property equal to nearly three times the size of that, you will readily understand that a very small extent of payable reef would be sufficient to place this company on a remunerative basis. Unfortunately, although we have occasionally met with quartz showing a fair amount of gold, the reefs have not held down. If we had been successful in discovering a permanent reef with anything like 12 dwts. of gold, we should have been able not only to give you a good return on your money, but probably have sold portions of the property which would certainly have resulted in a large profit to this company. I may say that we have, as far as possible, economised expenditure. The directors and managers during the past year have waived all remuneration, preferring rather that this money should be spent in exploiting than that it should go into their own pockets. (Hear, hear.) It is not with the idea of receiving fees that this board entered upon office—it was, if possible, to make the company a success. Of course, we cannot forecast the future.

IT IS SO.

If we could, few of us would have much occasion to come often to the City; and in all mining ventures there is a great amount of chance. We hope that you will consider under the circumstances we have done our best by suspending operations temporarily while we have yet some money in hand, rather than ask the shareholders to do what I take it they would have grudgingly have done, if at all—subscribe more money to further exploit this property. There are several companies on the field whose properties, from all accounts, closely resemble our own, and to them we look to see whether they are in the future to make that district profitable for gold crushing or not. Should they be successful, we will, no doubt, be able to gain by their experience without having to pay for it ourselves, and should that time arrive, we may deem it advisable to call you together to ask you to consider some scheme by which more money may be raised to continue operations. Mr. Edgar Taylor recently returned from South Africa, and as he has an intimate knowledge of the property, having been superintendent of mining operations on Henderson and Forbes, he will be able to answer any questions which shareholders may desire to put to him. I can only regret, before sitting down, that we have such a poor tale to tell you, but everything has been done in good faith, and beyond that all is a pure speculation, out of the power of anyone to control. I beg to propose "That the report and accounts as submitted be received and adopted."

Capt. RETALLACK (director) seconded the motion.

DISCUSSION.

Mr. LEWIS: Are not the expenses of carrying on the company in London rather heavy? for example, we are paying 20 guineas for auditors' fees.

The CHAIRMAN: The fee is nominal now, but that was the sum voted last year, when matters looked brighter than they do now, and when we had no idea that the result would have been so poor as it is. All expenses will be cut down to the lowest possible point. Mr. Mackenzie is in charge. He is a good prospector, and we pay him 25% a month for his services. He owns 1,000 shares in the company himself, so that he is greatly interested in doing what he can to find some payable reef. Beyond that the expenses are small, our object, meanwhile, being only to live.

A SHAREHOLDER: Are the shares worth anything?

DIRECTORS BUY, BUT DO NOT SELL.

The CHAIRMAN: That I do not know. I do not think any one of the directors has sold a share—on the contrary, they have increased their holdings. Several other directors, with myself, have bought shares instead of selling them.

Mr. MULLETT: Will Mr. Mackenzie report from time to time?

The CHAIRMAN: Yes. And if there is any important information the shareholders will get it.

VIEWS OF ONE WHO KNOWS THE PROPERTY.

Mr. EDGAR TAYLOR was asked to give his views of the situation, and said: I do not know that there is much to say beyond what has been communicated in the report. I can only point out that your managers on the spot, acting under my directions, have explored every reef pointed out in the original reports upon which the company was floated, and have explored them thoroughly, as I think is shown by the considerable amount of money spent which appears on the cost sheets. Unfortunately, the reefs, although numerous, have not proved, so far, either continuous in depth, or to yield payable quantities of gold. In the case of 13 of them, they have been proved on the flatter part of the property by our explorations, to be cut off by a belt of soap-stone. In order that we might be satisfied they were really so cut off, your directors purchased diamond drills. With these we made certain deep borings, which are satisfactory, although only so in a negative way, for they proved that the reefs did not, as far as we could find, penetrate the soap-stone bar. In reference to the other reefs in the northern range—there, again, the numerous reefs discovered have not been found to hold down, and explorations had to be abandoned. Of course, the property being so large, it cannot be said that we have explored the whole of it, but for that reason Mr. Mackenzie, who has been described by the chairman as a large shareholder, and who was the original prospector of the company, and, therefore, has a special knowledge of the district, is to devote his time to prospecting portions which we have not already touched, and we have, therefore, some hope that a discovery may be made. I do not know that the future policy of the company is much within my sphere, but that policy lies in remaining quiet doing this small exploration, and waiting to see what our neighbours, the Forbes Reef and Southern Forbes Reef, may prove by their extensive developments. I shall be glad to answer the questions of shareholders.

SUGGESTIONS.

A SHAREHOLDER asked whether as the property was so extensive portions could not be sold?

The CHAIRMAN: Certainly, if we could find buyers—(laughter)—but until we can show them some prospect of getting gold they are not likely to appear.

A SHAREHOLDER: Is there any value in the land, apart from the minerals it may contain?

Mr. EDGAR TAYLOR: I am afraid not of saleable value, because although we have grazing rights, those are simply for the cattle we employ, and not for sale to other people. We have very fine water power for working the mills if we only had good enough quartz.

The CHAIRMAN: Another reason we think there may be some hope for this district is that a railway is projected which will probably pass through a portion of the property. This, of course, will cheapen labour, could we find quartz of any value.

A SHAREHOLDER: Is there any prospect of working the mines by electricity?

The CHAIRMAN: That matter has been fully before us, but the first essential point has been to get good quartz, which so far we have failed in doing.

Mr. MULLETT: I hope the water power will not be sold, as that is our only hope.

The CHAIRMAN: We shall take care to preserve our rights in that respect, and in all others.

Mr. MULLETT proposed the re-election of the retiring directors, Mr. John Harvey and Mr. W. G. Izard, and the motion on being seconded was carried unanimously.

The CHAIRMAN, in replying, said: Mining is a pure speculation into which we put our money, hoping for the best. I think you will find the present board as economical as any set of directors that could be found. We have no intention of drawing fees even if funds were available for the purpose. (Hear, hear.)

Mr. LEWIS proposed the re-election of the auditors, who, it is understood, will receive a nominal fee in the present circumstances of the company.

The chairman and directors were thanked before the meeting ended.

EAST GRASSINGTON MINES, LIMITED.

LOW PRICE OF LEAD PREVENTS DIVIDENDS BEING DECLARED—SATISFACTORY POSITION OF THE COMPANY—A HOPEFUL OUTLOOK.

THE fourth annual general meeting of the shareholders of the East Grassington Mines, Limited, was held at the Offices, Palmerston Buildings, E.C., on Thursday.

Mr. Ernest Harris

presided.

The SECRETARY read the notice calling the meeting, and the report and accounts were taken as read.

The CHAIRMAN: Gentlemen, there is nothing very special to draw your attention to-day. We have had to contend with the tremendous weather of which you are all aware, and we have also had to contend with a very low price for our produce. Of course, these circumstances have militated against our making larger profits. The last time I had the pleasure of addressing you we were just keeping our heads above water, and I suppose we can only say we are doing the same at the present time, but we can say that

AN IMMENSE AMOUNT OF WORK

has been done in the mines. We have sunk the 47 level to the 60, which is about 183 ft., and we have proved, I think, satisfactorily, that we have every chance of success as we go down. We propose lowering the shaft another 15 fms., which will, no doubt, prove our mine to the utmost. We have visited the mines on several occasions during the year, and we have found everything in a very satisfactory state, both underground and above. We have placed our new pumps, and we have arranged these matters as economically as anyone could have, and we have to thank our manager, Capt. Williams, for the admirable manner in which he has got the machinery and placed it in position, almost entirely by his own skill, thereby saving us the expense of experienced engineers, which is a considerable amount. On the western side of our sett, we have commenced sinking

A NEW SHAFT,

which is christened Isabelle shaft, and for the future you will hear it called by that name. We trust as we go down, we shall cut a lode which we believe is there, and we hope it will be remunerative. I am sorry we shall not be able to declare a dividend on this occasion. You will see by the section the enormous quantity of work that has been done, but you can hardly realise it unless you have seen it. It seems to me almost impossible for so much work to have been done in the time, and it shows that we have not been asleep, but that everything has been done to try and make the mine a success. In a way, we are in a better position to-day than we were this time last year, for we can show a little profit, whereas we have never been able to do so before. With our new points working, and with a little more metal, we shall, we hope, be able to return you a little metal in the shape of dividends. Under the present circumstances, what with the terrible weather and the low price of ore, it is hardly possible to make lead mines pay, but the economy with which this mine is worked will enable us to do so when other mines cannot. I shall be very happy if there is anything further I can tell you, but Capt. Williams is here, and he will be glad to answer any questions you may put to him with regard to the present and future prospects of our mine. I now beg to move, "That the report and accounts for the year ending June 30, 1891, be received and adopted."

Mr. FREDERICK W. MANSELL (director), in seconding the motion, said: It will be in your recollection at the last annual meeting we had great hopes of making valuable discoveries in the 47-fm. level. We had gone over in the 37-fm. level a course of ore which contained several tons to the fathom, and we had every reason to expect when we sunk Harris's shaft down to the 47-fm. level we should be in good ground, but when we got down to the 47-fm. level we found there was a channel of ground so hard that our manager had to burn it away with dynamite. This was very costly and unproductive. We naturally expected that this body of ore we had in the 37 would

hold down, and its failure threw all our calculations on one side. Then it was suggested in consultation with the manager that it would be well to try the ground beneath the 47, to see how far this lasted. We had scarcely got below the 47, when

AT THREE DIFFERENT POINTS WE MET WITH LEAD,

Nos. 1, 2, and 3 sumps. That so encouraged us that we immediately set about to sink Harris's shaft down to the 60-fm. level, where we have every reason to believe we shall have good payable ground. The lode has been intersected, and so far we have driven about 10 fms., and it is one of the most encouraging points in the mine. Our manager values it at about 12 cwt. to the fathom. The 60 west was disturbed by what is known as a clayhole, but progress has since been made, getting beyond this clayhole, and lead is coming in again. There is one thing I should like to see, and that is Harris's shaft down another 15 fms. below our present points. If when we get beyond the influence of this hard ground we do not make discoveries I shall be very disappointed. As our chairman has pointed out, we have this year had to contend with the very low price of lead. We have told you the average for 1889-90 and for 1890-91, but unfortunately since then lead has dropped in value, and for the last lot, sold this week, we only obtained 117. 5s. a ton, which is the lowest price we have ever had. The low price of lead and the hard ground in the 47 have so disturbed our calculations that we have been compelled to come to you with this rather meagre account, when we were in hopes of paying dividends. If we open out the ground below this 60-ft. level we have

A GOOD CHANCE OF MAKING PROFITS.

We must not lose sight of the fact that to the west of your property very rich mines existed, and to the east it is on record that lead to the value of one million sterling was returned. That is on our vein. We have got as promising a vein as anyone need wish to see, but, unfortunately, so far it has been bunched. All the indications are in favour of some big body of ore being found close by. I have great hope that by sinking this shaft to the 75, extending our levels and sinking our western shaft, we shall have a very rich mine here.

A SHAREHOLDER: I see by the section that you put down a sump at the side of Hammond's shaft. Why did you not sink down Hammond's shaft?

Capt. DAVID WILLIAMS: Hammond's shaft is outside the lode there was a very nice shoot of ore going down below the 47, and my instructions were to sink down. We sunk down 60 ft., and we drove 30 ft. to the west, and we found the lode better and the ground kindlier and easier. It will be in your recollection when we met you 12 months ago, we had no capital in hand, and we decided to ask the shareholders for more, in order to sink deeper. I and my friends found about 20 per cent., the directors found their proportion, and some of the shareholders did as well. We commenced sinking in June, and reached the lode Nov. 1. We have since driven east and west on the lode. As we go to the eastward,

THE BUNCHES ARE BECOMING STRONGER.

To the west I think the prospects are favourable. The reason we have not sunk the mine quicker is, we had no funds to go down. On the 1st of this month, when Mr. Mansell and the chairman were down, we went through the whole of the underground workings, and fixed upon the position of the new shaft. It was then christened by the wife of the chairman the Isabelle shaft.

A SHAREHOLDER asked what amount was due to the directors for fees; he could not understand whether it was 400l., 600l., or 800l.

The CHAIRMAN explained that the directors had not taken any fees for the last two years, and there was, therefore, 400l. due to them, which was shown in the balance-sheet.

Mr. HOGARTH said it seemed to him the company was suffering from

THE AWFUL DEPRESSION IN THE PRICE OF LEAD.

If lead could be sold at a good price no doubt they would to-day be receiving a very handsome dividend. He certainly thought the manager had done very well under the circumstances, and though they would have liked to have seen something better they must take things as they find them, and hope that the present year would mark an improvement.

The motion was then put to the meeting and carried unanimously. The CHAIRMAN moved the re-election of the two retiring directors, Mr. Frederick W. Mansell and Mr. Herbert A. Hammond.

Dr. THOMAS J. CANTRELL seconded the motion, which was carried unanimously.

Mr. MANSELL, in returning thanks, said he only wished they could report a better state of affairs. However, they lived in hope, and, therefore, the directors hoped soon to be able to return something to the shareholders for their outlay. There was not a penny liability except the directors' fees; all the costs had been paid, and, therefore, directly they made paying discoveries the shareholders would reap the benefit.

Mr. HOGARTH then moved the re-election of the auditor, Mr. Edward Ashmead, which was duly carried.

AN INDEPENDENT REPORT.

The CHAIRMAN: That concludes the business of the meeting, but since we have been here a document has been handed to me which, with your permission, the secretary will read. It is a report on our property by Mr. Bonser, civil engineer, of Leeds, and is addressed to Mr. Tregellas. Mr. Tregellas has had our property inspected privately for his own information, and, therefore, the report may be taken as thoroughly unbiased. We have no idea what opinions are expressed in this document, as we have not read it.

The SECRETARY then read the report, which, after describing the different workings, said, "You possess a good tract of ground in a highly mineralised district. The lode is a true fissure vein, hitherto proved very bunched, and hard patches have occurred with undesirable frequency, but the deeper operations denote a decided improvement. By extending the 60, 47 and 37 levels, I consider your prospects highly encouraging. The mine is worked cheaply and expeditiously both underground and at the surface; your mines are well laid out and developed in a proper and workmanlike manner." The report concluded with the following words, "I was so satisfied with the encouraging prospects of the mine that I intend taking up shares therein."

A vote of thanks was then passed to the chairman and directors, which was carried.
Capt. Williams was also cordially thanked for his services, and suitably replied.

CANTABRIAN COPPER MINES.

PAST, PRESENT, AND FUTURE OF THE PROPERTY—SATISFACTORY REPORTS.

THE ordinary general meeting of the shareholders of the Cantabrian Copper Mines, Limited, was held on Thursday, Dec. 10, at Winchester House, Old Broad Street, E.C.

Mr. D. A. Onslow, J.P.,

presided.

Mr. S. BANNING (the secretary) having read the notice convening the meeting,

CONSIDERABLE PROGRESS IN DEVELOPMENT.

The CHAIRMAN said: I regret I am obliged to occupy the chair to-day, in consequence of the inability of our esteemed chairman, Mr. Hastings, to preside, through indisposition. He is present with us, but his voice is not strong enough, in consequence of a serious operation which he had to undergo some time ago, to undertake the strain of addressing you. Had he been well enough I am sure he would have been more capable of laying the position of affairs before you than I am. However, I will do my best to give you as clear a statement as possible as to the position of the company. As far as I know, you have all received a copy of the accounts made up to Sept. 30, which is for a period of 20 months, or from the date of the incorporation of the company to that date; but before I submit them to you for approval, I should like to say something as to the past, the present, and future prospects of the mines. This is the first annual meeting which has been held since the statutory meeting held in May last year. Since then considerable progress has been made in the development of the mines. As you are doubtless aware, in June last year two of your directors (Messrs. McKeand and Carter) visited the property to confer with Capt. Roskilley, the company's then manager, as to the best means of working the property, as also to arrange for the pumping and winding machinery which was required. On their return to London they made a report to the board, which was duly communicated to the shareholders, and which we (the directors) considered highly satisfactory, and trust you did also. Further, in Aug. of this year, matters not having progressed so satisfactorily at the mines as the directors wished, Mr. Francis Fowler, M.Inst.C.E., no doubt known to most of you as a mining engineer of considerable experience, was sent out to investigate matters and to report fully to the directors upon the mines, as also to give his advice as to their future working. On his return his report was printed and duly circulated amongst you, and from time to time, as other reports have been received from the manager, the substance of them has been communicated to you. I, therefore, think you have been pretty well posted up as to what has been doing at the mines almost up to the present. All who have seen the property, including our late manager, Capt. Roskilley, speak of it in the highest terms, and say that all we require is development to be in a position to raise ore in payable quantities. The directors, with the means at their disposal, have endeavoured to carry out this policy. Mr. Fowler, Mr. Roskilley, and the present manager (Mr. James), as also Mr. Belmonte (the former manager of the old Spanish Co.), are all unanimous in their opinion that when the main engine shaft, called Hastings shaft, on lode No. 5, is sunk to a further depth, the mines will pay. When I say pay, I mean make returns to the shareholders. Mr. Fowler, in his report, says that 25 metres more sinking will bring us to payable ore. The directors are, therefore, making the necessary arrangements to have this work carried out without delay. The cost, they find, will be about 20% per metre, or about 500% in all, if let by contract, which they are advised is the best course; and the time it is estimated it would take will be about six months—Mr. Fowler says four months—but, of course, copper will be raised from the other levels while this work is proceeding. The shaft, as you know, has been drained of water, and there is ample pumping power to cope with all the water which may be from time to time encountered, so that now everything is ready to commence this work. If you will allow me, I should like to read you a few extracts from the reports we have received on the mines.

A TRUE FISSURE VEIN.

The first report I propose to read is from Mr. Francis Fowler, and is dated Aug. 17, 1891. After stating the condition of things at the mines showed considerable improvement since his last visit, he goes on to say:—

"When I formerly visited the property, with much difficulty I was enabled to reach the bottom of the main engine shaft. There was then a good show of mineral, but on this occasion the waste having been in a great measure extracted, and the water out, I was enabled to make a thorough exploration, and I was well pleased with the result. The lode is evidently a true fissure vein within well defined walls about 3 ft. in width, containing several veins of fine copper ore in all, now showing fully 6 ins. in width of, I should estimate, 25 per cent. ore, and from the development already made, I have every confidence that this show will improve in depth. At the present moment we may fairly consider the mine to have reached its turning point, and will more than pay its expenses from this time, and in a few months make good returns to the shareholders. By working two shifts and driving on the bottom level I expect a production of 1½ tons to the fm., the same in sinking on the winze, and practically the same from the stopes; calculating on driving 4 ins. a month on each, will give 18 tons per month, and, say, 2 tons from the various upper levels, in all 20 tons, with a value of 25 per cent. copper. This estimate can only be increased by the main shaft being first straightened and sunk an additional 25 metres below the present bottom. This, with the ladder-ways and the cross-cut, will in all take some four months to complete, when the estimated output should be largely increased. The shaft is now down 25 metres below adit, and 160 ft. from surface. Your engine is powerful enough to enable you to sink the shaft to a depth of from 450 ft. to 500 ft."

DEPTH ONLY REQUIRED.

Mr. Roskilley says in his report which was issued to the shareholders on Oct. 8, 1890:—

"My opinion of these mines to-day is the same as expressed in my first and subsequent reports, viz., that depth only is required to make this property a great success; for such well-defined lodes as are open to view in the adit level, when developed at deeper points, will, I believe, be found rich in copper."

Mr. Roskilley, in his report dated Nov. 8, 1890, says:—

"These improvements give additional support to the opinion I expressed in my former reports as to the value of these mines when developed at deeper levels; and in view of this all energy will be exercised in order to get the engine and boiler houses completed for the reception of both the engine and boiler."

In his report under date of Sept. 19, 1891, Mr. Roskilley says:—

"In the 25-metre level, which is being explored east of Hastings engine shaft, the lode during the week has further improved in ore yield, and it is now worth 1 ton of rich mineral per fm. This end is opening up some good stoping ground. The lode in this level, driving west of shaft, is at present small; but it is of a most kindly nature, composed of quartz, green carbonates, black oxides, and rich copper pyrites, presenting all the characteristics desirable for the yield of copper ore in large quantities. I look anxiously forward to an improvement in this end, which, judging from its favourable appearance, may reasonably be anticipated."

Again, on Oct. 10, 1891, Mr. Roskilley says:—

"During the past day or two the lode in the 25 forebreast west of shaft has materially improved in ore yield, and now worth 1 ton of rich ore per fm.; a fine-looking lode, which is well defined, and promises to produce copper ore in large quantities, both in exploring this end and when developed below the present workings. The improvement here, and which I prognosticated in my report, dated Sept. 26, is really very fine indeed, and I cannot speak too highly of its character and ore yield, while, if it continues as good as at present, a profitable section of stoping ground may reasonably be anticipated."

A VEIN OF SUPERIOR COPPER.

We next come to Mr. Belmonte, who says in his report dated Nov. 15, 1891:—

"The 5th vein has a shaft 50 metres deep from the surface, with two galleries running east and west, where the work is now being carried on. The galleries carry a vein of superior copper, assaying 30 per cent. In the gallery running east there are three forebreasts showing good ore. The mines, without doubt, are very rich, and the sinking of the shaft some 20 metres will, according to experienced men, show the great riches of the mines, because the tendency of the 3rd, 4th and 5th veins is to unite at a depth of 20 metres to 30 metres, and then a brilliant exploitation will be made, with great profit to the company, for then galleries can be commenced right and left, and the result would be that from 8 tons to 10 tons could be extracted daily of 30 per cent. ore. This is apart from the fact that the deeper the shaft is sunk the more the vein increases, and the ore improves in a remarkable manner."

The following is from the last report received from Mr. James, the present manager, dated Dec. 5, 1891:—

"I am pleased to inform you that the 25-metre level driving west of Hastings engine shaft has greatly improved in value during the week, and is now worth at least 1 ton per fm. of the richest quality I have even seen in the mine, and, so far, it is still improving as we are going west. The 25-metre level going east is still mixed with white iron, mundic, &c., and is worth about ½ ton of copper per fm. There is scarcely any alteration in any of the stopes since I last advised you. We have dressed this week 52 cwt., and should have dressed more, but the miners' feast was on one day, so that we have only five days dressing for the week. The engine and pitwork are working well."

A BRILLIANT FORECAST

Now, gentlemen, all these men, who ought to know, speak in the highest possible terms as to the value of your property. During the past five months, or from July to Nov., we have extracted upwards of 36 tons of rich ore, whereas from Mar. last year up to June of this year we only extracted about 22 tons; and our output is increasing, for at present we are extracting about 10 tons of ore per month, and Capt. James hopes to soon double this quantity. 15 tons will pay all the expenses at the mines. The ore averages over 20 per cent. of copper, and has gone over 25 per cent. We have now ready for shipment nearly 40 tons of rich ore, which, we are told, will average over 25 per cent. of copper. Mr. Belmonte says that when we have the shaft down at least a further 25 metres we ought to be able to raise from 8 tons to 10 tons of ore daily, averaging 30 per cent. copper; but even if we only raise half this quantity at the present price of copper, we should be making over 10,000% per annum. With such prospects as these, gentlemen, I fail to see any valid reason for the present price of your shares. We have ample funds to carry out all the work contemplated. Gentlemen, the prospects of the mines never looked better than they do at present, and I feel absolutely certain that eventually your patience will be rewarded. Before I pass on to the accounts I would just say that the two directors who visited the mines went out simply for their expenses. They were not paid one penny for their time or trouble, and they were away 10 days. One result of their visit was that we saved upwards of 500% on our machinery bill. The chairman then referred to the items in the accounts, and concluded by moving the following resolution:—"That this meeting, having heard the statement made by the chairman and the explanation of the accounts furnished by him, hereby approves and adopts the same."

Mr. C. EARL seconded the resolution.

In reply to Mr. Sedgley,

GOOD ADVICE.

The CHAIRMAN said that the mine at present was not quite covering its expenses. He could not account for the present low price of their shares, but he hoped after the statement he had made the shareholders would not be disposed to part with them for a nominal amount. He believed when they had their shaft sunk that they would get sufficient ore to pay their expenses and give a handsome return to the shareholders.

Dr. CARTER (a director) stated that he did not think that there was a copper mine anywhere which yielded such a high percentage

of copper as theirs did. The last assay from Swansea was 25½ per cent., and, according to Mr. James's latest report, they might expect a higher percentage even than that.

The CHAIRMAN stated that it was the intention of the directors to at once make a call.

The resolution was then put to the meeting and carried unanimously.

The proceedings then terminated in the customary manner.

THE KIMBERLEY DIAMOND MINING CO., LIMITED.

AFTER A YEAR AND A HALF OF WORKING THE COMPANY FINDS ITSELF IN POSSESSION OF PROVED DIAMONDFEROUS GROUND—DIAMONDS ALREADY REMITTED.

THE annual general meeting was held on Tuesday, at Winchester House, to receive the report of the directors, the balance-sheet, and for other business.

Mr. Charles Jaques Posno (chairman of the company) presided.

Mr. GEO. BROWN (secretary) read the notice of meeting.

WORK BEGUN AND DIAMONDS SENT HOME.

The CHAIRMAN said: Gentlemen, this is our first annual meeting, and we are happy in submitting a statement and a report showing material progress. The accounts indicate that out of a total capital of 100,000*l.*, whereof 50,000*l.* is paid up, we have paid the 25,000*l.* for the mineral rights thus fully acquired and paid for, and have a balance of cash in hand of 10,000*l.* We have received 185 carats of diamonds, whereof one is a pure well-shaped stone of 58 carats, and our manager advises that he is about to forward to the London office further finds amounting to 190 carats, a total of 375 carats. The existence of diamonds on our property has, therefore, by our own operations been placed beyond all possible question, but as these diamonds having come, so to speak, from one spot, not more than 400 claims in extent, much more remains to be done; indeed we may be said to have only just commenced our career. You will know that a claim is a small space of 30 ft. by 30 ft., and that the extent of the land over which we have the right to explore is above 20,000 acres. Numerous applications have been made for the exploitation of other spots, but we have deemed it to the best interest of this company to proceed with deliberation in the matter, and have therefore abstained for the present from entering into any such arrangements.

A "GOLDEN HARVEST" IN STORE.

We must be guided by circumstances. We have under our lease rights of possibly inestimable value, and the experience of another year has only strengthened my original belief that there is a golden harvest in store for those shareholders in this company who will give us their confidence and not be too impatient. Mr. H. L. W. Lawson, our esteemed colleague, has visited our property, and has returned delighted with what he has seen. For myself, I have great difficulty in conveying to you the high opinion I have of the property. We are not working any mine; we are endeavouring to learn the nature of the soil comprised in our lease, and my belief is that it will presently be demonstrated that we are the custodians of great mineral wealth—wealth that may count up to millions. We may be said to have great mines all around us. The great mines of Kimberley, De Beers, Dutoitspan, and Bultfontein, are mines such as were not known in any part of the world before they were discovered—mines whereof it may indeed be said that "they beat creation." Yet may it not be that they are only branches springing all from a parent stem, and such parent stem, or a main branch, will be struck on the lands whereon the right to the minerals is vested in us. This is a matter for study and research. It is a problem not yet solved. We have taken it in hand, and to the solution of this interesting geological enigma my faith is pinned. This is only one of the possibilities. Certain it is that we are in diamond bearing soil. The diamonds that have come to hand I have brought with me, and any shareholder feeling a sufficient interest can see them after the meeting is over. This is all that occurs to me to say to you. It shows you what we have done and what we expect. I now move the adoption of the report. (Cheers.)

Mr. LOUIS SCHOTT (director): I second the motion.

DISCUSSION.

Mr. HART: Will you please inform us upon what part of the property you are getting these diamonds?

The SOLICITOR: It is called Belgravia Mine.

The CHAIRMAN: We call it No. 7, and it is only from that one spot.

Mr. HART: You say the manager has informed you that 190 carats are still to come forward. How long is it since you have had the last consignment?

The CHAIRMAN: Last week.

Mr. HART: Then did he find 191 carats in another week?

The CHAIRMAN: Not quite that. It is not a regular diamond mine that he is working.

Mr. HART: I understand that last week you received a consignment, and he still wires to you that he is going to send another of 190 carats, so that you must have found 190 carats since he sent the last consignment.

The CHAIRMAN: I would not like to say that as he does not find them so rapidly yet, because he does not do regular diamond mining. I read his letter to mean that he kept some back, and that there was something informal in the declaration, so that the exportation was delayed.

MORE INFORMATION REQUESTED.

Mr. GRANT-HOOPER: I regret I was not here to listen to your opening remarks, but I should like to hear some particulars with regard to the degree of energy with which our researches are being prosecuted. I do not gather from any of the remarks I have heard to what extent and with what degree of energy the examination of this ground is being prosecuted. Of course, I see from the expenditure that 2,100*l.* has been expended for salaries, and 3,500*l.* on prospecting. I should like to know if this has been spent in retaining the services of ornamental managers, even although I know managers are very indispensable, but I should like to know that this amount is really being spent in actual work, and if you can give us some indication as to the number of men employed, and the different portions of the property upon which prospecting is being carried out, and whether it has any relation to the De Beers or Wessels Mine, of which we hear so much, I should be glad. You will agree with me that the information you have given us up to this moment is meagre in the extreme, and I feel sure every shareholder in the room will be glad to find himself in possession of a little more information.

DETAILS UNDESIRABLE IN SHAREHOLDERS' INTEREST.

The CHAIRMAN: I have considerable difficulty in going into details as to where the prospecting has been carried on. We have given general results, and do not think that it is to the interest of this company to go into those very minute particulars. You have remarked on the money spent. Well, it has gone in labour, and it has had this result, that what was originally a simple belief has now become a confirmed belief. To go into the wages-sheet week by week, of which we could give particulars, would occupy us a long time. We have been at work only a year, or a year and a half, and I can assure you, from my knowledge of the local manager, that he has spent the money to the best of his intelligence for our benefit. (Cheers.)

A DIRECTOR WHO HAS VISITED THE PROPERTY.

Mr. H. L. W. LAWSON, M.P.: I should like to say, Mr. Chairman and gentlemen, that the last questioner might be satisfied by the fact that I have been over the whole of the work which has been done by this company in exploring and prospecting, and consider the results to be highly satisfactory. If the shareholders have any confidence in their directorate, it would not be advisable to make a full statement of what it is inexpedient in the highest degree should be given forth in detail at the present moment; but in the future they will see that the work now being done, and that has been done by our manager in Kimberley, will bear very rich fruit, and, as the shareholders have heard, in the case of the one mine which is being explored, the "finds" have been satisfactory to him and to us. I can assure the shareholders from my own personal knowledge that there are other claims where the developments are likely to be as successful, or even more so.

Mr. GRANT-HOOPER: Can you give us an idea of the extent of the exploration?

Mr. LAWSON: The diamonds have been already produced, and the chairman has given a statement with regard to their importance.

Mr. GRANT-HOOPER: I do not think that information is sufficiently full. I understood from the chairman that we discovered nothing that amounted to more than an indication.

Mr. LAWSON: The chairman said it was about 400 claims.

Mr. GRANT-HOOPER: That was the information I really wanted, but missed through coming late.

Mr. LAWSON: The mine is now explored to the point stated, and 430 claims have been proved, but there are some parts of the mine which it would be impossible to work, as the ground is occupied by the stands of the London and South African Exploration Co.; and with regard to other indications it is not in the least advisable that a statement should be made which could not be to the advantage of the shareholders.

DISADVANTAGE OF UNPUNCTUALITY.

Mr. GRANT-HOOPER: I dare say it is due to the fact that I arrived five minutes late that I have missed some of the particulars given by the chairman. (Hear, hear.)

The report was unanimously adopted.

Mr. GRANT-HOOPER proposed the election of the auditors, Messrs. Deloitte, Dever, Griffiths and Co., which was carried, and the meeting separated after the chairman had been cordially thanked for presiding.

REVIEW.

SPLAY-FEET SPLASHINGS IN DIVERS PLACES. By Goosestep. London: The Leadenhall Press, E.C.

The author of these lines, who is known to be largely interested in mines, and to be specially observant of those of India, has published in book form his versifications on things in general, and on mining ventures in particular. It may be regarded as one merit of the poems that they are short, and it is another that they are to the point. There is much harmless fun in "Goosestep," but no vulgarity, and we also detect in many of his verses an earnestness of purpose and feeling which does credit to his heart.

REPORTS OF MEETINGS.

THE GOLDFIELDS OF MYSORE, LIMITED.

SALE OF ONLY ONE-NINTH OF THE PROPERTY ALREADY MADE, THE PROCEEDS OF WHICH HAVE BEEN MORE THAN EQUAL TO THE TOTAL CAPITAL OF THE COMPANY—INTERESTING STATEMENT AS TO PROSPECTING AND OTHER OPERATIONS.

THE fifth ordinary general meeting was held at the Cannon Street Hotel, on Thursday, to receive the report and balance-sheet, to elect directors and auditors in place of those retiring, and for other general business.

The Right Hon. Lord Ribblesdale

(chairman of the company) presided.

Mr. JOHN GARLAND (secretary) read the notice of meeting.

THE CHAIRMAN PROPHETICALLY ACCURATE.

The CHAIRMAN: Gentlemen, I will proceed, as usual, to move that the report and balance-sheet to Aug. 31, 1891, be received and adopted, and make a few observations on the general position of affairs at the present time. I may say that Sir Charles Tennant is very sorry not to be here to-day, but he has gone to Egypt, so as to get out of the beginning of the English winter. I see, on looking at my remarks at the last meeting, I described the financial position of Goldfields as sound, and I defined the word "sound" by saying that we owed no money, and that we had a little to go on with. I also see, on re-reading those remarks, that with great daring I made a small

EXPEDITION INTO THE "DARK CONTINENT" OF PROPHECY,

and said I hoped, at a comparatively early date, the position would be altered, and that although we should still continue to owe no money we should have very considerable assets at our credit. I spoke of sales of land to various companies, which at that time were only in the air and not determined upon, and I must now say your board is very glad to be able to meet you here to-day and tell you that those hazardous predictions of mine have, as I think you will admit, been reasonably, at all events, if not abundantly, verified. (Cheers.) For my own part I should use the word "abundantly" verified, because this has been an important year in the history of the company. We have sold a great deal of land, and we now

HOLD SHARES OF THE VALUE OF CLOSE UPON 50,000%.

That is the present position of the company. (Cheers.) The accounts I think are the principal feature of the directors' report which has been presented to you. The report in itself is short, and very much to the point. It merely tells you of the sales of land to which I have just alluded, and the fact of our having become a land company reduces the information on mining and so on. But the accounts have been very carefully prepared, and the board thought the best way was not to confine them actually to the year, but to give you an exact account of the financial operations of the company up to the end of its last financial year—that is Aug. 31. Mining rights over

492 ACRES HAVE BEEN SOLD DURING THE LAST YEAR,

and have come into this account, but further than that comes in the account of 220 acres, which were sold in 1889, the preceding year, to the Champion Reef Co., which makes 712 acres of your property that we have been able to sell. As you know, a very small proportion of that purchase money was paid in cash, only 5,000% was paid by the Champion Reef Co., and as you also know we took the purchase consideration very largely in shares—almost entirely so. A great many people, I believe, thought that our doing so might not have a beneficial effect on the shares of the purchasing companies. That was never the view of your board, and it was not the view of the boards of the purchasing companies, and I think that the event has justified the views taken by the boards, both of the vending and purchasing companies, because the shares of Nundydroog and Ooregum have considerably increased in value since those purchases. So far from the large quantity of shares changing hands as purchase consideration having affected values—in spite of all the great difficulties which the City has been going through, and from which all speculative efforts have suffered, Indian gold mining shares in these strong companies have

HELD THEIR OWN EXTRAORDINARILY WELL.

(Hear, hear, and cheers.) The amount received in cash and shares for the 712 acres was 258,250%. and after deducting the proportional value of the land sold, which we considered very carefully, and which I think was fairly taken on the basis of the original cost, and also after deducting legal and other expenses in connection with these sales, a profit was shown on the various transactions of 243,148% odd,

and on the entire operations of the company, that is, after deducting mining, prospecting, and managing charges to Aug. 31,

A TOTAL PROFIT IS SHOWN OF 236,502% ODD.

This sum has been disposed of in the following manner: Shareholders have received dividends in shares equivalent to 200,749%, which was equal to 18s. 3d. a share at the market price at that time, and I know myself that a clever friend of mine, who watches the market carefully, told me he got out of his dividend in shares at exactly 100 per cent. profit; 6,977%, which was the total amount, has been written off preliminary expenses; from mining rights 7,000%, and from the expenditure in India and England, 10,000%; 5,000% has been transferred to a reserve fund for the purpose of equalising dividends, and to provide for any depreciation in the value of the assets of the company, which I think you will agree is a wise and prudent disposition of that sum of money; and the balance of 6,775% has been carried to the credit of profit and loss account. The company still retains, as shown on page 7 of the directors' report, the following shares: 2,000 in the Mysore Co., 3,000 in the Ooregum, 3,000 in the Nundydroog, and 22,000 in the Champion Reef. The latter is an asset which I have always considered a very good one, for I am a very great believer in the future of the Champion Reef Co. As I said at the beginning, taking these shares at the present market value, they are worth close upon 50,000%.

BALAGHAT SALE.

It is mentioned in the director's report, but I will mention it again, that a contract has been entered into with the Balaghat Co. for the further sale of land, amounting to 90 acres—we getting 20,000% for it, of which 10,000% will be in cash and 10,000% in shares. The Balaghat board has a scheme all ready, and when a favourable moment comes, which will be some time, I suppose, after the new year, we shall put it forward, and I hope the purchase, as far as raising the money goes, will be satisfactorily carried through. I have so often spoken about the great size of this property, that I do not wish to say any more, but I think you will all see that the 802 odd acres (which includes the contract with the Balaghat) is a very small bit out of the enormous area you possess. It is

TOO LARGE A CAKE TO BE ALL PLUMS,

but there is very little doubt that in the 8,400 acres you still have, a very large amount of most valuable mining ground is included. One great advantage we have as a company is that we now spend very little money, and simply wait for people who are willing to come and buy. In most businesses in these days one is obliged to advertise, and advertising expenses are enormous. We have none of these. Our property is being advertised for us every day by the wonderful success of the Mysore, Ooregum, and Nundydroog properties, and the good prospects of Balaghat and Champion Reefs. I have very little doubt that a very much larger proportion of this residue of our estate will sooner or later, and I think it will be sooner rather than later, change hands at very flattering prices to this company. Very little mining has been done, so I will not say anything about that. Mr. Jones' report is very complete, and deals with it, but we are pushing on prospecting operations vigorously, and some of the prospecting which is now going on at the Victoria block we think may turn out of considerable value. Within the last six weeks we have rather increased our expenditure on prospecting, because I think it is a policy which should be pushed. The directors have formed the

INTENTION OF BRINGING OUT A NEW COMPANY,

to work a portion of our land. We are only waiting for a good opportunity to bring the proposals we have to make before you. I think that concludes all I have to say, and I will now move—"That the report and balance-sheet to Aug. 31, 1891, be received and adopted."

Mr. JOHN TAYLOR, who was cordially received, said: Gentlemen, I beg to second the resolution which has been proposed. In concluding the statement I made to you at the annual general meeting, held about a year ago, I said, although we had nothing definite before us, I thought the time had then come when the Goldfields of Mysore Co. might commence to reap its harvest by sales of portions of the large property it possessed. Since that time these sales have been made, realising this large amount, which is equal to more than the capital of our company, although the total area disposed of is

LESS THAN ONE-NINTH OF THE ENTIRE PROPERTY.

Therefore, I think the year we have under consideration is very aptly described in this report as "eventful." In part payment of this land we hold these shares in what our chairman has told us are very successful companies—particularly the Mysore, Ooregum and Nundydroog, and having been connected with them for so many years, it is

A SOURCE, I CAN TELL YOU, OF MOST INTENSE SATISFACTION TO ME

to notice how well—how extraordinarily well—the development of

the reef in these mines goes on. In the Mysore Mine particularly, we have before us now the fact that we have followed down this great Champion reef to a depth of 900 ft., and that we have still the vein large and rich, which you know, without my telling you, speaks volumes for the permanency of the mines in this Colar Goldfield (Cheers.) Now, gentlemen, the mining operations carried on for the Goldfields Co. have been very limited, and there is but little for me to say. The only work we have at present in hand, with the exception of prospecting, is the drive of the 280-ft. level south of the shaft in the Golconda block, not anywhere near the Champion reef, but a long way to the west. In the 206 level above we had what appeared to be a very remarkable patch of productive rock—a shoot of ore where the lode was disturbed by a cross-course, and we could not take much of it there; but the rock contained over 1 oz. of gold to the ton, and this level we are driving at the 280 is about 74 ft. below, and I think we have a fair prospect of finding something there, although I do not wish you to attach very much importance to it at present. That is the only deep mining work we are carrying on; but there is another branch of the company's operations to which I attach special importance, and to which I desire to draw your particular attention, and that is the prospecting.

PROSPECTING.

With this vast extent of property, this work of prospecting is very important, because you are aware it is intersected all over its extent by these gold-bearing reefs (for they are proved to be so), although the gold may be in small quantities, but apparently almost throughout—I say that you will thus readily realise the vital importance of this prospecting work which I consider should be carried on with vigour. The lodes are very numerous, and being auriferous as they are, mining engineers will tell you a discovery of great value may be made at any moment. I told you last year we believed that Mr. Lavelle was a man of indomitable energy and perseverance, and one who, from the long time he had been connected with the Colar goldfield, had a great knowledge of the runs of these different reefs. Now, it is Mr. Lavelle who has this prospecting work in hand at various parts of your large property. At more than one of these it is apparent from his recent letters to us that he thinks he is

ON THE EVE OF MAKING SOME IMPORTANT DISCOVERY,

and of having something very good to tell us. I will only mention two places. You know from the map of the property that on its western part there are two blocks, one called the South block, and the other the Victoria block. On the south block Mr. Lavelle has sunk two shafts, and is sinking what can hardly be called shafts in the sense of deep mining, but might more properly be designated trial pits. He has sunk two of these, and is driving from each of them cross-cuts through the country rock to intersect a lode which he knows to exist, and which is to be seen at surface. In one of these, the northernmost shaft of the two, he tells us he has already cut strings of quartz about 4 ins. wide, carrying gold, which he believes is a part of the main lode—a leader flying off from it.

Mr. GILBERT ELLIOTT: The Champion lode.

Mr. JOHN TAYLOR: No. Near the extreme west of your property in the south block; nowhere near the Champion lode at all. I should think it is a mile and a half to the west of the Champion lode. In regard to the other shaft, he says in his last letter, dated Nov. 18, that he hopes, in the course of a mail or two, to inform us of the cutting of the lode in both these shafts. On the Victoria block to the west there is a line of hills, for there is nothing that can be called a mountain in that district, of which Mr. Lavelle has a high opinion, and he has a strong gang of workmen there with the object of finding a lode, of which it is perfectly evident from the extent of the old workings was extensively wrought in former times. Mr. Lavelle is strongly of opinion that this hill on the western part of our property should be prospecting, as he believes rich gold veins will be found there, and he urges the policy of

EXPLORATION BY TUNNEL.

In this I most fully concur, especially as we have ample funds for carrying on the work, and, as I have said, we may at any time hope to be richly rewarded by the discovery of a valuable reef in an entirely fresh part of our property. I do not think there is any more for me to say now. I must, however, tell you

IT HAS BEEN A MATTER OF SURPRISE

to me that more enterprise has not been shown in the direction of mining on this Colar goldfield. Several of the companies are doing, as you are aware, extraordinarily well. Some of the mines are getting down to a fair depth. I do not call Mysore at 900 ft. any great depth, but still it is a fair depth, and the reef is still maintaining its full size and value, and I should certainly have thought there would be a desire on the part of persons of enterprise to acquire and work portions of this large property. The time, I imagine, must come when the outside world will realise the importance of this goldfield and the advantage of investing capital in the development of the reefs upon it. Gentlemen, I beg to second the resolution. (Cheers.)

DISCUSSION.

Mr. GILBERT ELLIOTT: I gather from Mr. Taylor's remarks that work is still going on at the spot mentioned on page 13 of the report—the 280 south level:

"This class of ore, however, did not hold down in the winze but appeared to be dipping south, therefore by extending the 280 south level a greater distance there is a prospect of meeting the productive ore at that depth."

I read before that there is a reef there from 8 to 12 ft. wide, which has been found to give 1 oz. 15 dwts. to the ton, and, therefore, I wish to know for certain what progress is being made with that work, as it seems to me very important indeed. There is a great deal of quartz, and apparently a lot of it holds gold—therefore, I should wish to understand distinctly what work is being done in the 280 level south. I should like also to say that the shaft should be indicated on the plan in order that shareholders may know where it is.

Mr. TAYLOR: The plan is on too small a scale to show it.

Mr. ELLIOTT: Will you permit me to see it at the office?

Mr. TAYLOR: Most certainly. I will now indicate its position (doing so) on the Golconda block.

Mr. ELLIOTT: If you have a reef giving 1 oz. 15 dwts. running over 8 ft. wide—why, that is a fortune for us. I am very gratified to hear that the commercial position is so good in regard to our efforts as a land selling company, but here is a long report from the mine manager, and we have heard little beyond, although his report is dated some months back. I want to know what has been done in the 280 south level since this report was sent in, for I regard what I have spoken of as an important discovery.

Mr. TAYLOR: We have only had two or three letters since Mr. Jones wrote his report, and have no information of any change since. I have already told the meeting that we are driving the level 74 ft. below where we had the quartz containing gold, in the hope that we may find it at greater depth.

Mr. ELLIOTT: We do not hear of any further progress. You say 74 ft., but how long has it taken to drive that?

Mr. TAYLOR: I said nothing about driving 74 ft., but simply that we were driving at a depth of 74 ft. under the 206—in other words at the 280, which, of course, is 74 ft. below the 206. (Hear, hear.)

Mr. ELLIOTT: I want a report showing me the progress that has been made since, because that appears an important discovery.

Mr. TAYLOR: If you will kindly come to the office we will show you the weekly statements that have arrived since the date of this report, together with the plan of the workings. We are not in the habit of going into minute details at the meeting.

Mr. ELLIOTT: I press the point because this is a big discovery mentioned in your report. If you have 1 oz. 15 dwts. in a big reef measuring 8 ft., that is an important discovery; and I say so after 20 years' experience as an underground worker in quartz. It is much more important than any small prospecting advance.

POLICY OF THE COMPANY DEFINED.

The CHAIRMAN: We are more inclined to look at that as a prospecting discovery than anything else. If you are to take the full advantage of such a discovery, then you will have to reverse the policy that is being pursued, and begin mining on a large scale. You are the ultimate judges as to whether that should be done, but for my own part, and I believe I am speaking the views of the rest of the board, if you reverse the recent policy you will be making a mistake. That discovery will bring to us people who are ready to buy. I think we have done very well for you last year—(cheers)—and, perhaps, you had better let us pursue our present policy. (Cheers.)

Mr. ELLIOTT: That may be all very well if you had not sunk 280 ft.

The CHAIRMAN: That is to the advantage of the shareholders as landsellers.

Mr. ELLIOTT: Why should it not be to their advantage as miners?

The CHAIRMAN: Because it will be to their advantage when purchasers come, and they cannot have it both ways. I am always surprised myself, in thinking matters over, that nobody takes this block on which so much work has been done. I am surprised nobody has come to buy that block, with its machinery set up, its bungalows ready, and its shaft down 280 ft.—all done with somebody else's money, and gold proved in the reefs.

Mr. ST. STEPHENS: The last speaker told you he has had 20 years' quartz mining in India.

Mr. ELLIOTT: All over the world.

Mr. ST. STEPHENS: I never met the gentleman in India, but he has had access to the reports, as we have all had, and I do recollect seeing in one of them that after this large bunch of quartz was obtained it became disordered, and the manager thought it more economical to continue the shaft and drive under it than to sink a winze. The last speaker must know that it is very much better to cut such a body of quartz as this by driving from the bottom of an already existing shaft, 74 ft. deep, than it would be to work upon it direct by means of a winze, where there would be a larger accumulation of water, and where pumping machinery would be required to draw it out. Therefore, I think in driving the level at the bottom of the shaft 74 ft., Mr. Jones has adopted the most economical plan that he possibly could.

Mr. ELLIOTT: I wanted to know what he has done, and you have told me for the first time.

Mr. ST. STEPHENS: I have read it in the report, and I have also heard it from Mr. Taylor to-day.

The report was unanimously adopted.

ROUTINE BUSINESS.

The CHAIRMAN proposed the re-election of the two retiring directors, Capt. W. Bell McTaggart and Mr. Robert Taylor, who retire from office by rotation.

Major-Genl. DE LA POER BERESFORD (director) seconded the motion, which was carried unanimously.

Mr. PROBYN proposed the re-election of Messrs. Cooper Bros. as auditors, at a remuneration of 25 guineas.

Mr. HULL seconded the motion, which was carried unanimously.

Capt. MCTAGGART: I beg to thank you for my re-election, and can assure you I will devote the same attention to your affairs in the future as I have done in the past.

GRATITUDE.

Mr. WILLIAMS: I should like to offer a resolution for your adoption, "That the cordial thanks of the shareholders be given to Lord Ribblesdale and the directors of the company for the energetic and very successful way in which they have conducted the business of the company as presented in the report to-day." (Cheers.) I will not weaken the position, because what we have heard to-day, and what is stated in the report, is so convincing as to the manner in which the directors have managed the affairs of the company that I put the resolution to you without further comment.

Mr. LONG seconded the motion, which was carried by acclamation.

The CHAIRMAN: I am sure, gentlemen, we are very grateful to you for your kind expression of confidence in what we have done in managing the affairs of the company. Of course, to do our best not only for you but for ourselves is our duty as directors, but it is also our pleasure. As chairman I can speak to the extraordinary pains which all the directors take in attending the meetings and helping the affairs of the company in every way, and you have the advantage in this board, which I think is a great one in mining enterprises carried out at a distance, that

THREE OF THE MEMBERS ARE WELL ACQUAINTED WITH COLAR FIELD.

Genl. Beresford was the pioneer of it—he and Mr. Lavelle, who is

now pushing on our prospecting work, and who is a man of great energy, industry, and knowledge of the country—they two were the pioneers, and Capt. McTaggart knows the district well; and though my experience is not so large as that of my colleagues, yet I went out there and stayed on the field five or six weeks some two or three years ago. We are very grateful for the vote of thanks, and I hope that our future will be as prosperous as our past, and I have very little doubt it will. (Cheers.)

THE CHAMPION REEF GOLD MINING CO. OF INDIA, LIMITED.

A YEAR OF SUCCESSFUL DEVELOPMENT—FIVE SHAFTS BEING SUNK—ENCOURAGING INDICATIONS AT NEARLY ALL OF THEM—FINANCIAL POSITION STRONG.

THE third ordinary general meeting was held at the Cannon Street Hotel on Thursday, to receive the report and balance-sheet; to elect directors and auditors in place of those retiring; and for other general business.

Sir James M. Carmichael

(in the absence of the chairman of the company) presided.

Mr. JOHN GARLAND (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, I am sure you will share with me and with my colleagues on the board the deep regret we feel at the absence from amongst us to-day of our esteemed and valued chairman. Most of you by this time have learnt to know with what sustained keenness, I think I may say with what sustained relish, Sir Charles Tennant gives his energy and ability, and his great business experience and resource to those interests of his fellow shareholders which are intrusted to him, and when we add to that his tenacity of purpose, his ready pluck, tempered with that cool Scotch discretion which he brings to bear on all its business, I think this company should congratulate itself on its chairman. But coming to business—I hope I may assume we may take this report and balance-sheet as read. (Hear, hear.) I will not stand more than a minute between you and Mr. John Taylor, whom I shall ask to second the motion, and whose views on the mining prospects of our property I am sure you will be anxious to hear. But in that moment I will ask you to consider what I think I may fairly describe as the very satisfactory financial position of this company. There are still of the 200,000 l. shares, which form the capital of this company, between 13,000 and 14,000 shares unissued, and that is an asset which I hope you will agree with me will be of ever increasing value. Up to Sept. last we were always a little uneasy as to whether our working capital would hold out until the time the company was self-supporting and profit-earning, and in that month it became the duty of the board to consider how they could supplement that working capital. They determined to invite subscriptions for 50,000l. of first mortgage debentures, and I think it shows greatly the confidence in which this company is held by the public, that

THE WHOLE OF THOSE DEBENTURES WERE IMMEDIATELY APPLIED FOR.

(Cheers.) Therefore we are to-day in this position, that we have ample capital, and, I hope, at no distant date shall be a profit-earning company. There are two other points to which I should like to call attention. Last year Sir Charles Tennant congratulated the company on being fully equipped with machinery with the exception (and it was a large one) of stamps and kindred machinery connected therewith. We may to-day congratulate the company on being fully equipped with machinery without any exception whatever. That stamping machinery, as you will see by reference to the balance-sheet, has been provided at a cost of 5,670l., and I believe it is already on the field. Then I think you will find that

OUR PROPERTY HAS BEEN MORE FULLY DEVELOPED THAN IS USUAL

with mines at so early a stage of their history, and although that may account to a certain extent for the increased expenditure, it gives us a much larger basis for our operations, and warrants the hope that our returns will be quicker and larger than we could otherwise expect. I think, therefore, you will agree with me that on these three heads—ample provision of capital, ample equipment of machinery, and unusually large development of our mines—we stand in an exceptionally promising position. I, therefore, beg to move, "That this report and balance-sheet to Sept. 30, 1891, be received and adopted," and I shall ask Mr. John Taylor to address you on the mining details, whilst at the same time he seconds the motion.

MUCH WORK DONE WITH SATISFACTORY RESULTS.

Mr. JOHN TAYLOR: Gentlemen, I have very great pleasure in seconding that resolution. You will all have realised from the reports which have been circulated that a great deal of work has been done, and you will have realised also that the results have been very satisfactory. As you are aware, we have two sections or portions of the property on which we are working—one called the Mysore section, which adjoins the well-known Mysore Mine, and lies between that and the Ooregum, and the other portion called the Coromandel, which is considerably further to the north. Mining on the

COROMANDEL SECTION

has recently been limited to the drivage of the 380-ft. level north at Prospect shaft, and to the sinking of a winze below the 320 level. We had in this mine, below the 260-ft. level, old workings, in which pillars were left as supports for the ancient miners many years ago. The quartz taken from those pillars was found on assay to give upwards of 1 oz. of gold to the ton. The importance of these old workings is also shown by the fact that they extend to a depth of no less than

305 ft. from surface, that depth being the greatest to which any old workings have so far been proved on this Colar Goldfield, and I need not tell you, as you are well aware of it, how excellent the results have been on other parts of the Colar Goldfield, and in other mines underneath these old workings. These, gentlemen, we see are the deepest of the old workings, and therefore we have full reason for pushing the developments below in order to see what the ancients may have left us. Now, in the 320 level for about 50 ft. in length the lode averaged also, as I have told you, 1 oz. of gold to the ton—some of the quartz giving as much as 2 ozs. The development of this ground, therefore, you will see below this level, by this winze and by the level underneath, is very important, and I have the fullest hope that we may, before long, have something good to tell you about this mine. That is not the most important business we have in hand. The section that is called

THE MYSORE SECTION

is what we, I take it, are all looking to for our more immediate return and for profits following up those which are being made by our neighbours, Mysore and Ooregum. Upon that so-called Mysore section, about 800 ft. from the northern boundary we have Carmichael's shaft sunk to 253 ft. vertical in the country rock. At 225 ft. deep a cross-cut was driven eastward to cut the lode, and a level has been driven on it. The lode there varies from 1 ft. to 2½ ft. wide, and has been of the value of from 2 dwts. to 8 dwts. It is apparent we must drive further north here before we can expect the important run of ore ground we ought to get when we reach the pay shoot that was taken away by the ancient workers, and which you will notice at Trial shaft.

TRIAL SHAFT

is 150 ft. to the South of Carmichael's. You are aware that almost invariably the pay shoots and the old workings pitch in a northerly direction on this field somewhat rapidly, and, therefore, you will see that we must go further before we come to the rich vein. Trial shaft was sunk from the surface in order to follow down, and not lose touch of, important old workings which exist there. It was followed down upon the underlie—the dip of the vein. It is now down 146 ft., and will be continued to meet the 225 level coming south from Carmichael shaft in order to give ventilation, and (should the ground, as we expect, prove productive) to open up stoping ground. 300 ft. south again from Trial Shaft we have

RIBBLESDALE'S SHAFT,

which has been sunk to a depth of 266 ft. At 240 ft. deep a cross-cut was driven east also to cut the vein, when the reef was found to be 2 ft. wide of quartz, containing visible gold, and when first cut the assay average was about 12 dwts. Levels were commenced north at the depth of 240 ft., and a material improvement was immediately recognised in the reef in both directions. The 240 level north has now been driven 180 ft. The average size of the lode throughout has been about 2 ft., and the average assay 17 dwts. We have, however, a better story to tell you about the 240 south, which has been driven 151 ft., for the lode has averaged 2 ft. in width—the average value of the quartz being 1 oz. 13 dwts. This is, of course, ground that can be stoped away at a very handsome profit. (Cheers.) In the rise above this 240 level south which has now been put up 10 or 12 ft., the lode shows, what we are very pleased to see, an increase of size. It is 4 ft. wide there, and Mr. Jones, you will notice, says in his report "This is an encouraging feature, because we are opening out here good stoping ground." A long distance to the south (1,734 ft.) we come to another shaft which has been named after your excellent secretary, Mr. Garland,

GARLAND'S SHAFT,

which has been sunk 190 ft. vertical, and then carried down a further 80 ft. upon the course of the reef. At 180 ft. deep we had reason to think the vein was not far from us, and we thought we would like to see it. A cross-cut was driven a short distance, and instead of cutting into that reef, it was not altogether an advantage to us to find that we cut into old workings. At the same time it is but a modified disappointment, because although we should like to have cut into a reef containing a good quantity of gold, yet it shows that the ancient workers must have had something good to go after if they went to the depth of 180 ft. in this case and 300 ft. elsewhere as I have already said. Therefore one must not always feel a disappointment, though actually it is so in this sense at a depth like this, because you have no stoping ground above you. You hope to come into a reef, the quartz of which will go to the mill and you find that it has been taken away. At this point, 180 ft. deep in Garland's shaft, a portion of the reef was left standing on the south side about 2 ft. wide with quartz clearly indicating that what the old miners took away must have been very good indeed. These pay shoots pitch to the north, and this is the case with the old workings. Therefore we naturally look to the drivage of a level to the north to meet with those pay shoots at a greater depth, and to explore the reef at Garland's shaft. We therefore drove the 240-ft. level north, which has now been extended 166 ft., and though we have not yet reached the point at which we ought to get the gold we ought to do so very soon. The 240-ft. south from Garland shaft has been driven 152 ft. For a short distance from the shaft the lode was small and unproductive, but soon afterwards we came into better ground, and for 70 ft. we had a capital lode about 2 ft. wide, with

QUARTZ WORTH FROM ½ OZ. TO 2½ OZS.

We then cut into old workings, about 2½ ft. wide, showing what valuable ground the ancient workers must have had, for they have taken away the whole of the reef. Garland's shaft is down to 274 ft., and for the last 21 ft. of sinking the lode has been about 2 ft. 3 ins. wide, and has averaged in value 1 oz. 12 dwts. to the ton. It is a capital lode, and it is made evident that we shall be opening very soon a valuable mine at this shaft. Now, gentlemen, 360 ft. again south of Garland shaft we come to the last shaft to which I shall draw your attention, Dalzell's, 174 ft. north of our boundary, so that we are getting pretty close to it.

DALYELL'S SHAFT.

This shaft has been sunk vertical to a depth of 180 ft. It then intersected the reef, and has been carried 116 ft. further on the course of the reef. The lode here has varied from a few ins. to 1½ ft. in

width. The quartz has contained almost throughout about 4 dwts. to the ton, which is hardly sufficient to pay; but we have really no reason to expect any great improvements there until we get down far enough to touch the pay shoot, which we know from the old workings is coming in that direction from the property of the Mysore Co. to the south. Mr. Jones tell us he expects to get to this pay shoot in a further 100 or 125 ft. sinking, and I need not tell you we shall urge him to push down the shaft as quickly as possible. In Dalyell's shaft two levels have been driven, one at a depth of 160 ft. and another at a depth of 240. The 160-ft. level, after having been driven 90 ft., came into old workings, and just before it reached them we were driving upon a vein 2 to 3 ft. wide, yielding gold quartz, giving from $\frac{1}{2}$ oz. to $2\frac{1}{2}$ ozs. to the ton—showing, in my opinion, that the ancient workers only continued their operations on rock which was richer than that, but which you know now, under our modern system of working, will pay very handsomely. The level below the 240-ft. level has been driven 174 ft., and we have now but a few feet further to drive in order to reach the pay shoot I have mentioned found in the 160 ft. mentioned above, and this level will then be continued to communicate with the 240-ft. level south from Garland's shaft, giving good ventilation and opening up this stoping ground. I have no more to say upon the mine, and therefore need not occupy more of your time, but would add that whereas the cost has been considerable, you must recollect that practically

WE ARE WORKING FIVE MINES,

each of which is provided with powerful winding machinery, and in four cases out of the five with pumping machinery as well. In addition we have splendid air-compressing machinery made by first-class makers of that kind of work in this country for supplying the rock-drills, and we have now a battery of 20 heads of stamps, with engine power that has gone out calculated to work double that number, or 40 stamps in all. I hope we shall soon have them all running. I think I have said enough to show you how satisfactorily our operations have proceeded, and how good our prospects now are. This company started, I consider, under exceptionally favourable circumstances with a long stretch of property lying exactly between two very rich mines, and with the great Champion reef, on which those mines were working, running through its entire length. There is no doubt about that, because it is clearly traceable by the old workings, and it is known with absolute certainty to exist for the whole length of the 3,000 or 4,000 ft. mentioned. The Mysore and Ooregum companies have gone on prospering and increasing in richness, and the developments, I think, as mentioned to you in our Champion reef sett continue to more than confirm me in the very high opinion I have always held of your property. (Cheers.)

The CHAIRMAN invited discussion, but no one rising to speak, the report was put, and carried unanimously.

ROUTINE BUSINESS.

The CHAIRMAN: Sir Charles Tennant and Lord Ribblesdale retire in rotation this day, and I have to move their re-election. For myself, I am only a beginner in mining business, and an apprentice as compared with them. I would not presume to speak of their services, which you all know and appreciate as much as I can.

Mr. PROBYN seconded the motion, which was carried unanimously.

Mr. WALTER JAMES: I have to move "That Messrs. Cooper Bros. and Co. be and they are hereby re-elected as auditors for the ensuing year, at a remuneration of 25 guineas."

A SHAREHOLDER seconded the motion, which was carried, and the business of the ordinary meeting terminated.

EXTRAORDINARY MEETING.

Mr. JOHN GARLAND then read the notice of the extraordinary meeting, which was for the purpose of considering and passing a resolution to the following effect:—

"That article 80 of the articles of association of the company be repealed, and that in lieu thereof the following be article 80:—'The company shall employ Messrs. John Taylor, Frank Taylor and Robert Taylor, now carrying on business in co-partnership as mining engineers at No. 6, Queen Street Place, London, under the style or firm of "John Taylor and Sons," as managers of the company upon the terms of articles Nos. 1 to 7 inclusive of an agreement made the 7th day of June, 1889, between the Mysore Gold Mining Company, Limited, of the first part, the Goldfields of Mysore, Limited, of the second part, John Taylor and Sons of the third part, and the company of the fourth part, and in all respects as if the said John Taylor, Frank Taylor and Robert Taylor had been included under the description of "John Taylor and Sons" in such agreement, provided that the employment of the said firm shall be determinable by special resolution of the company, and that any member of the said firm who is now or may hereafter be appointed a director of the company shall be exempt from retirement by rotation so long as such employment shall continue.'"

The CHAIRMAN: Gentlemen, I think you will all understand the object of this resolution, which was simply to include in the firm who have done so much service to the company, Mr. Frank Taylor, whose name has not hitherto figured in connection with it. Considering what we owe to the Messrs. Taylor hitherto, we can only say that the more of them whose services we have the better will we be pleased.

Lord RIBBLESDALE seconded the motion, which was carried unanimously.

The CHAIRMAN: Notice will be issued of the meeting, necessary to confirm this resolution, and that is all the business we have before us.

Mr. WALTER JAMES: I do not think the meeting should disperse without having passed a cordial vote of thanks to you, sir, to the directors, and also to the staff at home and abroad.

The motion was seconded and carried unanimously.

The CHAIRMAN: Sir Charles Tennant will be extremely glad to hear of this resolution, which will be communicated to him. It will be gratifying to him as it is also to us and to the staff to hear your appreciation of our united services.

THE INDIAN CONSOLIDATED GOLD MINING CO., LIMITED.

DIRECTORS HOPEFUL, AND SHAREHOLDERS INSPIRED BY MR. MALCOLM LOW'S ADDRESS—REASONS GIVEN WHY THE SUCCESS OF OTHER MINES SHOULD BE ACHIEVED BY THIS—TRIBUTE TO THE LATE MR. LAMBERT.

THE second ordinary general meeting was held at Winchester House, on Monday, "to receive the report of the directors and the balance-sheets from the date of the incorporation of the company, up to June 30, 1891, and to elect directors and an auditor."

Mr. Malcolm Low, M.P.

(chairman of the company), presided.

The SECRETARY read the notice of meeting.

The CHAIRMAN, who was heartily received, said: Gentlemen, I rise to move the adoption of the report and accounts, which have been some time in your hands and which no doubt you will wish to have taken as read. (Hear, hear.)

A SAD LOSS.

Before passing to the business of the meeting let me crave your indulgence for one moment whilst I allude to the loss we have all sustained in the death of our friend and colleague, Mr. Alfred J. Lambert. He was with us here at our last meeting and spoke. All through our complicated re-construction he worked like the master workman he was in our interests. With his quick perception, unflagging industry and cool determination, he was ever a tower of strength to any association with which he was connected. And those of you—and I think there are some here who knew him personally—will agree with me when I say that those who best knew him most lament his loss. (Hear, hear.) We have appointed, subject to your approval and re-election this day, in his place, Mr. William Houston Long, a very large shareholder, a gentleman long and favourably known to us for the interest he takes in mining matters, and one who possesses the additional advantage of being well acquainted with your properties, both in the Wynaad and at Colar. Indeed, he has returned from visiting both rather more recently than I have myself. Gentlemen, let me recall to your recollection, and I will do it very briefly, the circumstances and conditions under which we so unanimously determined to re-construct this company, so as to put ourselves in possession of further funds.

WYNAAD OPERATION.

In the Wynaad we have our large cinchona plantations, but these, owing to the low price ruling for bark for many years past, could not be counted upon to produce any immediate or considerable revenue; and we had our Phoenix Mine. This Phoenix Mine has never produced anything but low-grade ore, and even that not in large or regular quantities. We were, it is true, always getting gold enough to pay, or nearly pay, our working expenses, but still there is nothing, whether in planting or mining, in the Wynaad, which would much have tempted us to the act of self-denial involved in the raising of further capital. What was it, then, that induced us to re-construct? You will agree with me when I say that it was for the purpose of

THOROUGHLY PROVING OUR MINING GROUND IN COLAR—

to do justice to that ground; in other words, to prove it thoroughly in depth, to see whether that self-same lode which has produced such rich gold mines for our two neighbours to the north (Ooregum and Mysore), runs into our sett, or whether it was, unfortunately, to fail in producing such riches as has been the case with some of our adjoining neighbours to the south—that, I say, was the object of our re-construction, but, at all events, up to the present we have not been successful. That being so you will allow me to pass very briefly by the Wynaad. When I was there I thought that even still there was too much expenditure on cultivation, and I instructed Mr. Paterson at once to cease all further planting of cinchona trees, and to maintain only the present plantations. As to the mining there, I may briefly mention from the report, that the three main drivages, tramway No. 1 and No. 2, one above the other. No. 2 being the lowest, entering the mountain from the south, have been pushed on southwards as rapidly as possible, opening up fresh stoping ground of ordinary low-grade ore. Of course there is always the possibility and the hope (though I confess I do not think it is a very strong hope) that our continued drivages into the interior of the mountain may land us in bodies of ore of a richer character than those hitherto met, but even with the poor ore we have managed, as you will see from the accounts, to make the

GOLD RECEIPTS TO KEEP AHEAD OF THE MINING COSTS.

Of course, if we take into consideration the cost of the machinery and stores there is a little difference on the other side, but we keep a close watch on the Wynaad expenditure, and should not hesitate to shut it down, should we at any time find the total expenditure seriously outrunning the total receipts.

COLAR PROPERTY.

I now pass to our Colar property, where our chief hopes lie, and if here we have, as I think we have, strong hopes in depth, it must be admitted that we have also suffered two disappointments so far as regards present depths. Now these we neither attempt to ignore nor to minimise. You will find them prominently stated in the report. The first is the exhaustion of payable ore down to the present bottom, 425 ft., in the works at No. 5 shaft, and although we have from this part already won from time to time something over 18,000 oz. worth of gold, yet we have always found the lode there very capricious and uncertain—the runs of rich ore being short, patchy and uneven. Though there are still large masses of quartz standing in the different levels, yet, unfor-

unately, it is rather too poor to pay for milling. What we are doing there I shall come to presently, but I pass now to the other disappointment. In the two northern shafts, Plummer's No. 1 and No. 2, we cut the lode as predicted at about 200 ft. below surface. While I was on the field we were pushing on the drivages of the 210 ft. levels in both shafts, north and south, and day by day as the work advanced hopes ran high in the field amongst the experts—for out there we are all interested in our neighbours' successes—I say hopes ran high day by day that we should come into a rich discovery. Often quartz would be turned out which

TO THE EYE LOOKED AS GOOD AS THAT AT OOREGUM,

but, unfortunately, the assays told a different tale. Now the lode is proved on the 210-ft. level the whole distance between the two shafts (300 ft.), and also to a considerable distance north of No. 1 and south of No. 2—the whole of the ground being tested at intervals by cross-cuts to see that we are leaving nothing of value on either side. So far as the 210-ft. level is concerned, the lode has been proved and found wanting. Yet that depth is shallow, and it may well be that it will settle and improve in value as we go down. Especially that may so happen when we get through and beyond the influence of the great north and south trap dyke. This is what we are now doing, and our progress is at a very satisfactory rate. Plummer's No. 1 shaft is sunk vertically the whole of the way, we have now reached, by the latest advices, 280 ft. below surface, or 70 ft. below the 210-ft. level. We shall sink another 20 ft., and I may say that we must now have nearly got through that work, because our advices are about a month old, and then we shall cross-cut east and west—west to intersect the known lode which, of course, dips out of the shaft at the 210, and east to prove a run of ground which we shall get under old workings, to the north of main shaft. Plummer's No. 2 is sunk vertical to the 210-ft. level. After that it follows the dip of the lode until the lode was temporarily cut off by the trap dyke. It is now down 190 ft. below the 210, or about 400 ft. altogether from the surface, counting the latter part on the dip of the lode, and we are now very nearly through the trap dyke. We do not at all doubt that we shall find the lode on the other side of the trap dyke, but whether it turns out poor or rich, of course the event only can show. As to our other works, I must not detain you too much with mining details, but point them out briefly. The other works in progress are as follows—the west drivage of the cross-cut on the 240 level, which is now out some 590 ft. from main shaft, and through the dyke, which at this point is 70 ft. wide, with a general western underlie. Then we have the resumption of the east cross-cut in the 240 level to prove whether there was any lode standing on certain old workings further east, and, third, the further sinking below the 425 in No. 5 shaft. This, we say, was temporarily abandoned in order to give precedence to the operations at Plummer's Nos. 1 and 2 shafts. Now that we have plenty of air-compressing power we shall resume at that point.

ONE THING ONLY WANTING.

I may say that Mr. Oakley attaches great importance to this work in fact, nothing is wanting but that the quartz should be somewhat richer, for large masses of it exist in the mine. It is proverbially, as we know, stupid to prophecy—most of all is it stupid so to do in regard to mining. We have had our disappointments in the shallower levels, and I think it is fair to hope that we may have better fortune in store for us in depth, and find that a vein which has really been so extremely rich in our northern neighbours' properties, Mysore and Ooregum, may yet be found to have some richness in store for us. (Cheers.) At all events, two things seem to be certain, the first is that having deliberately resolved to prove this ground in depth it would be unreasonable and even foolish to withdraw our hand before that has been adequately done. The other I have previously mentioned but will now repeat, namely, that the works we have in hand command the run of this Champion reef for more than 1,500 ft. on its course, and if, as we hope and trust, there be within that length any rich runs of ore, then

THESE WORKS ARE SO DEvised THAT THEY CANNOT FAIL TO FIND THEM.

We shall, of course, have to call up the remainder of the capital, but our opinion is that with the proceeds we shall be able to do that which we associated ourselves to do, namely, to thoroughly prove our Colar ground at a reasonable depth. I have a few remarks to make on some items in the account. As regards the first balance-sheet, it is from the date of the incorporation of the company to Dec. 31, 1890. You will see that there is a total possible issue of shares, 550,000, all of which have been issued with the exception of 1,916, and the 3s. on these latter has to be deducted. The item, "calls outstanding 2,013 $\frac{1}{2}$," has since been all or nearly all paid. On the creditor side we have deducted from the purchase-money of the estates the amount of the assets of the old company, transferred by the liquidators. This includes

33,500 SHARES IN THE COLAR CENTRAL CO.,

which we have no other way of exhibiting but at par, and accordingly do so exhibit them. With regard to the second balance-sheet for the half-year ending June 30 last, the item, "calls outstanding 13,763 $\frac{1}{2}$," is at once accounted for by the fact that the call was made before June 30, but was not due to be paid until 20 days after. The item, "sundry creditors 2,588 $\frac{1}{2}$," includes 2,500 $\frac{1}{2}$ borrowed in anticipation of the call, and it has, of course, since been repaid. As regards the expenditure and receipts account for the same period, I wish to note that the last item of machinery and stores (6,780 $\frac{1}{2}$) is mostly due to the completion of our heavy machinery. I am glad to say that no such charges will occur again because all our heavy machinery is up and at work, and we are fully equipped. I am very much obliged to you for the kindness and attention with which you have heard me, and I beg now to propose the adoption of the report and accounts. (Cheers.)

Mr. T. G. GILLESPIE (director) seconded the motion, which was carried unanimously and without discussion.

The CHAIRMAN: It falls to the lot of all the directors to retire, though, of course, we are perfectly willing to continue to give you our best services, and shall be pleased if any gentleman in the body of the hall will propose the motion.

Mr. GAUSSEN: I beg to propose the re-election of the directors, Mr. Malcolm Low, Mr. Gillespie, and Mr. Long. I think you will all agree with me as to the

DEBT OF GRATITUDE WE OWE TO THE DIRECTORS

for the perseverance and patience they have shown in dealing with our mine, and doing their best to bring the property to a successful issue. We seem to have one thing which our more fortunate neighbours lack—plenty of water. Probably by the time they get water we also may get gold. If ever we do, and we come into a satisfactory position, it will be entirely owing to our directors. (Cheers.)

Col. THORBURN seconded the motion, which was carried unanimously.

Mr. GILLESPIE: Our chairman has requested me to return thanks, which I do most sincerely. It has been a source of very great anxiety, and even disappointment, that we have not been able to get more forward, but all our work has been entered upon only after much deliberation. We are quite as much, if not more, interested than you are in that success of this company, which we hope yet to be able to bring about if you give us time. You have always been kind and considerate, and it has been much appreciated by us. With the chairman's remarks, relative to our late lamented friend, Mr. Lambert, I am in fullest sympathy. His has been a terrible loss to us, a greater loss almost than those in the body of the hall can well understand. I thank you very much for your kindness. (Cheers.)

Mr. PROBYN proposed the re-election of the auditor, Mr. James Harris.

Mr. H. W. BIRKS seconded the motion, which was carried unanimously.

EXTRAORDINARY MEETING.

The SECRETARY then read the notice of the extraordinary general meeting held to alter certain articles of association, of which the full details have been given.

The CHAIRMAN: This meeting is held purely to fulfil the requirements of the committee of the Stock Exchange to whom we are pledged to submit these resolutions to you. The alterations themselves are purely of a technical kind, and I propose, "That the alterations of the articles of association, as read by the secretary, be and are hereby approved."

Mr. GILLESPIE seconded the motion, which was carried unanimously.

LIQUIDATOR'S MEETING.

The liquidator of the old company, Mr. S. Grady, here took the chair, and read the notice of meeting, which was to pass, if approved, the following resolution:—"That Malcolm Low, of No. 22, Roland Gardens, South Kensington, Esq., M.P., be, and he is hereby appointed a liquidator of this company, jointly with Standish Grady, of Dashwood House, and in place of Alfred James Lambert, deceased."

LIQUIDATION COMPLETED.

The CHAIRMAN: Gentlemen, the circular which I addressed to you on the 28th of last month will have fully explained the necessity for calling you together. I regret having to give you the trouble to attend here to-day, but I found there was no other way of overcoming the difficulty caused by the lamented death of my colleague in the liquidation of the affairs of the old company. I cordially endorse every syllable of the fitting tribute which Mr. Low has just paid to the memory of Mr. Lambert. The re-construction of the old company was carried through without any very serious difficulties, except those in connection with some few members who gave us due notice of dissent. I am happy to be able to tell you that we have now settled all these claims without having had recourse to arbitration. I say now advisedly, because it is only within the last few days that the final claim has been settled, and settled, you will be pleased to hear, on precisely the same terms as we offered some 18 months ago, but for this one case of dissent the affairs of the old company would long since have been concluded. It will be necessary to hold another meeting, at which the accounts of the liquidation will be presented, but I may tell you that the financial part of our duties chiefly consisted of paying off the preference shareholders of the old company, and carrying on the business until such time as the new company was in a position to take it over. I should, perhaps, here explain why the liquidators did not put in application for the 1,916 shares in the new company, which are still unallotted. It was because we deemed it advisable to hold them in reserve until we had settled with all the dissentient shareholders. We have application for these shares, and shall now proceed to deal with them. Mr. Malcolm Low, a gentleman with whom you are too well acquainted to require more from me than the bare mention of his name, has kindly consented to act as liquidator, in the place of Mr. Lambert. (Cheers.)

Mr. BIRKS: I beg to propose the resolution read by the liquidator

Mr. WELDRON JONES seconded the motion, which was carried unanimously.

The CHAIRMAN: I am exceedingly obliged to you for your attendance, and I do not think you can accuse me of having wasted very much of your time. (Hear, hear.)

GRATITUDE.

Mr. JONES: I beg to propose a cordial vote of thanks to Mr. Malcolm Low and his colleagues. It is not a pleasing duty to have to announce temporary failure, for temporary I thoroughly believe to be. I trust the hopes entertained for the future may be realised by the next meeting. The directors are showing the right sort of spirit whilst contending against great odds. They would be exceedingly unwise to abandon the workings under present circumstances. A little more effort may bring us into riches such as those enjoyed by our northern neighbours. Meanwhile we cannot do better than thank those who are working so heartily and faithfully for us. (Cheers.)

Carried by acclamation.

The CHAIRMAN briefly returned thanks, and the meeting separated.

THE EMMA CO., LIMITED.

SHAREHOLDERS UNDAUNTED IN THE FACE OF PAST DISAPPOINTMENTS — REASONS GIVEN WHY EMMA MAY YET PROVE A VALUABLE MINE — THE WALLACE MANAGEMENT — MR. SNELL UNANIMOUSLY RE-ELECTED.

THE second ordinary general meeting of this company was held at the Cannon Street Hotel, on Monday, to consider the accounts and the directors' report, and for the dispatch of the ordinary business of the company.

Mr. Frederick William Snell (chairman of the company) presided.

Mr. RICHARD L. HOBBS (secretary) read the notice of meeting.

BOARD STRENGTHENED.

The CHAIRMAN: Gentlemen, before entering upon the business we have met to do to-day, I wish to state that Dr. Dunhill, one of the directors, is lying ill at York, and is unable to be present. Since the last meeting we have lost by death Mr. Henry W. Askew, who was a shareholder in the original Emma Co. when it was first brought to this country, and has continued a shareholder through the various reconstructions through which it has passed. He held his shares from the beginning, and only in the course of last year increased his holding by purchasing a number more; Mr. L'Amy, one of the other directors, thought with me that it was necessary to appoint someone in the room of Mr. Askew, to conduct really the ordinary business of the office, but it was found difficult to get anyone to join the board. I tried to get someone who was acquainted with mining, and who would be able to render good service to the company, but was unable to do so, in consequence of not being in the position to offer an inducement in the way of remuneration for joining it, and, therefore, I requested Major Cotton to become a director, and he kindly agreed to do so, and has continued a director up to the present time. (Cheers.) You will notice that the accounts we submit are for a period of 14 months, as we have taken them from the liquidation of the old company to June 30, 1891. By the articles, we are bound to take them to Dec. 31, but I think the shareholders would have complained had we adhered to the terms of the articles, and only presented accounts to Dec. 31 last; therefore, if at any time we have to amend the articles it will be desirable to alter the dates from Dec. 31 to June 30, which will enable us to give you the latest accounts from the mine when we hold the meeting, as we usually do, in Dec. Unfortunately, I was away at the statutory meeting of this company, and, therefore, had not the opportunity of explaining to the shareholders what was done in reference to the re-construction. From our report you will see that the

RE-CONSTRUCTION HAS BEEN PERFECTLY SUCCESSFUL.

that out of 334,000 shares to which the shareholders were entitled, 325,675 have been allotted in this company. As there may be some shareholders in this room who were not shareholders in the old company, it will be advisable to explain the necessity which arose for the liquidation of the old company. When debentures of the old company were issued the terms were that none of the money subscribed towards working the mine should be devoted to the payment of interest. We, therefore, made an arrangement with the debenture-holders by which we had the option of paying them each half-year shares in the company in lieu of cash, calculating them at the price of 5s. each. Therefore, for every 1l. of interest which came due to them we had to allot four shares of 1l. each, fully-paid. At the time of this arrangement it was considered perfectly legal and right that shares should be issued at a discount, in pursuance of a judgment by Mr. Justice Chitty in a well-known case, but on a case being taken to the Court of Appeal it was held to be illegal to issue shares at a discount. That decision caused a great stir in the City, and attempts were made to get the Legislature to provide some remedy for shares which had been so issued, but without avail. The decision has been under appeal in the House of Lords in the Oregum case, in which I am concerned, and we are now waiting the judgment of the House of Lords as to whether issuing shares at a discount is legal or not. In the meantime the debenture-holders wanted their interest, and one of them told us plainly, "If you cannot give us our interest in the way you agreed to do it, we must get it in cash." We said, "We cannot do that because we are pledged to the shareholders that none of their money subscribed for the purpose of working the mine shall be devoted to any other purpose than that." Hence, it became necessary to re-construct the company and get rid of debentures altogether by getting the holders to consent to take debentures in this company, and to accept their interest in shares which we made of the denomination of 5s. instead of 1l. We had a meeting of the debenture-holders, who concurred in this arrangement, and the Court of Chancery approved it, and hence new debentures have since been issued, and

ALL THE DEBENTURE-HOLDERS HAVE EXCHANGED,

with the exception of seven or eight to a nominal amount, the holders of which cannot be found. We may consider that the debenture-holders have completely come into the new company, and are well satisfied with the arrangements made. Under the terms of the issue of these debentures they have the option of exchanging their debentures for shares at the price that has been called upon them, and in pursuance of that debenture-holders holding 6,833l. have availed themselves of this option, and have had allotted to them 38,848 shares, upon most of which 6d. per share has been paid.

THE COMPANY HAS THUS HAD A DOUBLE ADVANTAGE

—it has got rid of debentures to this amount, and it has received between 900l. and 1,000l. towards the working of the mine. (Cheers.) The directors regret that the anticipations expressed at the first meeting of the company have not been borne out. I want to express

myself as well as I can, not in the language a mining expert would use under similar circumstances, but in that of one who looks at the position from a purely business point of view. The report of the directors, which has been circulated amongst you, sufficiently explains the position of the company and its general working during the 14 months up to June 30.

STATE OF THE MINE.

The directors have continued, as formerly, to issue from time to time all the information received from the mine, but not being satisfied with the progress which has been made, and feeling great disappointment that the hopes which we all entertained this time last year were not realised, they thought it was only right and fair to all that some further examination should be made into the condition of the mine to see really whether there was any use going on working at the property. Consequently, they obtained the report of Prof. Keyes and Mr. O. A. Palmer, and these have been circulated with the directors' report and balance-sheet, and, I trust, have been read by everyone. They are difficult to follow, however, without a map, and, in fact, even with a map they are by no means easy to grasp. I think that perhaps the matter may be made a little clearer if, instead of trying to follow every particular working foot by foot you generalise the description given. In order to enable this to be done, I have had marked upon the map certain points to which Mr. Briant will draw your attention as I proceed. I have had marked on the side of the map the relative places in which work is now proceeding. Beginning at the surface, we come down, roughly speaking, 100 ft. before we arrive at the level of the Illinois tunnel. Then below the Illinois tunnel 50 ft. we come across the Emma tunnel. These two constitute two different plans of working.

THE WORKINGS.

You will easily understand that the workings being all on the side of a hill, how it is that these tunnels are put in one below the other. Now, speaking generally, the work at the north-west and west ends of the property is upon these two levels. The point at which the good find was made this time last year was on the upper level (the Illinois tunnel), but it was found that we had gone to our boundary, and consequently we could not further explore the property in this direction. The workings from the old Emma tunnel level on the west have gone through the lower part of the old Emma ore body. You will remember that after this chamber had been excavated a very extensive cave occurred, that is to say, the whole of the super-imposed earth and rock fell in and obliterated the old workings. It is through the debris which fell and filled up the old ore chamber that these workings have been pushed, and they have gone beyond it. That is our second place of working. There has been another working also driven from the Emma tunnel more to the centre of the property, but the work here is unimportant, and I pass it over for the present.

BAY CITY TUNNEL WORKINGS.

Going now to the lower level, 300 ft. below the Emma, we come across the Bay City tunnel. The whole of the operations here, as you will see by the map, are to the south-east of the property, and they have been pushed until at the point "X," where favourable indications have been found. I should mention here that it might probably be found if this map were compared with the map at the mine that some of these lines of working are not correctly placed. They are from time to time put upon our map from the information we receive from the other side, but a microscopical departure from the exact angle of any of these workings would throw out these points very considerably from their true relative positions. However, they are near enough for our purposes to-day. Now, what Prof. Keyes proposes is that we should return to some work which was done by Mr. Gager. On the north of our property where the Bay City tunnel cuts into the hill there was sunk a vertical shaft, which was put in with the idea of overtaking the vein at depth. This was sunk some 435 ft., and when it was nearly 400 ft. deep it cut the hanging-wall; at 435 ft. it got to about the centre of the vein, and we shall therefore require (by estimation) another 35 ft. to get through to the footwall of the vein. In sinking this shaft cross-cuts were put in, one being at about 35 ft. deep, and that indicates the workings shown on the map. We had, however, a great difficulty to contend with in dealing with these workings. You will remember that the Emma Mine is the lowest mine on the hill, and this is the lowest part in the Emma Mine, consequently the difficulty with the water is very considerable, and as the work which we had done was not sufficiently productive to warrant us in going to the heavy expense of keeping the water in fork, it was abandoned, and work pushed forward in other directions on the higher levels. Prof. Keyes suggests that this part of the mine should be pumped dry, and that we should cut in the vein itself to the south-east and the north west, and endeavour to get underneath the place where probably deposits of ore may be found. You may notice in the various reports received that the explorations made have at several points come upon places suggesting deposits beneath.

A GEOLOGICAL PUZZLE.

The idea seems to be to attack these at the lowest possible level, as this in the end is the most economical way of dealing with them, if any should be found. We do not anticipate finding much in the old Emma workings. Probably all the ore in the locality was deposited in the old chamber, but there are still a large quantity of fillings and other inexhausted stuff in the old mine, which makes it quite worth while keeping on the explorations there. No doubt the whole of the formation on this famous hill is as much a geological puzzle now as it ever has been. We have consulted the best experts to be found, and have followed their advice, and yet have obtained no results. In time, no doubt, the scientific men will have satisfied themselves as to what are the real conditions of this geological problem. But I ask you to look at this map behind me. There is a line drawn through the centre of it marked "A A," which some of you may see, and along that line, beginning at the Flagstaff and running down to the Emma, there are indicated on the map various deposits from which ore has been taken. You will see these deposits all cut the main axis at an incline from the perpendicular.

DEFERRED HOPES.

They are, comparatively speaking, the same distance apart, and it seems to me (speaking, however, not as an expert) that it

would be surprising if all these deposits were found to have terminated suddenly at one end of the Emma property, never to re-appear again further down the hill. It is, I think, not unnatural to believe that at the south-east end of our property, at least, we have a chance of finding some such similar body. Of course, these explorations will cost money, and some of the shareholders may be saying that they think they have spent quite enough upon testing the mine, and are not inclined to spend more. I must confess that at the time I joined the board I never expected we should have been so long working before coming across any body of ore, and that, further, we should have spent the 25,000, which Mr. Park paid over to be expended in exploring the mine without having obtained any payable results. But we have been led on from time to time with promises, and what appeared to be anticipations, grounded on reasonable evidence. Some of you may be inclined to say that we have paid too much attention to the opinions of those at the mine; but, gentlemen, it is quite impossible, without the aid of a much more elaborate model than we can afford to have constructed, to exactly follow everything that is occurring in the mine. And all through, although I have frequently felt dissatisfied at the want of success, I have been constantly thrown back on this fact that Mr. Bennett is, so to speak, on the spot; he continues to have the greatest confidence in the skill of our manager at the mine; and, further, he has not in any of his letters to the company, or in any of his communications with me, at any time shown that he has lost faith in the property. But I am not asking you to believe what Mr. Bennett says, because I believe it or because he is my friend, or to believe in Mr. Wallace because he is endorsed by Mr. Bennett, but I call your attention to this fact that Mr. Bennett holds an extremely large interest in this company.

MR. BENNETT HOLDS 27,000 SHARES.

It seems to me impossible for anyone to give stronger evidence of the strength of his convictions than Mr. Bennett has done; first, by holding for so long a time such a large number of shares, and then, by exchanging his debentures into shares. If there was anything wrong at the mine he would naturally, being so much nearer, and holding the power of attorney of the company, know of it. I hardly like to mention one matter, but, perhaps, in justice to the directors I ought to do so. A short time ago we had some little difficulty with Mr. Wallace, who was not forwarding us the reports so promptly as we thought he should do. His excuse was that there was delay in the mail; but we have remedied this by directing him to hand all his reports to Mr. Bennett, and Mr. Bennett re-encloses them in registered letters to us. Since this arrangement was made the reports have been received with regularity. Some of the shareholders have kindly made suggestions to us as to the manner in which we should continue to work the property, and we are much obliged to them for so doing. I can assure them that nothing so much encourages directors as the feeling that their shareholders sympathise with them in the difficulties surrounding them, and are willing to help, as, in fact, you have always been, with kind suggestions instead of hindering, as is sometimes the case in other companies with other shareholders, by captious criticisms. We feel, especially as the illness of Dr. Dunhill has prevented his attending the board regularly, that it would be a great advantage if some shareholder holding a large interest were able to join the board, and assist us in deciding as to the best course to take. For my own part, although I do not wish to press my opinion unduly upon you, I feel it would be folly after having done so much at least not to do a little more and try whether yet the mine may not be made to pay. I may mention, in conclusion, that the suggestion as to working some of the machinery by electricity is not practicable. Prof. Keyes was on the property in the warm weather, and seemed in his report to have forgotten the fact that for nine months every available stream is frozen. The cost of putting up the plant and keeping it in work when it must necessarily be idle would be very heavy, remembering that electrical apparatus is very delicate, and some better means than that suggested by Prof. Keyes will have to be found if we decide to work at this lower depth. (Cheers.)

A GOOD SIGN.

You have had the superintendent's report; you have the accounts of the ore raised from the mine, and sold, and comparing that with former years, it is the largest amount that has ever been raised since the original discovery took place. The amount received for ore to June 30, 1891, has been 3,280, and since that time we have received \$7,708 more, sold, and comparing that with former accounts for the 10 months of 1890, 206, and the 12 months ending June, 1889, 1,325, and June, 1888, 1,182, and 1887, 1,199, there is a considerable increase in the amount realised and the expenses have not been very much more in proportion. In fact, they have been cut down to the lowest possible limits, and I do not think they leave any cause for complaint. (Hear, hear.) It is very expensive working at this mine. The miners get from \$3 to \$5 per day for their wages, and altogether the expenses are necessarily heavy. We have also given you the superintendent's report, and also further ones dated Oct. 23 and 29. Since that time other reports have come in which have been inserted in the MINING WORLD and other papers. They are much about the same as former reports. They still state that everything is looking hopeful and kindly for an ore body, but we have now been waiting six or seven years for this ore body to turn up, which has always been looking kindly, but practically it has not so far been equal to its looks. The shareholders would like to have some tangible evidence of it in order to satisfy their reasonable desire. (Hear, hear.) We have the maps from Prof. Keyes and the photographs for any shareholder to look at. They are interesting, but I do not think very instructive. I have had the accounts set out so fully that I do not think they call for much further remark. The expenses at the mine leave a balance to profit and loss of 6,053, but the total loss is 9,749, which amount is made up by adding to it the 2,462, which was one year's debenture interest, since paid in shares of the company, so that no money from the call, or any other source, goes to pay debenture interest. Under the articles one of the directors retires, and

I AM WILLING TO SERVE YOU

to the best of my ability if re-elected, though I should like to remind you that I have now been nine years in office. When Mr. McDougall

declined to join the board (he was liquidator of the original company)—at the earnest request of the shareholders I became a director. I had no desire to occupy the post of director of any mining company, but I have done my best—(cheers)—and my brother directors have supported me ably in taking care that the money which had to be expended in the mining operations should be expended in the most economical way, and that no waste should take place. We have done that, and I do not think anyone else in our position could have done more. (Cheers.) Mr. L'Amy has served you nine years as I have, and seven years more,

WITHOUT ONE FARTHING OF REMUNERATION.

(Cheers.) The work at the office is extremely heavy. Transfers are always coming in, and I was asking Mr. Hobbs, our secretary, with reference to the certificates, and he said that we had signed quite 3,000 this year, and with the re-construction going on at the same time that has made the work very heavy. Add to all this our deep regret that we have not yet been able to make the mine the success we hoped. Still I cannot believe myself that the original ore-body was the only one Emma can produce, and I believe some day or other we shall discover a fresh one. I should like to read you a letter I received from Mr. Bennett (Oct. 23) with regard to the mine. He says:—

"In the level just above the old Illinois tunnel level we have iron oxidised about 6 ft. in width, with streak of low-grade ore about 6 ins. wide through it, and small pieces of ore scattered through the mass of iron. In the drift north-west from Bay City tunnel on fissure No. 3 the vein has opened out to a width of 2 ft. of broken vein stuff with much pyrites of iron all through it. Yesterday a very thin seam of galena ore appeared in the face, and continues visible to-day. We have strong hope that this will increase, and give us an ore body. We feel sanguine that in the Illinois drift where in the 6 ft. of iron we shall find ore in quantity. These two points are both north-west of the Bay City tunnel level, and between that and the Vallejo ground. The difference of level of these two points (elevation) is about 250 ft., so that if we have ore at or between those two points we have space enough for a great deal of it. The work at these points confirms very significantly Prof. Keyes' fissure theory. He strongly recommends vigorous work as it is now being done at these places."

That letter was not written for this meeting as the writer never thought it would be read to you, but I think it cannot fail to give you satisfaction. That is the last we have had from Mr. Bennett with reference to the working of the mine. We know that he himself has not lost confidence in the mine, and if anybody is able to judge as to whether they are likely to succeed in finding ore or not, Mr. Bennett is that man.

CONFIDENCE OF MR. BENNETT.

When you find that he has not sold his shares which he exchanged for his debentures, and which he might have done at a profit, and when you know that he has discussed the matter fully with Prof. Keyes and Mr. Palmer, and is strongly in favour of carrying out the suggestions made by the former, I think that ought to give us encouragement. I do not know that I can usefully say anything more, but if shareholders have questions to ask on the accounts or the report, I will be glad to answer them. (Cheers.) I beg to move that the report and accounts be received and adopted.

Mr. L'AMY: I second the motion.

DISCUSSION.

Mr. HUTTON: I wish to put one or two questions upon the accounts, and if the auditor is in the room he can answer them. You have taken the accounts from Apr. 25, 1890—being the date of the liquidation of the old company—to June 30, 1891. They are therefore for 14 months, but in taking the ore sales you have included the work done from Dec. 31, 1889, to Aug. 30, 1891, which is 20 months. The fact is that you bring in as an asset 258 tons, which realised 3,280; but you have not taken into consideration the extra expenses for the six months. I should like the auditor to answer that question, because it is palpable on the face of it that there is a discrepancy. The quantity of driving in each period—5,335 ft.—should be given, and the total appears to me to be a small amount of work for the outlay incurred.

The CHAIRMAN: Those expenses did not come in from the date you mentioned, but were carried to the last account.

Mr. HUTTON: But you have credited the amount received in this account. It strikes me that the office expenses are somewhat large, although our best thanks are due to the directors for

THEIR WHOLLY UNPAID SERVICES.

The transfer fees only come to 154, which, taking them at 2s. 6d., only gives 1,232 transfers in the 14 months. Of course, there is other work to be done, I know, but for a company in the state that this mine is, it strikes me 919 is a large outlay for staff. Another matter is the amount of 153, for office and general expenses, which requires explanation. I have had interviews with Prof. Emmans and Prof. Silliman as to this mine. Prof. Keyes is an excellent man, Vice-President of the Mining Bureau of California, and stands very high as an expert, but I am sorry to see he does not hold out anything more hopeful than is contained in his report. The only comfort I gained was from the last paragraph, when he says the mine is not prospected. That coincides with what Prof. Emmans says that the formation of Little Cottonwood canyon is most treacherous. He said, "It is so fickle, that although we know the ore should be there, yet the practical men who have looked for it cannot find it."

EXPLANATIONS.

The CHAIRMAN: With regard to the office expenses—before coming into the room I made inquiries as to the item of 153, which I thought rather high, but it was made up of numerous items, including the sending out to 1,500 shareholders of various circulars relative to the re-construction, and newspapers containing reports of the meetings to shareholders, with other miscellaneous expenses. The printing, stationery, and stamps were items occasioned by the re-construction, for all the debentures had to be re-printed, and exchanged, and stamped, and there were a good many other expenses which will not occur again. Any shareholder wishing to see these items will have the books placed at his disposal for the purpose by calling at the office, for we have nothing to conceal. (Cheers.) If Mr. Hutton himself had come he would have had this information. Bear in mind

that these accounts are for 14 months, and the office expenses, salaries of secretary and clerks, whom we are obliged to keep, only amounts to 384*l.* for 12 months, which I do not think can be considered large. (Hear, hear, and cheers.) The rent cannot be reduced, nor do I think can the items of printing, stationery, and stamps, and in that item are included the new books, which are an expensive item in this concern, whilst the telegrams have only cost 8*l.* 10*s.* 3*d.* At the time of the re-construction many circulars were sent out, and the secretary had to call in extra help. With regard to some of the work done at the mine, it is from Dec. 1. The superintendent wrote his report thinking we intended to have the balance-sheet made up from Dec. 1, instead of from the time of the liquidation. Although he states the work done within the dates mentioned, the amount of sales. We could not divide the amount of work done from June 30 to Aug. 28, 1891, but have only taken the mining expenses to June 30, 1891, and this is all we know.

Mr. HUTTON: The effect of what I say is that our loss should be greater. You have taken the amount credited for the ore sold to Aug. 28, 1891, and only charged the expenses to June 30, 1891.

The CHAIRMAN: That is not so.

Mr. MADGE: If Mr. Hutton will turn to page 3 he will find the amount of concentrates, and ore obtained given in fullest detail. (Hear, hear.)

The CHAIRMAN: You will see what we have sold from July, 1891, has realised \$7,708, and as having been sold since. The last paragraph but two of the report explains it.

WALLACE MANAGEMENT.

Mr. J. H. A. SMITH: I think we are all satisfied on that point, but there was one other matter to which you alluded, as to which I should like a little further explanation, namely, the mining superintendent, and whether you are entirely satisfied that we have the best man for the post. I have some friends who are interested in this concern, who are not at all satisfied that you have. Their uneasiness has been communicated to a good many shareholders, who would like some positive assurance that you think our interests are being safeguarded there. You referred, yourself, to the steps you thought it necessary to take to secure regular reports. Have you made any inquiries as to the reasons why the information was not forthcoming, and how it was the mails were only irregular when there was no one on the spot to control Mr. Wallace? In case this expected find should take place it is most important that we should know that we have there a man who can be depended upon to give us information promptly and fully. As to the question of office expenses—I am pretty largely interested in this company, and have every interest in reducing the expenditure, but I think you may make a mistake in getting your office work done too cheaply. (Cheers.)

JUSTICE TO MR. HOBBS AND HIS STAFF.

I had not the slightest connection with, or knowledge of, Mr. Hobbs, the courteous secretary of this company, until I acquired my interest in it, but I do think it only a matter of fairness to him to state here, and now, that it would be impossible to exceed the politeness and attention I always received from that gentleman when I have made enquiries at the office. (Cheers.) I have also had occasion to call upon Mr. Snell, who has been equally courteous in giving me the information I required, so that I consider we are most favourably situated with regard to our home management at least. We have efficient management and courtesy, and so far as I am able to offer an expression of opinion, I trust we may make it clear to Mr. Hobbs and to his staff that so long as his work is done efficiently and well, as it is at present, there will be no question as to some trivial cheeseparing in regard to them on the question of salary. (Cheers.)

ACTION OF THE CHAIRMAN AS TO THE LOCAL MANAGEMENT.

The CHAIRMAN: With regard to the question so well raised by Mr. Smith, I mentioned in my opening observations that the directors were very much dissatisfied with Mr. Wallace. I was myself, and even went to the length without the knowledge of the board, although I afterwards got their consent, to telegraph over to Mr. Bennett to dismiss him then and there. We were sometimes a month or six weeks without a word from the mine, although we had instructed him to send reports every week as to what was done, what length of drivage had taken place, what ore had been raised and sold, and the quantity on hand, and we told him that with each report he was to send a duplicate of the one of the previous week. For a month or six weeks we did not get any report at all, and when he wrote he said he had posted his letters as usual, though it was extraordinary they should not arrive, I did not exactly place the reliance upon the letters having been posted that Mr. Wallace would like me to have done; but who are you to have in his place? He knows the ins and outs of the mine, and has been there a great many years. When Dr. Dunhill and Mr. Hutton came back from their visit they thought highly of him, and they made inquiries of McCornick and Co. and others, as to whether the fact that he kept a store would be any detriment to the holding of his position as superintendent. The report was that it would not, and that Mr. Wallace would be the best man to appoint. Prof. Keyes says he found him a very suitable man, who had explained to him the whole position, and he (the professor) told him what his recommendations were for future development. After the explanation of Mr. Wallace as to the non-arrival of his letters, the directors instructed him to hand them to Mr. Bennett, so that he might post them to us in a registered letter. The directors have taken no further steps to sever their connection with Mr. Wallace, but the position is this, that he can be got rid of at any time the interest of the company may require it. It is a very anxious matter to have someone at the mine who is trustworthy, because

INFORMATION HAS LEAKED OUT

as to what was doing there, although it is almost impossible to prevent this. Some people here have friends in Salt Lake who are only too anxious to cable the news they first hear to London. If you leave the matter in the hands of the board they will do the best they can for the shareholders.

The report was unanimously adopted.

MR. SNELL UNANIMOUSLY RE-ELECTED.

Mr. HUTTON, in proposing the re-election of Mr. Snell, said: I had the privilege of serving with him for several years on the board, and know he gives a great deal of time to the affairs of the company, and

that they cause him considerable anxiety. I only regret that we have not been able to recognise his services rendered for so many years past, and feel that we are subjecting him to an undue tax without any reward.

Mr. FISHER seconded the motion, which was carried by acclamation.

The CHAIRMAN: I am very much obliged to you for my re-election, although, personally, I wish your decision had been the other way. I have had so much trouble and anxiety about this mine that I should have been glad to have been relieved from office. Still, I am not one to run away when I once put my hand to the plough. In 1882, when I first joined the board, I said I could not put ore in the mine if it were not there, but that I would act in the best interests of the company, and your unanimous vote to-day justifies the belief that my conduct has met with your approval. I am largely interested in the mine, and do not give up the hope of finding something which will remunerate us all. I hope after all Emma will turn out something that will

MAKE US LOVE HER MORE

than we have yet had occasion to do. Since she was brought over here in 1871 her name has not been one of which people have been very much enamoured, but perhaps some day there will be a revulsion of feeling, and we shall all rejoice.

Mr. R. G. Alford was re-elected auditor on the motion of Mr. HUTTON, who said he felt sure that gentlemen would coincide with him in his criticism of the accounts.

NOT CONVINCED.

Mr. ALFORD: I am not at all convinced by Mr. Hutton. 3,280*l.* represents ore for which the cash was actually received before June 30, 1891, and Mr. Hutton cannot convince me that the manager received cash for ore sold before it was raised. (Cheers and laughter.)

On the motion of Mr. MADGE, Mr. Snell and his colleagues were cordially thanked for their unpaid services.

MOSMAN GOLD MINING CO.

SUCCESSFUL PROSPECTING AND DEVELOPMENT WORKS—IMPROVED POSITION OF THE COMPANY.

THE ordinary general meeting of the shareholders in the above-named company was held at Cannon Street Hotel, London, E.C., on Monday.

Mr. George Hopkins, C.E.,

presided.

Mr. THOS. WINDER (secretary) read the notice convening the meeting, and also the minutes of the previous meeting, which were approved and signed. The report was taken as read.

THE SMILE OF FORTUNE.

The CHAIRMAN: Gentlemen, at this time last year I ventured a hope and a belief that this company would be able to continue and pull through its troubles without re-construction or additional capital. Seeing the state of our accounts, it required rather a strong faith in the mines to venture such an opinion as that, because by reference to the accounts you will see that at that time the whole of our capital, with the exception of 608*l.*, which was in the bank, was expended, and that we owed at Charters Towers 582*l.*, so that, speaking near enough for all practical purposes, at that time the whole of our working capital was expended. Well, gentlemen, fortune smiled upon us, and soon after I made that statement the mine began to improve, with this result—that throughout the whole of the year 1891 we have made sufficient profit out of the mines themselves to carry on the very large and extensive works of development which we have been doing during the year. (Applause.) Not only have we had the development works proper on the mines themselves to pay for, but, as you know, we have been sinking a new working main shaft down to a considerable depth.

THE NEW SHAFT.

It was only about a week ago that that shaft was connected with the 1,000-ft. level on the Eastward Ho! Mine, thereby giving, what was very badly required in that mine, good ventilation—in fact, the lower workings of the Eastward Ho! up to that time it was impossible to carry on for want of ventilation. That shaft during the whole of its length went down on the reef—not always payable, but very frequently it was payable—and as we went down, so far as we were enabled to do it, we ran out levels right and left, and did a certain amount of stoping from the reef. You will, of course, understand that although the shaft is down to the 1,000-ft. level, it cannot stop there. We must go on sinking, not only until we cut the next level—that is, the 1,100-ft. level—but it will have to go forward so as to enable us to work the unworked portions of the Eastward Ho! property, and also that large block of ground known as the Rainbow Block, which we purchased about two years since. Before I leave the shaft perhaps I had better give you what is the latest information with respect to it. We had one little drawback in our operations, and that was that from some cause or other our surveyors got wrong as to the depth we should have to sink before we cut the 1,000-ft. level—they were out in their calculations nearly 200 ft. Had they been right in their figures we should have made the connection three or four months ago; but instead of 800 ft. odd, which was thought at first would be the depth of the shaft, it turned out to be 1,060 ft.

LETTER FROM THE MANAGER.

The last communication we have from our manager is dated Oct. 24—at which time he had not made the connection—in which he says:—"The Wyndham shaft has reached a depth of 1,000 ft.; ore in shaft is improving as it goes down; the vein is fully 4 ft. wide." Then he goes to say:—"North Australian and Wyndham reefs: Crushed 181 tons; obtained 265 ozs. of gold." Then he adds, "I was at the mine at 7.30 this evening, and found that the quartz in the shaft continues its size about 4 ft. wide, with the difference that the quality has improved. I found some really good stone showing fine gold very freely. Since last Friday (the 16th inst.) 73 tons of quartz have been raised from the shaft alone—from say 14 ft. of sinking, and I trust the stone will continue down hundreds of feet and place the Mosman Co. among the dividend-paying companies of this field. I

have great hopes of this being the case at no very distant date, and I now begin to wonder what we shall do for crushing power if the reef continues its present size for only the next 200 ft. down. We could not crush the stone with 10 stamps—that is the limit of our mill—and other mines here keep all the other batteries fully employed. If the field continues improving there will not be stampers enough to do the work."

IMPORTANT INFORMATION.

And now comes a very important piece of information. He says:—

"I have had the Byerley level of the North Australian Mine driven a few feet southward, and appearances point to an improvement. Some small leaders of heavily mineralised stone were met with, and the formation has changed, looking very encouraging. After so long time, with such small results, it is quite cheering to have such a good show of stone in the Wyndham shaft. I feel quite elated over it. There has been no event that has caused me such satisfaction for a long while as the cutting of this good stone, and which should prove to the directors that my action in pressing for the purchase of the Rainbow Block ground was, at any rate, genuine, and subsequently Gardiner and Lambert's lease, without which the ground could not be worked to such great advantage."

LATEST BY CABLE.

That letter was received on the 5th of this month, and, knowing that you would like to have the latest news, we sent out a cablegram two or three days ago merely announcing to him the day of the meeting in two code words, which meant "General meeting of shareholders, Dec. 7," and we got this cablegram in return:—"We have struck 12 ins. of rich ore in the Byerley level, south drift; about 4 tons of quartz on the surface; crushing has been commenced." (Cheers.) Now the Byerley level is very important, because it has always been from those levels in the North Australian Mine that we have got our richest and best quartz. Very often it comes to 3 ozs. to the ton from those levels. Of course our average is brought down by the stone coming from other parts. For instance, in the New Wyndham shaft and the stopes in connection with it, the crushings generally average about 1 oz. to the ton, and it is when the ore gets mixed altogether that the average is brought down. But I think you will agree with me that that report of finding stone in the North Australian is very important. (Applause.) Now, we have not only sunk that shaft the full depth I have mentioned, but out of the earnings of the mine we have also equipped—that is to say, we have put in rails and bought hoisting machinery and all the machinery that is necessary for working that shaft. Not having too much money, we did not go to the expense of new machinery, but we happened to be able to buy some hoisting machinery in the neighbourhood, which, Mr. Holliman tells us, although it was second-hand was very good, quite sufficient for the purpose, and at all events it will last us for five or six years to come. We, of course, have to cut our coat according to our cloth, and I think you will agree with me that that was the proper thing to do.

THE CHARTERS TOWERS MINES.

My remarks to-day cannot be very long, because, throughout the year which we have under review, our operations really have been confined to getting this shaft down as quickly as possible, to get at the quartz which had been opened up both in the 1,000 and in the 1,100-ft. levels of the Eastward Ho! Mine. I suppose most of you have seen an article this morning in a financial paper on the Charters Towers Mines, calling attention to the output of gold which is coming from that district—the most important gold-mining district of Australia, and giving a great deal of information respecting Charters Towers Mines. You are all aware that latterly there has been a large amount of success in that field. There are several mines around us that have been doing exceedingly well; and I think we have got to that stage now—that there is no reason why we should not participate to some extent in the great improvement which has taken place in that district. Speaking of the Day Dawn P.C. Mine, the writer of the article calls it "the father of the Charters Towers goldfield." Now, there he is wrong. Our mine—

THE MOSMAN MINE IS THE FATHER OF THAT GOLDFIELD.

Gold was first discovered in Charters Towers by Mr. Mosman, our director—hence its name, and our mine is the oldest worked field in the Towers. A little further on the writer speaks with praise—and very properly so—of the way in which many of these new and productive mines are managed, and he lays particular stress upon the point that they are managed by local people. That, of course, is always a great advantage, and it is an advantage which we possess, because it is acknowledged on all hands that Mr. Holliman is one of the most experienced miners and able managers in the whole of that field. (Cheers.)

ACCOUNTS TO BE SUBMITTED EARLIER IN FUTURE.

I am labouring under a considerable disadvantage, and one which I have tried to remedy, and which I mean shall be remedied in the future, that is, that at the end of 1891, we are dealing with accounts which go only up to the end of 1890. I think that is a very unsatisfactory state of things. (Hear, hear.) However, I have to accommodate myself to the circumstances. I will just point out that during the year 1890 we crushed 2,326 tons of quartz, which realised 3,282½ ozs. of gold of the net value of 11,202½.—the quartz yielding an average of 1 oz. 8 dwts. 5 grs. to the ton. That, as I have just mentioned, with the help of 7,000% of capital which we had in hand at the beginning of 1890, has supplied the expenditure for that year; and in accordance with the footnote, which we have put in the second page of our report, I shall propose, in order that we may start fair with the next year's accounts, that the sum of 6,079% 12s. 6d., which was standing to the debit of revenue on Dec. 31, 1890, shall be transferred to capital, because we cannot divide exactly what has been spent on revenue, and what on capital, but we know that the whole of this work in connection with the shaft has been, and should very properly be taken out of capital. We know that over 7,000% of capital has been expended on that work, and, therefore, there is nothing unreasonable or improper in transferring to capital the amount which now stands to the debit of revenue of 6,000% and odd, and in proposing the adoption of this report and accounts I shall make the resolution subject to that being done.

THE MILL.

Our mill, which is only a small one—10 stamps—has been working well throughout the whole year. It has crushed altogether 4,702 tons of quartz, about half of which was our own and the other half belonged to other companies. We received for crushing from other companies 2,417% 2s. 11d., thereby reducing the cost of the crushing of our own stone to 1,962% 16s. Of course, not having quartz enough to keep the mill employed the whole time, Mr. Holliman very wisely crushes as much stone as he can from outside sources; and, as he says in the letter I read to you just now, "All the mills in Charters Towers are getting as much outside crushing as it is possible for them to do, and he begins to be a little uncomfortable as to how he is going to crush our own stone. Well, I am not uncomfortable myself about that. Let us get the stone, and I think we will find the means of crushing it—first of all, by dropping out what we do for other people, and using the mill entirely for our own purposes. However, there is no doubt the policy he has been pursuing has been a wise one. We are to-day, gentlemen, in

A TOTALLY DIFFERENT POSITION

from what we were in this time last year. We then had very grave doubts as to whether we should be able to go on at all from week to week. It was a very anxious time for the directors. We did not know but what we should have to call you together to pass a resolution to liquidate the company, with the view of raising further capital, but as I said then, and I repeat now, it is an operation that ought to be very carefully avoided if possible, and never attempted unless it is absolutely indispensable. (Hear, hear.) We hoped and we persevered, and we were rewarded for our hopes. We have worked through the whole year, and done very expensive and large works during that time; and as the directors say in the last paragraph of their report, we hope that with these works completed, or nearly so, and the mine in a good condition for working, that we may reasonably expect that henceforth profits may be realised for the shareholders. We have had a trying time. I am sure the shareholders have been most considerate and patient. There is no disguising the fact that the Mosman, like some other Queensland mines, was a great disappointment. We were led to expect great things of it. Large quantities of gold had been taken out; and I think now we have got so far that we may rejoice and share also with the general prosperity which seems to have come over that field. All these mines which are paying so well, and have such very small capital have been at work for a very short time; we do not know what their future is. In our case I suppose the mine has been worked 20 or 25 years, or more for what I know, and an enormous quantity of quartz taken out. We have to begin, so to speak, where the former owners left off. We have to

GO IN FOR DEEP MINING,

which is more expensive, because it involves a large amount of machinery, both for pumping and drawing purposes; and we have to prove the ground down in the lower levels. Now we have got our mines thoroughly equipped. We have got a shaft running down in quartz all the way—sometimes not payable, at other times yielding about 1 oz. to the ton. We have bought large blocks of ground; so that we have, I think, a good future before us. The whole of that "Rainbow Block" property is untouched, and a good deal of the "Eastward Ho!" and being in this state I think there is no reason, if things go well, why we should not be in a very prosperous condition before long. (Applause.) I will now move the resolution:—"That subject to the sum of 6,079% 12s. 6d. at debit of revenue account, and which has been expended on sinking, and equipping the Wyndham shaft, and general development work, being transferred from revenue account to capital account, and which sum the directors are hereby authorised and instructed so to transfer, the report and accounts now presented be and they are hereby received and adopted."

Mr. JAMES A. CRAWFORD (director) seconded the motion.

CRUSHING MACHINERY.

Mr. FERGUSSON: Gentlemen, It appears to me that the directors deserve our very hearty thanks for having managed to improve the position of the affairs of the company so very greatly, and without having been forced to resort to the very disagreeable process of re-construction, which at one time seemed perfectly unavoidable. I wish, however, and I have no doubt the directors also wish, that it had been possible to crush more than 2,326 tons of quartz, which compares unfavourably with the amount crushed in 1889, viz., 3,440 tons. But, gentlemen, this has been most satisfactorily accounted for by what the chairman has said, and what is stated in the report. I would like, however, to say one word about the crushing machinery we have out at the mines. I think that the board are extremely cautious in their movements, but it appears to me that it would be wise to have more crushing machinery. I merely throw out the suggestion, for I think we may trust the directors to see to this when the proper time comes. Shareholders may say, "But where are we to find the money to do it?" It would be easy enough to find the money. In the Nundydroog Co., of which I am a director, we found the money by issuing preference shares. A few such shares would easily enable us to get the machinery, and I think it would pay us.

A FEW PERTINENT QUESTIONS.

We have been told of one lode 4 ft. in width. Perhaps, Mr. Chairman, you would tell us the size of each reef and lode on which we are working? I observe that the price obtained for our gold was less than 3% 10s. an oz. May I ask where that was sold? I ask the question because the gold from the Indian mines is brought to London and sold for over 3% 15s. per oz. Of course there is gold and gold; and it does not follow that because the Indian gold sold better, Mosman gold should sell better than 3% 10s. per ounce. Could you tell us how many pennyweights to the ton will pay the working expenses? Of course that is an important point. In conclusion, I would ask the board if they would be so good as to publish in the financial and mining journals once a month, or oftener, for the information of the shareholders, any news of importance that may have been received from the mines, as is now done in the case of the Mysore, Nundydroog and others. (Cheers.)

REEFS VARIABLE IN WIDTH AND VALUE.

The CHAIRMAN: As regards the width of all the reefs—I am afraid

we can give no figure; they vary so. The Wyndham reef, on which the shaft is sinking, has varied from 18 ins. up to about 4 ft. The rich veins in the North Australian Mine are very narrow. We generally get from 6 ins. to 12 ins. of payable stone; and, of course, in running our drifts we have to take out 3 ft. or 4 ft., consequently, there is a good deal of waste with the payable quartz. It is the character of the whole of that field—the reefs are patchy and uncertain both in width and value. As regards the value of the gold—of course that entirely depends upon how much silver there is in the bullion. All the gold bullion which comes from Charters Towers generally sells at about 3*l*. 10*s*. an ounce; Indian Gold I have always thought sold even as high as 4*l*. an ounce. It is entirely a question of fineness—how much silver is mixed with it. The gold is sold in Australia and sold, I think, to the best advantage.

12-DWT. STONE WILL PAY.

As regards the number of pennyweights that would pay expenses—that is a difficult question to answer, because we have never been in a state to separate well our capital expenditure from revenue, but I think they generally reckon out there that about 12 dwts. will pay. Labour is very costly, the weekly wage of a miner being about 3*l*. From 10 dwts. to 12 dwts. would pay expenses.

Mr. FERGUSSON: 1 oz. stone would give dividends then?

The CHAIRMAN: Yes. Even this year; but for having to spend the money on purposes of capital, we should have had a surplus. As regards publishing the news—I was under the impression that we always did that. You see our crushings come at irregular intervals. The crushings are always published when cabled over, and the mining reports have generally appeared. I think it is very desirable that they should be published. The financial papers are very good and considerate, but sometimes in the press of matter and the number of mines they have to deal with, they are obliged to leave our reports out. We will, however, take care that they are sent for publication. They are

ALWAYS IN THE WEEKLY MINING PAPERS.

In the Day Dawn Co. we send out every month a reprint of the fortnightly reports with the crushings, and that gives great satisfaction to the shareholders, but it is too expensive for this company to do so at present.

Mr. H. INGLIS: The accounts with which you have been dealing are a year old—can you tell us the quantity of quartz that has been crushed since the date of the report, and also the expenses at the mine?

Mr. CHATER: With reference to Mr. Fergusson's remarks, I should like to draw your attention to the action of the New Queen Co. They used to sell their gold at Charters Towers, and the price obtained averaged about 3*l*. 9*s*. 6*d*. per oz.; latterly, however, they have taken to selling it in London, and they get something over 3*l*. 10*s*. an oz. Have you had any assays of the 4 ft. reef in the New Wyndham shaft; or have you any idea of how much it goes to the ton? I should also like to know whether the 10-stamp mill is situated near the Mosman or Mystery reefs, or some distance from the present workings?

A SHAREHOLDER: When do you hope to call us together with the report of the current year? It is a little difficult to understand to what period you are referring when you speak of "this year." Do you speak of the year with which the accounts deal, or of the year 1891?

MEETINGS IN FUTURE TO BE IN MAY OR JUNE.

The CHAIRMAN: I quite feel with you, sir, that there is a difficulty, and sometimes when I say "this year" I am alluding to the current year and sometimes to the year for which the accounts are. I do not see any reason why we should not have our meeting held always in the month of May or June, and I think that is what we must have done in future. (Cheers.) As regards the sale of the gold—we are fortunate in having a director of the New Queen on our board. It is a question that has been before all the Queensland companies. Of course, there are a good many other questions to consider besides the price you get in Queensland and the price you get in London. There is the time it takes to come over, the loss of interest, &c., but on the whole I think the balance is in favour of sending it over to this country to be sold. I do not know whether it makes as much as 1*s*. 6*d*. an ounce difference. We have not been in a position to deal with things with such a free hand as we could have wished. Although we have now pulled through our difficulties, there were times when we had to go to our bankers for some slight accommodation, and the way in which we got that accommodation was by depositing the gold with them. As regards the situation of the 10-stamp mill, it is on the Mystery ground, and it was placed there for the convenience of a supply of water. We cannot move it from there, because we cannot command a supply of water at our mines where the shafts are. With reference to Mr. Inglis's question as to what has been done during 1891, I intimated in my opening remarks that we had been able to carry on and complete these works during the present year, paying for them out of the proceeds of the mine. However, I have a statement here which will give you a little more detail.

RESULT OF THIS YEAR'S OPERATIONS.

From Jan. 1, 1891, to Sept. 24, we had raised 2,258 tons of quartz, which had yielded 3,224 ozs. of gold, out of which the North Australian—the quartz is always rich when we get it in the North Australian—furnished 2,086 ozs., the "Eastward Ho!" 335 ozs., the Wyndham shaft and level 790 ozs., and a few odds and ends 11 ozs., making a total of 3,224 ozs. which have realised on sale 11,040*l*. 7*s*. 10*d*. Then on Oct. 21 we had a further crushing sent by cable—181 tons yielding 265 ozs.—so that up to Oct. 21 our gold had realised practically 12,000*l*. (Cheers.)

A SHAREHOLDER: That is more than the whole of last year?

The CHAIRMAN: Yes. In reply to Mr. Chater as to an assay—we have no quartz sent over, and they do not assay it there. All that they care about is the mill return, and that is generally about 1 oz. to the ton on the Wyndham shaft. I have given up all faith in assays. (Hear, hear.)

The resolution was then put and carried unanimously.

RE-ELECTION OF CHAIRMAN.

Mr. CRAWFORD: I beg to propose, "That Mr. George Hopkins be re-elected a director of the company."

Mr. CHATER: I will second that.

The motion was carried unanimously.

The CHAIRMAN: I thank you, gentlemen, for re-electing me. I do not know whether it is an honour or not. (Laughter.) It is a troublesome matter to conduct these companies that have so far fallen short of what shareholders have expected, and properly expected, when the prospectuses were issued. However, I think that we, at all events, have brighter days in store for us, and, I think, in future our work will be of a more pleasant description, and under those circumstances, I think, I may thank you for the honour you have done me.

REDUCTION IN AUDITORS' FEES.

Mr. FERGUSSON: Gentlemen, I have to propose "That Messrs. Monkhouse, Goddard and Co., chartered accountants, be re-elected auditors of the company." With regard to the remuneration of these auditors, I observe in the accounts, "auditors' fees, 2*l*. 5*s*." I do not think the work can be quite heart-breaking. It seems to me that it should be very simple indeed, and as these are times of economy I think that—for the present at any rate—our auditors should be content with 15 guineas. I propose, therefore, that the remuneration be 15 guineas.

Mr. PANKHURST seconded the motion.

The CHAIRMAN: I wish Messrs. Monkhouse, Goddard and Co. had been represented here to-day, for I do not much like reducing the amount in their absence, but, of course, it is for you, gentlemen, to say what the remuneration shall be.

A SHAREHOLDER: I think it is 15 guineas easily earned.

The motion was agreed to unanimously.

A vote of thanks to the chairman and directors concluded the proceedings.

THE KANYA EXPLORATION CO., LIMITED.

A LENGTHY MEETING—THE POSITION AND PROSPECTS—A MINOR CHIEF WITHDRAWS OPPOSITION—THE CONSORT MINE—THE CHAIRMAN APPEALS FOR FAIRPLAY FROM THE SHAREHOLDERS.

THE second ordinary general meeting of this company was held at Winchester House, Old Broad Street, London, E.C., on Monday, Dec. 7, 1891, for the purpose of receiving and adopting the directors' report and accounts, electing directors, appointing auditors, and fixing their remuneration, and transacting the ordinary business of the company.

The Hon. W. F. B. Massey Mainwaring

presided.

Mr. W. CLARKE DANIELL (secretary) read the notice calling the meeting.

The CHAIRMAN said: Gentlemen, perhaps you will take the report and accounts as read. (Yes.) It will, therefore, now be my duty to propose, "That the report and balance-sheet be, and the same are hereby received and adopted." Gentlemen, it is only a very short time ago that I had the pleasure of meeting you that I presume many of those I then addressed are again here to-day. (Hear, hear.) Therefore, I very much fear that my speech may be rather

DA CAPO

in its nature, and I may weary you by repeating some things again. But some things have happened since that meeting which are, I think, highly advantageous to the company. One—to which I alluded at the previous meeting—was the fact that there was trouble with one of the minor chiefs, which placed difficulties in the way of promoting our prospects in that country. I am glad to be able to tell you that we have had a telegram within the last two or three days from our manager out there stating that he has been able to arrange everything with this minor chief satisfactorily, and I presume, therefore, that his opposition will cease. We had, as I informed you the other day, commenced prospecting there, and were actively engaged when he called upon us suddenly to leave our work—in fact,

HE GAVE US OUR CONGÉ IN VERY POLITE TERMS,

and we were obliged, after protesting, to leave. I need not, however, go further into that question now that his opposition has ceased. That fact is of advantage in another way—that if ever it happens that the railway is made, under the option that we hold that chief's opposition would have been an extremely annoying circumstance, because the shortest route would lie through a large portion of the country which he holds. With respect to the railway communication there, things just now in Mashonaland are in an uncertain condition. I do not say any more than that. There have been reports in the papers, but we do not know exactly from our own knowledge whether they are true or not. The success of Mashonaland will depend upon the construction of this railway, and, in fact, the prosperity of the northern part of South Africa. After having explored a large portion of this country, we are settled down to work in one or two other places, but that has been only lately. You will see the telegram we have circulated in the report. We have nothing further respecting that, because upon receiving it we took the precaution of only writing to our manager, as we did not wish the knowledge to be disseminated and so cause damage to the company. Now, that report, so far as we can see, seems to point to the fact that we have all along been told that the Kanya country was very highly mineralised. There is no doubt that such is the case, but whether those veins are of a paying character depends upon their being investigated and tried, because many districts have been found to be highly mineralised, but when tried have not been found to have paying reefs upon them. I hope, however, we possess a paying reef, and if further investigation on the part of Mr. Smith should prove this to be so, the Kanya Co. has got something extremely valuable, and which in itself is certainly sufficient to have justified the formation of this large company. While prospecting was going on the gold fever occurred in Mashonaland, and, unfortunately, some of our prospectors were seized with it, and instead of prospecting for us had gone off on their own account, thinking they had found the land of promise there. Some of them had now come back, but what that means I do not know exactly. Your board got an

opportunity of going into a property that is not within the radius of the Kanya Exploration district, and after elaborate enquiries it seemed so advantageous to the Kanya Company that we decided to go into the matter. Terms were come to after a great deal of negotiation, and I think you will find that they are very satisfactory terms for the company. I took the precaution of consulting various gentlemen who were acquainted with the district, and I invariably got the same answer with respect to

THE CONSORT MINE.

Next to the Sheba Mine we consider the Consort property out there the best. To get such a property as that for the price that we paid for it—which was not the price that the stamps which were partly erected there cost—was a chance that we considered should not be lost. With respect to the negotiations for the purchase, I think it is only fair to the other company who allowed us to go in with them to let you know that the approaches came from our side. We heard of this good thing and we endeavoured to get a slice of it. It was hinted at the last meeting that the parent company was rather wanting the Kanya Company to help a lame dog over a stile, but it was nothing of the kind. We were very anxious to get it, and we made the approaches to them, and I must say they have met us in a most liberal way in everything connected with the property. In the report you will notice there are also

VALUABLE OPTIONS—

options, gentlemen, that will become extremely valuable from the very moment that the Consort crushings commence and the value of the reef is shown by the results. The board of the Consort Co. are not going to simply make crushings, which they could do now, for the purpose of showing immediate returns. If the plan which they are going on had been adopted by many other mines in South Africa, there would not be so much trouble connected with those mines to-day. Their plan is to sufficiently develop the lodes so that there may be an ample amount of ore ready to keep the stamps going, because there is nothing more disastrous in respect to stamping ore, than to have a full supply one day, and only have half the stamps running on the next day, although the expenses connected with the work are just as great. The Consort board is going on a very solid basis, and I am quite sure the returns on this account will give you every satisfaction. From the report you will also notice the very great interest we have got in that property, and perhaps some gentlemen here would like to know that even in the old Consort Mine many people refused to sell their shares at 9*l*. a piece, and like many other people the old Consort Co. thought they were going to make a fortune very quickly. They looked too far ahead and borrowed money for the purpose of getting a large number of stamps. Unfortunately, a bad time came—

A GREAT WAVE OF DEPRESSION SWEEPED OVER SOUTH AFRICA,

and the result was that they were not able to complete those stamps. If any other particulars are required respecting the Consort Mine, I shall be glad to answer questions put to me on the subject to the best of my ability. We have, of course, nothing to hide, and we want to let you know as much as we know ourselves. In one of the options that we have obtained in Kanya there is a trading option. A trading option we consider very valuable, if we can make arrangements to start another subsidiary company to work it. Of course this company has not a sufficient capital to undertake the formation of a trading company. Perhaps we may take an example from neighbouring companies further north than Kanya. The Bechuanaland Exploration Co. have done exceedingly well since they commenced their trading stores, and I do not see, with the large population there is in Kanya, why we, too, should not do exceedingly well. We have also had the report of their engineer who went out in their interests, and who strongly advises the Kanya Co. to follow the example of the Bechuanaland Co. in starting these stores. With respect to the Consort Mine, you will see that the report was made by one of the most experienced engineers, having to do with South African affairs and a man in whom, I think, we can place thorough reliance. No doubt, many shareholders know what a valuable thing they have got in the Consort property. As to the delay in calling this meeting, I must take the blame upon myself. As a matter of fact, we are within our legal time in holding the meeting. We were extremely anxious that this matter should be closed up before this meeting was held, because sometimes the fact of publicity being given to such delicate matters as these is the cause of their being frustrated and injured, and I was extremely anxious to be able to tell you that we had actually got our slice of the Consort property. I am happy to tell you that since the last meeting held here we have actually got our share of the property. We have also had a telegram from the other company to say that they have commenced working the Consort property. Of course, we knew it would be very rapidly proceeded with, because everything connected with the erection of the stamps was already on the property, having been included in the purchase we made on your behalf. We hope that by your vote you will justify the action which we took—an action, of course, which involved some responsibility on our part. Some shareholders seemed to think they ought to have been consulted before, but such a procedure would have defeated its own end; the very fact of our consulting the shareholders would have prevented our doing business which has proved of great advantage to the company. Of course, we cannot tell what the future will be except by judging slightly from the past. Judging from the past of this mine, of the circumstances under which it came to a temporary termination, we are led to look to the future with the greatest confidence. I cannot conclude without thanking the shareholders for the most courteous manner in which they treated me when I met them last, and I must also thank the gentleman who presided over the meeting for the courtesy which he extended to me. I do not think the meeting did any harm;

IT CLEARED THE AIR,

and gave the shareholders an opportunity of knowing what was the position of the company, and allowed them to understand better the report that we have circulated among you. I do not think I have anything else to tell you, except that I shall be glad to answer any question you may put to me, and I will now move the resolution which I have already read. (Applause.)

Sir WILLIAM MILLER seconded the motion.

Mr. F. FENTON said that he was very glad to be present at that meeting, and he believed that it was in a measure due to him that it was being held. When he saw the letters in the financial papers, written apparently with the idea of damaging the company, he at once wrote to the secretary and suggested that a meeting should be held as soon as possible, and the shareholders should have the full statements of affairs put before them. He was glad that this course had been adopted. He knew South Africa probably as well as any person could who had not been there, as he had many personal friends and relations who had been resident there for many years, and some of them had been born there. He had heard before of the value of the Kanya property in connection with another scheme with which he was interested, namely, the Trans-continental Railway scheme, and if this were ever carried out it would be through the property owned by the Kanya Concessions Co., which, in his opinion, was

THE TOLL-GATE OF AFRICA,

and was the only safe, healthy, and unmountainous route between the interior and Cape Town. If the Trans-continental Railway was ever carried out, and he believed it would be, although he had been called a madman in connection with it by his own brother, it would bring London within 14 days of Cape Town. The scheme was to make Kimberley the Chicago of South Africa, and a general meeting point for railways from every part through to Kimberley, and thence through to London. He proceeded to speak in high terms of the value of the property and as to the abundance of timber, water, &c., and was going into further details as to his scheme for the railway when the meeting expressed some impatience.

A SHAREHOLDER: This is only a waste of time.

Another SHAREHOLDER: I rise to

A POINT OF ORDER.

The adoption of the report is the subject before the meeting, and he is not speaking on that question at all.

Mr. FENTON said he was sorry to waste the time of the meeting, and resumed his seat.

Mr. DRAKE referred to the action of the directors in regard to the Consort Gold Mine, and maintained that the directors ought not to have gone into this without first consulting the shareholders. He should hold to this principle whether the result in the end was advantageous or not. He remembered that at the previous meeting the chairman had stated his willingness to work without fees, but he still noted that the item of directors' fees appeared in the report. He had no doubt that the directors were quite legally within the four corners of the articles of association in spending the shareholders money without asking their leave with regard to the Consort Mine. He had no doubt that their articles of association were so shaped that it entitled them to do any mortal thing they liked. He noted that they had spent in connection with this Consort Mine 10,169*l*. and he wanted to know whether any more would have to be spent before the purchase was completed.

The CHAIRMAN: It completes the purchase.

The SOLICITOR: There is no liability. They are fully-paid shares.

Mr. DRAKE asked the chairman if this was so.

The CHAIRMAN replied in the affirmative. He said that there were

FURTHER ADVANTAGES,

but no further liabilities.

Mr. DRAKE asked the shareholders to note this, but he feared that these advantages were of Micawber-like kind. They struck him as being the Micawber-like as to anything turning up, but they must hope for the best. He did not, however, like the directors to be going north, south, east and west, and spending the shareholders' money without consulting them first. Even if they lighted on a De Beers diamond mine it would not alter in his judgment the fact that the board of directors had no right to pledge the shareholders in any matter without first consulting them, and he asked the chairman at that meeting to pledge himself and the board that they would not adopt such a course again, but would summon a meeting of the shareholders and ask their opinion.

Several SHAREHOLDERS interrupted Mr. Drake at this point; and he concluded his remarks by saying that they had not the plethora of capital now that they seemed to have had in the past, and he was opposed to their going in for the purchase of half or quarter or sixty-fourth shares of "any blessed thing under the sun."

Mr. THOMAS FAIRFIELD (a very youthful shareholder) said that in his opinion the shareholders would get no dividends out of the company. He considered that the amount of money that they had in hand was about sufficient to carry them on for one and a third year more. He did not think that any of the directors had ever visited Kanya. He knew he was

THE YOUNGEST SHAREHOLDER IN THE COMPANY,

but he had a holding of 60 shares, and, in his opinion, the best thing that could happen would be for the directors to get the Bechuanaland Company, or the Chartered South Africa Company, or some one of these large companies who had a market quotation, to take over this company. (Laughter; and Hear, hear.)

Mr. DAVID REED referred to the calls in arrear and stated that he saw in the accounts there was an item of 10,171*l*. for calls not yet paid. He considered that these calls should be paid up at once, and that pressure should be brought to bear upon the shareholders in arrear. He did not care how good their names were or whether they were Rothschilds—they ought to pay up their shares. Not only were their calls in arrear, as he had stated, to the extent of over 10,000*l*. on Sept. 30, 1891, but the interest on those calls at the rate of 10 per cent. per annum, amounting to 1,377*l*., had not been paid.

The SOLICITOR: They are subject to interest.

Mr. REED: Why is it not paid?

The SOLICITOR: Principal and interest are always recoverable together.

A SHAREHOLDER: The interest is cumulative.

The SOLICITOR: When the liability as to principal is enforced interest always follows.

Some further discussion followed, in which Mr. JORDAN, Mr. SMITH, and other shareholders took part, in the course of which it was suggested that the Consort property had been drawn as a red herring across the trail.

CORROBORATIVE TESTIMONY.

Mr. T. MORGAN HARVEY (a late director), who had resigned on account of ill-health and the pressure of other business engagements, then addressed the meeting, and explained that there was no other reason for his retirement. He spoke in high terms of the value of the Consort property, which he considered was a very good mine indeed.

After some further discussion,

The CHAIRMAN said it was a question whether or not the board had confidence in the directors, or whether they had not confidence. He was perfectly willing, if the shareholders wished him, to go, and to let anybody they liked to appoint fill his place. He asked them not to consider his private feelings for one moment in the matter, but to ask him to go, and he would be willing to go, as he always had been willing to go when he felt that he was *de trop*, or that it was not for the welfare of the company that he should stay. Those gentlemen who knew him knew well enough that he was perfectly willing to make any personal sacrifice, as he had done in other companies, and was willing to aid, if necessary, in the Kanya Co., but he did object to a few shareholders coming and throwing vinegar at anyone and causing a ferment in the meeting, which could only ultimately damage the gentlemen in that room who were *bonâ fide* shareholders. He repeated that he did not wish the meeting to consider him personally in the matter, but to tell him if they wanted him to go and he would be willing to do so. But if they wished him to stay and to work, nobody would work so hard and so willingly as he would, but he did not want to stand on the edge of a precipice so that some small shareholder's action might tilt him over into the depths below. (Hear, hear.)

CALLS IN ARREARS TO BE PAID UP WITHIN 14 DAYS BY RESOLUTION OF THE MEETING.

Mr. HARVEY then proposed a resolution to the effect that notice should be given to the secretary to issue a circular to the shareholders who had not paid their calls, intimating that if they did not do so within 14 days, legal proceedings would be taken against them to recover the same with interest.

Mr. REED seconded the motion.

The CHAIRMAN expressed satisfaction that such a resolution should have been proposed; he said that it strengthened the hands of the directors. They would now be able to go to the defaulting shareholders and get the money much easier now they were backed by a resolution of a general meeting. He was very much obliged to the mover and seconder of that resolution.

The motion was carried.

A SHAREHOLDER: With interest?

The SOLICITOR: Of course.

Another SHAREHOLDER asked the position in regard to the following paragraph in the report:—"At an early stage of Mr. Smith's operations, difficulties were encountered by the refusal of a minor chief to permit, without payment of compensation, mining operations in a territory which he claimed to be his; added to which prospectors were attracted to Mashonaland." He wanted to know the position now.

The CHAIRMAN: The opposition has been removed; therefore, the question does not occur. I told you in the opening part of my speech that we had received a telegram that the opposition to this company had been removed.

After further discussion,

The CHAIRMAN moved the re-election of Mr. Evan Baillie Grant and T. Watkin Davies, as directors. He stated that when vacancies occurred on the board, Mr. Evan Baillie Grant and Mr. T. Watkin Davies consented to act, to enable the business of the company to be continuously proceeded with. The directors would have preferred to have consulted the wishes of the general body of shareholders in supplying these vacancies, but the occasion would have been inopportune. The gentlemen thus appointed placed their resignations in the hands of the shareholders, but offer themselves for re-election.

The motion was seconded and carried.

FORMAL BUSINESS.

The CHAIRMAN said that the next resolution was for the re-election of auditors.

It was proposed the fee for the first year should be 50 guineas, and for the second 35 guineas.

A SHAREHOLDER moved, and Mr. BLUNT seconded, that the company's auditors, Messrs. Woodthorpe, Bevan and Co., who, under the articles of association, retired, should be re-appointed at these terms, which was agreed to.

A vote of thanks to the chairman, moved by Mr. REED, closed the meeting.

THE NEW MINERA MINING CO., LIMITED.

A MINE OF CONSIDERABLE PROMISE, AND THAT HAS ALREADY MADE SUBSTANTIAL RETURNS.

The fourth ordinary general meeting was held at Queen Street Place on Friday, Dec. 4.

Mr. E. A. Pontifex

(chairman of the company) presided.

Mr. JOHN ELPHICK (secretary) read the notice of meeting,

A COMPANY THAT RISES ABOVE ITS PROSPECTUS.

The CHAIRMAN: Gentlemen, I think it would be somewhat interesting literature if we could collect the prospectuses issued for the last few years of the various companies that have been started, and compare the promises made in them with the subsequent performances. I think, generally speaking, the performances would be in inverse ratio to the promises. That is the case with this company, though entirely in a different and far more agreeable sense. We made no promises in our prospectus, though we anticipated we should find as good lodes in our property as were found in the neighbourhood of the old Minera Mine; but our performances have been even greater than anything that could have been anticipated at the time the company was formed. Its total capital is 30,000*l.*, of which 10,000*l.* only was paid in cash and shares to the vendor, leaving 20,000*l.* for working capital. With that comparatively small amount of capital,

and with the value of the ore we have raised during our operations we have sunk a shaft 322 yds. deep, of a very large and substantial character; we have driven nearly 1,500 yds. of levels and cross-cuts; we have supplied two large steam boilers, and have altogether 10 steam engines of various kinds to work rock-drills, &c., and we have also much dressing machinery.

SALES OF OVER 5,000*l.* WORTH OF PRODUCE.

All this has been charged to revenue, and the results have been that since Feb., when we commenced to dispose of ore, we have sold nearly 900 tons of blende and over 320 tons of lead ore, and in the short period of 11 months we have laid open an estimated quantity of 10,000 tons above our deepest, or 315-yd., level without taking into consideration anything below our feet. (Cheers.) The returns of the last five months have yielded us 5,165*l.*, which, if placed against the costs will show a profit even at this early stage. At the present moment

WE ARE WORKING TO A PROFIT.

and may reasonably anticipate within a few months being able to declare a good dividend. I can speak personally as to the character of the produce, inasmuch as the English Crown Spelter Co., of which I am chairman, is one of the largest buyers, and it finds the quality of the blende unequalled. I do not think there is anything in the market which is nearly so good, so that in that respect I may congratulate the shareholders on the results obtained. I think they are a monument to the foresight and intelligence of Mr. Henry Taylor and Messrs. John Taylor and Sons, who first saw the excellent prospects that presented themselves at this spot, and who so wisely availed themselves of the opportunity of realising them. Whilst congratulating both them and the shareholders I have also to move the reception and adoption of the report and accounts.

Capt. RETALLACK (director) seconded the motion.

VIEWS OF MR. H. E. TAYLOR.

Mr. H. ENFIELD TAYLOR: I do not think I have anything to add to the report I wrote on Nov. 18, except that in the last paragraph but one on page 9 it is said that two cross-cuts were then only just started, but now both of them have, I am glad to say, turned out successfully "near the point" (as the report says) "where the 315 level entered the ore ground." The cross-cut was started south, and has already intersected the vein which is bearing blende, I should think, worth 1 or 1½ tons to the fm. The other cross-cut is from the same bottom level to a north lode we had seen in the 295-yd. level, which has also intersected the lode, and we are now driving east upon it in a rich vein about 7 ft. wide. Further east in the level we have also driven a short cross-cut, and found the same vein running parallel to the main vein, which is also worth 2 tons of lead to the fm—a most gratifying fact; and really, if these levels hold on as they are doing at present it looks like having parallel veins at the bottom of the mine. As far as I can ascertain in the old Minera Mine this northern vein has not yet been found, and, therefore, it is quite possible that we may have a run of rich ore in our ground here, because the boundary helps us, whilst in the other vein it cuts us off.

THE EASTERN DISCOVERY IS MOST IMPORTANT,

should it only hold on, because we have land for something like half a mile in that direction all unwrought, because nobody knows anything about it. There are no workings within a mile further west. When we drove the first cross-cut we cut several strings, but nothing of great importance, though there was one string in the top cross-cut quite close to our boundary—so close, that we had to stop driving any further—with a very promising lode, but instead of ½ in. wide as in the upper level it is 4 ft. in the 315. The new dressing machinery is completed, and was put to work on Wednesday last, and though I will not say it will immediately increase our returns, it will do so ultimately very considerably. I should also add that, in order to provide against the dreadful weather we seem to be constantly visited with in Wales, the dressing floors, with the exception of the new ones, have been covered in, and I intend to do the same with the new ones as soon as I can. We are practically, so far as regards the weather, protected until we get 10 or 15 degs. of frost, which we have not had this season yet, though the rain and wind have been greatly against out-door work. In order to keep up the returns we are working night and day both above and below ground.

On the motion of the CHAIRMAN, seconded by a DIRECTOR, Mr. Thomas Johnson was re-elected a member of the board, and Mr. St. John was re-elected auditor.

A vote of thanks to Mr. H. Enfield Taylor for his services closed the meeting.

THE NEW WELSH SLATE CO., LIMITED.—An extraordinary general meeting was held on 9th inst., at the offices of the company, Joseph Howard, Esq., M.P., in the chair, for the purpose of confirming the resolution passed at the extraordinary meeting, held on 23rd ult., to increase the capital of the company to 75,000*l.* by the issue of 2,000 5*l.* 8 per cent. preference shares. The resolution confirming the increase of capital was carried unanimously. The output for month ending Nov. 28 was 535 tons; gross value, 1,827*l.*

THE SAN JACINTO ESTATE, LIMITED.—Errata in report of meeting in last week's paper.—Page 842, under "WORK DONE," third and fifth lines, "I may say that before the company, &c.," should read, "I may say that before Capt. Harris took over the property there was scarcely any work done in the mine by the company." Page 843, under the "AMERICAN TIN MARKET," fourth line from bottom of paragraph, "Mines of your neighbours," should read, "In the lands of your neighbours, &c., &c." Page 844, under "THE CHAIRMAN REPLIES," first paragraph, "We have the batteries, &c.," should read, "We have the batteries on the ground, and concentrators for the head that is put up; but, for the other heads, we have to get a certain number of concentrators, &c., &c., &c." Page 844, last paragraph, third line from bottom, "Should be removed to the mouth of the mine," should read, "Should be put up at the mouth of the mine." Also in editorial remarks, page 827, eleventh line, "duty at the rate of 4c. per hundred," should read, "duty at the rate of 4c. per *lb.* will be imposed, &c., &c."

A pro rata allotment will be made to all applicants for Ten Shares and upwards.

The List will OPEN on MONDAY, December 14th, at 10 a.m., and CLOSE on or before WEDNESDAY, the 16th, at 4 p.m.

Certificates for Shares in exchange for Letters of Allotment will be ready on and after Monday, December the 28th.

THE TOMINIL MINES, LIMITED.

REGISTERED UNDER THE COMPANIES ACTS, 1862 TO 1890.

CAPITAL - - - - £500,000,

In 100,000 Shares of £5 each.

80,000 fully paid Shares will be allotted to the Western and General Development Syndicate, Limited, in full payment for the Mines, Machinery, Stores, &c., the remaining 20,000 Shares are intended to be issued to provide £100,000 for Working Capital, but the present issue of 10,000 Shares will, it is estimated, prove sufficient.

FIRST ISSUE OF £50,000 IN 10,000 SHARES OF £5 EACH,

PAYABLE AS FOLLOWS:—5s. per Share on Application; 15s. per Share on Allotment; £1 10s. per Share on March 1st, 1892; and the Balance in calls of not exceeding £1 per Share, and at intervals of not less than one month.

PROSPECTUS.

THE promoters of this Company are the Mexican Association, Limited, the Mexican Explorations, Limited, and the vendors, the Western and General Development Syndicate, Limited.

This Company is formed to acquire several groups of silver and gold mines situated at Tominil, in the State of Durango, about 4½ days' journey (mule-back) from Mazatlan, on the western coast of Mexico.

The principal mines were brought to the notice of the first two above-mentioned companies in June, 1890.

Relying on the powerful houses with whose credentials the mines were introduced, and influenced by the extraordinarily favourable statements (since verified) concerning the richness and extent of the ores they contain, it was at once decided to send the best known expert obtainable to examine and report upon them.

The expert selected by unanimous consent of those interested was Mr. Albert Grothe, M.I.C.E., Consulting Engineer to the United Mexican Mining Co., Limited, as an expert of the highest reputation in mining circles, and personally well-known to the syndicate from his position as director of the Mexican Association, Limited.

Mr. Grothe in due course visited the mines, and his report (which may be seen at the Company's offices) was so very favourable that it was decided to expend £25,000 in preliminary development work, with a view to eventually bringing out the present Company, should the results be deemed satisfactory.

For the purpose of raising this £25,000, as well as a further sum for the formation of this Company, in the event of the report of Mr. Grothe being substantiated, the Western and General Development Syndicate, Limited, was incorporated, and the necessary capital paid up.

The mines opened out are now sufficiently developed to justify the formation of this Company; the reports received from the managers of the syndicate proving the veins of ore to be of great magnitude and exceptionally high grade; these reports can also be inspected at the Company's offices.

For the future management of the mines the services of Mr. W. H. Armstrong have been secured. Mr. Armstrong takes the first rank

among successful mining managers, and his experience, skill, and integrity are vouched for by the most noted mine owners and engineers in the United States, among whom may be mentioned Mr. John W. Mackay and Messrs. Fraser and Chalmers, Limited.

Additional assurance of the *bonâ fides* of the Tominil Mines, Limited, is to be found in the significant fact that no cash is to be paid by the Company for the mines, machinery, stores, reserve ores, &c.; the consideration is entirely in shares, notwithstanding the large cash outlays by the Western and General Development Syndicate, Limited, aggregating nearly £30,000.

All preliminary expenses down to allotment, including advertising, registration and other charges, being provided for, the amount of this issue (£50,000) is left intact for working capital.

A *pro rata* allotment will be made to all applicants for ten shares and upwards.

Certificates for shares in exchange for letters of allotment will be ready on and after Monday, December 28th, 1891.

Two contracts have been entered into, one dated December 12th, 1891, between Western and General Development Syndicate, Limited, of the one part, and this Company of the other part, whereby the former agrees to sell, and the latter to buy, a group of mines, situated at Tominil, for a consideration of 80,000 fully-paid shares of £5 each, of and in the undertaking called the Tominil Mines, Limited; the other dated the 7th December, 1891, made between the Western and General Development Syndicate, Limited, of the one part, and W. F. Jack of the other part, which relates to the expenses in connection with the formation of the Company. Copies of these contracts may be seen at the offices of the solicitors of the Company.

Prospectuses may be obtained at the bankers, brokers, solicitors, or at the office of the Company.

Applications must be made on the accompanying forms, and must be deposited at the offices of the Mexican Association, Limited, 31, Lombard Street, E.C., or with the bankers of the Company.

ROBEY AND CO'S EXPANSION PORTABLE ENGINES

Possess the following advantages:—Great Strength, Extreme Simplicity of Design, First-Class Workmanship, Great Economy in Fuel, Ease of Management, Absolute Safety in Working, Great Power, and Durability.

N.B.—ROBEY & Co. are also manufacturers of Portable Engines, Semi-Portable Engines, Robey Engines and Locomotive Boilers combined (both Compound and Simple), Vertical Engines, High Speed Engines, Horizontal Fixed Engines (Simple and Compound), Sugar Mills, Locomotive, Cornish and Vertical Boilers, Winding Engines, Head Gears, Mine Pumps, Centrifugal Pumps, and every description of Machinery for Builders and Contractors.

IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO'S Stone Breaker and Ore Crusher, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame a neat and much stronger Frame of Rolled Steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the Machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the Machine is running so as to reduce the material to any desired size, and are adapted for either eubing or crushing.

N.B.—ROBEY & Co. are also manufacturers of Portable Engines, Semi-Portable Engines, Robey Engines and Locomotive Boilers combined (both Compound and Simple), Vertical Engines, High Speed Engines, Horizontal Fixed Engines (Simple and Compound), Sugar Mills, Locomotive, Cornish and Vertical Boilers, Winding Engines, Head Gears, Mine Pumps, Centrifugal Pumps, and every description of machinery for Builders and Contractors.

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

MARKETS SHOW MORE LIFE—PROBLEMS—DUTY OF THE PUBLIC IN RELATION TO BROKERS, AND VICE VERSA—TOMINILS AT A PREMIUM—THE FLOW OF PRICES.

THE market has been somewhat roused from its lethargy by a rustling of the leaves of business which was heard yesterday, and notably to-day. It is a curious fact, which may well take place with the Christmas conundrums — Why is it that in eight weeks out of ten Friday is always a more lively day on the market than its predecessors?

There are other market problems equally mysterious, as, for example, why is it that the public do not take up what they buy, instead of adopting the carrying-over system, and why is it they do not press for the delivery of the stock they have paid for? There are brokers on the market who are known to be short of shares by the thousand, and whose faces would bear anything but the self-contained look of satisfaction now to be found upon them, did the public act up to the spirit and the letter of the advice we have so often given them. They should avoid the carrying-over system as far as possible, and refuse to have a second transaction with any broker who does not promptly deliver the stock which has been bought. If the broker buys it, he is precious prompt in demanding from his clients the return of transfers and certificates. Why should not clients mete out the same measure of justice to brokers?

In a few (only a few, we are thankful to know) cases brokers have been known to give unsatisfactory reasons for the non-delivery of stock—reasons applicable to the inexperience rather than the knowledge of their clients. Sometimes reasons for delay are well-grounded, but in cases of undue delay or unsatisfactory correspondence, a note to the particular office from which the certificate should be forthcoming, will generally elicit a reply, giving a clue to the real facts.

It is to be hoped that the committee of the Mining Exchange will be as rigid in dealing with the cases of those of their members whose business methods may not be what they should be, as their contemporaries at the “big house over the way” have been this week. They have requested the resignation of two members,

whose conduct in relation to a client outside was the subject of an application to the committee. According to report, the brokers concerned had not been able to deliver some securities for which they had made themselves liable, and are stated to have resorted to subterfuge in excuse for their default. It will be satisfactory to the public to learn that whenever an irregularity of the kind is reported to the committee, measures are at once taken to punish the persons found guilty. Of course it remains for the client to take his case into the Law Courts if he has no other means of obtaining fulfilment of contract.

The applications for Tominil shares—the enterprise introduced a week ago, of which we spoke so favourably in our last issue—have been largely in excess of the actual number to be allotted, and to-night we hear that the shares are quoted at $\frac{1}{2}$ premium. It will be remembered that the directors were pledged to a *pro rata* allotment, and this undertaking was honourably fulfilled.

Referring first to the Indian section, which is the most steady of all, we have to announce the gratifying fact that the South-East Mysore re-construction has been perfectly successful, and also that the latest news from the mine is encouraging. The whole of our last article on the Colar Goldfield by “One who has studied it,” has been reproduced in the *Madras Mail*, and, with a fairness that always characterises our contemporary, the source from which it has been taken has been stated. We wish we could speak in similar terms of the fairness of some of our other contemporaries, who quote these Indian articles in various sorts of ways, the object being to conceal the source from whence they are taken, and to lead the reader to suppose that they have been written expressly for their own columns. The *Madras Mail* is clearly not a paper to stoop to such devices as these. The market for Indian shares has been quite uneventful this week. The rises have been purely fractional, and do not require special comment.

In regard to the Copper section there have been many transactions, influenced for the most part by Paris dealing, but here again the changes have been slight.

Far more important have been the dealings in General Foreign shares. First of all come those of Callao Bis, which, on Wednesday, looked unmistakably firm, and to-day were dealt in by thousands. On the week the shares are up 1s. 6d., which will not be overcheerful news for those who are known to be short, and who, wishing to close their books at a low price, ran about wringing their hands, crying “Woe unto them, for a call is coming.” The market for these shares closes very firm, and it is quite probable that in the early part of the week much better prices will be seen. There has also been a good deal of business in De Lamar shares, where a dividend, of 15 per cent. is freely spoken of. The shares have risen 3s., with the prospect of still better quotations. Elkhorn, which seems to move in sympathy, has also not been left out in the cold. The shares are up. The satisfactory news from Palmarejo sent by the chairman, Mr. Pigou, who is now on the spot, had a beneficial influence on quotations. Golden Feathers are better, but Golden Gates do not seem to move. The meetings of both companies are fixed for next week, and we shall, as usual, give full reports. The director, Mr. Kirkpatrick, and the secretary, Mr. Harvey, will be at the meeting to give an account of all they saw and did when hobnobbing with Col. McLaughlin at Oroville. There has also been a rise in Tolima shares, and the agitation for reducing the denomination from 5*l.* to 1*l.* is proceeding apace. Mr. Thos. Thompson is taking the lead in this matter, and is receiving general support. Don Pedros seem strangely low when considered in relation to the prospects of the mine. There has been a decline on the week, which, strange to say, seems to have followed a considerable amount of investment buying. Shareholders have the option of making their shares fully paid, and may be advised to do so, because it is only these that can be dealt in on the market. There has been some market for El Callao shares which are weaker in sympathy with Richmond, La Luz, Yankee Girl, and one or two other descriptions. During the week there was a rise of 9d. in Flagstaff shares, which, however, does not seem to have been fully maintained.

Colombian Mines have, writes a correspondent, been without feature, but it may be mentioned that a strong combination of Stock and Mining Exchange men are taking in hand the

question of sub-dividing Tolima 5l. shares into others of 1l. each, it being thought that such sub-division would prove of benefit both to the company and the market. Tolima "A" shares close at 9½l. to 10l. xdl., and the "B" shares about 6½l. to 7l. Colombian Hydraulic and Orita are unchanged at 22s. to 23s. and 12s. 6d. to 13s. 6d. respectively. Colons have been bought at 4s. 3d. to 4s. 9d., and Lomas present a stiff market at 2s. to 2s. 6d. Tesoros keep flat, but it is expected will go better after payment of the call. Gravels close at 10s. to 10s. 6d.

Here is a leaf from the diary of a broker in regard to Colon shares:—"I began (he says) to deal in Colons in Jan. at 4s.; in Feb. I kept my book right at 4s. 9d.; in Apl. I bought at 3s. 3d.; in May I sold at 3s.; in July they were down to 2s.; in Nov. they rose to 3s. 9d.; and this week 4s. 3d. That is not so bad if you consider what a dreadful year this has been for securities of every kind."

In the African section there has been little that is worth chronicling. In the Land and Gold departments the changes have been fractional, and as for the Diamond market, attention seems to be concentrated on the "great pearl case" in the Law Courts.

Australian shares have, for the most part, been weak, including Australian Broken Hill and Wentworth Proprietary.

Home mines have moved downwards principally, and confidence in Cornwall will not be strengthened by what took place at the Wheal Uny meeting to-day, when a call of 10s. was made under unusually dispiriting circumstances. As an indication of the state of copper mining in Cornwall, it is mentioned that, whereas in Gwennap, at one time, probably 5,000 persons were employed in the (about 20) mines in that neighbourhood, at the present moment not one of them is being worked. Levant miners are on strike on account of an attempt to re-introduce a time register which was dropped about two years ago. Levant is the only dividend-paying mine in the district, except Owles. The floods have seriously affected the working costs of many mines.

We can hardly expect that much business will be transacted next week, as we shall be in the holiday season, and we go to press a day earlier.

AFRICAN LANDS.

Remarks.—The feature of the week has been the free dealing in Chartered shares, which at one time changed hands at 15s., but afterwards rallied and close at last week's quotations. Exploring, Oceana and Goldfields have fallen.

Business.—A rise is shown in Exploration of ½ and Transvaal Gold, 3d.; whilst the following have fallen:—Bechuanaland, 1½; Exploring, ½; Goldfields of South Africa, ½; Goldfields of South Africa New, ½; London and South African, ¼; Oceana, 1½; Read's Drift, ½; Silati River, 6d.; Transvaal Estates, 1s.; and Transvaal Lands, 1½.

KAFFIRS.

Remarks.—The market has been very neglected except for Pioneer shares, which have had a slight rise. Declines have occurred in Pigg's Peak, Ferreira, Jumpers, Simmer and Jack, and Langlaagte. The market closes weak.

Business.—A rise is shown in Sheba of 6d.; Glencairn, 9d.; Langlaagte Block B, 6d.; Pioneer, ½; Spes Bona, 3d.; and Knights, 1s. The falls are as follows:—Pigg's Peak Ordinary, 2s.; Pigg's Peak Preference, ½; Bantjes, 6d.; City and Suburban, ½; Durban Roodepoort, ½; Ferreira, ½; Forbes Reef, 6d.; Henry Nourse, 1½; Jumpers, ½; Langlaagte, 1½; Moss Rose, 1s.; Robinson, 1½; Salisbury, 1½; and Simmer and Jack, ½.

DIAMONDS.

Remarks.—There have been free dealings in De Beers and Gordons, the former having risen considerably. On the other hand North-Eastern Bultfonteins have fallen.

Business.—A rise is shown in De Beers of 1½; Gordon, 1s.; and the only fall to note is in North-Eastern Bultfontein of 1½.

1/2	Burma Rnby Mines 15s. paid ..	1/2 — 1/2

INDIANS.

Remarks.—There has been very little business in this class, but the tendency has been downwards. The only exception is that of Ooregum Preference, the shares marking a rise of 1.

Business.—A rise is shown in Ooregum Preference of 1, whilst a fall has taken place in Colar Central of 6d.; Goldfields of Mysore, 6d.; Indian Consolidated, 6d.; Mysore West, 6d.; Nine Reefs, 6d.; and Nundydroog, 1½.

COPPER.

Remarks.—There has been a slight fall in the price of the metal, but it has not affected the shares to any material extent. Tintos are slightly lower, but these shares are practically controlled in Paris. Capes have fallen 10s. on the new issue, while, with a rise of 5s. in Tharsis, there is no other alteration to call for attention.

Business.—A rise is shown in Tharsis of $\frac{1}{2}$, whilst a fall has taken place in Capes of $\frac{1}{2}$; Namaqua, $\frac{1}{2}$, and Rio Tinto, $\frac{1}{2}$.

AUSTRALIANS.

Remarks.—This market has been somewhat neglected, with the exception of Wentworths, which have, however, fallen, although some considerable dealings have taken place. Anstralian Broken Hill Consols are also lower.

Business.—A rise is shown in Bonnie Dundee of 3d., but the following are lower:—Australian Broken Hill, 9d.; Gympie Golden Crown, 6d.; Gympie Great Eastern, 3d.; Mosman, 3d.; and Wentworth Proprietary, $\frac{1}{2}$.

GENERAL FOREIGN SHARES.

Remarks.—Considering the time of the year a fairly good business has been transacted, and in a few instances rises have occurred. De Lamar, Callao Bis, Golden Feather, Elkhorn, and Palmarejo have all been largely dealt in during the week. Richmonds and Don Pedros are a shade lower, but close firm.

Business.—A rise is shown in Almada of 3d.; Amador, 3d.; Balkis, 6d.; Callao Bis, 1s. 6d.; Colorado, 3d.; De Lamar, 3s.; Elkhorn, 2s.; Flagstaff, 6d.; Golden Feather, 2s. 6d.; Golden Gates, 3d.; New California, 3d.; Palmarejo, 1s.; Tolima, $\frac{1}{2}$ (now ex. div.); and United Mexican, 6d. The falls are in Colon of 3d.; Don Pedro, $\frac{1}{8}$; El Callao, $\frac{3}{8}$; Gravel Gold, 6d.; Loma, 3d.; Montana, 3d.; Richmond, $\frac{1}{2}$; Silver Mines of La Luz, 9d.; and Yankee Girl, 3d.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Telegram from the managing director, Dec. 11:—"Fifteenth shipment, consisting of 24 cwt. of ore, containing 6,100 ozs. of silver, will be shipped for London per steamer, leaving Adelaide on Dec. 23. Will ship next week additional output 8 tons medium grade ore, containing 206 ozs. of silver to the ton, and 40 per cent. of lead."

BRITISH BROKEN HILL PROPRIETARY.—During the week ended 10th inst., 478 tons were treated, including 144 tons of iron ore, yielding 72 tons of lead, containing 5,736 ozs. silver. During the week ending 17th inst. 469 tons of ore were treated, including 78 tons of iron ore, yielding 52 tons of lead, containing 4,690 ozs. silver.

BROKEN HILL PROPRIETARY.—During the week ended 10th inst., 4,900 tons of ore were treated, yielding 735 tons of lead, containing 176,400 ozs. silver. The cable also states that the price of shares in Melbourne is 7 $\frac{1}{2}$ 4s. During the week ending 17th inst. 4,849 tons of ore were treated, yielding 824 tons of lead, containing 179,413 ozs. of silver. The cable also states that the shares are 7 $\frac{1}{2}$ 2s. 6d. in Melbourne.

GOLDEN GATE.—The company on the 14th inst. declared a dividend of 1s. per 48,000th share. Mine looking splendid, and crushing continues.

GYMPIE GREAT EASTERN.—A cablegram, dated Dec. 15, gives the result obtained during the past month, viz.:—"24 days, 600 tons, 554 ozs., 1,950 $\frac{1}{2}$ value, 1,100 $\frac{1}{2}$ profit."

HARRIETVILLE.—A telegram from the mine Dec. 16:—"Cleaned up Dec. 16. Mons Meg Mine, 500 tons; Guerdon Mine, 250 tons; together, 228 ozs. Tiddlee Mine, 61 tons, 20 ozs. Amalgamating pans, 39 tons, 66 ozs."

NO. 7 NORTH-EAST QUEEN.—The mine (14th inst.) has cleaned up 260 tons for 468 ozs. smelted gold; value, 1,760 $\frac{1}{2}$. The usual bi-weekly dividend of 6d. per share is declared.

MIDAS.—Cable: "Yield for week ending Dec. 12, 49 ozs."

MILL'S DAY DAWN UNITED.—The company has crushed 1,000 tons of quartz for a yield of 1,040 ozs. of gold, valued at 3,585 $\frac{1}{2}$. The usual monthly dividend of 3d. per share has been declared.

NEW QUEEN.—Crushing for the past fortnight:—350 tons (yielding) 560 ozs. (gold). We have shipped 640 ozs. per Avoca.

VICTORY (CHARTERS TOWERS).—In future, dividends due to London shareholders of this company will be made payable at the London Branch of the Australian Joint Stock Bank, the company's bankers.

WENTWORTH PROPRIETARY.—Cable from Mr. W. H. Irwin, the manager:—"The north-west drift, Phoenix shaft, 200-ft. level, is showing some improvement. The vein in winze No. 2 north of Phoenix shaft is worth 2 ozs. per ton. Phoenix No. 2 vein is producing arsenical pyrites in the winze, and the winze on No. 1 Phoenix vein below 200-ft. level is being sunk in very rich arsenical pyrites. The rich ore (varying from 35 ozs. to 160 ozs. per ton), Crinoline vein, is now being stoped, and continues to improve. Good progress is being made in the different workings at the Reform shaft."

FOREIGN MINES.

ALMADA AND TIRITO.—Cable from the superintendent:—"Last month's profit was \$1,500; water very scarce."

CASTILLON (PYRENEES).—The directors have sold 50 tons lead ore to Messrs. Nevill, Druce and Co., of Llanelly, at 8 $\frac{1}{2}$ 16s. 6d. per ton, f.o.b. Bordeaux.

COPAPO.—At a meeting of shareholders held on Tuesday a dividend was declared of 3s. per share, free of income-tax. Notice is given that the above dividend will be paid to the holders of bearer warrants against coupons No. 6 on and after Dec. 18, provided the coupons are lodged at the company's office two days for examination.

DE LAMAR.—Capt. Plummer cables in answer to an enquiry as to when the additional 10 stamps would be in operation:—"The new machinery has started gradually. All working satisfactorily now."

ELKHORN.—Cable: "Bullion produced for week ending Dec. 12, \$8,960."

ESMERALDA.—The manager cables:—"The north drift is out 20 ft. on the Esmeralda vein, which at this point is looking better. The south drift is out 4 ft.; there is little ore, and is looking encouraging."

FRONTINO AND BOLIVIA.—Oct. advices state:—"Produce, 5,648 $\frac{1}{2}$ 9s. 3d.; cost, 4,537 $\frac{1}{2}$ 11s. 1d.; estimated excess of returns, 1,110 $\frac{1}{2}$ 18s. 2d."

GOLDFIELDS OF URUGUAY.—The directors have sold, through Messrs. Pixley and Abell, the bullion produced during the month of Oct., which realised 1,273 $\frac{1}{2}$ 11s. 4d. nett.

GRAND CENTRAL.—The manager reports that half of the road is now finished, and that the vein is opening out as good as was expected.

GRETA COLLIERIES.—The directors notify that their debenture coupons, due 31st inst., will be paid by the London Joint Stock Bank, Limited, 5, Princes Street, E.C., on and after that date.

GUADALCAZAR QUICKSILVER.—Col. Alexander Gordon, of 27, Cheapside, E.C., and of Chingford, Essex, has joined the board.

JAY HAWK AND LONE PINE CONSOLIDATED.—Telegram from the manager, Capt. H. Pridcaux, viz.:—"Mill stopped crushing to clean up. Have shipped in all 21 bars bullion, value \$16,500, and will ship forthwith concentrates, estimated value, \$6,500. Mill started again and has run four days; the returns show 4,400 ozs." N.B.—The cable returns have given an estimated total of \$20,900 against the above \$23,000. Under date Dec. 2 Mr. Pridcaux reports:—"The lode below the 700 in the shaft is expanding again, and is better than last week. In the 700-ft. level west we have in the bottom or sole of the level a vein for over 100 ft. in length, and 5 to 6 ft. thick of rich ore. The tunnel under the hill shows a vein of ore 3 ft. thick. The mine altogether is looking well. The mills are crushing regularly. Both mine and mills are in good working order."

LA LUZ.—Cable from Mr. H. A. Hilton, the manager:—"Sample 100 tons gave an assay of \$10 in gold and 30 ozs. in silver. Assorted sample, \$300. With proper ventilation of the mine it will yield 100 tons per day of 24 hours. To improve the ventilation, working day and night."

MAID OF ERIN.—Cable: "Gross yield for the week ending Dec. 12 1,000 tons; estimated value \$13,000."

OSCAR.—Telegram from the manager, Dec. 12:—"Sinking on eastern lode, which dips at the angle of 35. There is every appearance that this lode will yield an ore body of considerable value."

OURO PRETO.—A telegram, dated Dec. 13, gives last month's return of gold as follows:—"2,902 tons of quartz produced 8,388 oits. of gold (967 ozs.); mill idle three days."

PALMAREJO.—Coupons No. 2 of the 1st mortgage debentures, due Jan. 1, 1892, will be paid on and after that date at the offices of the company, 4, Copthall Buildings, E.C.

PORT PHILLIP.—Advices, dated Nov. 9:—"Quartz raised by tribute parties for the fortnight ending Oct. 31 amounted to 181 tons; yield, 57 ozs. 2 dwts. 12 grs. gold; value, 231l. 7s. We are increasing the number of tributers, and assisting some parties who are opening up the ground, sinking winzes, &c."

POTOSI.—Telegram:—"Potosi Viejo lode 5 ft. wide; the prospects are encouraging; Ingersoll drills have arrived, and are giving good results."

RIO TINTO.—The company announces payment of the drawn bonds of their five per cent. issue of 1884, and coupons on their five per cent. issues of 1880 and 1884, due 1st prox. They invite holders to present coupons and drawn bonds at once.

RUBY.—Telegram from Eureka:—"30 tons tribute ore shipped and smelted, producing to company \$76."

SAMBAS EXPLORATION.—A sample of ore, sent by the company's manager, has been sent to Messrs. Johnson, Matthey and Co. for treatment, and the following is the result of their assay:—Produce of gold, 3 ozs. 9 dwts. 12 grs.; produce of silver, 11 ozs. 5 dwts.

HOME MINES.

WHEAL UNY.—The position of affairs as explained to-day was extremely serious. The loss, taking into account so-called assets which are irrecoverable, was 3,900l., and a call of 10s. was made. There were originally 12,000 shares, but by relinquishments these have been reduced to 8,167. Mr. Strauss is taking the matter boldly into hand, and is determined before certain changes proposed by the manager are carried out that he will only have with him in the venture solvent partners. A meeting will be held in Cornwall on Jan. 8.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

SIMMER AND JACK.—The profit for Nov. was 4,300l.

NIGEL.—Result of last month's crushing, 4,093 ozs. of gold.

FERREIRA.—Cable:—"Crushings for last month 4,251 tons, yielding 3,848 ozs. gold."

TRANSVAAL COAL TRUST.—Operations for Nov.:—Output, 10,000 tons; profit, 2,600l.

NEW CHIMES.—Cable from the secretary to-day:—"Nov. output is 1,753 ozs., including 476 tons concentrates treated."

DURBAN-ROODEPOORT.—The directors have declared an interim dividend of 2s. per share (10 per cent.) free of income-tax, payable on Jan. 11.

GIE APPANTOO.—Cable from the mines gives Nov. returns:—Appantoo, 62 ozs.; Prestea, 370 ozs. Small output attributable to fall of mullock on east level."

GELDENHUIS.—The company declares a dividend of 15 per cent., payable to all shareholders on the books of the company on Dec. 31. The transfer books will be closed from Jan. 1 to 7, inclusive.

PIGG'S PEAK.—A message has been received in cipher from Barberton, which reads as follows, viz.:—"The present mill returns unsatisfactory; mill working day and night until clean-up. Cannot give actual result."

TRANSVAAL MORTGAGE, LOAN AND FINANCE.—The coupons of the 5 per cent. debentures due 31st inst. are payable on and after that date at Messrs. Prescott, Dimsdale, Cave, Tugwell and Co., Limited, 62, Threadneedle Street, E.C.

KLERKSDORP GOLD ESTATES.—The liquidators announce that the re-construction of the company has been successfully carried through, and that the lists of application for shares have been closed at the company's bankers, Martin's Bank, Limited.

GRASKOP MILL AND MINING.—A cable announces the result of the Nov. crushing as follows:—"Crushed 574 tons; yield, 193 ozs.; estimated cost, 490l." The consignment of gold from the Oct. crushing (164 ozs.) has been sold through Messrs. Johnson, Matthey and Co., Limited, for 631l. 16s. 4d., or 3l. 16s. 7d. per oz.

CROWN REEF.—Crushed during 27½ days last month 6,968 tons, which yielded 4,008 ozs. of smelted gold. The revenue for the month was 14,328l. 12s., and the working expenditure was 7,437l., leaving a balance of profit for the month of 6,891l. 12s. The expenditure on capital account was 1,677l., making a total expenditure for the month of 9,114l.

NORTH-EASTERN BULTFOUNTEIN.—Telegraphic advice for two weeks ending 12th inst. announces:—"Washed 23,000 loads top ground; yield, 3,000 carats of diamonds; 900 loads blue-ground from 140-ft. level; yield 350 carats of diamonds; 20 loads screened blue ground tested from 170-ft. level; yield 13 carats of diamonds; increase of blue ground on floors, 3,320 loads."

EAST SHEBA (Nov. 16).—Consulting engineer's report:—"The Standard shaft was holed at 264 ft. 4 ins. on the 12th inst.; thus the contractors have driven 11 ft. 4 ins. since the 1st inst. I gave them 8 ins. for squaring up. On going a few feet beyond the shaft I came upon the argillaceous fissure, so well known in the Sheba, and commonly called the talcose vein; it is not quite so wide as in the Sheba ground. North of the talcose vein is quartzite for about 35 ft., then comes [what to my mind is undoubtedly the Sheba lode,

although there is no perceptible hanging-wall; the rock is similar in character to the low-grade ore found in the Sheba. Drifting east should at once be commenced at the rate of about 35 ft. per month; it should cost not more than 3l. 15s. per ft.—H. WORTHINGTON.

COMMERCIAL NOTES.

METALS.

COPPER has been quiet and easier. G.M.B. warrants, after easing to 44l. 7s. 6d., recovered again to 45l. cash. Three months has ruled 7s. 6d. to 10s. premium over cash. To-day's prices are 45l. cash and 45l. 10s. three months. The charters for last half Nov. 1,100 tons, and for first half Dec. 700 tons. Supplies to England and France during first 14 days Dec. 4,378 tons. Delivery 4,408 tons. Visible supply on Dec. 15, 57,620 tons against 57,590 tons on Dec. 1. We quote English tough, 48l. to 49s.; best selected, 49l. to 50l.; strong sheets, 58l. to 59l.; India sheets, 56l. to 56l. 10s.; yellow metal sheets, 5½ to 5½; sheathing, 5½ to 5½; ore, 8s. 6d. to 9s. 8s.

TIN has been quiet but firmer, and prices have recovered to 91l. cash.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING DEC. 19.

Attaree Khat Tea...	...	2½ per cent.
Amazon Steam Navigation	...	3 per cent.
Assam Co.	2½ per cent.
Borelli Tea	...	2 per cent.
British Steamship Investment, Preference	...	6 per cent.
British Steamship Investment, Deferred	...	5 per cent.
Colonial Bank	...	5 per cent.
Crompton and Co., Preference	...	7 per cent.
Crompton and Co., Ordinary	...	5 per cent.
Continental Union Gas	...	8 per cent.
Commercial Bank of Scotland	...	7 per cent.
Eastern Extension Telegraph	...	2s. 6d. per share.
Electric Construction	...	6 per cent.
Edward and John Burke	...	10 per cent.
Majuli Tea	...	2½ per cent.
Moabund Tea	...	5 per cent.
National Bank of Scotland	...	15 per cent.
Ohlsson's Cape Breweries	...	10 per cent.
Private Register	...	6 per cent.
Royal Exchange Assurance	...	4 per cent.

RICHARD SMITH MEMORIAL FUND.

ON Mr. Smith's resignation of the office of Instructor in Assaying at the Royal School of Mines, in Dec., 1890, a committee was formed to collect subscriptions for a testimonial in recognition of his 40 years of useful and unostentatious service. The list, however, had not been closed, when Mr. Smith succumbed, on Aug. 6, after several painful surgical operations, to an attack of paralysis. He leaves a large family in very straitened circumstances, his civil pension, of course, ending with his life. The subscriptions received or promised in response to the former appeal amount to 210l. 19s. 6d. In the present more pressing circumstances a further appeal is necessary. It is believed that many old School of Mines men and others would wish to increase their subscriptions, while those who, owing to absence from England or other causes, have not yet subscribed, will now have an opportunity of doing so. It is proposed that the fund shall be devoted in any way the committee may deem advisable to the assistance of Mr. Smith's family, and it is hoped that their appeal will meet with a prompt and liberal response. Subscriptions may be sent to the hon. treasurer, Edward Matthey, Esq., 78, Hatton Garden, London, E.C., and lists will be published in the MINING WORLD and *Mining Journal*.—T. KIRKE ROSE, Royal Mint, London, E., A. HARPER CURTIS, 13, South Hill Park Gardens, Hampstead, N.W., Hon. Secs.

REVIEWS.

ELECTRICITY UP TO DATE. By John Verity, M. inst. E.E. London: Frederick Warne and Co.

This is a popular treatise on a subject which is daily growing in importance. The author has dealt with the matter in an exhaustive and comprehensive manner. The work contains articles on the different modes of producing electricity, the public supply of electricity, the dynamo, electricity as an illuminant, electricity as a power, and other things of interest in connection with the subject. There is also a glossary of electrical terms, and the work is illustrated. The book will supply a public want.

WHITAKER'S ALMANACK FOR 1892.

We have received a copy of this work, which continues to increase in size. Additional space has been allotted to educational matters, and a separate article dealing with educational progress and occurrences is given for the first time. Agricultural education also forms the subject of a separate article. The statistics given have apparently been prepared with much care, and may be relied upon as correct. An article on our present ocean mail supplies a convenient record of the rise, progress and best achievements of the great lines of ocean steamers. Naval gunnery and a synopsis of the results of the census are also amongst the subjects separately treated.

LETT'S DIARIES, 1892.

Messrs. Cassell and Co. have again published the usual assortment of these popular diaries. They are of all sizes and shapes, and are compiled for every conceivable purpose.

THE NORTH WALES SLATE TRADE.—There is a better feeling in the trade than has been the case for several years, owing to the reduced stocks and smaller number of quarries producing. For the last few weeks orders have been given out very freely for delivery over the first months of next year by both home and foreign merchants, and some difficulty is being experienced in supplying immediate wants.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Dec. 17).—Watson's engine shaft: In the 172-fm. level east the lode is 3 ft. wide, producing saving work of copper and mundic ores. In the 160-fm. level west the lode is 3 ft. wide, and is yielding 2 tons of copper ore per fm. In the 148-fm. level east the lode is 3½ ft. wide, and is producing some good copper and mundic ores. The stopes throughout the mines are turning out good quantities of copper and mundic ores.—W. CLEMO.

DRAKEWALLS (Dec. 17).—The stope in the bottom of the 147 east is producing 14 tons mundic per fm., and saving work for tin, and the stope in the bottom of the 132 west of the cross-course is yielding 5 tons mundic per fm. and good stones of copper ore. We shall turn the draught on Saturday next for another clean out of arsenic soot.—H. RODDA.

WHEAL METAL AND FLOW (Dec. 16).—I am pleased to say the lode in the 27 end is better defined than for some time past, but is not yet got out of the influence of the slide. The lode above the slide is about 1 ft. wide, composed of strong sulphur, mundic, peach, white priant, a little tin, but not to value. The two new pulverizers are working well.—S. P. CURTIS.

FOREIGN MINING INTELLIGENCE.

BALAGHAT-MYSORE (Nov. 25).—North engine shaft: The 600-ft. level north has been driven 9 ft. 9 ins., or 346 ft. 9 ins. from the shaft; the quartz has become much smaller, being now only about 8 ins. wide; it will, however, I think, soon again improve in size; it assays 2 ozs. 8 dwts. 4 grs. of gold per ton. The machine rise in the back of this level has been advanced 14 ft. 4 ins., or 71 ft. above the level; the quartz here has also become squeezed, and is now only about 9 ins. wide; it assays about 3 ozs. per ton. The stopes in the back of this level yield quartz of about 16 ins. wide, and assay, on an average, 5 ozs. 5 dwts. 20 grs. of gold per ton. The 600-ft. level south has been driven 8 ft., or 33 ft. from the shaft; the quartz is improving a little in size and quality, and now assays 12 dwts. 21 grs. of gold per ton. I am hoping we shall soon get a further improvement here. The No. 1 winze in the bottom of the 500-ft. level south has been sunk 4 ft. 6 ins., or 51 ft. below the level; the quartz is about 4 ins. wide in the north end, but in the southern end of the winze it is nearly 1 ft. wide, and assays about 1½ oz. of gold per ton. I am pleased to say satisfactory progress is now being made with the clearing and securing of the 500-ft. level north. I hope we shall get through the break in the course of a day or so; we shall then soon be able to reach Haines' shaft at this level. The stopes in the back and bottom of this level produce quartz of about 14 ins. wide, and assay, on an average, 4 ozs. 8 dwts. 17 grs. of gold per ton. The stopes in the back of the 410-ft. level north yield quartz of about 1 ft. wide, and assay about 15 dwts. per ton. The 330-ft. level south has been driven 5 ft., or 62 ft. from the shaft; the quartz is at present small. The stopes in the back of the 330-ft. level north yield quartz of about 10 ins. wide, and assay 1 oz. 3 dwts. 8 grs. of gold per ton. The stopes in the back of the 270-ft. level north produce quartz of about 1 ft. wide, and assay, on an average, 2 ozs. 0 dwts. 8 grs. of gold per ton. The stopes in the back of the 270-ft. level south yield quartz of about 9 ins. wide, and assay 3 ozs. 3 dwts. 20 grs. of gold per ton. The stopes in the back of the 165-ft. level north produce quartz of about 2 ft. wide, and assay, on an average, 2 ozs. 2 dwts. 18 grs. of gold per ton. Haines' shaft: This shaft is being pushed forward as fast as possible, and will, I hope, be down to the 500-ft. level in the course of a few days. Surface: All our general work is progressing fairly satisfactorily.—J. PRYOR.

BRATSBERG.—Report for week ending Dec. 5:—Hoffnung Mine: No. 2 adit level is producing more ore to-day than last week, but still without value; we expect, however, daily an improvement. No. 1 rise is yielding ½ ton per fm., and No. 2 rise appears to be improving. The winze sinking in the bottom of this level is still worth 1 ton per fm. At No. 3 adit level there is no change either in the end or in the rise. We are unable yet to resume driving No. 4 level. Murchison's mid-level is worth ½ ton per fm.; the lode here is in a very irregular state, and the ore for the time being is found in bunches, but it is of a very good grade for copper, and contains more silver than the ore from any other part of the mine. Johannes Mine: The level east on Howard lode is worth about ½ ton per fm., but the western end continues poor, although of promising appearance. The rise in the back is still opening up satisfactorily, but owing to the want of ventilation at this point we do not make the progress here we could wish. We are making fair progress in laying the tramroad at the shallow cross-cut. We have now 100 miners employed, but two or three are leaving in the course of a few days. Surface work and remarks: Owing to the breakage of the stonebreaker axle, necessitating the fixing of a new one, we suffered a loss of one day at the jiggling machinery during the past week, but since the repair all has been running smoothly.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING WORKS.—Report for week ending Dec. 5:—Smelting works: There is nothing to report here, but the coke vessel arrived at Skien Dec. 1, and we are expecting to hear to-night of the arrival of the barges at Bandakslid with a supply. Electro depositing is proceeding as usual, and there is nothing new here to report on. This department will soon be idle for want of copper for the tanks; there will, however, be one more batch sent before this happens. On Saturday morning we dispatched to you 524 copper plates of the net weight of 8,598 kilos, or 8 tons 9 cwt. 1 qr., which we hope will arrive safely.—T. F. SMITH.

CALLAO BIS (Nov. 22).—Advices from the mines:—Independiente: Since the 8th inst. the work has been continued as follows:—Shaft: The shaft men have been employed to fix the other 8-in. plunger lift, which in a few days more will be completed. These two plunger lifts are capable of keeping the coming water comfortably, say, six strokes per minute, which is very easy for our pumping engine, besides making a great economy in our fuel. The No. 4 cross-cut has been advanced 11 ft., or 51 ft. from shaft. No change has taken place in the ground since last reported. We have slightly turned the cross-cut south-west, in order to strike the present lode now working on at right angles, which I hope to meet in about 40 ft. more driving. The No. 3 level south has been advanced 40 ft., or 266 ft. from shaft; lode showing 3 ft. wide, of good value. The raise in the back of this level has been advanced 36 ft.; lode showing 4 ft. wide, of good value. The No. 2 level south has been advanced 43 ft., or 281 ft. from shaft; lode showing 6 ft. wide, of good value. The

raise in the back of this level has been advanced 36 ft.; total distance, 84 ft.; lode 6 ft. wide, of fair value. The No. 1 level south has been advanced for the present raise 20 ft.; lode showing 6 ft. wide, of good value. The No. 1 level north has been advanced from the present raise 25 ft.; lode showing 3 ft. wide, of fair value. Surface work: The other 10 stamps completed. Mill results: 678 tons yielded 859 ozs. bar gold (already advised by cable). Mine looking very promising.

CAPE COPPER.—Oct. report:—Ookiep: The driving of the 117-fm. level east of 72 winze is temporarily suspended to enable us to cross-cut northward from the extreme forebreast; the rock contains spots of copper ore. The ground in the 117-fm. level north of 72 winze has during the month produced a few stones of copper ore. There is no change to notice in the 117-fm. level south towards the new shaft; the rock is hard, compact, massive quartz. The ground in the 105-fm. level east of No. 6 level is composed of quartz, mica, iron, and copper ore, the latter not sufficient to value. The 92-fm. cross-cut north of main east level has of late produced a few stones of iron and copper pyrites. The 68-fm. level (No. 6) south-east of 24 winze is still yielding stones of copper ore. The stopes in the 92 and upper levels are yielding their usual quantities of copper ore. Trial Mines—Nababeep south: The 59-fm. level south-east of north-east level is producing fully 1 ton of copper ore per fm., and the cross-cut north at this depth is yielding a little saving stuff. The ground in the 43-fm. level north-east from shaft is spotted with copper ore. Spectakel: The new shaft sinking below the 36-fm. level is yielding 2 tons of copper ore per cubic fm., and the winze sinking below the same level is worth 3 tons per fm. The stope in the 36-fm. level east of No. 1 flookan course is producing about 1½ tons of copper ore per fm. Ookiep east: The rock in bottom of shaft sinking below the 66-fm. level is producing occasional stones of copper ore.—Capt. HENWOOD.

—Returns for Oct.: Ookiep, 1,970 tons of 23 per cent. Arrival at Port Nolloth: The Swansea Castle. Arrivals at Swansea: The Inverness and John. Bill of lading received: 650 tons of ore per Hinda.

CHAMPION REEF (Nov. 25).—Fortnightly report:—Mysore section: Carmichael's shaft has been sunk 3 ft. 9 ins.; total depth, 257 ft. 3 ins. Driving north at the 225-ft. level, 10 ft. 6 ins.; total distance, 27 ft. 6 ins. Driving south 20 ft. 6 ins.; total distance, 186 ft. 3 ins.; the lode in the end is small, and carries only a trace of gold. Ribblesdale's shaft: No sinking has been done, as the shaft-men have been employed cutting ground for tip-plat and bearers for taking up sets and plunger pole, which is now being fixed just below the 240-ft. level. After this work is completed, and the water taken up at the level, the sinking of shaft will be resumed with rock-drills. At the 240-ft. level the south drift has been advanced 16 ft. 9 ins.; total length, 167 ft. 9 ins.; the lode in the end is 1 ft. wide of quartz, which assays 1 oz. 11 dwts. per ton. The rise in the back of this level has been risen 12 ft. 3 ins.; total height above level, 32 ft. 6 ins.; the lode during the last few feet has opened out to over 4 ft. wide, of quartz of very good quality, the average assay value being 2 ozs. 12 dwts. 6 grs. per ton. This rise from the back of the level has had a good and productive lode all through, and will open up a good piece of stoping ground. The north drift has been advanced 17 ft. 9 ins.; total, 126 ft. 6 ins. The lode at this point has split into several branches, which only assay 2 dwts. per ton. Driving cross-cut east from this level 9 ft. 6 ins.; total length, 25 ft.; nothing of importance has been discovered in this direction, and the work is now suspended. Garland's shaft: Sinking 4 ft. 6 ins.; total depth, 279 ft.; the lode is 3 ft. wide of quartz, which assays 10½ dwts. per ton. The 240-ft. level: The south drift has been advanced 9 ft. 9 ins.; total length, 162 ft. At this distance we drilled a long hole, which, when blasted, holed through to the 240 level from Dalyell's shaft. The two small air pumps which are now at work pumping to surface at Dalyell's shaft will be dispensed with, as the water can now go back through the 240-ft. level direct to Garland's shaft pumping lift. The north drift has been advanced 13 ft. 6 ins.; total length, 179 ft. 11 ins.; the lode is 2 ft. wide, but at present the quartz is very white and unproductive. Dalyell's shaft has been sunk 11 ft.; total depth, 307 ft. 9 ins.; the lode is still small, only carrying a few inches of quartz. The north drift at the 240-ft. level has been driven 20 ft. 3 ins.; total length, 184 ft. 11 ins.; the lode is 2 ft. wide of quartz, which assays 9 dwts. 15 grs. per ton. Trial shaft: The drift north at a depth of 146 ft. has been advanced 26 ft. 6 ins. We have passed through some more old workings, which have gone below the level; in the present end the lode is small, but carries a little free gold. Coromandel section: Driving at the 380-ft. drift north at Prospect shaft, 5 ft.; total, 65 ft. 9 ins. The winze below the 320-ft. level north has been sunk 7 ft. 3 ins.; total depth, 62 ft. 6 ins.; lode 2 ft. wide; worth 4 dwts. per ton. We have now reached the depth of the 380 level, and driving has been commenced north from the winze. General: The six Italian miners have arrived in good health, and are at work with the rock-drills. The building of Italians' bungalow is finished, and the masons are now employed building permanent shed over the pumping engine and boilers at Carmichael's shaft.—R. C. JONES.

COLAR CENTRAL (Nov. 25).—The 200 north has been driven 8 ft., making a total of 78 ft. 6 ins.; the quartz is 2 ft. wide, of which 20 ins. are on the footwall, and the other 4 ins. are in the hanging; they are divided by a bar of country rock; the assay value is 8 dwts. to the ton. The 200 south has been driven 6 ft. 6 ins., making a total of 65 ft. 9 ins. No change to report; winze sunk, 5 ft. 3 ins.; total depth, 53 ft. 3 ins.; the lode is very small, and is worth only 1 dwt. 7 grs. to the ton.

COLORADO.—The manager's report for fortnight ending Nov. 30 is just to hand. He reports that active work is going on at 14 different points, the following being the most important:—Terrible Mine: 8th level west advanced 5 ft. since last report; lode, 4 to 5 ft. wide; mineral vein, 2 to 3 ins. wide. 1st level: The ore in back of stope is still very strong at about 3 ins. wide, and a good sale is expected from this stope this month. 2nd level: Lode, 4 ft. wide; mineral vein, 2 to 3 ins. wide. Coin lode, Brown adit level, now in 680-ft. from cross-cut; lode, 4 ft. wide. There is about 2½ ins. of almost solid ore, and everything goes to show that an ore shoot is being neared in this place. The lode is well-defined, carrying two good walls, and the lode matter is composed of excellent silver-bearing rock, with the mineral very firm on the footwall. Brown lode: Rockwell adit level: Lode, 4 ft. wide; mineral vein, 1 to 2 ins.

Brown tunnel level: Lode, 4 ft. wide; mineral vein, 2 ins. Mammoth tunnel level: Lode, 5 ft. wide; mineral vein, 2 to 3 ins. Silver ore tunnel level: Two stopes; lode, 4 ft. wide; mineral vein, 2 to 3 ins. wide. Glasgow lode: Mammoth tunnel level: Lode, 4 to 5 ft. wide; mineral vein, 2 to 3 ins. wide. The ore from the various workings is being prepared for market, and the sale will be reported next mail.

FLAGSTAFF (Nov. 21).—Since my last week's report I have been very busy with repairs in the shaft. I am getting on well with this work, and shall, I expect, finish it by the end of next week. I am making a very strong job of the shaft, and I think it will not require anything more doing to it for a good while to come. The machinery is working splendid; the compressors are doing much better than the old ones ever did. We are now working only one pair, and that gives us a pressure of 80 lbs. of air in the hoisting works, and the distance is now 1,400 ft. further than it was before. I am now bringing up the men to three meals in the skip from the mine through the shaft, and also letting them down to their work by the skip, which is a great saving of time. As soon as the shaft is finished I will commence clearing the 7th level, and push that work all I can. The mine, I am pleased to say, is looking excellent at all points; in some places better than it did last week. The ore above 6th is following a smooth wall, and I think this ore is sure to continue on up to the 5th level. It is all good ore, and more than half of it is first-class. The ore on this wall also extends downwards, and is a strong seam of ore. I have not yet explored it in depth, but shall commence doing so at once. We are now working on two other points, both below the 6th, which are furnishing good ore. The ore above 6th is from 14 ins. up to 1½ ft. thick, and below 6th from 10 ins. up to fully 3 ft. thick, and has not at any time during the week been less than 2½ ft. thick. The winze is 8 ft. wide, and the ore extends beyond each side of it, and how much further it is impossible for anybody to say. I think we are sure to have a mighty big body of ore here, and it is all good ore, a great deal of it first-class, with a good quantity of silver-lead and carbonates showing. Number of cars (tons) of ore taken out during the week 43—being 24 first-class and 19 second. The past week has been very stormy, and I have had some of the men shovelling snow. I have also had two men sacking ore, as Prof. Vincent wants to get down 200 tons more ore to Sandy, and make sale of it before he leaves, but I do not see how this is possible, for the snow is now 5 ft. deep, and still storming, and the tramway to Wasatch is, I think, blocked for the winter.—A. L. SWOPE.

FRONTINO AND BOLIVIA.—The directors have received advices from the mines, dated Oct. 21 and Nov. 6, also a letter from Messrs. Restrepo, dated Oct. 12. The statement for the month of Oct. is as follows:—1,370 tons of ore produced, bar gold, 1,760 ozs.; tributaries' gold produced, bar gold, 701 ozs.; bar gold, 2,461 ozs.; also 7,433 lbs. of sulphurets, valued at 523½. 17s. 6d. Estimated value of the gold and sulphurets, 5,648½. 9s. 3d.; cost at the mines, Medellin, and in London, and paid for gold bought of tributaries, 4,537½. 11s. 1d.; estimated excess of returns, 1,110½. 18s. 2d. It is announced that 24 heads are now at work at the new Silencio mill. The sum included in the above cost, expended on the work of the completion of the mill during the month of Aug., was about 535½.

GYMPIE GREAT EASTERN (Oct. 29).—Fortnightly report: During the past fortnight the cross-cut at the 730-ft. level east of the Orient reef has been extended 8 ft.; total, 477 ft. from the shaft. We are now through the leaders mentioned in my last report, the formation is about 3 ft. wide, and the leaders through it are from ½ to 1-in. thick, showing coarse gold. I should recommend rising on these leaders now to the slate bed, which is about 20 ft. up. Should they exist in the slate they should carry good gold. In putting up this rise we should hole through to the winze sunk from the 580-ft. level in about 50 ft., when levels could be started north and south to work the eastern portion of the Orient reef; these levels would be about 690 ft. The north drive has been extended 12 ft.; total, 136 ft. The crushing stuff is about the same as last reported, showing a little gold. The south drive has been extended 6 ft.; total, 96 ft. There is no change here. There is a large body of crushing showing a little gold in the stopes going north over the level. In the stopes over the level going south there is no change; they all show a little gold. The rise on the reef west of the dyke has been put up 4 ft.; total, 18 ft. There is a change coming in on the roof, and I believe it will make it better for working. The rise is now well ventilated. A door has been put in the cross-cut, and the drive and rise centred. This gives a good current of air at the top of the rise. 690-ft. level: The stopes going south above this level all show a little gold. I have four men working here. For the 19 days ending Oct. 16 there were 475 tons of quartz raised and crushed for a yield of 537 ozs. 2 dwts. 12 grs. of smelted gold. There are 15 head of stampers working for the mine; the other 10 head are idle at present. Everything about the mine, winding engine, and battery is in good working order. There are 59 men employed—52 at the mine, and seven at the battery.—J. JAMES.

INDIAN CONSOLIDATED (Nov. 21).—Phoenix section: Tramway level has been driven 12 ft. during the fortnight. The seam of decomposed stuff previously mentioned has widened considerably, and there is more quartz showing in the face. No. 1 level has only been extended 4 ft., the ground being very hard; there is no quartz in the face. Stopes: There is no change in A and B, except, perhaps, that they are a trifle small, and still mixed with black rock. C stope is looking well, and I hope to get a good quantity of stone from here. At E we are both stoping underhand and rising up under No. 1 level. I have also commenced underhand stoping below tramway level opposite A. I forgot to mention that in the off-drive I alluded to in my last report we have a vein of decomposed stuff similar to that in tramway, and also a little mineralised pink quartz. The fuel tramway is laid to the forest, and is being gradually extended. All that remains to be done is to bridge the Nulla so as to bring the fuel into the mill. Mill: I am sorry to say water is falling fast, so much so that I shall only be able to work 10-head until end of month, when I must start steam, for which everything is in readiness.—C. A. PATERSON.

—(Nov. 25).—Colar section: Plummer's No. 1 new shaft has been sunk 8 ft., making a total depth of 288 ft. 3 ins. from surface. Plummer's No. 2 new shaft has been sunk for the past fortnight 15 ft., making a depth of 204 ft. 3 ins. on the nuderlie, or a total depth from surface of 416 ft. 3 ins. We shall have to suspend the sinking of this shaft while putting down skip road, which we estimate will take from 8 to 10 days. The 240 main shaft, west cross-cut, has been extended 18 ft., making a total distance from shaft of 630 ft. 6 ins. The change

of ground met with here did not last many feet, and the end is again in hard rock. The 240 main shaft, east cross-cut, has been driven 10 ft. 6 ins., making a total distance of 204 ft. 3 ins. from shaft. The ground at this place is very hard and bad for blasting. No. 5 shaft: 425 north drive has been put out 15 ft., making a total of 72 ft. There is no change in the lode here since last report.—M. STEPHENS.

MOSMAN.—Manager's report for fortnight ending Oct. 31:—Crushing mill: About 350 tons of stone from the Victoria Gold Mining Co.'s Mine is now going through the mill, estimated to yield between 4 ozs. and 5 ozs. per ton. This will be followed by about 200 tons from the Queen Central Mine, and the remainder of the year will be taken up in reducing the stone at grass, and that to be raised as the crushing proceeds.

—Cable Nov. 17:—"The Wyndham shaft has reached a depth of 1,060 ft. Connection has been made with the 1,015-ft. level. There are about 300 tons of quartz on the surface, which I shall commence to crush next week."

MOUNT MORGAN EXTENDED (Oct. 20).—In my cablegram of Oct. 5 I stated that the ore was improving in the Immanuel No. 3 shaft as we go down. General sample, assay No. 807 between the 97 and the 102 gave 15 dwts. of gold and 10 dwts. of silver; it fluctuates, however, in value, being sometimes as low as 5 to 7½ dwts. of gold, and 10 to 12½ dwts. of silver. It is, however, extremely satisfactory to be carrying gold down with us in this shaft, and I have every hope that we may be able to conduct this exploration to a successful issue, for certainly the appearances at present are very encouraging. Phoenix shaft: The sinking is being continued on the underlay, so that it would have been more correct to have said that the actual depth was 144 ft., as the measurement was not vertical. On Oct. 3 I made a careful inspection of the Phoenix. Standing on the top of this mine you can see the men very distinctly working on the top of the mount, south-east by south from the point of view, and as the crow flies about a mile distant. This bearing indicates the existence of a main fissure vein, probably highly auriferous, connecting the Phoenix with Mount Morgan, because this bearing is a similar bearing to the dykes which I have surveyed on Mount Morgan, and also to "A" vein and the Immanuel vein in our own ground. The Phoenix vein, however, is a cross vein running truly magnetic east and west, and in the Phoenix property there are several other cross-veins, highly auriferous, that have only partially been opened, and east and west parallel to the Phoenix, I am of opinion, and in this Capt. Bennett, the Government Inspector of Mines, agrees with me, that when we begin to develop the Phoenix vein it is very probable that we may discover the junction with the main fissure vein running in the south-east direction, which I feel certain exists in the ground, and which undoubtedly must be the mother of the highly auriferous Phoenix vein. If I am fortunate enough to support this hypothesis by proof, we may find a large fortune in this ground. In any case, from what we know of the veins already exposed, it promises to be a very profitable claim, and I anxiously look forward to the time when I can put more men into it to develop it properly. I omitted to state that my hypothesis is supported by the fact that the St. Patrick's vein about ¼ of a mile to the eastward by its direction and inclination points to the existence of main fissures running in the direction stated, also the direction of the Dany creek on our eastern boundary points to the same conclusion. We have roasted about 18 tons of tailings ready for chlorination, and have made a general clean up round the mill and mine.—R. BALLARD.

MOUNT ZEEHAN.—The manager writes for week ending Oct. 30:—Argent section, block 2: Main engine shaft, sunk 1 ft. 3 ins., making total from plat 9 ft. 3 ins., from surface brace 81 ft. 3 ins. We had to do some preliminary work, such as cutting and guttering around plat to convey water in box-ladders down the shaft, cleaning up the bottom of shaft, and squaring down the same in north end about 4 ft., from the bottom. However, they have made good headway since they started. The ground is much harder here than it was in the Queen Extended shaft, short heady ground, a light kind of slate with siderite. I consider it will take five months to put this shaft down 100 ft. South drive No. 4 lode: 72-ft. level extended 22 ft., total from cross-cut, 172 ft. Lode formation, 3 ft. wide, very much broken up in the end at present, and not so much second-class ore; formation composed of siderite, graphite slate and light on the footwall side, with a little galena mixed. We should get some good shoots of ore in this drive going south as we gain backs, and the surfaces showing south would warrant this drive being continued. Ore raised: 6 cwt. of first-class ore raised and bagged, and 16 tons second-class raised. Queen extended section block 5: Air shaft No. 2 lode has been driven and underhand stoped 8 ft., making total length 21 ft., by depth 15 ft. Lode formation 4 ft. wide, 6 ins. to 18 ins. of which is solid galena, for 15 ft. length in bottom of stope. This looks better than I have ever seen it before for 15 ft. in length. I have only four miners here this week, some off sick. Ore raised: 3 tons 18 cwt. of first-class ore raised and bagged, and 2 tons second-class raised. Montana section, Block 9: Stope from north end of winze, 12 ft. by 6 ft. This completes the stoping to the bottom of level. Lode formation, 18 ins. wide, and very poor seconds. I have finished with this end. Two miners for the week and one miner one day; discontinued. Stoped from south end of winze, 15 ft. by 6 ft.; lode formation, 2 ft. wide; all second-class ore in the end. This is also finished to the bottom of level. I am going to fill up stopes with mullock this afternoon, and to-night that will complete the work and finish all we can do for some time at Montana until main shaft is sunk. All work here will be discontinued after the ore is cleared in. Ore raised: 4 tons first-class ore raised and bagged from south end; 2 tons first-class ore raised and bagged from north end; 6 tons second-class ore raised, and 7 tons of second-class ore raised from south end; total ore raised and bagged for the week, first-class ore raised and bagged, 11 tons 4 cwt.; second-class ore raised, 31 tons.

NAMAQUA.—Report for Oct.—Tweefontein mine.—The shaft below the 73-fm. level: Skip road, ladder and timber work have been fixed. All work is proceeding satisfactorily, and as soon as the stuff which has accumulated has been cleared away, the extension of the levels will be proceeded with. The shaft below the 85-fm. level east: This driving is being driven obliquely to reach the lode a little distance from the shaft. The shaft below the 85-fm. level west: This level is driven in a diagonal branch, which at times contains a little rich ore and gives hope that the main part of the lode may prove more productive at this depth. The shaft below the 73-fm. level east: There is no change to notice here. The shaft below the 73-fm. level west: There is very little change in the appearance of the ground at

this place. A leader about 12 ins. wide contains enough ore to make it worth while to send it to the concentrators. The appearance is very encouraging; worth 1 ton of ore per fm. The shaft below the 58-fm. level west: A small string of ore was passed through. There is no other change to notice. The shaft below the 43-fm. level north-east: At this point a communication has been made with the other part of the working, which is a great convenience. Stopes: The 58 east: This part of the mine is not turning out satisfactorily, but work will be continued as opportunity offers; worth 2 tons of ore per fm. The 43 east: A nice stope is opening out here, which it is hoped may continue; worth 10 tons of ore per fm. The 33 east: There is not much change to notice; worth 4 tons of ore per fm. The 33 east, north side: This is a patch going into the side, which may lead to something better or die out quickly; worth 5 tons of ore per fm. The 33 east, back: This is a new stope and it looks promising; worth 7 tons of ore per fm. Wheel Julia Mine: There is no change at this place. Output for Sept.: 198 tons of 26 per cent.

NEW CALIFORNIA (Dec. 2).—Mine report for second half of Nov.:—The 2,100-ft. level west, in 59½ ft.: The lode has improved considerably during the past week, and now consists of a vein of milling ore from 6 to 8 ins. in width, in which is found some lumps of high-grade pyrites. The rock being favourable at present, good progress will be made in drifting, and the further development of this vein will be followed with great interest. The 2,100-ft. level east, in 23 ft.: The lode on this side is 18 ins. wide, composed of a felspathic rock and pyrites with quartz—good vein stuff, but of little value as yet. The 2,000-ft. level west, in 1,002 ft. (cutting through vein): This work has laid open the lode for a length of 75 ft., showing a strong large and well defined vein, averaging 5 ft. in width, and in place 7 ft. It is not of sufficiently high grade to pay for stoping, but here and there some better ore is to be found, and in this part of the vein prospecting is being done with a view of proving up this ground more fully. Work has been resumed on the drift. The 2,000-ft. level west, stopes in back of level and rise: The rise is being put up on the vein, and will eventually connect to the intermediate drift and open up a section of paying ground. The 2,000-ft. level west: 1,900—2,000 intermediate: The lode in the intermediate workings has shown much and many changes during the half month, and for some days was very poor. But now again we have good ore in the rise, which when laid open by the connection of the rise with the bottom workings in the 1,900 will yield profitable returns. We are cutting out a block of lode left in the late stoping, with the intention of putting out a drift to explore the extensive run of ground lying intact between this point and the main shaft—some 600 in length; the lode is 4 ft. wide, yielding 10 tons of ore per fm., but the grade is not satisfactory, being from 4 to 5 dwts. per ton only. The 1,900-ft. level west, prospecting drift on boundary line: The lode is of a very fine appearance, having the characteristic rock on either wall, and a vein filling some 3 ft. wide, which mills from 4 to 5 dwts. of gold per ton on the plates. The weather has been exceedingly stormy and cold, preventing the contractor from proceeding regularly with his work on the boilers. We hope, however, to have them finished in the next two weeks.—A. RICKARD.

NEW DEVALA MOYAR.—Mine manager's report for the week ending Nov. 12.—The 186-ft. level west has been driven 6 ft.; total, 117 ft.; and the 116-ft. level, No. 4 winze, has been sunk 4 ft.; total, 71 ft. The quartz in these workings continues of a black vitreous description, but in the breast of 186 ft. west is speckled with a little pyrites and a few garnets. The 186-ft. level east has been driven 3 ft.; total, 43 ft. The footwall continues well defined, but the vein of white quartz has pinched out. We have patches of white quartz in the breast, but nothing regular, and have met with small bunches of mundic, but nothing yet of sufficient quantity to be valuable.

—The secretary is instructed to add that the gold from the July and Aug. crushings has realised 577l.

NEW DEVALA MOYAR.—Mine manager's report for the week ending Nov. 19:—The 186-ft. level, drive west, has been driven 6 ft.; total, 123 ft.; and the 116-ft. level, No. 4 winze, has been sunk 4 ft.; total, 75 ft. The reef in these workings continues of the black vitreous description described before. The No. 4 winze being down deep enough to bottom the 186-ft. level, sinking has been stopped, and we are now planking down the winze for permanent ladder and bucket ways. The 186-ft. level, drive east, has been driven 4 ft.; total, 47 ft. Here the footwall continues regular, but there is only a little green schist on it: we have no quartz in the breast. I regret to say that we have had an accident with the compressor, and shall not be able to work the drills for another two or three weeks; we can however, compress sufficient quantity of air to keep the hoist going and give ventilation for hand-drilling.

NEW HOOVER HILL.—Report for Nov.—The mill ran for the month eight days; crushed 25½ tons of ore, yielding 55,065 ozs. of bullion, which I am shipping you.

OOREGUM.—Mine report for fortnight ending Nov. 24.—Wall-roth's shaft has been sunk 3 ft. by Italians; total depth from surface, 451 ft.; the lode is 1 ft. 6 ins. wide, assaying 1 oz. 8 dwts. 7 grs. per ton. The 360-ft. level south has been advanced 32 ft.; total length, 176 ft. 6 ins.; width of lode, 2 ft. 6 ins., worth, 1 oz. 1 dwt. 19 grs. per ton. The 360-ft. level north has been advanced 9 ft. 6 ins.; total length, 57 ft. 3 ins.; lode, 1 ft. 3 ins. wide; value, 1 oz. 6 dwts. 2 grs. per ton; we have now holed to the No. 1 winze, 280-ft. level north. The 280-ft. level south has been driven 31 ft.; total length, 93½ ft. 7 ins.; lode, 7 ft. 6 ins. wide, assaying 5 ozs. 8 dwts. 21 grs. per ton. The 215-ft. level north has been driven 1 ft.; total length, 94 ft. 9 ins.; lode, 1 ft. 6 ins. wide, worth, by assay, 3 ozs. 17 dwts. 7 grs. per ton. The 215-ft. level south has been advanced 4 ft. 4 ins.; total length, 289 ft. 11 ins. The 280-ft. level south continues to hold strong and rich, and if it holds in depth will be the most valuable part of this property. A stope has been commenced in bottom of this level between No. 1 winze and No. 2. This will save hoisting deads from the rise to the new shaft to be commenced to the south, as a stull can be put in, and the deads used to fill up, and keep the ground open. Low's shaft: The 350-ft. level north has been advanced 5 ft. 6 ins.; total length, 117 ft. 6 ins. The 350-ft. level south has been advanced 9 ft. 4 ins.; total, 221 ft. 10 ins.; width of lode, 6 ins.; value, 1 oz. 2 dwts. 21 grs. per ton. Winze 350-ft. level north has been sunk 3 ft. 10 ins.; total depth, 36 ft.; lode, 1 ft. 6 ins. wide, assaying 4 ozs. 2 dwts. 17 grs. per ton. Probyn's shaft has been sunk 9 ft. 6 ins. by Italians; total depth from surface, 621 ft. 7 ins.; lode, 3 ft. wide, worth 5 ozs. 11 dwts. 1 gr. per ton. The 550-ft. level south

has been advanced 29 ft.; total length, 209 ft. 9 ins.; lode, 1 ft. 6 ins. wide, worth, by assay, 1 oz. 10 dwts. 21 grs. per ton. The 550-ft. level north has been driven 18 ft.; total length, 58 ft. 9 ins.; lode, 4 ft., assaying 2 ozs. 14 dwts. 10 grs. per ton. No. 1 winze, 550-ft. level south, has been sunk 4 ft.; total depth, 4 ft.; lode, 7 ft. wide; value, 1 oz. 12 dwts. 16 grs. per ton. Rise back 550-ft. level south has been risen 9 ft. 9 ins.; total, 9 ft. 9 ins.; width of lode, 3 ft., worth 1 oz. 10 dwts. 12 grs. per ton. The 450-ft. level south has been advanced 7 ins.; total length, 332 ft. 10 ins.; lode 1 ft. wide, worth 1 oz. 0 dwts. 17 grs. per ton. No. 2 winze, 450-ft. level south, has been sunk 3 ft. 2 ins.; total depth, 43 ft.; lode, 3 ft. 6 ins. wide, assaying 1 oz. 1 dwt. 19 grs. per ton. No. 3 winze, 450-ft. level south, has been sunk 2 ft. 7 ins.; total depth, 18 ft. 7 ins.; lode 2 ft. wide; assay value, 17 dwts. 10 grs. per ton. Rise back 450-ft. level south risen 6 ft. 2 ins.; total, 35 ft. 6 ins.; lode 3 ft. wide, assaying 2 ozs. 3 dwts. 3 grs. per ton. Winze 450-ft. level north sunk 4 ft.; total depth, 36 ft.; lode 3 ft. 6 ins., worth 2 ozs. 10 dwts. 2 grs. per ton. The 300-ft. level south advanced 11 ft.; total, 361 ft. 8 ins.; lode 1 ft. 3 ins. wide, worth 1 oz. 10 dwts. 12 grs. per ton. No. 2 winze, 300-ft. level south, has been sunk 4 ft.; total depth, 33 ft. 7 ins.; lode 1 ft. wide; assay value, 1 oz. 4 dwts. 5 grs. per ton. No. 3 winze, 300-ft. level south, has been sunk 2 ft.; total depth, 2 ft.; lode 1 ft. 6 ins. wide, worth 1 oz. 10 dwts. 8 grs. per ton. New stamps: Piles are in and concreted and coffer bolts thereon, mud sills down, and we are erecting the framing. The engine loading is fast approaching completion. Tailings: The carpenters are engaged about the wood framing for the remaining wheelers and settlers. The ground for storage tanks and new compressor is being excavated. Mill is running at full speed, and is kept fully supplied with quartz. The machinery is running well. The health of the camp is fairly good; four Europeans have been off duty some days during the fortnight, two with fever, and two from slight injuries.

OSCAR (Dec. 11).—Hodgkinson's lode: We have been sinking this week on the eastern lode cut in cross-cut at 320 ft. from surface. There is a well-defined lode, about 4 ft. wide, with good walls, and 15 ins. of quartz, impregnated with copper and iron pyrites, and which, by panning, shows free gold. Its assay value is over 1 oz. to the ton. We find the lode is much flatter than the average dip, from 150 ft. to 300 ft. levels, being almost identical with the dip from surface to the 80-ft. level; consequently, there will be about 20 ft. farther to drive in the cross-cut 50 ft. below than we expected. Six men are employed driving the cross-cut to push it ahead with all possible speed. There appears, judging from the results obtained where the lode is being worked on, that we shall open up a valuable section of ground. The stopes between the 200 ft. and 300 ft. levels are producing some very fair quartz. All other places show no alteration.—J. DAW, jun.

PARKER (Dec. 6).—Extract from letter from the manager at the mines:—I cabled you on Wednesday last that we had struck a rich pocket of ore. I consider this the richest vein ever yet discovered on your mines, although I reported it to you by cable as only a pocket, for I am firmly convinced now that it will run into the main vein, from which, I take it, it must be a blow-out, and would now, therefore, still more urgently advise your sinking a shaft on or near your main vein for a distance of 250 or 300 ft. at least.

PESTARENA UNITED (Dec. 3).—Monthly report—No. 1 lode: The 55 fms. end south is carrying a small branch on the hanging-wall, but is producing no ore to value. In the 70 end south no change has taken place since last reported, the lode continuing to produce 8 tons of ore per fm.; worth 1 oz. per ton. In the 70 end north the ore is now concentrated on the hanging-wall in a branch 40 centimetres wide, and produces 5 tons of ore per fm.; worth 1 oz. 10 dwts. per ton. The 90 end south carries a branch 10 centimetres wide, producing 1 ton of ore per fm.; worth 12 dwts. per ton. In the 130 end south the lode is 80 centimetres wide, and is showing small patches of pyrites at times, but not sufficient to value. Caunter lode: The lode in the 55 end east averages 40 centimetres in width, and carries less underlay than formerly. It produces 4 tons of ore per fm.; worth 14 dwts. per ton. In the winze sinking under the 120 end east the lode is wide, but does not carry a very large amount of pyrites; it produces 9 tons of ore per fm.; worth 10 dwts. per ton. In the 90 cross-cut south nothing new has been met with, and the rock has become much harder. In the 150 cross-cut south little has been done, the men having been employed building a dam to protect the Pozzone catch-pits. In the Valle Rossa cross-cut south another small vein has been traversed, but is of no importance, being only about 3 centimetres in width. We have 10 stopes at work, producing, on an average, 6 tons of ore per fm.; worth 16½ dwts. per ton. Stabioli Mine: The Stabioli level has been cleared. All the men are now employed clearing another level that has been found about 6 metres below the Anza level previously reported. In future the Anza level will mean the lower one just found, work in the upper one having been suspended. Two timbermen are still employed clearing the Ruina adit. Val Toppa Mine: The stope over Zero level on eastern branch has been suspended for a while, and the men set to drive on end south, as the ore seems to be lengthening in that direction, and produces 6 tons per fm., worth 8 dwts. per ton. In the stope over Zero level on eastern branch the lode produces 3 tons of ore per fm., worth 10 dwts. per ton; this is a new rise 20 metres north of the above stope. The stope on arch under No. 2 level on west lode having become poor, has been suspended. All the machinery continues to work satisfactorily, and there is still sufficient water for all our requirements.—W. H. TRELEASE.

TILT COVE.—East Mine—Shaft (hitherto Minnie winze): We have resumed sinking with rock-drills, and shall sink the shaft perpendicularly and drive a cross-cut to intersect the ore-body. Output for month, 4,050 tons of 4½ per cent. wet assay.—W. R. TOMS.

—Arrivals at Swansea: The s.s. Rochfort, with 372 tons of regulus of 20 per cent., and 564 tons of East Mine ore of 6 per cent. wet assay; the s.s. Prado, with 310 tons of regulus of 22 per cent., and 730 tons of East Mine ore of 6 per cent. wet assay.

NOTICE is hereby given that the transfer books of the American Association, Limited, will be closed until further notice, in order to prepare for the sub-division of the existing 10l. shares into shares of 1l. each. Due notice will be given when the certificates for the latter are ready.

REPORTS OF MEETINGS.

THE COPIAPO MINING CO., LIMITED.

NOTWITHSTANDING THE CIVIL WAR, THE PROFITS MADE EXCEED BY £5,580 THOSE OF THE PREVIOUS YEAR, AND THE SHAREHOLDERS RECEIVE 11½ PER CENT., OR 4s. 6d. PER SHARE, IN DIVIDENDS.

THE annual general meeting was held at Winchester House, on Tuesday.

Mr. Arthur Holland

(chairman of the company) presided.

Mr. RALPH S. ARCHBOLD (secretary) read the notice of meeting.

5,580L. MORE PROFIT.

The CHAIRMAN: Gentlemen, the account shows for the past year we have made a profit of 23,540L., as compared with 17,960L. in the corresponding period of the previous 12 months, or, in other words, for the past year we have made 5,580L. more profit than the year previously. (Cheers.) As we say in our report, we think that a not unsatisfactory state of things, considering the trouble we have experienced through the civil war. That profit, however, is not quite as great as we contemplated it would be 12 months ago; but, then, none of us thought that Chili, above all other countries, would be troubled with civil war. That civil war broke out in Jan., and the consequences to us were most prejudicial. It caused the necessities of life, including all mining articles, to advance in price; it disorganised labour, and as time went on it interrupted communication to such an extent that we could not dispose of our ores in Chili as we had always done in the past, and communications also were so interrupted that it was very difficult for us to make speedy arrangements to deal with our ores. After some time, however, we succeeded in arranging shipments of them to this country, some of which have already arrived, and been realised at very good prices. But there is always an objection to making shipments as against making sales of ore on the spot in Chili, because we have to run the risk of the market, and our policy has always been

AGAINST SPECULATING ON THE MARKET.

At the present moment we have some of our shipments still on the water, and since they were shipped the market has rather gone against us, but the valuation of those cargoes has been set in the accounts at the lowest possible price, and for next year's account we should hope, if the copper market goes up, it will show a profit on those shipments. The consequence of being unable to effect sales in Chili has been that the realisation of our ores has been delayed, and we have not, therefore, been in the position to pay you further dividends until the present moment. As we say in our report, we shall

PAY YOU A FINAL DIVIDEND OF 3s.

on the 18th of this month, making 4s. 6d. in the 12 months; and that will be at the rate of 11½ per cent. on the paid-up shares, which is the same amount as in the previous year. (Cheers.) Although this year we made upwards of 5,000L. more profit than for the previous year, yet we carried forward from the previous year a very large balance, which enabled us to pay that same dividend. (Hear, hear.) We now carry forward about 1,000L. more than we bring into the accounts in the present report. As regards the civil war, before leaving the question I would refer you to Mr. Hall's report, which we have printed *in extenso* for the guidance of the shareholders. On page 3 he goes thoroughly into the labour question, and there shows you how it has troubled him of late. He points out how the price of provisions has gone up from an ordinary to a very high rate indeed, and he says:—

"The Congressional party took possession of this province on Apl. 23 ultimo, since which date our supplies have been entirely cut off from Valparaiso, resulting in an increase of prices on all articles of consumption to over 300 per cent." That has seriously affected our working expenses, which have run up to nearly 25 per cent. beyond what they ought to have been, and beyond what they were prior to the revolution.

PRODUCTION.

The production of the past 12 months of the Dulcinea Mine has been 8,520 tons, or an increase of 1,300 tons on the production of the previous 12 months. At Checo the production has been 2,350 tons, and the average per centage of copper has been 18½ per cent. The price of bars, on which our sales are based, has been rather lower in the last 12 months, but still, in spite of that, we show you the substantial profit I have named. You will see further down in the report that we call attention to

THE PROFIT THE ESTATE HAS MADE,

and which has been 729L. more than in the previous 12 months. That, I may say, judging from the report, was through what Mr. Powditch was able to do, owing partly to the high prices he obtained from the Congress troops, who came across that locality. The cattle were prevented by the disturbances from coming across the Andes in ordinary seasons, and we derived less profit from them and from hay, but we derived more profit from barley and straw, and these have helped to swell the profit of the estate (2,749L.)—a larger profit from that source than we have had for many years past. I would repeat what I have previously said, that the estate is a most valuable asset of the company. It extends over 13 miles along the River Copiapo, and is watered by tributaries, or small streams from that river.

WE HAVE 180,000 ACRES,

the greater portion of which is under cultivation. There is another point to which Mr. Hall, in his report, calls attention, and that is the large profit made from the store, the carting, the butchery, and bakery departments. The total profit from these four sources have amounted to upwards of \$38,000, and we take to ourselves a certain amount of credit for having inaugurated those departments, because, at the time we had considerable opposition, but we pegged away, and the result has been most satisfactory. Mr. Hall says:—

"You will scarcely be able to imagine the great advantage that this establishment has been to the company, especially under the present disturbed political state of the country. There is not the slightest

doubt that if we had to depend on outsiders for the carriage of the ores, provisions, water, coals, and materials generally, that all work at the Dulcinea would have had to be suspended months ago, even if we paid three times as much as we are now paying to the Ingenio; in fact, if we had not taken the carting into our own hands, the entire business would have been stopped." That shows we were justified in our policy then, and I am glad to see Mr. Hall specially draws our attention to it again.

ACCOUNTS.

As regards the accounts, there is nothing very special to which I need call your attention, except you will see the expenditure on capital account remains precisely the same as it has done for the past 24 years, that is to say, we have not added anything to it, but have gone on spending out of revenue all the cost of everything with which we have had to deal. We go upon this principle thinking it a sound one. We debit to profit and loss account yearly a certain amount to depreciation of machinery and buildings that have been erected in the past. As regards the accounts, I have called attention to the fact that the estate left a profit of 2,749L., and the same coincidence comes out in these accounts that I called attention to last year, namely, that the profit from the mining estate is equivalent in this case almost to the London expenditure and the discount on bills, which we have to bear. Therefore, the whole of the profit which we show in our accounts is practically derived from the mines; and that, also, we think a very satisfactory state of things. As regards the future, Mr. Hall calls attention to the fact that

THE RESERVES HAVE INCREASED 13,800 TONS,

an increase over the reserves of the previous 12 months, and we think that is the proper way to conduct a mine—to open up reserves even to a larger extent than the amount of ore taken out. We have extracted 8,520 tons, and opened reserves of 13,800 tons, or 5,000 more tons than what we have extracted. Fletcher's shaft, which is the main shaft of the Dulcinea Mine, has been sunk to the 230-fm. level; and we have almost completed the plat there, and the letters yesterday announce he is on the point of sinking it to the 290. It continues to increase in richness the deeper we go; and the only difficulty we have to contend with there is the want of labour, which is undoubtedly a serious matter.

COST OF THE CIVIL WAR IN LIFE.

The civil war, he states, it is estimated has cost 9,000 men, who are chiefly miners, who have lost their lives, and that loss makes labour scarcer than before. The nitrate industry seems to be busier than it was, and is absorbing labour, and he has considerable difficulty in obtaining the necessary number of men. We have foreseen this will be the case, and have been in communication with him to

EMPLOY ROCK-DRILLS,

so as not only to save labour, but also to assist in the ventilation of the lower parts of the mine, where at that great depth the ventilation is somewhat imperfect. There is no doubt that if we could satisfactorily employ drills it would be a great advantage to the company, but it is a difficult matter to put these delicate machines into the hands of unskilled miners 6,000 or 7,000 ft. above the sea level, where we have no skilled attendants to adjust their parts, and in case of damage it might be difficult to get the parts repaired satisfactorily. However, we are not letting the matter drop, and are in close communication with Mr. Hall on this subject. In our report we call attention to the little trouble which Mr. Hall mentioned in the letter we received from him just before we published the report. We only thought it due to you that you should be informed of everything. He said at the 210-fm. level the rock which stands between the eastern and western lodes showed signs of giving way. We have been very anxious about it, and have despatched by special steamer a quantity of timber to assist him in case of need to prop up the mine there. His later telegram, which you had advices of last week, mentions its production has run up to 800 tons, but says nothing about the trouble in the shaft, and we can only conclude there is no further danger there. In his letter of Oct. 22, which followed a fortnight later, in which he advised us of this little trouble, he says, "The whole of the shaft is now working satisfactorily again." He says, "Fletcher shaft is now going on as usual." We know for Nov. his production had run up to 800 tons, whereas that for Oct. was 500 tons; Sept. 500 tons, and Aug. nothing, because the different troops ordered that all mines should be suspended, because they wanted the able-bodied men in the army. In July, however, it was 1,000 tons. The average percentage seems to keep up, and although we shall not during the current 12 months have been working at full pressure owing to the delay caused by the civil war, we yet expect to have a very fair result to show you this time 12 months. (Cheers.) As regards the Checo Mines, which were originally the most productive of the company's property, we are pegging away there. We have command of the water, which troubled us at this time last year, and Mr. Hall is seeking whether he cannot find a good paying lode in Price's shaft or in Matthew shaft. At the Cherton and Yeso Silver Mines we are simply holding our own, and are incurring, practically, no expense. I think a great deal of credit is due to Mr. Hall for his prevision in foreseeing that the cost of provisions and necessities would go up, and in his detailed report he mentions that—

"Soon after the disturbance began here it became quite evident to me that everything would become very dear. I therefore sent orders for a large stock of provisions and materials generally. We purchased a sufficient stock of flour and other leading articles to last against the end of the year. The flour was purchased at \$7.50 per 100 lbs., and the other articles at proportional low prices. The result has been that we have supplied the Dulcinea Mine from our own bakery at \$8 per 100 lbs. of bread, when outsiders have had to pay \$25 for the same weight."

I think great credit is due to him and Mr. Powditch for the manner in which they arranged these supplies should be sent to the mine before the rise of prices. It has had an important effect, for we have been able thereby to retain labourers who otherwise might have gone to other mines. Our last cable mentions that we have resumed selling ores on the coast, and the remittances ought to come to hand, and if we can see our way to fair profits during the next six months, we shall be prepared to pay you an interim dividend. I say I think great credit is due to Mr. Powditch for the way in which he made his arrangements for sales, &c., which were on a very satisfactory basis, and we have no reason to think that he has done anything but

right there. I do not know that there is anything else I need call special attention to, but shall be glad to answer any questions that may be put. I move "That the directors' report and statement of accounts for the year ending June 30 last be received and adopted." (Cheers.)

Mr. KENNETH H. JAMES (director): I second the motion.

DISCUSSION.

The Rev. J. MOORE: Having come a considerable distance with the view of attending this meeting perhaps I may be excused for occupying your attention for a few minutes. I think the shareholders will agree with me in thinking that the report, under all the circumstances, is decidedly satisfactory, and especially the report of Mr. Hall. (Cheers.) I think our praise is undoubtedly due to Mr. Hall, especially for the admirable manner in which he appears to have surmounted the difficulties caused by the civil war. In spite of those difficulties and the scarcity of labour the result is satisfactory, and we should be

MOST UNREASONABLE IF WE WERE DISSATISFIED

with the dividend that has been paid. (Cheers.) Still, we have not received any dividends since last Dec., and I took it for granted that the quarterly interim dividends were to be done away with altogether. I, for one, should not be sorry if they were, because it would save expense in sending out the warrants so often. (Laughter.) Some will say that the expense is small, but then the proverb says, "Every little makes a mickle." If we take care of the small things we shall, no doubt, be able to take care of the important things. We ought, above all things, to have economy, and if our expenses can be reduced with regard to efficiency we ought to look round and see where that reduction can be made, seeing that labour is becoming so dear, provisions so high, and the difficulties so great. It may seem as though I am a little dissatisfied if I say that the directors are not altogether blind to their own interests. They would not be men if they were. We are all willing and ready to receive any benefits in this world that Providence may be willing to impart to us, but it has struck me that the directors' fees might be reduced to 300*l.*, and the number of the board reduced to three. (Laughter.) A saving of this sort might only mean one-half per cent. to the shareholders; but, still, to a person of moderate means, let me say a widow, or even a person like myself, with 100*l.* in the concern, that half per cent. might mean 10*s.*, with which

A TURKEY FOR CHRISTMAS DINNER

might be purchased. (A VOICE: Not a fat one.) (Laughter.) I am not aware what the labour of the directors may be, but they must be paid extremely well for attending at the office only once a month to see the letters, whilst the real working anxiety is on the other side.

JUSTICE TO DIRECTORS.

Mr. REEVES: I have a good deal more experience in the City than the reverend gentleman who has just spoken, and I do not agree at all with what he has said. As for meeting once a month, you (to the Rev. Mr. Moore) country parsons have no idea what the work of a company like this entails. I speak as a director—a conscientious director—of a company, and I should propose in this case rather that the directors should have an increase than that their present emoluments should be curtailed. Some of them are very large shareholders, and their capital is locked up in these shares. I think it most unjust that after such a year as they have had anyone should insinuate that they are overpaid, though I hope in saying this I have not been rude to my reverend predecessor. (Cheers.)

The CHAIRMAN: Mr. Moore is quite wrong as regards the number of meetings the directors attend. There is a great deal of work in this company in the transfer department alone. Copiapo shares have life in them—(hear, hear)—and there are hundreds and thousands of them changing hands every year, and attention to the details occupies a great deal of time.

12 OR 15 YEARS' UNPAID SERVICE.

As regards the amount of remuneration, that was specially voted to us some few years ago, because we had worked for many years previously, perhaps 12 or 15, without a penny in the way of fees. (Cheers.) After we had pulled the concern from an unprofitable state into one which has paid very good dividends for many years, and has still a brilliant future before it, and which, I may say, has got into this position by the exertions of those who sit on this side of the table, we thought we were entitled to consideration for those past years when we had nothing. (Cheers.) I do not think you will find commercial men in the City of London disposed to attend to the business of the company for inadequate remuneration. It is only fair where you have a prosperous company that the directors should be fairly remunerated. As regards reducing the number of directors, it is contrary to the articles of association, and is out of the question.

MR. MOORE RECANTS.

Mr. MOORE: The labour and anxiety of the directors appear to be more than I had any idea of, and, therefore, with great pleasure I leave the matter in their hands. (Cheers.) I spoke from the view of simple common sense, and from the idea that the directors only met once a month, and certainly in my remarks I had no intention to cast any imputation upon them. (Hear, hear.)

The report was unanimously adopted.

4*s.* 6*d.* DIVIDEND FOR THE YEAR.

The CHAIRMAN: I propose "That a dividend of 4*s.* 6*d.* per share be now declared, and the interim dividend of 1*s.* 6*d.* per share, declared by the directors on Dec. 10, 1890, be considered part thereof, and the balance of 3*s.* per share be now declared, payable on and after the 18th inst. to the shareholders on the register this day."

Mr. HARRINGTON: I second the motion.

Carried unanimously.

MR. HOLLAND'S SERVICES.

Mr. JAMES: The next business is to re-elect my worthy friend, Mr. Holland, as a director. You have heard for many years past the able speeches he has made at our meetings, and the lucid manner in which he has explained the position of the company, and although the reverend gentleman seems to think that his services are too highly remunerated, I can assure all present that the time and attention he

has given to the business are such that his services are worthy of a higher rate of payment than he receives. He spends more hours over this company than Mr. Moore may be willing to believe, in seeing its affairs are properly carried on. (Cheers.)

Mr. HARRINGTON seconded the motion, which was carried by acclamation.

AN ABSENT FRIEND.

The CHAIRMAN: I am much obliged to you for your confidence. I have a letter from our absent colleague, Mr. Weir, who has been very unwell, in which he says, "I think it is the first general meeting of shareholders I have failed to attend since I have been elected a director," and he has been a director upwards of 20 years. I move the re-election of Mr. Charles Hemery as a director.

Mr. JAMES seconded the motion, which was carried unanimously.

Mr. HEMERY, in returning thanks, said the directors had a great deal of anxiety and responsibility in carrying on the concerns of this company, and devoted much time to it.

The auditors, Messrs. Cooper Bros. and Co.; and Mr. F. W. Honischer were re-elected.

The CHAIRMAN: I hope to be able to make an equally favourable statement to you 12 months hence.

On the motion of Mr. REEVES, the cordial thanks of the meeting were voted to Mr. Holland, his colleagues, and the staff, to which Mr. JAMES briefly replied.

WHEAL UNY.

SHAREHOLDERS DECIDE ON THE ADVICE OF MR. STRAUSS TO HOLD A MEETING IN CORNWALL ON JAN. 8 TO PURGE THE SHARE LIST OF DEFAULTING AND DOUBTING PARTNERS.

A MEETING of this company was held yesterday at Mr. Parry's Offices, in Gracechurch Buildings.

Mr. Arthur Strauss

was asked to preside.

After reading his report, Capt. WHITE made a further statement to the effect that it was very disappointing to him to present such a document, which showed the returns to have been so poor, but he could not command the elements. But for these he could have sold 72 tons in the period dealt with instead of 55, and he would now have been sinking below the 244-fm. level in a large and healthy lode—he might say in a new mine, in which case the aspect of affairs would have been very different. The property would have been worth many thousands more, and the shares marketable, for there was a good mine opening out in the bottom level. He had spoken of the changes in the pitwork and machinery he recommended, and such a change would also enable them to drive the western end towards the great cross-course, where they might reasonably expect rich deposits of tin, but they were afraid to go near them on account of the water. Westward the water seemed to be increasing.

PRACTICAL QUESTIONS.

Mr. THOMAS NICOLLS ROBERTS: What would the change you recommend cost?

Capt. WHITE: The alteration of the pitwork from the 160 to the 30, and the changing of the engine, would not cost more than 6,000*l.* at the outside, and would enable us to work all the year round, whereas the bottom level at present can only be worked at certain periods of the year. We are now down to the 244, and the water has risen to the 193.

Mr. ROBERTS: What time will the proposed change take?

Capt. WHITE: 12 months from now, including the forking of the mine.

ACCOUNTS.

The CHAIRMAN: The first resolution is, "That the accounts be allowed and passed, printed and circulated, and sent to the shareholders, together with the agent's report and the proceedings of this meeting." The accounts show a loss of 3,571*l.* 3*s.* 4*d.* In addition there is about 317*l.* put in as an asset on forfeited share account which is also a loss, and which will mean a total of about 3,900*l.* The share list at present consists of 8,167 shares held by various people; 3,003 shares were relinquished, and 830 had been forfeited, so that we have to divide this approximate loss of 4,000*l.* amongst the holders of 8,167 shares.

Mr. ROBERTS: There are three meetings in the year, and if your recommendations are carried out we should have to pay calls of 10*s.* for each period at that time.

Mr. HODGKINSON: I think at present we must leave that matter in abeyance, but it is the thing to do—in fact, it ought to have been done at the outset, but the persons who originated this mine were more anxious to make a profit on the sale of shares than to develop it on a permanent basis, and that is the reason there has been so much prejudice against it in Cornwall. I second the resolution.

Carried unanimously.

CALL OF 10*s.*

On the motion of the CHAIRMAN, seconded by Mr. HODGKINSON, it was decided to make a call of 10*s.*, payable within a month.

The CHAIRMAN: We now come to a serious matter—the arrears of calls, 3,913*l.* I have heard it said it would be advisable to close the mine, but I am dead against doing any such thing. It would be very hard, indeed, on the men who are employed there, and would also be very hard on those shareholders who have, so far, shown faith by paying their calls. If anything can be done to avert such a calamity, the committee are anxious to do it, but, I think, in order to induce the shareholders to continue working the mine, it is absolutely necessary that we should start with a clean sheet, and not allow these arrears of calls, and also see that our shareholders are of such a character that they will be able to pay the future calls that may be made. We, therefore,

PROPOSE A SPECIAL MEETING

to be held in Cornwall, on Jan. 8, to consult the shareholders there as regards the proposals of Mr. White. I am anxious we should appear before the Cornish shareholders with a clean book, and not be told then and there that it is impossible to go on because the arrears are so large, and because amongst the shareholders there may be a

certain number who are not considered satisfactory as partners. I am, therefore, anxious that the matter should be cleared up within the next three weeks. The first resolution I propose as regards the arrears of call is that legal proceedings should be taken at once to collect all the outstanding calls. They are mostly due on the last call, and appear thus: last call, 2,442*l.*; previous call about 1,000*l.*; call before that 388*l.*; and so on down to a few pounds. It is fair to assume that some are not able to pay, and we can only ascertain that by legal process. Mr. Parry has written again and again to them without success, and

SOLVENT SHAREHOLDERS NATURALLY OBJECT TO INSOLVENT PARTNERS.

(Hear, hear.) My anxiety, therefore, is to eliminate from our list all defaulting and doubtful partners, and I propose: "That all outstanding calls be immediately collected by legal process, and that a special meeting be held on Jan. 8 on the mine for the purpose of forfeiting such shares as may be deemed desirable, and for the purpose of considering Capt. White's suggestions as to the working of the mine."

Mr. ROBERT seconded the motion, which was carried unanimously.

The CHAIRMAN: The question now is—what instructions will you give to Capt. White as to the working between now and Jan. 8? I understand the water is now at the 193. If we keep it there what will the costs be per month.

Capt. WHITE: We shall lose from 250*l.* to 260*l.* a month, but we can save a portion of that by letting the water rise to the 160. The present machinery will not reduce the water in the winter months. Before knocking off 26 to 28 tributaries, as we should have to do if we allowed the water to rise to the 160, I should like to have two or three more days to consider the position relatively as between letting the water rise to the 160, or keeping it where it is in the light of costs. It would be a neighbourly act to Wheal Bassett to let it stay where it is, because they will be damaged if it is allowed to rise to the 160, and at present they have as much to do with their own water as they can manage.

The CHAIRMAN: Probably they will contribute towards our expense in keeping it down.

Capt. WHITE: They are in a better position than we are, and should help. We have a good lode in the bottom, but for which I should not have recommended this extra outlay.

It was decided to leave the water question in the hands of the committee.

Mr. Strauss was thanked for presiding.

BREWERY ASSETS CORPORATION, LIMITED.

NEARLY £6,000 PROFIT ON SEVEN MONTHS' WORKING.

THE second ordinary general meeting of the above corporation was held yesterday, at the Cannon Street Hotel.

Mr. J. Satchett Hopkins

(chairman) presided.

The SECRETARY (Mr. E. Howlett) read the notice convening the meeting, and the report and accounts were taken as read.

The CHAIRMAN said: Gentlemen, as you have already been informed, this is the second ordinary general meeting of the Brewery Assets Corporation. At the first meeting all the details of the prospectus and the objects of the company were fully discussed and dealt with. The difficult points of the prospectus were thoroughly gone into. The objects of the company were, as you will remember, and as stated in that prospectus, "To make advances upon breweries, licensed properties, and brewery assets, and to purchase and hold the securities of brewery companies and other investments, and generally to carry on business pertaining to a Brewery Trust and Assets Co., which included purchasing of certain public-house properties in the metropolis." I am now reading from the prospectus itself. The said properties were to be selected from a list which was published, and the prospectus further stated that it was in "the absolute discretion of the directors to accept or reject any of the properties, and to determine what proportion of capital should be invested in this way." Well, gentlemen, our operations did not begin for some little time, in consequence of various payments on account of subscriptions not having become due, and that, together with numerous inspections and reports of the different properties and lengthy investigations as to title, etc., by the company's solicitors and the solicitors on the other side, occupied between four and six months, while the purchases were being finally completed, and the company got in possession of their properties, so that by the time represented in the report

WE REALLY HAVE ONLY ABOUT SEVEN MONTHS' WORK.

This cannot be too clearly borne in mind, the company not having a full year represented in its financial year's report, but only a little more than half a one. Another very important feature of the period represented in the balance-sheet must also be remembered. It would be difficult to remember, I should think, a time when such general financial depression has existed for so long. It has not only affected our capital account, but also our revenue account, for it is impossible that such a general depression could not concern and seriously affect every branch of trading. We ourselves felt this severely, our prospectus being issued on the very day of the Baring crisis, which, of course, could not be reckoned upon nor anticipated. I think we may congratulate ourselves, and I may congratulate you, that we have even steered clear of any losses, and I think it is a great deal to be able to say under such exceptional circumstances.

PROFIT OF NEARLY 6,000*l.*

We have to deal with a gross profit of nearly 6,000*l.*; the exact figures are 5,924*l.* 1*s.* 6*d.* Now, we have not only not had the benefit of our properties, but we have not even had the capital shown in the balance-sheet the whole of the time—part of it only for a short time. From what I can see, the profits amount to about 20 per cent. for the time we have had the money to deal with. But I need not tell you that this 20 per cent. has not wholly arisen from our licensed trade, but from work in other branches of this company's business. Now, considering that this is the first year, and that we have had to get into working order,

I think the result must be admitted to be very satisfactory, as it puts us in a position to-day of being able to recommend to you a dividend of 6 per cent., besides writing off 378*l.* 1*s.* 11*d.* from the preliminary expenses. There are a few items in the balance-sheet upon which questions might arise. The first is as regards our profit and loss account. You will notice that our office rent and salaries, although working at numerous centres, several offices are kept within a most reasonable amount, 588*l.* The directors are entitled to fees by the articles of a very much larger sum than that shown in the profit and loss account, but seeing that the company has only been in possession of its property for a portion of the year, they desire that the company should have as much as possible the full benefit of the profits arising therefrom for the period. I think I may say, without egotism, that the directors have taken a very fair and generous view of the situation. Further, that they themselves, their family connections, and friends, all being large shareholders in this company, their principal interest is in its prosperity, and must ever remain so if we are to build up a permanent dividend-earning property. With reference to the interest amount, this may appear a large item, but it includes the payment of the debenture dividend or interest for the year.

BALANCE-SHEET ANALYSED.

We now come to the balance-sheet. The first item is purchase of properties, brewery, public-houses, and other premises. It is interesting to know that notwithstanding all the gloomy and pessimistic views taken by people who very gladly assume a position of disinterestedness for our welfare, the takings at the various shops and depôts show on the whole no falling off on their change of proprietorships. Indeed, they have been most satisfactory. In most cases a substantial increase instead of the predicted decrease has taken place, and at the present moment, with the alterations that are in contemplation at the different premises, I have not the least hesitation in saying that this company is the possessor of some of the finest and the most valuable and desirable licensed properties in this City of London—such as the Cannon, in Cannon Street, opposite this hotel, the Moorgate, in Moorgate Street, and the Adelphi Stores, in the Strand. Properties that are bound to increase in value as time goes on, and properties of which any proprietor may be justly proud. In order to anticipate any questioner as to the danger of loss of license, &c., I may say that while we do not believe that any license will ever be in danger so long as the houses are conducted in a similar way to ours, and prove themselves to be a public benefit and convenience, still at the same time arrangements are now being made with the License Insurance Co. with a view to effect insurances of all the licenses of the company, so as to obtain absolute security. Next we come to item 6,349*l.* 16*s.* 11*d.*, sundry creditors. These have, of course, been since discharged, with but little exceptions. Against this 6,000*l.* we have, on the other side, 2,569*l.* 10*s.* 4*d.* owing to us, reducing the above to 4,000*l.* This sum includes a number of items already referred to in the profit and loss account, such as office expenses, salaries, interest on debentures for the year, mortgages, &c., not paid at that date, but now, of course, discharged. I do not know that there is any other feature calling for special remark. Our balance is, as you will see, 5,924*l.* 1*s.* 6*d.*, from which has to be deducted the expenses I have already referred to, leaving 2,611*l.* 10*s.* 5*d.* The dividend recommended will absorb 2,233*l.* 8*s.* 6*d.*, leaving 378*l.* 1*s.* 11*d.* to be written off preliminary expenses. Now, gentlemen, I have great pleasure in moving the adoption of the report and statement of accounts.

Mr. CHARLES J. COX seconded the resolution, which was carried unanimously without discussion, and the proceedings terminated with a hearty vote of thanks to the chairman and directors.

THE GENERAL ELECTRIC POWER AND TRACTION CO., LIMITED.

FROM 50 TO 75 PER CENT. OF THE ELECTRICAL HAULING IN MINES SUPPLIED BY THIS COMPANY—PROSPECTS ENCOURAGING FOR A CONSIDERABLE FURTHER EXTENSION IN THIS DIRECTION.

THE first ordinary general meeting of this company was held at Winchester House, Old Broad Street, London, E.C., yesterday, at 2.30 o'clock, for the transaction of all business which under the articles of association can be transacted at an ordinary meeting.

The Rt. Hon. the Earl of Albemarle, A.D.C., K.C.M.G.

(chairman of the company), presided.

Mr. THOMAS SMITH (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN, having referred to the absence of several directors of the company, in consequence of other important business engagements and ill-health, said that in rising to move the adoption of the report at the first annual meeting of the company, it was natural for one to carry his mind back to the time of the inception of the undertaking, which was then under discussion. They began, as the shareholders knew, with very small beginnings, and their numbers were very few. They did not, first of all, appeal to the public for funds, and they only went quietly to work with a system of electricity, which had now proved itself to be a decided success. (Applause.)

THEY BEGAN AT BRIGHTON

with a very small installation, and he had to admit that in the first instance they committed as many mistakes as were to be expected under the circumstances. But every mistake suggested its own remedy and its own cure, and by never shrinking from any difficulty, but by overcoming every obstacle, they found themselves in the position, three years ago, to go to one of the most prominent metropolitan tramway companies and tell them that they were in the position to conduct their tramways by electric traction instead of horse traction, which had hitherto been used on their lines. They were fortunately able, principally through the instrumentality of his friend, Mr. Macpherson, who was very intimate with many of the directors of the North Metropolitan Tramways Co. to inspire that company with a little of their confidence, and the result was that they were allowed to have a small section of their line for experimental purposes. They were allotted, out of the total of 41 miles, 2 miles of the system, upon which they

were to run a certain number of cars per day under that company's supervision. The arrangement made with the electrical company was that the tramway company should pay them 4½d. per mile for the traction. They were not quite sure at that time what it would cost, but they were quite certain that with the publicity which would be given to electrical traction that success would attend their efforts, and that it would be worth their while to work at 4½d. per mile. The arrangement which they made was that they were to bear all the cost of the initial expenditure of the installation, and that every 1s. that they expended, was to be expended under the direct supervision of the Tramways Co. themselves, and that nothing was to be done without their direct cognisance, but that the Electrical Co. were not to be impeded in their operations. The Electrical Co. did this in order that they might be able to appeal to accomplished facts. Their anticipations were justified by results, and for three years they had carried on electrical traction work on the Canning Town line on the North Metropolitan Co.'s system. From the very first they met with the greatest kindness and consideration on the part of the North Metropolitan Tramway Co.'s authorities, who encouraged them in every way possible, and afforded all the help in their power. They satisfied that company so well that in the year 1889 the North Metropolitan Co. found themselves in a position to appeal to Parliament for permission to extend over their whole system electric traction and to entirely do away with horses. Parliament granted the request, and gave them seven years in order to form a basis on which they might raise necessary capital for the purposes of this operation. The board then thought that everything was going on well and in a satisfactory way, they having obtained the Parliamentary authority, and having made manifest the advantages of electrical traction; but the West Ham Corporation were of the opinion that they ought to have the *veto* upon electrical traction through their district, and the *veto* that they wished was of such a character that it was quite impossible to work under the proposed terms. The West Ham Corporation said that Parliament had granted them seven years to obtain their capital, but they, the West Ham Corporation, must have their *veto* in the matter, and their *veto* was to the effect that they could stop electrical traction through their district at 24 hours' notice. He need not tell them that an expenditure of 40,000% was entirely out of the question under these circumstances, and that no body of individuals would undertake a responsibility of that kind when they had hanging over them the *veto* of a fluctuating body who might call upon them to undo their work within 24 hours. They had carried out the work for the North Metropolitan Co. satisfactorily for years, but, under the circumstances, there was no course left but for the tramway company to appeal to Parliament for some modification of the terms under which they worked. The company had renewed with the North Metropolitan Co. its contract, upon slightly modified terms, for the working of the Canning Town line, but until Parliament interfered, which he hoped they were going to do in the next session, it was impossible for them to proceed further. (Hear, hear.) They were working without accident and without hitch, and at a less expense than with horses. (Cheers.) He was not in the habit of using strong expression or of making prophecies, but he would point out to the shareholders that they had been, from the circumstances which he had detailed, prevented from seeing the fulfilment of

THEIR JUST EXPECTATIONS

from causes entirely beyond the control of the directors, and of the very kind and accommodating company with whom they were working, the North Metropolitan Tramways Co. He hoped that next year they would be able to give the shareholders a better account upon that point. From the enormous number of applications that were constantly coming in to them for information as to electrical traction in the various towns throughout the country, they found that there was a very strong feeling arising that electrical traction was the proper mode of working tramways, and many proposals had been made to them to equip tramways in various parts of the kingdom; but the position was this, that most tramway companies had already locked up almost the whole of their available capital in horses and cars, the erection of stables, &c., and had not any great command of money for electrical traction and if they desired to go in for electrical traction it could only be done by making arrangement with the electrical companies to supply the money requisite. The directors of the company, however, had not thought it right to run any risks in the matter, and to all such offers for equipping tramway lines electrically they had had to turn a deaf ear. He hoped that the shareholders would approve the action of the directors in this matter. (Hear, hear.) He would now turn from electrical traction to another part of their business, which had been very largely developed, had been successful to a degree, and afforded the greatest possible satisfaction to the directors.

ELECTRICITY IN MINING.

He meant work in mines, and coal-winning, which was more recent than pumping. Electrical pumping in mines had been developed to a very considerable extent, and had employed their works in a very satisfactory way. This portion of their work, like the whole of the electrical industry, was still in its infancy, but he was happy to say that it had very largely developed, and they had very great confidence in its continuing to do so. He believed that they had a very considerable percentage of the hauling which was done in mines in their own hands, 50 per cent. he might say. He did not wish to exaggerate, but experts told him as much as 75 per cent. He would not pledge himself to figures, but leave that to the experts, but he could safely say that they had a very fair proportion of such work as was done by electricity in mines, and from the indications which were constantly coming in to them they saw that the mining industry was getting more and more to believe in the facilities and economical qualities of electricity. (Applause.) They hoped to have a very large extension in that respect in the future. There was another point to which he wished to draw attention, and that was as to electrical boats. In that branch of the business they stood alone. (Cheers.) They had got a considerable fleet already on the Thames, started by Immish and Co., and continued and developed by their successors, this company. It was daily increasing, and they found that foreign governments were coming to them with regard to the question of the appli-

cation of electrical motive power to ships. They were in hopes that the English Government would be doing the same, but

THE ENGLISH GOVERNMENT WERE NOT QUICK IN MATTERS OF IMPROVEMENT

like other countries were. At any rate the company were creating a very considerable amount of confidence in the minds of users of electric launches. Another point that the company had gone into had been the question of the electrical depositing of copper, and in that branch there was a very large possibility, he must say, that from all he had been able to learn, and from all that his colleagues had been able to ascertain on that point, that particular industry was one which ought to prove very profitable, and he had every confidence in his own mind as to the success of that process. Well, then there was the general question of electric light and power. They were producing electrical plant, and in this connection there was a satisfactory feature, the St. Pancras people, close to the company's works, had got an electric lighting installation for the lighting of their own district, and he was happy to say that the St. Pancras people had shown great confidence in their neighbours, this company, and they had been called upon to supply the electrical fittings for the installation of that district. This was a very encouraging thing, because it showed the feeling that existed towards the company and confidence of their ability to carry out the work. He did not wish to detain them unnecessarily, but the general manager reminded him that they had sent out tramway estimates amounting to 400,000%. Some of that was in abeyance from circumstances he had already described, but they had orders promised for 150,000% in the next year. It was also satisfactory to note that in some places corporations themselves had taken into consideration the advisability of adopting electrical traction for municipal tramways, and in these particular districts the difficulties, as in the case of the West Ham Corporation to which he had referred, and in the case of tramways generally, would not arise. He trusted that before long they would be doing work for some of these corporations. He repeated that

HE DID NOT WISH TO PROPHECY.

He congratulated the shareholders upon the results up to the present time, and he hoped that next year he would be able to give a very good account of their business. Subject to any questions that any of the shareholders desired to ask, he begged to move the adoption of the report and statement of accounts.

Mr. THOMAS FULLER seconded the motion.

No questions were asked.

The resolution was unanimously carried.

The retiring auditors, Messrs. Ward and Wilding, were re-elected.

A vote of thanks to the chairman and directors for their services having been accorded,

The CHAIRMAN briefly acknowledged the compliment, and the proceedings terminated.

THE MYSORE HARNHALLI GOLD MINING CO., LIMITED.

THE MINE CONTINUES POOR.

THE third ordinary general meeting of the shareholders of this company was held at Winchester House, Old Broad Street, in the City of London, on Thursday, Dec. 17, noon, for the purpose of receiving the directors' report; passing the accounts to June 30, 1891; and transacting the ordinary business of the company.

Lieut.-Col. F. Henderson

presided.

The SECRETARY read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said that the directors regretted that up to date they had not succeeded in striking a payable lode, and they were sensible of how great the disappointment must be to the shareholders. They had decided to have a further opinion on the property, and had selected Mr. L. Evans, who carefully inspected the mine last Aug., and submitted a report advising that they should carry down considerably lower certain of the shafts in the hope of finding that the small lodes and veins would unite at depth, and form a persistent and payable lode. The board had not lost faith in the mine, and although disappointed, they were not discouraged. To atone, in some measure, for their disappointment, the resident director, with the consent of his co-owners, proposed some time ago to make over to this company, on certain terms, another square mile of mining land in the Mysore territory, and nearer the Colar Goldfields, although in no way connected with them. The terms proposed were briefly these, that this company should spend a certain sum in preliminary prospecting, and that if the indications were in their opinion favourable, a further sum should be devoted to more conclusively establishing the fact that the property was worth working. At this stage the property was to be formally assigned over to them and if thoroughly satisfied with the property up to date they were then to endeavour to raise 20,000% for the future working of the company's properties. The directors were using all possible efforts to reduce expenditure, including the drawing of less than half the fees they were entitled to. He concluded by moving the adoption of the report.

A discussion followed, in which Mr. STEVENS, Mr. LEWIS, and other shareholders took part, and complaint was made at the largeness of the

EXPENDITURE,

and it was also suggested that the services of the resident director should be dispensed with.

The CHAIRMAN, in reply, said the directors were using their utmost efforts to keep the expenditure down, and some of the expenses were exceptional, and would not occur again. As to their present resident director, he was very valuable to them, having a thorough knowledge of the language, and being well acquainted with all questions as to native labour.

Replying to further questions, the CHAIRMAN said that their present financial position was that they had about 5,000%, and their total monthly cost for everything was about 550%. They would have to call the shareholders again, he expected, about April.

The resolution was carried.

The retiring director, Mr. Briscoe, and the auditor, Mr. Goddard, having been re-elected the proceedings terminated.

THOMAS THOMPSON,

STOCK AND SHARE DEALER
ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,
And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN
and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read
Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR,
free on Application.

Shares sold at Special Prices for forward delivery (One,
Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

MINING SHARE CO-OPERATIVE SOCIETY,

15, COPTHALL AVENUE, E.C.

TELEGRAPHIC ADDRESS: "SIGHTSEER."

BANKERS: LONDON AND NORTH-WESTERN.

MINING AND MISCELLANEOUS SHARES are somewhat in
demand for new account; prices have improved to-day, and heavy
buying was perceived by shrewd operators, who as usual make it a
speciality to accumulate shares standing at low prices before the
termination of the year, and it would be prudent for the speculative
public to take advantage of present prices.

Special price list will be forwarded on application, also terms of
business and advantages offered.

MINING SHARE CO-OPERATIVE SOCIETY.

THE MEXICAN ASSOCIATION, LIMITED,

Undertakes all classes of business in
connection with Mexico, and by means of
established Agencies can furnish Reports
upon Mines and other Properties through-
out the Republic.

Code: Assuefacio, London.

Offices: 31, Lombard Street, E.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Justice.—It is not payable until the 15th inst., therefore you will have to hand
dividend over to the purchaser.

Expense.—You should not sell at these low prices. Have a little more patience.

G. R. S. (Cardiff).—Cannot advise any of those you mention.

Arrow.—Very fair to buy.

Bread Knife.—Take the small profit.

Commerce.—Sell at once.

B. C. D. A..—Cannot go lower, we think.

Christmas.—The investment is a good one. Certainly hold.

Ohio.—Very little has been done at the mine. However, keep your shares for
the present.

S. Goswell.—Markets may improve in the new year. By selling now very
little could be got for them.

Corinthian.—You are entitled to the dividend.

Inseparable.—A better price seems likely. Hold on.

Blackwell.—Doing well. Keep your shares.

Charing Cross.—We hardly care to recommend it.

Impregnable.—You must certainly pay.

Cake.—The risk is too great. Sell them.

H. R. D. (Lincs.).—Sell part and secure the profit.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.

BANKERS.

THE LONDON AND SOUTH WESTERN BANK,
LIMITED, LONDON.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING-
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.

LONDON: SATURDAY, DEC. 19, 1891.

*The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.*

THE SOUTH-EAST MYSORE GOLD CO., LIMITED. —A SUCCESSFUL RE-CONSTRUCTION.

THIS company, we are delighted to know, has been successfully re-
constructed. Already nearly 90,000 shares have been applied for, and
allotment letters will be posted to-day. The advices received from
the mine this week are very satisfactory, and there is every prospect
that with the fresh capital now provided, another fine property will
be opened up. Under the re-construction scheme the total capital
arranged for is 30,000l., and of this no less than 22,500l. is set down
for working capital. Should any important discovery, therefore, be
made the shareholders would at once reap the benefit of this small
capitalisation, which is much less than that of any other mine work-
ing on the Colar goldfield.

SUNDAY DIVIDENDS.

WHAT is it coming to? When will the labours of secretaries have
an end? Are these "indefatigables" to be deprived of the means of
grace, as well as those of recreation? Here is the City of Chicago
Brewery and Malting Co. actually dating its dividend warrants on
Sunday—an example of devotion to duty which is worthy of imita-
tion on any other day than the Lord's Day, on which it actually
took place. The dividend warrants are dated "Sunday, Dec. 13,"
and the happy shareholders received them by the first post
on Monday, the 14th—a pretty good proof that they were
posted, if not prepared, on the Sabbath day. We can
imagine that the work commenced as the church bells were
calling the shareholders to prayer; that it was well underway by
about the end of the first lesson; that it had made good progress
towards the close of the second, and that when the clergymen were
crying, "Here eudeth the third lesson," the hard-working secretary
had began to see some prospect of the termination of his labours.
Indeed, it is probable that just at the moment the benediction was
being pronounced he had put the final touch to his work, and was
sallying forth from the office with the dividend warrants ready for
post very much in the same way as the shareholders whom he may
have encountered were issuing from their sanctuaries with prayer-book
and bible under their arms. This is a brewery company, and we

have all heard before of the union of "beer and the bible;" but the alliance in these later days seems to be assuming fresh forms.

YURUARI.

THE liquidator of Yuruari has lost no time in putting the property on the market. It is described as covering 667 hectares in Venezuela; as having a mill of 60 stamps, and 20 stamps unfixed; together with a large amount of tramway rails and other appurtenances, which we can well believe have cost the sum he mentions—150,000*l*. The two main shafts are sunk respectively 500 ft. and 1,000 ft., and there are extensive levels and connections underground. In addition, there is the Eureka property of 20 stamps, with a large amount of machinery on surface—in fact, 100 stamps in all. The mine has produced, during the last six years, about 350,000*l*. worth of gold, but, as we have all along said, none of this ever seems to have come to the shareholders in the way of dividend. All they have been favoured with has been reconstructions and calls. There was certainly a time when we had hope that Yuruari would have taken a front place amongst the mines of the day, but, unfortunately, from one cause and another, this anticipation has been torn to shreds. Even at this eleventh hour we cannot but think that a well-organised and well-managed syndicate might pick up the threads of the tangled skein of Yuruari affairs and yet make the property successful. The opportunity is certainly a good one—much better than beginning *de novo* with any new mine. The hour has struck, but where is the syndicate?

COL. MALLESON SMITES HIS FOES.

THE Mysore-Wynaad meeting was a triumph for Col. Malleeson. By a unanimous vote the shareholders refused to part with his services, and possibly the instinct of self-preservation guided them. A stall at the opera on a gala night, or a box at the theatre when a new play is to be produced, is no sort of treat at all compared with the spectacle of Col. Malleeson at a meeting, at which he takes off his gloves and divests himself of his coat. We have always said that the gallant Colonel is seen most to advantage when he assumes the offensive. His assailants can approach him up to a certain point, but once they pass the line of demarcation which defines the point beyond which the Colonel will stand no more nonsense, those assailants must take care. Now, Col. Malleeson had cleared the deck for action at Mysore-Wynaad meeting by putting a paragraph in the directors' report, stating that he did not offer himself for re-election. After briefly stating the position of the company, he moved the adoption of the report, and waited with calmness the onslaught upon directors' fees, which is a sort of "hardy annual" at Mysore-Wynaad meetings, and may be expected with the certainty of the cavatina in an opera, or the slow movement in a sonata. He had not long to wait, for Mr. Seligsen dealt with the familiar theme. This gentleman's idea of managing a company is not unlike Sam Weller's knowledge of London—"peculiar." He thinks Mysore-Wynaad, with 2,000 shareholders, can be provided with offices and secretary for 100*l*. a year, that one man can do all the work, and that three directors can be had each for a round sum of 50*l*. a year. In the same breath he took occasion to deplore that Col. Malleeson meant to resign, and truly described him as "the backbone of the company."

It was after this eloquent gentleman had "orated" that Col. Malleeson divested himself of the garments we have already named, and for nearly half an hour milled away in fine style, and "took it out of" those who had somewhat with impunity attacked him at former meetings. He told the shareholders who cavilled at the 200*l*. a year they paid to him for attending to the business of the company five days in every week, that he declined to serve them for less. His most congenial and, at the same time, most profitable employment, was literature, and he described it as the "tub" to which, like a modern Diogenes, he could return and make far more within that receptacle than he could by working outside it for ungrateful shareholders. He said he spoke on the fee question from the standpoint of absolute impartiality, for he would be "out of it"—by which we assume him to mean he would be *in* the Diogenes' tub, but *out* of the Mysore-Wynaad Co. But he shook his finger warningly at his now penitent auditory, as he said, "I advise you not to have a cheap board." There are two men in London who know more about the Colar Field than Col. Malleeson, but only two, and these are our old friends, Capt. McTaggart and Genl. Beresford, but in point of knowledge the Colonel is third, for he has resided near the spot for years, and has, indeed, often taken a constitutional in that direction. No wonder, then, when it was judged that the Colar district was worth something more than agricultural value, it was thought that the special knowledge the gallant Colonel had acquired in his meanderings, would be of service to Mysore-Wynaad shareholders, and, thinking so himself, he joined the board. But it never entered into the philosophy of Col. Malleeson that he was to give this special knowledge, and five days' labour per week to boot, to a lot of strangers for nothing. Certainly not, he would sooner see the shareholders—well, to Charing Cross in penny bus first. "Why should I," exclaimed the Colonel, with a logical outburst that caused cold shivers to strike to the bones of Mr.

Seligsen and his supporters, "give all my work and experience and my time, which is the chief portion of my capital, to any body of shareholders either for nothing or next door to it? If you want work done you must pay for it. You are like men who get rid of good servants, to whom you are paying fair wages, for the purpose of going out into the streets to pick up the first people you can find to work for low wages, and yours will be the loss in the end. If you impose responsibility you must give adequate payment. You have no right to ask me to give you my most valuable possession—my time—for nothing, and if you do so I will refuse. Moreover, you have made a contract with me in your articles of association, which were revised in your favour 10 months ago, and by your unanimous vote. A public company is not a philanthropic institution, and if you want me to work for you without payment I simply reply, I will not do it."

Now, it is very curious that Englishmen in a crowd like to be talked to in this way. They would not like it individually any more than one would like to be called a "miserable sinner," although in a chorus in the church one is perfectly prepared to include himself in the unhappy category, and even to intone it. In fact, Englishmen will submit to have things said to them in a crowd, which, individually, they would resent. Hitherto at Mysore-Wynaad meetings the shareholder had done all the badgering, but now the badgers found themselves badgered, and they took it in uncommonly good part. Secretly, they must have admired the gallant colonel's home thrusts, and in truth, by their voting, they openly showed it, for they asked him by a unanimous vote to retain his chairmanship of the company. He will do so, but they must pay him for his work, and they must not cavil at his payment in future meetings. If they do! But no, we forbear to mention the dreadful calamity that will befall them.

PROGRESS OF ST. JOHN DEL REY.

IT is not usual for the directors of a mining company, which has not for some time been paying dividends, to be received with cheers on entering a meeting; but that was the happy experience of the St. John del Rey board on Thursday. We take this as an evidence of two things, first that the confidence of the shareholders in the management is unshaken, and next that there is a determination without undue delay to find the money required to complete what Mr. Tendron described as "The greatest mining work ever undertaken." The report of the superintendent did not arrive in time for the meeting, but it could scarcely have added anything to the very explicit narrative that was given by Mr. Tendron. He first spoke of the surveys which had to be made before the work was actually commenced, and at this stage it is reassuring to hear that they have been so accurate. He next pointed out that the shafts are not being carried down to cut the lode, but northward from them, so that should any accident occur in the mine hereafter ingress to it will not be cut off. The shafts have now been carried down almost to the lode. Careful arrangements had to be made as to the pumping gear, and it was interesting to note in this, as well as in other connections how old machinery has been utilised by "the hero of St. John del Rey"—the indefatigable Mr. Chalmers. Then he had to provide sufficient hauling power, and has done it with such success that he has now an effective horse power of 500, as against a previous total effective horse power for hauling and pumping combined of 268. This last alone was an immense task, for it included the making of new water courses some 6 miles in length. He had also to take every precaution to secure the shafts, and he had to make himself practically acquainted with brickmaking, but appears to have entered into this industry so heartily that he was able to sell at a profit a surplus quantity. The dangerous part of the work is now done, and by the middle of Feb. it is believed that his arrangements will be completed for driving the first level into the lode. We thoroughly endorse the remark of the chairman that for expedition—we might even say ability—the work of Mr. Chalmers in a foreign country has never been equalled, certainly it has never been surpassed.

Upon the question of finance, Mr. Tendron put the case as plainly as the mouth of man could do it. The shareholders may adopt half measures or whole. If they adopt half measures they will complete the workings of the mine but make no provision for the treatment of the ore when it is brought to surface. If they adopt whole measures they will proceed with both works simultaneously. Words would be wasted in trying to point out the advisability of the latter course. There are a thousand shareholders, and if each of them does his part the burden upon the whole of them will be light. If the debenture money is not forthcoming there must be re-construction. This is a hedge—to use the chairman's simile—to which we hope the shareholders will never come, and so be spared the risk of trying to clear it. They must find the money by debentures, and unless we have wholly misread the spirit of the meeting, that is what they intend to do. The statement that, perhaps, struck us most at this meeting was the one we have reproduced in italics in our verbatim report, viz., Mr. Chalmers will be able to work at half the former costs. Here, again, words would be wasted in pressing the importance of such a statement in any consideration of the future profits of the shareholders.

Everyone was delighted to see Mr. Hockin again at the board table. His supplementary remarks reminded the shareholders of

what St. John del Rey had done under his chairmanship in past times. A mine paying average dividends of 25 per cent. for a quarter of a century, and a good dividend at a later period, and that is again on the point of securing the lode which supplied the gold, and from which the access was only cut off by accident, is not one that ought to beg long for a comparatively small amount of debenture money, particularly when the chief part of the work has been done. We must, however, press upon each of the shareholders the absolute necessity of doing his own part in relation to the further capital that is required. In every sense that we are able to conceive it will be to his interest to do so.

NORTHERN TRANSVAAL LANDS CO.

THE shareholders of this company own very extensive landed property in the Transvaal, which cannot fail to become of immense value as the country is developed; but, as all speculators in land know, more than an ordinary degree of patience must be exercised if property of this nature is to be realised to advantage. That all-important factor, railway communication, will soon be made with some of the company's farms; and arrangements have already been made for the occupation of one of them in the Waterberg district, and for rearing cattle and cultivating tobacco and other crops, the company receiving a proportion of produce by way of rent. Stores are being opened, and are doing a good business. Prospecting for gold, &c., is being wisely delayed pending the development by owners now at work on contiguous properties.

WEARDALE LEAD CO.

THE cloud of adversity which at present overshadows this company is certainly not attributable to any shortcomings on the part of the management. Their difficulties are two-fold. In the first place the large importation of lead from Australia and the United States has had the effect of glutting the market and keeping prices abnormally low; and, secondly, there has, unfortunately, been a falling off in the quality of the ore raised from the mines. As regards the former, there seems little prospect of any material rise taking place in the near future; but the poorness of the veins may be, and probably is, only of a temporary nature. These mines have yielded large returns in the past, and there is no reason why history should not repeat itself in their case. In view, however, of the present circumstances, it is to be hoped that the Ecclesiastical Commissioners, who are the ground landlords, will not be blind to their own interests by exacting rents and royalties such as the company cannot afford to pay. The mines give employment to upwards of 600 hands, and it would be a serious loss, alike to the workpeople, the shareholders, and the commissioners, were the company compelled to suspend operations.

SUTHERLAND REEF.

THE amalgamation of the Potsdam Reefs Co. with the Sutherland Reef Co., which is now practically complete, is likely to be of great advantage to the shareholders of both companies. The meeting held on Tuesday was, on the whole, satisfactory, and the chairman was able to announce, on the authority of the Transvaal Minister of Mines, that the farm Potsdam would shortly be declared a public goldfield. The company owns about 100 acres of this farm. Another satisfactory statement was that the Silati Railway would be commenced in May, and would come within two miles of the property. The success of the South African companies must depend greatly on the facilities for transport.

THE AMERICAN ASSOCIATION.

FROM all that we can hear, there is every reason to believe that the new issue of capital unanimously authorised to be created by the American Association, at the meeting on Monday last, will be promptly subscribed. From the full report of the proceedings, which we publish in another part of our present issue, it will be seen that Mr. Pontifex gave a very clear exposition of the present position and future prospects of the undertaking, and it is not surprising that the few shareholders, who for a time opposed the recommendations of the board, were induced to give way, after the common-sense remarks of Mr. Pollock and Mr. Aston. It is possible that Mr. Pullman and his friends may yet desire to have a committee of enquiry appointed. If so, the directors have promised to give such a committee every possible facility for conducting their investigations; but it would clearly have been a very imprudent step to have permitted such an inquiry to have delayed the raising of the further capital which was shown to be absolutely necessary, and thus to have jeopardised the best interests of the association. Mr. Pontifex did not attempt to deny that in the past financial administration of the concern, locally, serious mistakes have been made. But, *nous avons changé tout cela*. In Mr. Bartlett the association has the right man in the right place, and there is every reason to suppose that with the capital that will shortly be placed at his disposal the transport facilities will be improved in such a way that the undertaking will soon be self-supporting. Meanwhile, it is satisfactory to observe that the development of the mineral resources of the district is proceeding apace. Large orders for coal and coke have been booked by the Mingo Mountain Co.,

though other important orders have had to be refused, owing to the lack of sufficient transport facilities, and, although the iron and steel industries have not gone ahead at the pace anticipated, the fact that the Watts Syndicate has raised and stacked over 65,000 tons of ore ready for smelting, proves beyond dispute that the iron-ore deposits are of a highly valuable character. By the arrangements which have now been made, the two systems of railways immediately serving the district will be placed under one management, and as the cars will be interchangeable, considerable economies will be effected in the working expenses, while, of course, the customers of the railways will derive great benefit from the improved means of transporting their produce. In short, the existing shareholders have every inducement to provide the money they are asked to subscribe. The value of the property is indisputable, and there is every assurance that if the improvements, which the new capital will effect, are carried through carefully and expeditiously, the shareholders will, ere long, forget the disappointments of the past, and be satisfied with the dividends they will receive.

COPIAPO AFFAIRS.

THE shareholders of this company must have been surprised on receiving the directors' report to find that notwithstanding the civil war in Chili the profits made exceed by 5,530*l.* those of the previous year, and that they have sustained no diminution of dividends, but have received 4*s.* 6*d.* per share, or 11½ per cent., the same as they did for the previous financial year. The whole of the facts were most clearly stated by Mr. Arthur Holland, the chairman. The civil war affected the company in a variety of ways, and might have done so more seriously but for the foresight which was exercised by the directors at home, and by Mr. Hall and Mr. Powditch on the spot. Prices of stores and supplies were advanced, and, most serious of all, labour was disorganised by the men being pressed into the army. It is estimated that this dreadful conflict cost Chili the lives of no fewer than 9,000 men—many of them skilled in mining and other pursuits whose loss cannot easily be replaced. This, as we gather from Mr. Holland's speech, is the chief trouble with which Mr. Hall has to deal. The mines are opening out well, particularly the Dulcinea. The reserves have been increased during the year by 5,000 tons, and the farm has yielded a larger profit than heretofore. The employment of rock-drills is being carefully considered by the directors to make up for the deficiency of labour. Shareholders can hardly grasp the extensive character of the property they possess. They own 180,000 acres—the greater part under cultivation—along the river Copiapo. Their land is watered by tributaries, or small streams, from that river. If the company can do so well in a period when Chili was torn by internecine strife it is pretty safe to forecast greater prosperity during the current financial year.

TRANSVAAL GOLD AND EXPLORATION CO., LIMITED.

THE directors have issued their report and accounts for the year ending Sept. 30 last. The debenture debt has been paid off, and the property is now free from any encumbrance. The machinery and plant have hitherto been standing in the books at their first cost, the only item for depreciation being 1,081*l.* charged in profit and loss account in 1888. The directors have had these re-valued, and the sum of 16,921*l.* has been written off to depreciation. Out of the balance at the credit of profit and loss for 1890, the sum of 3,000*l.* was carried to reserve fund, which has been invested in Consols. The general outlook is very encouraging. The yearly production of bullion continues to increase in a very satisfactory manner. The board recommend a dividend of 7½ per cent. per annum, free of income-tax, for the year ending Sept. 30, 1891, of which an interim dividend of 2½ per cent. has already been paid.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

A FURTHER reduction in the Bank rate was expected in some quarters this week, chiefly because the market quotation had once more fallen 1½ below the current *minimum*. The directors, however, on Thursday promptly notified that the 3½ per cent. rate was unaltered, and thus, we think, the year will end. The retention of the rate rather steadied the market, discount remaining at the previous quotation of 1½, ¾ per cent. for three months' bills, while money was slightly harder, although only worth 1½, ¾ per cent. for either call or loan. Christmas requirements are at hand, and the end of the year follows so the enquiry should improve. The bullion movements continue, however, on a reasonable scale. The arrival from Brazil, and a larger influx from Lisbon than usual has sufficed, in the absence of any pressure for either Germany or Spain, to strengthen the Bank reserve by 535,000*l.*, only a little coin having returned from circulation, while notes have gone into the country to a small extent rather than the reverse. The liabilities under deposits have augmented, chiefly due to an addition to the private deposits of 373,000*l.*, and the result is that the proportion is but 1 better, at 41 per cent. The private securities have run off 51,000*l.*, and the discount houses have reduced their terms for deposits by ½ per cent.

Since the settlement last week business at the Stock Exchange has partaken quite of a holiday character, but in spite of this absence of support prices have been well and firmly maintained, so that there is on balance a rise shown for the week. This has been partly due to the cheapness of money and the better tendency on the Paris and Berlin bourses; but the upward tendency of the American market has influenced other securities to some extent. The Funds have been extraordinarily steady, not having moved for cash from 95½, ⅔ since last Tuesday week, although for account the quotation went up and down ½ several times, always reverting to its original figure. Other investment securities improved, but of these there has since been some weakness in India and Colonial Government Stock. In the Foreign market the international section has improved, Spanish, Portuguese, and Italian especially, although the first-named, after touching 68, relapsed, realisations following the arrangement of the new loan for 10,000,000*l.* Turkish and Egyptian bonds were very good, the Tribute loans being admitted to the same privileges as the United Debt. Argentine, however, have fallen on the advance in the gold premium to 277 per cent., and rumours that the dividend of the 1886 loans secured on the Customs' receipts would not be paid. Home rails have advanced considerably on good traffics, and American, Canadian, and Mexican have all alike gained ground.

There is at length a harder tendency in the Money market, and to-day a disposition was evinced, as customary at this period, to begin curtailing accommodation, and keeping loans well within sight of touch. However, business remained quiet, and while discount for three months' bills was comparatively firm at 1½, ⅔ per cent., advances were 1½, ⅓. Bar silver improved a trifle to 43½, ⅓, but Rupee Paper declined, the Four per Cents. 73½, 71; and the Four-and-a-Half per Cents. to 72½, 73½. From the Bank of England 80,000*l.* in sovereigns were withdrawn for Germany, and also 60,000*l.* for the River Plate.

There has been little doing in the Stock markets to-day, but apart from dulness and some re-action in Foreign securities prices have had a good tendency and close firm. Consols were still unaltered for money at 95½, ⅓, and 95½, ⅓ for account, and other securities in this market were likewise steady. Foreign stocks gave way, except for a sharp advance in Peruvian; the Ordinary rising ¾; the Preferred, 4¼; and the bonds, 1½. Turkish "Tribute" and Defence bonds re-acted ½ from yesterday's rise, and International stocks were generally ½ to ¼ lower, with ½ in Mexican and some Buenos Ayres Cédulas, the premium on gold having further advanced to 283 per cent. Spanish, however, remained steady. Home rails were quiet but firm, apart from a further relapse of ¼ in Metropolitan on the progress of the Central London Railway Scheme. Brighton "A" was well supported, the daily traffic again showing an increase of 539*l.* Sheffield "A" and Great Eastern both improved ¾, North-Western and North-Eastern ½, and the Scotch lines ¼ to ½. Americans opened steady, and, with some general buying prices improved, and closed strong at their best, or ¼ to ¾ above yesterday's quotations. Wabash and Denver issues were again good, the former rising 1 to 1½, and some of the second-class bonds advanced, Reading Income bonds as much as 2½ per cent. Grand Trunks improved ¼ to ¾, but Mexican Ordinary was flatter, and Nitrate firmer. Allsopp's Stocks further relapsed 1 per cent. from their recent rise, otherwise there was no special feature.

Annexed are the final quotations to-day:—Consols Account, 95½, 95½; Egyptian Preference, 90, 90¼; Egyptian Unified, 95½, 95½; French Four-and-a-Half per Cents., 103½, 104½; Hungarian, 90½, 91½; Italian, 90½, 91; Mexican, 85½, 86; Peru Five per Cents., 9½, 10¼; Peru Six per Cents., 33½, 34; Russian 1889, 94½, 94½; Portuguese, 34, 34½; Spanish, 67½, 67½; Turkish, 1871, 93½, 94; Turkish Defence, 91½, 92; Caledonian Railway, 121½, 121½; Great Eastern, 90, 90¼; Great Western, 158½, 159½; Brighton "A," 151½, 152½; North Western, 174½, 174½; Metropolitan, 89½, 90; Metropolitan District, 31¼, 31¼; Midland, 162½, 162½; North British, 45, 45½; North Eastern, 160½, 160½; South Eastern "A," 86½, 86½; Mexican Ordinary, 29½, 30; Grand Trunk, 11½, 11½; Grand Trunk First Preference, 73, 73¼; Grand Trunk Second, 53½, 54; Grand Trunk Third, 29, 29¼; Canadian Pacific, 93, 93¼; Denver Preference, 46½, 47½; Erie, 32½, 32½; Milwaukee, 81½, 82½; Lake Shore, 129½, 130; Louisville, 83½, 84½; Atlantic First, 38½, 38½; Ontario, 21, 21½; Ohio, 21½, 22½; Norfolk and Western, 53, 53¼; Reading, 20½, 20½; Reading bonds, 86, 87xd; Union Pacific, 44½, 44½; Wabash Preference, 29½, 29½; Ottoman Bank, 11½, 11½; Anglo-Telegraph, 50, 51; National Telephone, 4½, 4½xd; Hudson's Bay, 15½, 15½; Suez Canal, 107½, 108½; Guinness, 319, 321; Allsopp's Ordinary, 28, 30; Bryant and May, 13½, 14½; Eastman's Ordinary, 4¼, 4½; Elmore's, 2½, 3.

THE CAPE COPPER CO., LIMITED.

A PROFIT OF 112,113*l.*

THE profit and loss account for the year ending Apl. 30 shows that the value of the ore and metal returned for that year was 231,641*l.* 19s. 5d. The average assay of the ore was 21½ per cent. The profit and loss account, including the amount brought from the previous year, shows a balance of 112,113*l.* 18s. 4d. This amount has been dealt with as follows:—1,116*l.* 3s. 10d. has been paid in income-tax, and 75,000*l.* in dividends; 10,000*l.* has been transferred to a reserve fund, and 5,000*l.* to a smelting and sulphate works sinking fund; the balance of 20,697*l.* 11s. 6d. has been carried forward. Owing to the considerable fall in the price of copper, and the discrepancies in the assays reported from the mines, the stocks brought over from the previous year's account show a further fall below the value therein attached to them. At the close of that year there existed a suspense account of 110,121*l.* 12s. 7d., which had been created to meet the differences in values of stock and the loss occasioned by the failure of the Société des Métaux. The compromise effected with the Société left of that amount an available balance of 36,059*l.* 5s. 6d. The further loss, above mentioned, and the law costs have now been transferred to that account, reducing it to 5,897*l.* 3s. 9d. It should be noted that the past year's work was much affected by the circumstances arising out of the late operations of the French copper syndicate, and the reasons are fully given in the report. The directors, however, now congratulate the shareholders upon the fact that the ill effect of the French combination is, as far as this company is concerned, at an end, and a dividend (possibly of about 4,000*l.* or 5,000*l.*) may be expected from the liquidator of the Société des Métaux. "It is impossible to forecast the future of

the copper market, but it is fair to assume that, with the greatly diminished stocks and largely increasing consumption, prices must eventually recover. When such is the case this company will at once reap the full advantage of the recovery without any such disturbing influences as have arisen during the past year." The company now possesses a locomotive line of 92 miles in length, in excellent condition, standing in its accounts at the comparatively small figure of 169,218*l.* 16s. 7d., or equal to 1,840*l.* per mile. The figure above stated includes the cost of the jetty at the Port. The return of ore from Ookiep amounted during the 12 months to 22,974 nett dry tons. The underground reserves are estimated at 88,000 tons of 21 per cent., compared with 91,350 tons of 21 per cent. at the close of the previous year. The lower levels have not yet opened out any extent of valuable ore ground, but during the year they have shown very encouraging features. The prospects at Spectakel have much improved, and an increased yield is anticipated. No material change has occurred in the Trial Mines. The machinery at the various establishments has continued to work with efficiency and economy, and it has been kept in admirable order. The shipping work was again conducted very successfully throughout the year. Smelting at Briton Ferry: The operations in this department show an improvement over those of the previous year. At Tilt Cove: A very satisfactory feature has been that, as the workings have got deeper, the assay of the ore shows improvement. There is good reason to hope that during the current year the Tilt Cove property will show profitable results. The Briton Ferry Chemical and Manure Co., Limited, have now had their preferential rights, and from June 30 one moiety of its profits belongs to the Cape Copper Co. While regretting that unusual circumstances have, for a time, disturbed the company's previously steady progress, the directors feel convinced that their effects have been completely removed, and that affairs may now be expected to resume the course of former years. It may be noted that, during the three-and-a-half years since the re-construction of the company, it has declared dividends amounting to 1*l.* 7s. 6d. per share, equal to 412,500*l.* free of income-tax. The directors will, at the general meeting, propose resolutions for the creation of 150,000*l.* additional capital. This additional capital will enable the directors to pay off the debentures appearing in the accounts and to further reduce the existing indebtedness, and bring it into a more desirable compass, thus saving a heavy cost of interest and charges which that indebtedness has always entailed.

EAST GRASSINGTON MINE.

A FAVOURABLE REPORT.

Dec. 7.—As instructed, I have made a careful survey of the above mines, and beg to submit the following remarks, viz.:—They are situate on the north-eastern slope of the hill range, dividing the wharfe from the Nidd Valley, at an elevation of 1,300 ft. above the mean level of the sea. Held on a 21 years' lease at 1-20th royalty paid in kind. Embracing an area of upwards of 1 mile in length from east to west, by nearly a mile in breadth. The formation is the mountain limestone, of which I have considerable mining experience. I first inspected Harris's main engine shaft, situate in the centre of the property, and sunk some 21 yds. south of the old surface excavations as a plumb or perpendicular shaft to strike the lodes at an hade, about 150 yds. below the surface. The deepest point here is the 60 or 120-yds. level, at which the lode is struck 18 yds. north of the shaft, with drives extended 10 yds. upon the course of the lode which is strong and healthy, averaging nearly 2 ft. wide, well charged with patches of excellent quality galena; worth 12 cwt. per fm., which, if sold as potter's ore, would command the best price obtainable. You have every prospect here of laying open considerable backs for overhead stoping. The 47-fm. level east and workings thereat, are at present suspended, owing to heavy flows of water coming down through a high fissure tapped in an uprise upon a cross-course or heave, and which will shortly be drained by the upper workings relieving the pressure beneath, and the drive extended eastwards upon a strong ore-producing lode, also the ore grounds in the backs will be available. The 37 and 27-fm. levels have both been driven a considerable distance eastwards upon the lode, which in the present forebreast is rather small. Here you have a nice shoot of ore some 6 fms. behind the firebreast, now being stoped; value, 10 cwt. per fm. The next is Hammond shaft, also sunk plumb 100 yds. below surface and connected with the former and driven at the 47, 37 and 27-fm. levels. The lode crossed this shaft on the hade, and is 13 yds. south of the 47-fm. level, which has been driven a considerable distance westward, discovering two lengths or shoots of ore ground, viz., at King's Dump and Amy's workings. No. 3 dump is 15 yds. beneath the 47 level, and the deepest point here, showing throughout a strong ore lode averaging 2 ft. wide, and worth 12 cwt. of lead per fm. On the forebreast of the 47 the ground is tight and the lode pinched up, but all the feeders or branches of spar are impregnated with lead ore, proving that it will again become productive when the various smaller veins unite together under more favourable geological conditions. I have carefully noted and compared each point as visited with the manager's report and accompanying section of the workings, and confirm his description and values given, hence it is not necessary for me to recapitulate here *seriatim*. After careful consideration I have arrived at the following conclusion. 1st.—That you possess a good tract of ground in a highly mineralised district. 2nd.—The lode is a true fissure vein hitherto proved very bunchy, and the hard pinches occur with undesirable frequency, and the ore shoots met at the 37 level cut out, and barren zones came in at the 47 level, which, together with the exceedingly low price of lead, are the cause of not more profitable workings. The deeper operations denote a decided improvement, and recurrence of the ore-producing measures. 3rd.—By extending 60, 47 and 37 levels eastward and westward of the new Isabella shaft, where you have a large tract of virgin ground, I consider your prospects of meeting with continuous profitable shoots of ore highly encouraging, and with such flattering indications you may decidedly look forward to the development of richer ore bodies. 4th.—That your mine is worked cheaply and expeditiously, shafts sunk, timbered, and pit-work fixed, plats cut, and drives extended, with all the buildings, pumping and hoisting gear, well and substantially erected—in a word, both underground and at the surface your mines are well laid out and developed in a proper and workmanlike manner. A vigorous prosecution of the underground workings on the present

lines must lead to tangible results in the near future.—HAROLD BONSER, Civil and Mining Engineer and Surveyor, Sutton-in-Ashfield, Notts; and Albion Walk, Leeds.

P.S.—I am so satisfied with the very encouraging prospects of the mines that I intend taking up shares therein.

CORRESPONDENCE.

[We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

AN AUSTRALIAN GOLDFIELD.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—Some recent articles in the papers lead me to think that some particulars about a very productive Australian goldfield, which seems to be but little known here, may interest some of your readers.

I refer to the system of ancient rivers, which had their rise in the Great Dividing Range, a little north of Ballarat, and flowing thence northward towards the Great Valley of the Murray River have left under the lava, which now covers the greater part of the area, once an extensive water-shed tributary to the Murray, vast quantities of auriferous silt, which have only since about 1874 been called on to give up their treasures.

Since that date over a million ounces of almost pure gold (worth 4l. to 4l. 3s. an oz.) have been raised, at first by small companies with light plants, and later on the depth from the surface of these old river beds increased by larger proprietaries, with larger pumping and winding plants, and at increased expenditure. But the leads, as they recede from their sources, leave more extensive deposits of gold-bearing alluvium, and amply warrant heavier expenditure.

The district has received various local names as the leads stretched out—the Spring Hill, the Kingston, the Smeaton Goldfields—the mines now at work and giving very satisfactory yields being close to, and in the parish of, Smeaton.

The following table, arranged in the order of time, gives the names, gold yields, amounts called up, and the profits obtained by several of the mining companies referred to:—

Name of Company.	Gold returns.	Calls.	Dividends and Royalty.
	Ozs.	£	£
Lewers Freehold ...	13,938	630	38,550
Hawkins ...	5,793	900	12,142
Greys ...	2,283	600	4,155
Robinsons ...	10,104	1,800	25,293
Richardson's Western ...	13,013	2,100	36,483
Baron Rothschild ...	13,778	1,875	38,814
Camerons ...	15,652	2,850	35,775
Dykes ...	39,448	—	65,470
Ristori ...	102,406	7,200	232,250
Loughlin ...	37,330	—	63,769
Lone Hand ...	126,050	15,300	283,620
Home Paddock ...	30,315	8,875	47,537

In all these mines the deeper leads are supposed to have been worked out; the higher level *débris*, or reef washes, have been very little explored, and (as in the case of Ballarat, which is now a quartz mining district) the quartz reefs are yet untouched, the more easily saved alluvial gold having been first gone for. Royalty has ranged from 10 to 5 per cent. The mines now at work in the Smeaton district, such as the Madame Berry, the Consols, the Berry No. 1, and the Beaconsfield, are giving splendid returns, the first two alone having already paid more than a million pounds in profits.

All of these mines have been owned and managed in the colonies, and prove that Victoria will long continue, as it has been since 1851, the foremost contributor to the world's wealth in gold, and the richest, the steadiest and the most reliable of fields for the miner and the investor.—I am, &c.,

AUSTRALIAN.

"COURTESY" AT TARRYALL CREEK.

SIR,—In your issue of Sept. 3 last you published some information which you had "ferretted out" for a correspondent respecting some mining companies, viz., La Trinidad, Tarryall Creek Gold Co., and United States Placers.

As to the second of these, viz., Tarryall Creek Gold Co., you mentioned the new address of the offices—33, King Street, Cheapside, and that Mr. Brogden, one of the directors, and Mr. Wetherell, the secretary, had received your representative with every courtesy, and betrayed the greatest desire to give him all possible information. As a shareholder, I wrote to the secretary, at the new address, some few weeks ago, to enquire when the meeting, named in your report, would be held, or when some information about the company would be sent to the shareholders. I have had no reply whatever! As you appear to command that "courtesy" which is not vouchsafed to their shareholders, will you kindly permit this to appear in your paper, or allow your representative to make another application to Messrs. Brogden and Wetherell?—I am, &c.,

AN UNFORTUNATE SHAREHOLDER.

FRONTINO AND BOLIVIA (SOUTH AMERICAN) GOLD MINING CO., LIMITED.

SIR,—Allow me to call your attention to an error in the editorial article headed "Frontino Affairs," in which you have given the returns and profit of the second half of the year ending June 30, 1891, as those for the whole year.

The returns for the first half, viz., to Dec. 31, 1890, were 36,502l., and the profit was 10,455l., and the returns for the second half, viz., to June 30, 1891, were 40,492l.—these having been augmented by 4,750l., the value of auriferous copper from old plates—and the profit was 13,669l., this having been augmented by 4,541l., the profit derived from the auriferous copper.

The total returns for the whole year were, therefore, 76,995l., and the total profit was 24,124l.

The dividends paid during the year, and a bonus from the auriferous copper, amounted to 20,907l., being altogether 3s. 3d. per share; and 1,950l. has been carried to reserve fund, making in all 22,857l.

The amount which is being expended on the new machinery has absorbed the residue of the profit.—I am, &c.,

RICHARD DONAGAN.

(Chairman of the Company.)

184, Gresham House, Old Broad Street,
London, E.C.,
Dec. 15.

NEW GUSTON CO., LIMITED.

ESTIMATED RETURN FOR NOV. MONTH.

THE mine superintendent cables to the following effect:—Ore shipped, 1,300 tons; value, 12,396l.; mine expenses and supplies, 3,306l.; railway freight, 826l.—4,132l.; profit for the month, 8,264l. The mine is looking well.

DIVIDEND.

The directors have decided to pay an interim dividend for the fourth quarter of the current year of 2s. per share, and, in addition, a bonus of 2s. per share, both free of income tax, payable on the 31st inst., thus making the return to the shareholders 80 per cent. for the current year, leaving a large balance of undivided profit to be carried forward to credit of revenue account. The total dividends and bonuses declared from Nov. 15, 1888, to date now amount to 39s. 6d. per share. The directors, hoping to maintain good and regular dividends, consider it prudent to retain large cash reserves, having in view the very variable quality of the ore (ranging from 20 to 10,000 ozs. of silver per ton), the impossibility of gauging the proportion of the richer kinds in the various ore bodies, and bearing in mind the uncertainty of the output and shipment during the winter months at the great altitude at which the mines are situated.—B. MCNEILL, Secretary.

The report of the superintendent states that the mine continues to look well.

YANKEE GIRL SILVER MINES, LIMITED.

NOVEMBER RETURNS.

THE mine superintendent cables to the following effect:—"Ore shipped for the month of Nov., 690 tons; estimated value, \$8,500; working expenses (including ore freight), \$17,000. Have cut station at No. 11 level, and am drifting towards the ore body met with in No. 10 level."

Capt. Harvey has been suffering from illness, but is now convalescent. The following is the latest report received from the mine:—Robinson Mine—No. 1 level, South drift, No. 1 stope: Height of stope over back of level 62 ft.; length, 28 ft.; value of ore from 25 to 40 ozs. silver per ton; lead 50 per cent. Shaft: The main shaft has been sunk a further depth of 26 ft.; total depth below base of No. 5 station, 110 ft. The contractors have 4 ft. more to sink to complete their contract of sinking 100 ft. Yankee Girl Mine—No. 2 level, Orphan Boy stope: Height of stope over back of level, 41 ft.; length, 18 ft.; ore 2 ft. wide for 6 ft. in length; remaining portion of stope ore scattered; value from 20 to 70 ozs. silver per ton. Five-and-Half level, Yankee Girl ore body, Stope: Height of stope over back of level, 20 ft.; length 22 ft.; ore scattered; value from 50 to 1,200 ozs. silver per ton. No. 6 level, Orphan Boy ore body, Stope: Height of stope over back of level, 8 ft.; length 20 ft.; ore scattered; value from 10 to 60 ozs. silver per ton. No. 8 level, West ore body, Stope: Length of stope, 31 ft.; height over back of level, 30 ft.; ore scattered; value of ore from 15 to 50 ozs. silver per ton; copper 4 per cent. to 8 per cent. No. 9 level, West drift: Drift extended, 8 ft.; total length, 189 ft.; there is quartz 1 ft. wide in the forebreast. Our object is to continue this drift until we get under the west ore body seen at No. 8 level. South-west ore-body, Stope: Length of stope, 61 ft.; height over back of level, 29 ft. for 33 ft. in length; remaining portion of stope height over back of level, 23 ft.; east portion of stope, ore 2 ft. 6 ins. wide for 29 ft. in length; west portion of stope, ore 11 ft. wide for 28 ft. in length; value of ore, from 20 to 40 ozs. silver per ton; copper, 3 per cent. to 12 per cent. No. 10 level, West drift: Drift extended 13 ft.; total length from station, 92 ft.; there is quartz 18 ins. thick in the forebreast. Yankee Girl, Ore body, Stope: Close up to the bottom of No. 9 level we have discovered some fair copper ore, which carries from 35 to 80 ozs. of silver per ton. Shaft: The pipe column has arrived. We have lined the column with Californian redwood and lowered it into position. The water has been lowered 90 ft. below the base of No. 10 station, or to within 10 ft. of No. 11 level. There is now considerable *débris* and slime to clean out from the bottom of shaft.—B. MCNEILL, Secretary.

Telegraphic information has been received from Capt. Harvey as follows:—"No. 10 level, Yankee Girl ore body, Stope between No. 9 and No. 10 level: Ore 3 ft. wide; value 20 to 150 ozs. of silver per ton. No. 10 level west: Ore in face of drift 2 ft. wide; value from 20 to 180 ozs. of silver per ton. No. 10 level, Winze: Ore from 2 ft. to 6 ft. wide; value from 10 to 70 ozs. of silver per ton."

AMERICAN BELLE MINES, LIMITED.

The following information has been received by cable from the mine superintendent:—"Shipped from Silver Belle during Nov., 35 cars of ore, about 350 tons; estimated value, \$4,700; working expenses, \$10,500." Owing to the recent illness of Capt. Harvey he was unable to forward his usual monthly report. Capt. Harvey has since cabled to the effect that he has returned to his duties. The directors would remark that the expenditure on revenue account includes a large outlay incurred in running levels Nos. 9 and 10, the former being expected to cut the first of the ore bodies in the course of a few weeks.—B. MCNEILL, Secretary.

THE GENERAL ELECTRIC POWER AND TRACTION CO., LIMITED.
—The progress of this company in electrical work in mines is fully set out in our meeting columns, and is worthy of careful perusal.

REPORTS OF MEETINGS.

THE AMERICAN ASSOCIATION, LIMITED.

A PROTRACTED MEETING RESULTS IN THE UNANIMOUS PASSING OF THE REPORTS, THE ACCOUNTS, THE RESOLUTIONS FOR RAISING MORE CAPITAL, AND THE WITHDRAWAL OF A HOSTILE AMENDMENT.

THE fifth ordinary general meeting was held at the Cannon Street Hotel, on Monday, to receive and consider the balance-sheet and the report of the directors, and to elect directors and an auditor, and to transact the ordinary business of the company.

Mr. E. A. Pontifex

(chairman of the company) presided.

The SECRETARY read the notice convening the meeting.

POSITION EXPLAINED.

The CHAIRMAN: Gentlemen, the first business which we have to discuss to-day is that which relates to the report and accounts for the past year, which have been duly circulated amongst the shareholders. In ordinary circumstances it would be my duty to go in considerable detail into nearly every point to which allusion is made, but as the infinitely more important business of to-day will be that for which the extraordinary meeting has been convened, namely, whether, and if so, how, additional capital should be raised, and as we have from circumstances been compelled to meet at a somewhat late hour in the day, I will not trouble you with quite such lengthened remarks on our operations of the past year as, otherwise, I should have ventured to offer to you. With reference to the accounts, I may mention that our auditor, Mr. H. C. Sargent, has had exceptional opportunities of going into every detail connected with them upon the very scene of operations. Mr. Sargent was at Cumberland Gap for upwards of a month, and investigated every point of interest which in any way related to the affairs of the company, which came under his cognisance as auditor and accountant. He has made a long and comprehensive report to the directors, in which he gives a detailed history of most of the past transactions of the association, of their management, and of their bearing on the future operations of the company. He has also carefully studied how best to curtail the current expenses—what are the immediate sources of revenue out of which they can be defrayed, and how that revenue can be best and most speedily increased. That report is on the table, and any shareholder can peruse it at his leisure. The result of these investigations is that Mr. Sargent has arrived at the very satisfactory conclusion that if a comparatively small and not very costly addition can be made to the transport facilities, mainly upon the Belt Railroad, the association can at once be placed upon a self-supporting basis, with a bright future before it.

THE RAILWAYS.

The rolling stock of the Belt Railroad is at present lamentably deficient in traction power, and the permanent way requires a considerable outlay for ballasting, &c., but we have not sufficient capital at our disposal wherewith to supply what is necessary for these purposes, nor for the payment of the balance due on account of the construction of the line. The two small locomotives which are already at work are quite insufficient, in point of power, to carry a loaded train of minerals along the heavy gradients which obtain on that portion of our railway system; although they may have been powerful enough for the purposes for which they were originally acquired. So deficient are we in traction power that, as we are informed, our tenants of the Mingo Mountain Coal and Coke Co., although able to supply it, were recently compelled to decline an order for 140 tons of gas coal per diem, offered them by the Louisville Gas Co., although the Louisville and Nashville Railroad Co. (over whose line the coal would have to pass), had offered to supply the necessary cars to carry it.

OTHER RESOURCES.

From this it will be seen that our tenants have made satisfactory progress in opening up their collieries, and that if means of transportation were afforded them, they could send abundance of coal over the Louisville and Nashville railroad to the north, and of coal, coke, &c., over our own Knoxville, Cumberland Gap and Louisville Railroad to Knoxville and the south. This trading is entirely independent of what I may call the home consumption, such as the Watts' Iron and Steel Syndicate and other such industries, will require so soon as those industries come into operation, as it may be shortly expected they will do. No little disappointment has been felt by all at the slowness of development of these enterprises; but when once they are started I think we may confidently say the whole aspect of affairs will show a very large and rapid improvement. The same reason accounts for the small development in the iron ore beds, as, naturally, our tenants would not raise an indefinitely large stock of ore until they were within a measurable distance of starting their works. It will, however, be observed from the report that the Watts' syndicate are stated to have already raised and to have over 65,000 tons of ore mined and stacked.

MR. SARGENT'S REPORT.

From Mr. Sargent's report it appears that royalties to the extent of about 7,000£. have accrued to the date of closing the accounts, against about 900£. in the previous year, which, in the circumstances that I have alluded to, is a not unsatisfactory increase. The dividend which was paid in January last was, therefore, not earned from royalties, but from entirely exceptional sources of revenue, such as the sale of building lots, and of shares in subsidiary companies, which are not capable of indefinite repetition. The Knoxville, Cumberland Gap and Louisville Railroad has continued to show a fairly satisfactory increase in the returns from the traffic carried over it, and in spite of the disadvantages under which it at presents labours, it is now earning its interest on all the first mortgage bonds which were issued and sold. Seeing that this result has been attained without any traffic passing over the line, which would result from the output of the manufactories which have been, or are to be instituted at Middlesborough, which were looked upon as the main sources of the traffic we expected to have to carry, this may be considered a very satisfactory

result. Of course, so soon as those manufactories commence work the earnings of the railway will very largely increase. Hitherto, the Belt Railroad has been managed by one organisation, and the Knoxville, Cumberland Gap, and Louisville Railroad by another, and an independent one. This, manifestly, is a defective arrangement, as not only can the two be managed by one staff at much less expense, but if the rolling stock of the two lines were interchangeable, a less quantity of it would be required than if each company had to handle its own separate supply of locomotives, cars, &c. The board are now directing their attention to the question of the amalgamation of the working of the two lines of railway. I may mention here that Messrs. Cary and Whitridge have lately been able to arrange for the supply of 250 cars to be hired at a monthly rental, which rental, it is believed, will be payable out of the railway receipts. Some remarks have reached us which would imply that the directors had committed the company to an outlay on the railroad without sufficient authority from the shareholders, or without clearly letting them understand what it involved, but this is not a fact. Without disclaiming any responsibility which properly attaches to us as directors, and especially without seeking to relieve ourselves of it by placing it upon your shoulders, I should like to point out that at every stage of the progress you have been kept informed of what was being done in respect of the building of the railroad, how it was being paid for, and of the gradually increasing indebtedness due to its cost of construction.

THE ASSOCIATION AND THE RAILWAYS.

You will probably remember that at the extraordinary general meeting which was held on July 21, 1887, an amendment was proposed from the shareholders' side of the table, requiring us to build the railway, and to make the tunnel on a much more expensive scale than we ourselves had proposed. At the same meeting the nature of the arrangements which ordinarily prevail in America, by which a railroad is built by a construction company, formed for that special purpose, was clearly explained to you; and you were also told that we should have to subscribe for a considerable number of the shares of that company, and would have, consequently, to pay for those shares a very considerable sum of money. At the meeting held on Dec. 22, 1888, I informed you in my opening speech that a Construction Co. had been duly formed for the purpose of building the railroad, and that this association had subscribed 45,000£. towards the capital of that company, with a view of retaining a preponderating interest in its operations, as well as to form a nucleus for further subscriptions of capital by other persons. At the meeting held on Nov. 13, 1889, I further told you that in addition to the 45,000£. which we had subscribed to the capital of the Construction Co., we had had to advance them sums of money amounting in the aggregate to 37,000£., so that the association had subscribed, in one form or another, an amount of 82,000£. towards the capital of the Construction Co. I mentioned at the same time that the Construction Co. had found that the cost of building the line had been much greater than they had expected.

DIFFICULTIES.

Such bonds as they had been able to place had been sold at much less than the price anticipated, and a large number of them could not be negotiated at all owing to the then prevailing depression. The Construction Co., therefore, found themselves without funds to complete their contracts, and if this association had not taken over their business, the Construction Co. would have had to go into liquidation, in which event a receiver would have been placed in possession of the railroad, and the association would have lost all control over its future policy as well as the value of all the capital they had subscribed towards its cost of construction. Perhaps, as things have turned out, it might have been wiser if the association had at once realised this loss, and had faced the possibility of a policy in the management of the railroad which might be adverse to the interests of the association, or rather of its tenants, but at that time neither the board nor the shareholders thought it wise to accept this sacrifice, neither was it anticipated that the disturbance of financial affairs both in America and in England, and the general loss of confidence which has followed it, together with the failure of the City of Knoxville to fulfil its obligations, would have placed us in the critical financial position in which we now find ourselves. At the meeting held on Dec. 21, 1889, I again referred to this subject and mentioned that we had now bought up all the interests of the Construction Co., and that from this time forward the association was practically the Construction Co. itself.

SHAREHOLDERS TOLD ALL.

Thus we cannot, with any justice, be accused of having kept back from you a full knowledge of all the circumstances connected with the building of the railroad and of the money required for its construction. It is that outlay which has created our financial difficulties. We should never have incurred it but that we were told the funds might be provided in America by the sale of the Railroad Construction bonds, and that would doubtless have been feasible but for events which no one could have foreseen. No doubt it would have been much pleasanter if we could have induced other people to find the money wherewith to build the railroad, which was to develop your property and make it five or six times its original value. It is always pleasant to get other people to pull our chestnuts out of the fire. We tried to get them to do so—and to some extent we succeeded—but we could not entirely do it, and we have now to decide whether we shall ourselves provide the money to pay for the work, which we deliberately decided was necessary, or whether we shall surrender to others the property on which that money has been spent, and the value of which it has so immensely increased.

NEW MANAGER.

The directors have much satisfaction in stating that they have been able to select a very competent manager to succeed Mr. Arthur, as general manager in America, in the person of Mr. J. H. Bartlett, who is here to-day. Mr. Bartlett has the experience and technical knowledge of the management, management of railway and other similar enterprises, in which knowledge Mr. Arthur was of necessity somewhat lacking. I do not wish in any way to depreciate the value of some of the past services of Mr. Arthur. It was impossible to obtain a more capable man for the early stages of our development, but Mr. Arthur possesses the fault which is sometimes found associated with great energy and

with great capabilities, namely, that his views were too impatient and too ambitious. He did not measure with sufficient accuracy the means at his disposal for carrying out the very large and comprehensive plans which his prescience and foresight enabled him to perceive would ultimately be required. Mr. Bartlett is a man of business, accustomed to business ideas, and I feel quite sure that so soon as he gets in the saddle we shall see great improvements in all those points of management in which, possibly, we have been hitherto somewhat deficient. The question of the provision of additional capital is one which will more properly come within the scope of the extraordinary general meeting, which will be held immediately after the present meeting. I will therefore only now allude to the matter sufficiently to remind you that at the extraordinary meeting held in July last I explained to you at considerable length the circumstances which required us to provide the 300,000*l.* which we then asked you to subscribe by way of debentures. We did not receive from the general body of shareholders any very liberal response to that invitation, and what we have now to ask you is to provide us substantially with the balance which remains unsubscribed of that proposed issue. It will, however, be my duty to go into this matter more at length at the extraordinary general meeting to be held presently. I will, therefore, only say at the present moment that with the addition of sufficient capital to enable us to pay the balance of the cost of construction of the railway, which railway was absolutely necessary in order to give a commercial value to your property—and was always fully understood to be so—every hope which has been expressed as to its future prosperity will be more than realised, and that the success of your enterprise will be almost without parallel, aided, as it evidently will be, by an era of prosperity which all the most competent authorities hold to have already commenced in the United States, and which they expect will be both brilliant and enduring. (Cheers.)

MISTAKES MADE.

Sir THOMAS BROOKS (director): I second the resolution. We all feel (I do particularly) great regret at the present state of the association. I feel there has been too much extravagance in America. We have had too much confidence in Mr. Arthur, who has not taken this into account as a strictly commercial undertaking. At the same time even we do not wish to shirk our responsibility, but we have been disadvantaged by the great distance from the scene of operations, though the extravagance of which I have spoken is as nothing compared with the great value of the property. I have invested my money in the concern, and have now all that I ever had in it at the commencement and considerably more, because I have regarded it as an investment. Mistakes have been made which will be corrected in the future. I took up the debentures, and

AM QUITE PREPARED TO TAKE UP PREFERENCE SHARES

if the meeting passes the resolutions. I do think there is a good future for the association. One of our great difficulties has been our unexpected financial obligations to the railways which we were told would be taken up by the Americans themselves, and which we thought would be done, until Mr. Arthur found he could not find the money to complete the Belt Railway. Then, again, the Belt Railway has been extended far beyond the requirements of the association, and the rest has been for the benefit of Middlesboro'. I have no doubt if we succeed, and I consider the American Association is the keystone of that district, that the Belt Railway itself will also pay. As to the output of coal, it has been put down at the small amount of 4,000 tons a day, and as one knowing about collieries, I say that is only a small amount of what you may expect from the coal development in the Middlesboro' district. You go in at a day level and have no pits to sink, and a large amount can be got out from there. Mr. Sargent says even taking the coal alone it will pay us interest on all the capital spent, and I consider that only the beginning of our development. I do not wish to advise anybody, but I can only tell you what I shall do myself, and that is take up these preference shares, with full confidence in the future of the association.

AMENDMENT.

Mr. PULLMAN: I have an amendment to propose. I believe there are a number of gentlemen here who share with me the feeling that we have put up long enough with the promises held out to us as to our success. I think it is desirable you should know the holdings of our partners, if you will permit me to call them so, on the board. I have been at some pains, and at trifling expense, to obtain a full list of shareholders, and you will find this information very interesting. Sir Thomas Brooks I find to be a most creditable holder of 532 shares; Mr. Clarence Cary, 611, and, I believe, he has never sold a share; Mr. Story Maskelyne, 300; Mr. Jacob Higson (whose report you will all remember, as it led so many of us to invest our money), 64 shares; Mr. Pollock, 61 shares; Mr. Dillywin Parrish, 28 shares; and Mr. Pontifex, 26 shares.

The CHAIRMAN: I hold a great many more, as I will explain.

Mr. PULLMAN: Mr. Barnett holds 68. You will find in the profit and loss account an item upon which no reduction is suggested by the auditor—directors' fees, 1,375*l.*, which means 172*l.* a year for each of the eight directors. (There are nine.) I wish to propose: "That this meeting be postponed; that a committee, having the confidence of the shareholders, be at once appointed to go into every question that requires an answer in this report, with power to obtain services from the auditor, to whom we appear to be more indebted than to anybody else." I have a strong reason for wishing for the appointment of a committee, because I am unable to bring myself to believe that the shares, the initial value of which was 10*l.*, jumped in the way they did to 34*l.*, at which I expect a good many unfortunate ones bought, and then more mysteriously still went down by leaps and bounds to about 2*l.* I am most anxious to trace the upward movement according to the official quotations, and the downward movement according to the same source, and to have laid before us the transfers passing through the books of the association, which in some measure may account for this rise and fall. Gentlemen, you will know by that what I mean. (Cheers.) If I do not carry my amendment, it will be necessary for me to refer to other matters. The actual working expenses in America have been 19,623*l.*, and whereas the auditor reports they may be reduced to 5,364*l.*—an

abatement of 14,000*l.*—yet the directors tell us that they can only effect a saving of 10,000*l.*—a nice contradiction. The

LEGAL EXPENSES HAVE BEEN PARTICULARLY HEAVY.

Whoever supposed that this property, bought with a flourish of trumpets at 3*l.* an acre, was going to necessitate an outlay of 3,003*l.*, and the legal expenses in London have amounted to 896*l.* Does that include counsel fees paid by the board to know whether they have exceeded their powers? I do not suggest we should be so unwise as not to pass the resolution of the extraordinary meeting, but I do think you will agree with me when I tell you that the

DIRECTORS HAVE TREATED US WITH MARKED UNFAIRNESS

when they have waited to within four days of the due date of the repayment of their loan before they have called us together to explain the situation. I have a letter from the secretary as follows:—

"Loans due from the association fall due on the 19th and 28th, and the directors are unable, with the means now at their disposal, to induce the lenders to extend the date of repayment. If the new shares are created and subscribed, my directors are satisfied that every indulgence will be shown by the people to whom the loans are due, but if the shareholders by their action on Monday next should do anything which will have the effect of raising a doubt in the lenders' minds as to the subscription of the new capital, there will be nothing for it but the liquidation of the company."

Is that a fair way for our anxious partners to treat us, who are the sleeping partners?—to put a pistol at our heads and say, "Your money or your lives." I believe and hope that the money will be subscribed, and I trust, having regard to what I implicitly believe to be the value of this magnificent property, the time will come when it will be an honour and pride to be associated with it, instead of as it is to-day—almost a shame and disgrace. (Cheers.)

MR. PULLMAN'S DEALINGS SHOWN.

The CHAIRMAN: One word upon a personal question. Mr. Pullman has said I hold only 26 shares, and that is quite true, as far as regards the register. I am a poor man, and do not profess to be otherwise. I speak the truth honestly and truly. I am sorry to say it, and I have been greatly made poor by this and kindred companies. I have lost several thousand pounds, which I could ill afford to lose, and as the result of that I have had to borrow money on some shares I hold, so that my shares are not standing all in my name. I never sold a share until after you refused to subscribe to the issue of debentures, and then I found my securities so depreciated that I was obliged to sell. The highest price I ever got was about 6*l.* 10*s.*, for what I gave 15*l.* for on allotment. I have lost money heavily by this company, and it is not fair to stigmatise me as you have done with only holding 26 shares. God knows

I HAVE WORKED HARD AND HONESTLY

in your interests, and all my colleagues will bear me out in that statement. (Hear, hear, and cheers.) Mr. Pullman has spoken of the unfortunate shareholders in this property, but I congratulate him that he is not one. (Laughter.) I have taken the trouble to examine the register, and find that between Mar., 1883, and Apr., 1889, he acquired 115 shares; between Nov., 1889, and May, 1890, he sold the whole of those 115 shares, and realised a profit on them of over 1,000*l.*, and I find that on Sept. 11, 1891, he bought the 40 shares which he now holds. (Laughter and cheers.)

Mr. PLOTON, in supporting the amendment, said he had not come to criticise what had been done for the last three years in the spirit of maliciousness. He did not agree with those who said the directors had nothing to do with market quotations, because good management made those quotations rise, and the reverse made them fall. He thought if the directors had a committee they would get the money they required to put the property on a sound footing. As to its increasing value he had no doubt, but at the same time he wished to know in what way past expenditure had gone, for he did not see how these railway undertakings could pay. For example, on the Knox Hill Railway a lot of money had been spent, but he was told it would have to be re-built, because the ballasting was so bad. His informant was Mr. Arthur, who said "No heavy trains can pass along those rails." As regards the Belt Railway, it did not pay at all, and how would the board be able to make it pay? How was the profit made of 19,436*l.* on the construction of the road—the only profit they saw in the accounts? The report stated 34,000 tons of coal had been extracted to the end of Sept., but it did not state how long it had taken to extract it. (Cries of "Time.") I second the amendment.

POSITION OF THE BOARD.

Mr. H. F. POLLOCK (director): I rise for the purpose of making a suggestion. Speaking on behalf of my colleagues there is not one of us who does not recognise that Mr. Pontifex, your chairman, has worked harder than any other member of your board. At a time when we were in great difficulty, and when, owing to private engagements and the autumn holidays, other directors had to go away, I can only say that, as a director, I stayed in town for the whole of last summer, and

MR. PONTIFEX, YOUR CHAIRMAN, STAYED BY ME,

and without his assistance and industry we should not even have been able to meet you here to-day. (Cheers.) As to any insinuations by Mr. Pullman that the directors have been selling their shares, I invite every investigation. (Cheers.) Personally, I am here as a director who has never sold a share, and who has taken every opportunity of increasing his holding on each occasion that an opportunity has been afforded to me. (Cheers.) I believe I bought my last shares as high as 32*l.* It is a fact that a portion of my shares were taken as security for a loan at my bankers, and do not for the moment appear in my name, but that is the explanation of the mystery. There is not a member of the board who wishes to retain his seat a day longer than you wish him to do it. (Cheers.) I think, however, it would be very unwise if you took steps to delay the subscription of this capital. The board agree with me thoroughly in the undertaking that we will only use that capital so as to "hold the fort," so to speak, and that we will undertake, immediately we have put the association out of immediate danger, to come before you and place at your disposal our resignation.

WE COURT THE FULLEST INVESTIGATION.

(Hear, hear.) I agree with all that has fallen from my colleague, Sir

Thomas Brooks, I am the member of the board who believed longest in Mr. Arthur, but am very sorry I did not remember long ago the old saying, "No man can serve two masters." We made the mistake of allowing Mr. Arthur, as your manager, to go into other enterprises when we ought to have kept him to this business exclusively. Mr. Pullman will find that we have taken all proper steps to renew the loans, but in times like the present people wish to draw in their money, and not to leave it in what some might consider an indifferent security. The cables which will go to America about this meeting will show the people there what confidence the English public have in the undertaking, and if they see a unanimous resolve to help ourselves by subscribing the capital, as some of us will do, in more than our *pro rata* proportion, then it will be all the better for the association, and afterwards you can discover, as we challenge you to do, whether there has been anything beyond errors of judgment in our management. If that be done, if we have a hearty meeting to-day, and if the capital be subscribed, you may take my assurance that we will only use that money for absolutely necessary purposes, and that we will at the earliest moment place ourselves in your hands. We are assured by the auditor that the minimum sum with which we can proceed to work is 150,000*l.*, and we have asked for 198,000*l.*, but unless we see 150,000*l.* well in sight we will not proceed to allotment. That means that we must all subscribe. There has not been the smallest attempt to underwrite. Every shareholder comes in on exactly the same basis, and whatever Mr. Pullman may think of my efforts in connection with the debentures, I can only say I believe in the American Association and intend to take more than my *pro rata* proportion of the preference shares, and to induce my friends, if possible, to do the same. (Cheers.)

The CHAIRMAN: I will answer the questions put. As to the profit on the Belt Railway, the bonds were issued to us at a certain price, and we placed them on the market at a better price—the profit being shown on the accounts.

A SHAREHOLDER: To whom is the money owing?

Mr. POLLOCK was about to give the information, when several shareholders protested, because it was not in the interests of the association that names should be mentioned. He proceeded to say that the auditor only returned from America on Nov. 19, and had been at work almost night and day since—in fact, he only finished the accounts to-day, so that not a moment's time was lost in calling this meeting.

VIEWS OF A MANCHESTER SHAREHOLDER.

Mr. EARLE: I have come from Manchester to attend this meeting, and the remarks I will make are intended in no way to be hostile to the board. I am satisfied that this is an extremely valuable property. The holding I have was worth 30,000*l.* 18 months ago; it is now worth 2,000*l.*, or barely that, but I am prepared to sacrifice that little rather than subscribe for these preference shares without additional information. I find that during the period of barely four years over 100,000*l.* has been spent out of income in managing the property—general expenses, 12,700*l.*; travelling expenses, 3,000*l.*; advertising, 3,000*l.*; cables, 800*l.*; legal expenses, 11,684*l.*; surveys over 10,000*l.*; office expenses in London and America over 20,000*l.*; exploring for coal, 6,000*l.*; and directors' fees 5,758*l.* Unless we can be shown how those expenses are to be reduced it seems to be idle to talk of finding further money. That the property is worth considerably more than the liability on it there cannot be a question; and as to the railways even, I believe that their liabilities to the association are quite worth 20*s.* in the pound. If so, the association at a low figure must be worth three-quarters of a million sterling, and the liabilities, except to the share and debenture-holders, appear to be trifling. I cannot see any objection to the appointment of a committee, but if we are in such a state that adjournment for a reasonable period will bring us to a collapse, then I, for one, at once say—let the collapse come. I support the amendment.

A SHAREHOLDER: I was glad to hear Mr. Pollock say that the directors will not proceed to allotment unless 150,000*l.* was "in sight," but what does that mean?

Mr. POLLOCK: We have invited the shareholders to pay 6*d.* per share, and if we do not see before us with this, and the subscription for further debentures that may come in, 150,000*l.*, we will not proceed, but return the money. In any case, when we have made the association safe, we will place our resignation at your disposal, but our successors will find that they will have no easy task.

DIRECTORS OUGHT TO REMAIN.

Mr. EARLE: We do not accuse the directors in any sense, but they, having got us into this mess, ought to stand by the ship and get us out of it. (Cheers.)

A SHAREHOLDER: I greatly advocated previously preference shares to debentures, but the shareholders have subscribed 24,500*l.* for the debentures, and Mr. Pollock's friends 83,575*l.*; therefore, Mr. Pollock's holding, with his friends, in the debentures is three and a half times more than that of the rest of the shareholders, and surely that should give us confidence. (Cheers.) Supposing the 150,000*l.* was not in sight, will the debenture-holders come in and swamp the rest of the shareholders?

Mr. POLLOCK: The position of the debenture-holders is that they are all on an even keel, and they have the rights of mortgagees which are always conveyed by a debenture issue.

CONSEQUENCES OF THE AMENDMENT INDICATED.

Mr. ASHTON: I listened with considerable dismay to the remarks of Mr. Pullman and the amendment he moved. I represent a holding of 2,000 shares in the association, which were not sold at a high price and were not bought back at a cheap price. (Laughter.) While Mr. Pullman was speaking it struck me he could hardly have realised what would be the effect of his resolution as regards the shareholders. How can he expect to raise the money requisite, if at the same moment a committee of investigation is appointed, which means a want of confidence in the directors? (Hear, hear.) Such a committee would be absolutely fatal to the interests of the undertaking. If you vote in favour of his amendment it means winding-up. (Cheers.) Whatever may be said about the extravagance of the past, this is a property of extraordinary value, and it will be wound-up just at the time when we are expecting to reap the fruit of the money we have put into it. We must appeal to Mr. Pullman not to press his amendment, and in any case it will be folly to support it. It would mean the dissolution of the company, and after the suggestion of Mr. Pollock there would be no difficulty in

strengthening the board, if that be desirable, and, personally, I should be glad to see it. I hope you will carefully weigh what you are doing before you vote for the amendment.

Mr. ELLIS: I am no apologist of the board. I never spoke to Mr. Pontifex or Mr. Pollock except in this room. I never sold a share, and took up my allotment at 50 per cent. premium. I wish to emphasise the advice of Mr. Ashton, for this is not the time to swap horses when we are crossing the stream. The board have made mistakes, and they feel it, and their legal expenses have been extremely heavy, but I think we should be doing ourselves harm if we did not subscribe this money, and trust the directors further. We must do it, or our property will be lost. I am prepared to subscribe my proportion, and hope others will do the same.

A CONVERT.

Mr. KAY: I came with proxies for over 1,000 shares, and was prepared to vote for the amendment, if it had not been for the remarks of Mr. Ashton, who I am sorry to find has retired from the board. I beg the meeting not to vote for the amendment.

Mr. WATTS: Is there any middle course?

MIDDLE COURSE.

Mr. POLLOCK: I think there is, and it arises out of the suggestion I made myself. I think you should pass the report and accounts, vote the additional capital, and go away with the understanding that you will all subscribe your 6*d.* a share, and that you will take our undertaking, as English gentlemen, only to use that money for the purpose of securing our position, and that we will call a committee of shareholders, although we have had conferences repeatedly already. We challenge anybody to say that there has been anything dishonourable or unfair about our treatment of the shareholders. We will select a committee, and even ask Mr. Pullman to be the chairman, or to select that committee. (Cries of "No.") There is nothing upon which we do not invite investigation. We have all lost money. Mr. Pullman is welcome to make any charge he pleases, but he may come before you again as soon after Christmas as possible, and say—there is our report; here is our resignation; we leave ourselves in your hands. (Loud cheers.) So I say, under these circumstances, there is a middle course. Mr. Clarence Cary has braved the storms of the last few days to come over here and be present at this meeting, and will probably address you.

Mr. PULLMAN said that, actuated by the speech of Mr. Ashton, he would withdraw the amendment, but he repudiated the idea that he had charged the board with dishonourable conduct, though if he had made a cap which had fitted the heads of anyone let that person wear it. (Cries of "Oh!")

The original motion was then put and carried unanimously, and the retiring directors and auditors were re-elected.

EXTRAORDINARY MEETING.

The SECRETARY then read the formal notice of the extraordinary general meeting to pass the following resolutions:—

"1. (a) That the capital of the company be and the same is hereby increased by the creation of 150,000 new shares of 1*l.* each. (b) That such new shares shall be called preference shares, and shall carry a cumulative preferential dividend at the rate of 7 per cent. per annum, and shall in addition to such cumulative preferential dividend be entitled to participate *pari passu* with the ordinary shares of the company (and in proportion to the amounts paid up thereon respectively) in all further dividends or bonuses which may be paid by the company. (c) That in the event of the company being wound up the holders of the said preference shares shall be entitled to have the surplus assets of the company applied in the first place in repaying to them the amount paid up on the preference shares held by them respectively, and, after payment to the holders of the ordinary shares of the amount paid up on such ordinary shares, shall also be entitled to participate rateably with the holders of such ordinary shares in the residue (if any) of such surplus assets of the company. (d) That of the said preference shares, 120,000 shall be issued at once, and shall in the first instance be offered for subscription to the existing members of the company as nearly as possible in proportion to the number of shares held by them respectively, but any of the said shares not taken up by the existing members of the company shall be under the absolute control of the directors, who shall be at liberty to allot or otherwise dispose of the same to such persons at such times, and in such manner, and upon such terms and conditions as they shall think fit." "2. That the directors be, and they are hereby, authorised and directed to take all such steps as may be necessary to sub-divide the existing ordinary shares of the company, Nos. 1 to 40,000 inclusive, into shares of 1*l.* each."

WHY THE MONEY IS WANTED.

The CHAIRMAN said: We now come to the consideration of the question of how the increased amount of capital, which has been rendered necessary by reason of our outlay upon the railway, shall best be provided. The board had come to the conclusion that the most likely means of obtaining what is required would have been by a re-construction of the company, in which case every shareholder would have had to contribute his proportion, unless he were content to lose all interest in that property on which he had already spent so much money. I should like to take the opportunity of explaining the word "assessment," which is used in the report—in the event of re-construction every shareholder would have to be assessed—that is a colloquialism adopted by Americans. Nobody intended to imply that it was obligatory. If you take up the assessment the amount you would have to pay on your new shares would be considerable. In that way every shareholder would have been placed on an equal footing, and each one would have had to contribute in proportion to his present holding. We had two or three conferences with a number of the largest shareholders in the association, and some of them represented that this would come very hard on such shareholders as might be wholly and absolutely unable, from financial circumstances, to contribute their proportion. With a view to meet these objections, we have modified the scheme so as not to make it actually obligatory upon everybody to subscribe his full quota, but it is manifest that unless a very large proportion of the shareholders do this, the amount we shall receive from the proposed issue will be insufficient to place the company on a satisfactory

basis. To get over this difficulty and to induce as many shareholders as possible to help in the present emergency, and to induce such as have the means to take more than their rateable proportion of the issue, we propose such favourable terms as ought to leave no room for doubt that the required capital will be provided. Should, unfortunately, however, this not be the case, we shall then be compelled to revert to our original idea of a re-construction of the company, in which case those who come forward with their money will be purchasing for a tithe of its value, the property upon which you have spent so much, and from which we all justly expected such great things, and they will be acquiring it just at the moment when those great expectations are upon the point of being realised. The scheme we have to propose to you is, as stated in the report, that the capital of the company shall be increased by the issue of 150,000 preference shares of 1*l.* each, to be preferred as to capital, and to be entitled to a cumulative preferential dividend of 7 per cent. per annum, and, in addition, to rank *pari passu* with the ordinary shares for any further dividend. Combined with this proposal is one for an issue of a corresponding amount of the unplaced debenture bonds which have been already authorised at the price of 65 per cent. on their face value, so that a debenture for 25*l.* would be issued at the price of 16*l.* 5*s.* each. To be entitled to an allotment of a debenture upon these terms it is obligatory that 25 preference shares of 1*l.* each shall be applied for and allotted for each debenture issued. If a shareholder did not take up his proportionate number of preference shares he was not entitled to a debenture issued at the discount named.

A DIFFICULTY OVERCOME.

The object of this arrangement is to overcome the difficulty which the law attaches (until the pending decision of the House of Lords is obtained thereon) as to the issue of shares at a discount. It is permissible to issue debentures at a discount, but not shares, since the latter affects the nominal amount of the capital of a company. So far as the aggregate price of the two issues, of preference shares and of debentures respectively, is concerned, it is immaterial, for all practical purposes, whether the discount is accumulated upon the one issue, or is spread over both. We propose to accumulate it upon the one, namely, on the debenture; but any shareholder taking an allotment of the two must look upon the joint allotment as a whole, in which case he will see that he is compensated for not having his shares allotted at a discount by the circumstance that he gets his debentures at a proportionately greater one. As stated in the report, the effect of this joint arrangement will be that an investment of 25 preference shares, and of one 25*l.* debenture, will cost 41*l.* 5*s.*, and between them entitles the holder to a preferential return of 7½ per cent. over and above that which may be paid in respect of the existing ordinary shares. Since the interest on the debentures is fixed, and that on the preference shares will be proportionate to the profits made, this preferential return will not be uniformly 7½ per cent. in excess over that earned by the ordinary shares, because the profits on the shares increase, and the interest on the debentures remains fixed, so that the average of the two will be somewhat reduced. Thus, as stated in the report, if a 5 per cent. dividend is paid on the ordinary shares, the return in the combined investment would be 10¼ per cent., which is 5¼ per cent. and not 7½ per cent. more than the dividends to which the ordinary shares would be entitled. Of course, any shareholder might apply for preference shares alone, without taking up a proportionate amount of debentures, but he could not obtain the debenture without taking up the proportionate number of preference shares. Naturally, the first consideration of any intending subscriber to the preference shares would be, what chances are there of his receiving his preference dividend. On that point I would refer you to the auditor's, Mr. H. C. Sargent, estimate of future revenue, which is attached to the director's report.

FINANCIAL FORECAST.

Mr. Sargent there shows that so soon as the output of coal amounts to 4,000 tons per day, which it is stated it very shortly will do, and provided the means of transportation are afforded, an amount of profit of 28,930*l.* per annum may be relied upon, whereas, the preference dividend on the shares, and the interest on the debentures would only require an amount of 23,000*l.* It is most important to bear in mind that in this estimate of Mr. Sargent's he has not taken into any account whatever, the royalties which we shall receive on coke and on iron ore, upon the receipts from which the calculations were mainly based that originally induced us to acquire this property, and to expend the large amount of money which has been laid out upon its development. In point of fact this estimate of Mr. Sargent's is almost independent of the consumption of any of our products which will be the result of the creation of the large manufacturing industries that are now in process of formation in the town of Middlesbrough, and its neighbourhood. It will be noted that a further proposal was to convert each of our present 10*l.* share into 10 shares of 1*l.* each. The chief reason for this proposal was to facilitate transactions in the new issue of preference shares. Before the Stock Exchange authorities will grant a quotation for any new stock they require that there shall be a sufficient number of shares issued to cause what is called a "free market" in them. 15,000 shares, though, of 10*l.* each, would be too small a number to effect this object, whereas 150,000 shares of 1*l.*, though of the same aggregate money value, would do so. It being thus necessary to create the new shares of 1*l.* each, it is felt that it would be inconvenient to have two different denominations of shares in the same company, and, therefore, it is proposed to convert the old issues into shares of 1*l.* each, as well as to make the new issue in shares of that denomination. It may be asked whether the prospects of the company are sufficiently good to induce the shareholders to subscribe this further amount of capital. On that point I think there can be no doubt, and if you could hear all the statements which reach us I feel convinced you would be of the same opinion.

IMPORTANT POINTS.

All the outlay which has been required for the development of the property has now practically been expended, the railroad has been built, the mineral deposits have proved to be larger in extent and better in quality than we could have hoped for, and the organisations have been formed, and in many instances have already commenced work, that are to bring them to a profitable result. All the conditions in America are now as favourable to us as during the past two or three

years they have been the reverse, and universally an era of great prosperity is looked for, and, in fact, has already commenced. The enormous grain crops in America, happening simultaneously as they chance to have done with the scarcity of corn prevalent in Europe and in India, promise to create, in American phrase, such a "boom" as even the United States has never yet seen. (Cheers.)

VIEWS OF AN AMERICAN DIRECTOR.

Mr. CLARENCE CARY (director in America) seconded the motion, and said: You have a finer property than you seem to comprehend. The railroad, from its position and the business that it now has, and must have, may be regarded as sound, viewed as a naked railway operation. Prof. Proctor, who was the State Geologist of Kentucky, and a member of the Geological Survey of the United States, told me that the coal and coke output was

OF THE MOST SATISFACTORY CHARACTER,

that the iron ore was much better than he had anticipated when he examined and reported on it before, and that our coke was unlimited. My partner (Mr. Whitridge), who is acting as vice-president of the railway, and managing it in my absence, went to look at the property, and has cabled to me that he has found most wonderful developments of the coal and coke property, that orders are coming in faster than we have the means to supply, and far beyond our present accommodation and equipment. The railroad is in good condition, and will go through the winter without further repairs. It is now in a position to make substantial earnings, which we must have from this coalfield. As to what was said by Mr. Arthur, that the line was not ballasted, that referred to the Belt Railway, but the Knoxville was in good condition. I, as a shareholder, am going to take my proportion of this issue and recommend everyone within the sound of my voice to do the same. I think they will be sorry afterwards if they neglect the opportunity.

Mr. ELLIS: After the new preference shares have their 7 per cent., will they share in any balance?

The SOLICITOR: They will first be entitled to 7 per cent., and then rank as ordinary shares.

In reply to a further question, the CHAIRMAN stated that they would not proceed to allotment unless they got to within 10,000*l.* of the 150,000*l.* asked for in share and debenture subscription.

The motion was carried unanimously, as was also one reducing the nominal value from 10*l.* to 1*l.*

Mr. POLLOCK appealed to any gentleman of the Stock Exchange present to say whether by reason of this the company would lose its quotation.

He was replied to in the negative, but told that fresh application would have to be made.

The chairman was cordially thanked for presiding.

THE ISLAND BLOCK GOLD MINING CO., LIMITED.

A YEAR LARGELY CONFINED TO PREPARATORY WORK, BUT A PROFIT IS SHOWN ON THE WORKING.

A GENERAL MEETING was held at Cannon Street Hotel, on Wednesday, to receive the report and accounts of the directors to June 30th, 1891; to elect directors; and to elect an auditor.

Mr. Jeremiah Lyon

(chairman of the company) presided.

Mr. E. A. REEVES (secretary) read the notice of meeting.

DUPLICATE LINE OF PIPES.

The CHAIRMAN: Gentlemen, when we had the pleasure of meeting you last year we had the advantage of the presence of Mr. Rawlins, the manager of the mine, amongst us, who explained the desirability of having a duplicate line of pipes, and the result of the discussion that followed was that you sanctioned an expenditure to enable us to obtain it. Before Mr. Rawlins left he prepared all the necessary specifications for these pipes, which were ordered under his supervision, and we succeeded in shipping the whole of them at the end of Mar. We were somewhat disappointed in their delivery. We anticipated we might have had the great proportion of them in Jan., and that we should have had them delivered in New Zealand by such a time as would have enabled us to complete them before the winter season set in. Unfortunately, the bulk of them did not arrive in New Zealand until the winter season (which was exceptionally severe) had set in, and until the roads were quite impassable for heavy waggons. The result was that instead of having the duplicate pipes some months ago, we only learn by telegram yesterday that we may expect to have all of them placed in position by the 31st of this month. It may be satisfactory to you to know that when Mr. Rawlins returned to New Zealand, after an absence of some six months, he went all over the works and gave an exhaustive report, from which it was pleasing to learn he found everything in first-class position, reflecting the greatest credit on Mr. Heinekey, assisted by Mr. Adams, who were left in charge during his absence. The effect of not having these pipes duplicated up to the present has been that

OUR RESULTS ARE NOT SO SATISFACTORY AS WE COULD WISH.

The prominent feature in Mr. Rawlins pressing this duplication of the pipes was that we should be able to do double the amount of work at comparatively little more expense, and that our results would be then, in all probability, twice the amount they had hitherto been with a single row of pipes. We then, with your sanction, decided to issue some preference shares, but we have been disappointed in the result of the application made to the shareholders. We wanted 10,000*l.* to cover the additional expenditure, as well as the repayment of certain liabilities which the company had unavoidably incurred, but only succeeded in obtaining 6,917*l.* from the shareholders. I say "from the shareholders," but really of that amount the directors took nearly half, and our ground landlord, Mr. Clark, who was visiting this country, was so sanguine of our success that he also subscribed 500*l.* of the issue. The chief object we had in obtaining this additional capital was to pay off a mortgage we had incurred to the bank of about 3,000*l.* That we did in the Mar. following; but owing to our not receiving the full amount of this capital, and in face of the important work we had in hand, we were soon obliged to

GET FURTHER ASSISTANCE FROM THE BANK,

and in the accounts you will observe that on June 30 we were indebted

to it 2,174l.; but it holds no mortgage or lien whatever on the property, except a deposit of some of the unallotted preference shares. Since then we have been compelled to go to the bank for further assistance, and at present we owe them something over 3,000l. If this amount should have to be increased, we must expect to be placed in the position we were in last year—that is, to give the bank a lien upon our property. We hope this may be avoided as we are upon the eve of having the double row of pipes completed, when we have every reason to expect that our returns will improve. The amount of

SLUICING DONE DURING THE PAST YEAR

has been 21 hours per day—in other words, we have been sluicing for 6,610 hours; and when you remember the many difficulties that have had to be encountered in working this volume of water, and that our works extend over a range of 3½ miles, you will understand the nature of what we are doing. Such is the terrific power that is enveloped in these pipes, that to enable you to form some conception of the force with which we may work, I may mention that, unhappily, it happened that a youth in our employ met with a fatal accident owing to a nipple bursting off a very small valve, the result being that the water proceeded from it with such terrific force that, to employ the words used in reporting the accident, "the poor lad was turned over and over down the jagged rocks by the water some 40 ft., and after remaining unconscious for 70 hours he died." The result of our sluicing has been the collection of 2,045 ozs. of gold, representing over 7,700l. in value; and that coupled with the gold we had last year will amount to something like

12,000l. WORTH OF GOLD THAT WE HAVE ALREADY OBTAINED

from Island Block. I think you will agree with the board in thinking this abundant testimony in the way of confirming the theory that was enunciated in the prospectus as to the probability of this ground being the veritable river bed of the river Molyneux. With regard to the quantity of material we have sluiced, the authorities who are versed in hydraulics say that working with the pressure that we do, and from the size of our pipes, coupled with the fall we have, something like 1,440 tons of material are sluiced in eight hours. Upon that basis (I believe a correct one) we have sluiced over a million tons of material during the year, with the result of 1 gr. per ton. The accounts now presented can hardly be contrasted with those of the previous year, because we are dealing with accounts of 12 months, and the others were for 19½ months, but it is necessary I should comment on one or two of the figures.

A MANAGER WHO DOES NOT DRAW HIS SALARY.

First of all, we are indebted in the sum of 233l. to Mr. Rawlins, the manager, for balance of salary. This was due to him on June 30, and has not been drawn, nor, in fact, has he drawn any salary for the period from June 30 till now. When he was here last year 1,800l. was due to him for salary and money lent, the whole of which he took in preference shares. (Hear, hear.) Therefore, practically, the whole of the time Mr. Rawlins has been working on this property he has had a very small amount of cash out of the company. There is an item for a special tax (102l.), which last year was 206l. It is a tax levied by the New Zealand Government, irrespective of profit made, but assessed upon the actual value of the property owned, and I think we have some cause to complain that they have not waited until we can pay a dividend. They simply assess us upon the value of the property, ignoring the fact that we are employing about 35 men, and spending a considerable amount in the colony, and, in fact,

THE MORE WE SPEND, THE MORE WE ARE TAXED,

because we increase the value of our property. They have sought to tax us in the same amount as before, but we have appealed with this measure of success, that the 206l. has been reduced to 102l. We have had also another dispute with the authorities relative to the duty they have fixed upon the pipes last sent out. We had the same difficulty last year. According to the reading of the tariff in New Zealand it is clear that all kinds of machinery imported for the use of mining should go in duty free, and the Custom House officers and authorities decided last year that these enormous pipes that we have sent out did not come under that category, and that they ought to be taxed in the same way as water-pipes. We explained to them that it was an utter absurdity that we could intend to fix 20-in. pipes outside a house for the purpose of conveying rain water from the roof! (Laughter.) We appealed against it, and succeeded in obtaining a substantial reduction. This year the same question has recurred, and we are now fighting them relative to this further claim, 20 per cent. on some pipes we have shipped this year. The result of the working is that we have a balance of 1,736l., after paying all expenses for the year, but inasmuch as nothing has been written off depreciation, the directors thought (and the auditors with them) that it was only proper to commence to write off something by way of depreciation; and although the directors hold nearly half of the preference shares, and would have been glad of a dividend upon them, they thought, in the best interests of the company, they ought to deal with that amount in this way. (Hear, hear.) In addition, we have rather a dead weight to pull up in the 6,400l., that is, the balance from the expenditure brought forward from the last account. We ought to reduce that materially before contemplating the payment of another dividend. We have been successful in getting this fair amount of gold, because we were working in a narrow part of the river, and some parts of the river bed were so rich, that on one occasion we obtained 87 ozs. in 48 hours; but after passing through this narrow portion, the river widened out into a considerable flat, and our trouble has been for the past two months in trying to follow the actual river bed. Presuming a river is dwarfed into a small funnel of 100 yds.—if it swells out into possibly ½ mile there may be

DIFFICULTY IN TRACING THE ACTUAL GUTTER OF THE RIVER.

In order to find that we have had to sluice right across the river, and the gold we have had for the last three months has been obtained from that considerable overburden we have had to remove in order to try and find out where the river bed is. On one or two occasions the reports came that they thought they were absolutely upon the river bed, but on working a little further they found they had passed it. Mr. Rawlins seems to be under the impression that we cannot now be very far off from finding this veritable river bed, and the work so far

for the past two months has resulted in finding 140 ozs. of gold after removing a top burden of about 50 ft. The

TELEGRAM WE HAVE HAD FROM MR. RAWLINS YESTERDAY

announces that the yield is 140 ozs., at an expenditure of 70 per cent., and he sends a code word to say "There is every encouragement."

You must interpret for yourselves what the meaning of that code word is. So far as we, sitting here, can see, we think there is every indication we may soon come upon this important river bed. That view is strengthened by a letter received from a Melbourne shareholder, whom I do not know. He holds 500 or 600 shares, and says:—

"I have visited this mine, and have seen all the plant, dams, races, &c., and believe it to be one of the finest, if not the best, mining property in New Zealand. I have seen a letter from Mr. Ulrich, one of the best geologists on this side of the Equator, who considers the property magnificent, and the future of the mine assured—that the plant is the best in New Zealand, and the management first-class." Mr. Ulrich I take to be Prof. Ulrich, who originally reported upon the property, and upon the strength of whose statements we were very much led to go into it. He is professor of mining at the Otago University, and was formerly chief of the Geological Survey of Victoria. That is

AN ENTIRELY UNSOLICITED TESTIMONIAL

from one who, as I say, is unknown to me. It was received on June 22, since which date we have had additional pipes put down, so that I think his views would now be considerably strengthened by this additional work. I invariably draw attention to the holdings of the directors, and what they have done.

SELF-DENYING DIRECTORS.

The directors hold one-third of the shares, and since the commencement have not drawn any fees, have not asked for any, nor do they intend to until the company pays a dividend. (Cheers.) The other business will come before you in due course, and you may rely on our doing our utmost to endeavour to bring about such a state of things as will enable us very speedily to pay, if not a dividend on your ordinary shares, at all events a dividend on the preference shares. I now move the adoption of the report and accounts.

Mr. R. C. RAWLINS (director): I second it.

ENGINEER'S ESTIMATES AND RESULTS.

A SHAREHOLDER: As an engineer myself I should like to ask you—did our engineer make a mistake in his original estimate as to the pipes? In the prospectus he calculates that from one hydraulic lift with 300 working days he can get a quantity of gold equal to 44,167l. 10s. I suppose, when you started the company and appointed Mr. Rawlins manager he had pipes in accordance with that estimate, and yet at the present time you are doubling the quantity. To work a double row of pipes constitute a small item compared with the aggregate expense of working.

The CHAIRMAN: That is so.

The SHAREHOLDER: Then his estimate has been very far from the mark, as regards the quantity of gold that can be produced by one hydraulic lift. He has produced only 12,000l. worth of gold in two or two and a half years' working, although he estimates in one year, of 300 working days, to produce 44,167l. 10s. I put it to you whether the quantity of pipes you are sending out will make any great difference, because it seems to me his estimates are altogether wrong. I am comparing his results with his estimates in the prospectus.

A SHAREHOLDER: The expense of producing 2,034 ozs. of gold has been about 70 per cent., and the progress, by Mr. Rawlins' report (Aug. 20), should be "equal to doing nearly three times the work we have been doing at about 50 per cent. more cost." If that is so, where are our dividends to come from?

Mr. BOYLE: Was there a penalty clause in the contract in case of non-delivery? You said we had in hand 1,736l. available for dividends. But could that be so when we already owed at the bank 2,174l.?

A SHAREHOLDER: Your report states: "Until the present liabilities have been materially reduced, it will be impossible to pay any dividend on the preference shares." The liabilities, I suppose, are mostly to the bank.

CHAIRMAN'S REPLY.

The CHAIRMAN: The original prospectus was based upon the possibility of getting 13 grs. of gold per ton. There had been a number of experimental borings which were fully confirmed by several authorities, and it was upon the strength of these we considered there was gold at all in the property. Had we been working on the river bed, the result would have been greater, but we have had from 20 to 50 ft. of overburden to remove before reaching the bed, which accounts for the marked diminution in the returns. The manufacturers would not submit to a penalty clause, and we could not compel them to accept it. The 1,736l. shows the actual profit, as compared between the gold obtained and the expenses generally. We do not say we have paid off all our liabilities, because we have not, and 1,736l. is not in hand; but I said: "We must reduce the liabilities to the bank before we pay a dividend." Presuming we had an expenditure of 70 per cent. with one row of pipes—with two rows (presuming also we had double the returns of gold) instead of our expenditure being 70 per cent. it would only be about 35, as but few extra hands would be needed.

The report was adopted, and the retiring directors, Mr. Charles Colley and Mr. Crozier, were re-elected.

The auditors, Messrs. Browne and Lovelock, also were re-elected.

EXTRAORDINARY MEETING.

The meeting was then made special, for the purpose of passing resolutions read by the SECRETARY, the purport of which was explained by

The CHAIRMAN, who said: These resolutions are for the purpose of enabling us to have a register in New Zealand or Australia, for the benefit of local shareholders, from whom we have had several applications to this effect, and latterly a petition signed by nearly every one of them. We find this registry can be established at a nominal expense. One of our largest shareholders has offered to act as secretary for a nominal sum, and after consideration the board have

thought it desirable to adopt the suggestions, and I propose the resolutions *en bloc* which the secretary has read.

OBJECTION TAKEN.

Mr. BOYLE: I do not see what benefit it is for English shareholders to have this registry, but I can see where the expense comes in, and also where it opens the door to fraud. We know in London we are not free from the latter sort of thing, but thousands of miles away from here we are still more exposed to it, and I anticipated that ultimately there may be considerable trouble and difficulty caused to the company. Again, the principal part of the money found for this concern has been in England, and I think New Zealand shareholders are not injured in any way by having the shares sent home for registration as is the case with other companies.

The CHAIRMAN: That was our own view, but local shareholders said they could not form a market without a quotation, which the Melbourne Mining Exchange would not grant without a local office. As to fraud—we have safeguarded ourselves in every possible way, and I do not think by our system there is any possibility of it. We do not want, as directors, to sell our shares, but it is quite reasonable to suppose that other people do.

Mr. CROZIER seconded the motion, which was carried by 14 to 3. The chairman was thanked for presiding.

SUTHERLAND REEF, LIMITED.

SATISFACTORY REPORTS FROM THE PROPERTY—SHAREHOLDERS SANGUINE OF SUCCESS.

THE third ordinary general meeting of the shareholders of this company was held on Tuesday at Winchester House, Old Broad Street, London, E.C.

Mr. N. F. Robarts

(chairman of the company) presided.

Mr. F. C. O'NEILL (secretary) read the notice calling the meeting.

THE EVENTS OF THE YEAR.

The CHAIRMAN: Gentlemen, since we met you at the last annual meeting in Nov. you have had an opportunity on two occasions of meeting us, so that we have nothing much to add to-day to what you have already heard on those occasions, or have learned from the newspapers. In Feb. last there was a meeting of the Harmony Goldfields, Limited, to which the shareholders of this company were invited, when a description of the fields and of our own property was given by Mr. Mockford, our manager, and I think all the information up to that date you had as clearly as it could be given. At that meeting we informed you we were trying to make arrangements with the Harmony Proprietary Co. for the erection of a mill, where, in due time, ore could be crushed from our mine. We have had negotiations with the Harmony Co. with respect to the erection of the mill, but found they were not disposed to do it, and we felt it would be very disadvantageous for this company to spend money in the erection of machinery when the means at our disposal were not very large, and we were not absolutely certain as to the result of the ore.

PURCHASE OF THE POTSDAM REEFS CO.

Negotiations between our company, the Potsdam Reefs Co., and the Harmony Proprietary Co. have resulted in our making arrangements to purchase the Potsdam Reefs for 150,000 fully-paid shares, we taking over the whole of their assets, and adding their cash balances to ours, thereby giving us a working capital of 20,000*l.*, and the Harmony Proprietary Co. have agreed to give us a site for a mill, certain water rights to which we were not entitled, and to put at our disposal 30,000 fully-paid shares in this company, to be realised when we think fit. That arrangement was confirmed at an extraordinary general meeting, held, I think, in Aug. last, and we have since that time been working the Potsdam Reefs Co. on behalf of the liquidator. We are only waiting his advice to allot to him or his nominees the shares they are entitled to. The only other point with regard to that amalgamation which I need mention is that we undertook to put two directors of the Potsdam Reefs Co. upon our board, and I shall presently ask you to elect two of them to represent their shareholders on our board.

THE FUTURE OF THE COMPANY.

With regard to the future of the mine, very much must depend upon the facilities we have for bringing stores and machinery to it. You are probably aware that it is intended to construct a railway from the present terminus of the Delagoa Bay Railway to within 2 miles of our mine. That will be very important to us in the carrying of our stores. I was going to give you the information we have had from the workings up to the present, and exactly what we have done upon our reef, but a letter has come to hand which gives us the latest information and also contains very good news, so I will just read it to you. It is dated Nov. 15, and reads as follows:—

VIEWS OF MR. CONYBEARE.

"We have had Mr. Conybeare, chairman of the Silati River Gold Mining and Prospecting Co., Limited, and their expert, Mr. Pagler, over here this week and I showed them over every piece of work done on the property. They were greatly surprised at the large amount of work done, and were very pleased with the look of the Saturday reef and the new reef, and Mr. Pagler considers we have a most valuable reef in the Saturday, but, of course, the other is not opened up enough for him to give an opinion. They knocked off a lot of stone at the 150-ft. level, which, on being brought to surface, was covered with visible gold. Tunnel: We have been very short of boys here this week; only four boys have been at work; still, we have managed to drive 10 ft.; total, 133 ft. The formation is getting tighter, and we have passed through several leaders of quartz. Air shaft: We have sunk 2 ft. here this week; total, 121 ft. 6 ins. I am doing my best to get this down to the tunnel level by Christmas. The rock is very tough, and the dynamite will not work in it at all well. We get no water here at all now. Vertical shaft, South cross-cut, East and west drives: We have driven 3 ft. east and 1 ft. 6 ins. west this week; total, 16 ft. and 12 ft. 6 ins.; the leaders still keep rich and are increasing in width. The water here is very little now, and we may not require the pump for some time. It should be here in another month and it will take

some time to fix. It will be a tight fit to get it into this small shaft and allow of hauling at the same time. New shaft: We have had no night shift on here this week, as I am unable to procure boys. We have sunk 7 ft.; total, 32 ft. 6 ins. I shall try and get down 50 ft., and then cross-cut before putting more timbers in. If the reef is all right at that depth then we shall have to timber up to the timbers now in. The work on the mine has suffered from the great scarcity of kaffir labour. We have only had 20 boys in all this week. They have all gone home planting mealies. I have pegged out your water-right, and hope to get the plans off by next mail; also the plan of the 5 acres of ground for the mill."

EXTERNAL EVIDENCE.

By this mail there is also some satisfactory information which, coming from an outside source, may interest you. It is the report of a public meeting at the Silati camp, at which the Minister of Mines was speaking. He said:—

IMPORTANT STATEMENT.

"Gentlemen, on my visit last year to the Low Country, I found it rather difficult to cross the mountains. I expected to be able to travel more easily next time, but I see no improvement, although I have done my best to secure it. I will try again to get repairs to the roads, because my impression of the Low Country, favourable as it was after my first visit, has been greatly strengthened by this second visit. I have seen here gold such as I have never seen in any other goldfield. I have tried to make the Gold Law as perfect as possible, and I trust I have fulfilled your expectations, though I am convinced it is not yet all that it should be. But in order to make it as complete as possible, I ask the assistance of all who are acquainted with it. I am glad to see here an English M.P.: that is to me a proof that all Englishmen do not believe what the newspapers are writing. I find lots of errors in the newspapers, and I daresay Mr. Conybeare has had a similar experience. I look to him to contradict the statements made in some of the papers about this country, for I believe that when the railway has come up here, and the transport of machinery has become facilitated these goldfields can be worked properly, and at a small cost. Then this Low Country will prove itself to be as good a goldfield as any in the world, and not only as a goldfield, but its agricultural value will prove equally great. All that is wanted by a large population will need to be brought here, and I am living in hope that the railway will be here very soon."

In support of that I have to say we understand this farm Potsdam, upon which the two properties are situated, will in May be declared

A PUBLIC GOLDFIELD.

The Transvaal Government do not declare any field a public goldfield until they are quite satisfied gold exists in good payable quantities, and prospectors and miners can be attracted to it with a good chance of success. The fact of the Minister of Mines stating that this farm shall be declared a public goldfield in a few months is a confirmation of what we have heard regarding our mine, and as we hold about 100 acres of that farm, we may expect to find a good many more reefs than we have at present. That is all the information we can give you. We have tried to study economy during the year as much as possible, and we have done as much work as any mine in the district. We worked throughout the whole of the wet season, and I do not think any other mine did. With regard to the erection of machinery, I think you will agree it would be very foolish to spend money in machinery before we had thoroughly developed the mine. I am strongly against spending money on mills until we have developed the property, and found that we have a thoroughly satisfactory mine, but as far as we can speak at present all the indications are favourable. (Applause.) The chairman then moved the adoption of the report and accounts.

Commander F. C. de LOUSADA, R.N. (director), seconded the motion.

CRITICISM.

Mr. E. L. MOCATTA asked how much capital this company would receive from the Potsdam Co.; and when the new Sutherland Reef shares would be given in exchange for Potsdam shares. He was pleased to see the mine had been worked energetically, which he gathered from the amount of money spent in proportion to last year. The reports seemed to be satisfactory. He also wished to know whether the continuation of the Delagoa Bay Railway was really being proceeded with or was still in the air. The speaker then went on to criticise the balance-sheet, saying he failed to see why expenditure in London and South Africa should appear on the main sheet as an asset.

Mr. PROCTER asked how many shares Mr. Mocatta held in the company.

The CHAIRMAN: Mr. Mocatta holds 301 shares, of which 300 have been certified away.

Mr. PROCTER: Then Mr. Mocatta only holds one share. It seems to me Mr. Mocatta comes here to give us a periodical lecture. (Laughter.)

THE CHAIRMAN'S REPLY.

The CHAIRMAN: I shall have as much pleasure in answering Mr. Mocatta, as the holder of one share, as if he held a thousand—(hear, hear)—but I do not think it necessary to go through every item in the balance-sheet. Our auditors, Messrs. Cooper Brothers and Co., have certified as to their correctness, and we are quite content to leave it that way. (Hear, hear.) With regard to the amount of capital which Potsdam Reefs Co. has, I stated that our combined capitals would be 20,000*l.* If Mr. Mocatta will deduct the amount we have from that he will find how much the Potsdam Reefs Co. has. With regard to the distribution of Sutherland Reef shares, I am not in a position to give Mr. Mocatta the information he requires. I must refer him to the liquidator of the Potsdam Co., who has been notified of our readiness to allot the shares. With regard to the railway, I will give you Mr. Vorster's opinion. At the meeting to which I referred a short time ago the chairman asked if the 20,000*l.* caution money for the Silati Railway had been deposited, to which Mr. B. Vorster replied that it had to be deposited upon the flotation of the company before the works were commenced. The survey work was in progress, and the railway was bound to be completed as far as Leydsdorp in 18 months, *i.e.*, within three years, allowance having been made for the possibility of their being able to work

during only six months of the year. But he fully hoped that everything would be ready to make a start in May next.

The resolution was then put to the meeting, and carried.

ELECTION OF DIRECTORS.

Mr. MOCATTA proposed that the election of Mr. D. Dillon Trant, J.P., be confirmed.

Genl. BROOKE seconded the motion, which was carried.

The CHAIRMAN moved the re-election of Mr. Arthur Dent.

Commander de LOUSADA seconded the motion, which was carried.

The CHAIRMAN then moved the election of Mr. C. H. Cobbold and Mr. John Procter as directors of the company.

Mr. DENT seconded the motion.

The auditors were duly re-elected.

A vote of thanks was accorded to the chairman on the motion of Mr. MOCATTA, and the proceedings closed.

VALLEY GOLD, LIMITED.

IMPORTANT STATEMENT BY THE CHAIRMAN.

AN extraordinary general meeting was held at Cannon Street Hotel, on Monday, for the purpose of considering and, if thought expedient, of resolving with or without modification:—

1. To confirm an agreement, dated Nov. 19, 1891, for raising a fund for the laying down of hydraulic plant. 2. To authorise the directors from time to time to increase the capital of the company by the creation of not more than 50,000 shares of 1*l.* each, in order to satisfy the terms of the said agreement. 3. The new shares shall be called equipment shares, and whatever their number may be, they shall be entitled to one-half of the nett profits of the company available for dividend in every year, notwithstanding the preference given to the holders of preference shares.

Mr. T. A. Meates

(chairman of the company) presided.

Mr. A. E. S. OLIVIERI (secretary *pro tem.*) read the notice of meeting.

NATURE OF THE AGREEMENT.

The CHAIRMAN: Gentlemen, this is a meeting of the holders of ordinary shares, and I have to explain to you first of all the circumstances under which this agreement has been entered into by the board and their reasons, and I have then to ask you whether you are willing to confirm our action, and to ratify this agreement on behalf of the company or not. You will remember that last year, previous to the re-construction of this company, a question was put to the shareholders whether they were willing to subscribe a sum, which was estimated at the outside at something like 40,000*l.* for the purpose of providing a pumping plant from the neighbouring water supply, or whether they were willing to adopt an amendment to that scheme which was proposed by some of the most influential shareholders, to the effect that only a sum of 10,000*l.* should be raised for the purpose of paying off the existing debts of the old company, and carrying on the works upon the original lines for another season. I confess that to my regret the shareholders adopted the amendment, and that the larger scheme of putting in a permanent water supply consequently had to be abandoned. We have been since that time working under the modified scheme, and are not yet through our troubles, but in the course of the last few months a gentleman from America, of good position, respectability and integrity, who was paying a visit to London, was introduced to the board by some of our largest shareholders, and the upshot of his conversations with us led to an agreement which will be shortly read to you, but which comes to this—that, subject to a report as to the value of this property, this gentleman, speaking on behalf of friends of his in America, will be prepared to find a sum of not less than 30,000*l.*, and not more than 50,000*l.*, for the purpose of supplying that permanent water supply to the property which the shareholders themselves refused to supply last year.

WHY ORIGINAL ESTIMATES HAD NOT BEEN REALISED.

We have every reason to believe that the property is just what it has been represented to be all through, and that nothing but inability to procure an adequate water supply has prevented the original estimates being realised, and it appeared to the board and shareholders, who brought this matter to their attention, that the offer was one which we ought not to refuse. Consequently, the directors, with, as I say, the consent of one or two of the influential shareholders, entered into this agreement, and I will now ask Mr. Verden, the company's solicitor, to read it, and will then answer any questions that may arise upon it, and finally take the opinion of the meeting as to its adoption.

Mr. VERDEN here read the agreement, and the CHAIRMAN again offered to give every explanation.

EXPLANATIONS.

A SHAREHOLDER: Do the dividends upon the equipment shares come out of the earnings of the company before or after the payment of the dividends on the 10 per cent. preference shares?

The CHAIRMAN: The dividends upon the preference shares will be postponed. That question will come up at the meeting of the preference shareholders, but the profits of the company will be divided into two moieties; the first half will be handed over to the holders of the equipment shares, and the other half will be applicable in the first place to pay the preference shares their 10 per cent., and then there will be a *pro rata* distribution among the ordinary shareholders.

Mr. SIMMONDS: How many preference shares were subscribed?

The CHAIRMAN: 4,054. We wanted a minimum sum of 1,000*l.*, and we had that. That is exclusive of the number of preference shares we shall pay to the debenture-holders for their deferred interest.

Mr. SIMMONDS: Do the debenture-holders take the preferred shares?

The CHAIRMAN: Yes, for their interest.

A SHAREHOLDER: How does it affect the question of the barrier? Will the water be of service in getting through that?

The CHAIRMAN: On that point I think, of course, the difficulty of dealing with the cement arises largely from the fact that we have not the necessary water power to wash it away. With a supply of anything like what will be put in by the money of these gentlemen

dealing with the cement will be the question of merely a few days. But the difficulty has been that it is such a costly substance to remove by hand, whereas a power of anything like 300 ft. head of water from a 4-in. nozzle is sufficient to deal with cement, not of an unusually obdurate character such as met with there.

After some further discussion, the CHAIRMAN moved the resolution confirming the agreement.

Mr. ERICHSEN seconded the motion, which was carried unanimously.

The CHAIRMAN: It will be necessary that the directors have power to allot these gentlemen the shares, for that is a necessary corollary of the resolution just passed, and, therefore, I move—“That the directors be and are hereby authorised to increase the capital of the company by the creation of not more than 50,000 shares of 1*l.* each, in order to satisfy the terms of the said agreement.”

Mr. ERICHSEN seconded the motion, which was carried.

The CHAIRMAN: I move the third resolution: “That the new shares should be called equipment shares, and whatever their number may be, they shall be entitled to half of the net profits of the company available for dividends in every year, notwithstanding the preference given to the holders of preference shares.”

Mr. ERICHSEN seconded the motion, which was carried unanimously.

SPIRITED ACTION OF COL. CAREY.

The CHAIRMAN: That concludes the business of the ordinary meeting, but I should like to say that Col. Carey, who is the holder of the largest number of shares by a long way, holding 40,000 or 50,000, for which he paid a high price in the capital of this company, is leaving this week to reside upon the company's property during the coming season, with the view of seeing every effort is made to secure returns from this season's rainfall, and that journey of Col. Carey's, one of no small discomfort to himself, is being made out and home without putting the company to any expense whatever in case profits are not returned. You may be sure that a gentleman who has such a stake in the company as he has will leave no stone unturned in order to be able to produce some result after the snowfall has passed away.

Mr. SIMMONDS: What is the present capital?

The CHAIRMAN: Nominally 115,000*l.* of ordinary shares, of which 100,000*l.* has been issued in 400,000 shares of 5*s.* each, and there have also been created preference shares to the amount of 20,000 5*s.* shares, of which 12,000 have been disposed of, so that the present capital in all is nominally 120,000*l.*

PREFERENCE SHAREHOLDERS RATIFY AGREEMENT.

A meeting of the preference shareholders was then held, at which the foregoing resolutions were moved by the CHAIRMAN, seconded by Mr. ERICHSEN, and carried unanimously.

A SHAREHOLDER: I propose a vote of thanks to the chairman for the interesting statement he has made. Probably before we meet again the property will have exceeded our anticipations.

The CHAIRMAN: I feel certain when the question of dealing with the water has been overcome the result will at least be that we have realised them. (Cheers.) The distance we have to bring this water is 3 miles, but many other companies have spent a quarter of a million for the same purpose to bring it a far longer distance, so that what we are doing is nothing extraordinary.

THE VIRGINIA (TRANSVAAL) GOLD MINING AND DEVELOPING CO., LIMITED.

THE SATISFACTORY PROSPECTS OF THE RE-CONSTRUCTED COMPANY—CRUSHING EXPECTED IN THE EARLY PART OF THE NEW YEAR.

THE statutory meeting of the shareholders was held at the Cannon Street Hotel, Cannon Street, London, E.C., on Monday.

Mr. Alfred Jones

presided.

Mr. R. LAWRENCE SPICER (secretary) read the notice calling the meeting, which also stated:—“The share certificates will be ready for delivery on and after Wednesday, Dec. 16, 1891, in exchange for the allotment letter, the bankers' receipts for 2*s.* 6*d.* per share, and the old share certificate.”

The CHAIRMAN: Gentlemen, this is a statutory meeting of the new company, and, of course, usually it is only of a formal character, but, being a re-construction, we are able to give you a certain amount of information, which we are only too glad to do. This company is a re-construction of a company bearing the same name, registered 1889, and was formed in pursuance of an agreement made between the Virginia (Transvaal) Gold Mining and Developing Co., Limited, 1889, and its liquidator, whereby, in consideration of 50,000 shares of 1*l.* each, credited with 17*s.* 6*d.* paid up upon each share, the old company transferred all its property, mining rights and assets to the new company. A large proportion of the shareholders in the old company have applied for, and taken up, the shares to which they were entitled under the scheme for re-construction; and the balance has been applied for and allotted, except 1,665 shares, which the liquidator of the old company is empowered to dispose of for the best interests of the new company. Capt. A. P. D. Hodge, has had considerable experience in the district; it was under his superintendence that the prospecting and trial crushings for the original syndicate were made. He was appointed mine manager to the company on Aug. 21 last, and left England for South Africa on Sept. 5, arriving on the company's property on Oct. 9. Upon arriving at the mines Capt. Hodge sent home the following cablegram:—

“From the inspection I have made of the property the opinion I have been led to form of its value and prospects of success remains unaltered. Prospects are more favourable.”

I may perhaps here mention that at the time that we had Capt. Hodge in this room last summer we did not know he would be available for us, but I am sure now he has become so, you who heard him at that meeting will know how desirable it is for us that he should manage our property. And also writing under date Oct. 13 he says:—

“I have made a thorough examination of the different points in

the mine. I also took samples from the different points, and at surface bruised and panned them, with a very gratifying result, and while to-day I cannot send detailed report, I have cabled that you may know

THE VIRGINIA IS WITHOUT DOUBT A GENUINE, GOOD PROPERTY.

My panning results gave from 10 dwts. and 12 dwts. up to 1½ ozs. of free gold, and hence, I say, results are very gratifying. The following are the several points of workings on this property:—The Dutchman's shaft sunk to a depth of 111 ft. Curtis' shaft sunk to a depth of 89 ft. Blignaut's shaft sunk to a depth of 72 ft. Davis' shaft, 44 ft. and Watch's shaft, 17 ft., are sunk to ventilate the adit. The Dutchman's shaft and Curtis' shaft at the 80-ft. level are communicated with by a cross-cut. At the bottom of Curtis' shaft (that is at a depth of 80 ft.) levels have been driven north and south; that to the south (passing within 25 ft. east of Blignaut's shaft, and communicating with it by a cross-cut) has been driven 150 ft., and now reaches Davis' shaft. Thus, all the workings south of, and including Dutchman's shaft, are connected, thereby affording increased ventilation, which will much facilitate the work in the various drivages. From the cross-cut connecting Blignaut's shaft and the 80-ft. level another cross-cut has been made, almost direct south, and in this is situated Hodge's winze, a point which will be referred to later on, and of which Capt. Hodge thinks very highly."

With regard to Dutchman's shaft, Capt. Hodge says under date Nov. 2:—

"Towards the bottom I have found a rich point going north, where I shall drive and stope out a quantity of ore, that from pannings to-day gives fully 1 oz. to the ton;" and under the same date, referring to Blignaut's cross-cut (which has been mentioned as connecting that shaft and the 80-ft. level) he says:—"I have begun stoping in the roof near the Blignaut's shaft, with results that if it holds on as now, and as I have every reason to believe it will do, we shall have a good output from this point alone. Pannings from average samples taken from width of reef (fully 3 ft. wide, and running right up to the surface) show considerably over 1 oz. per ton. The further sinking of the shafts has been temporarily suspended, and an adit level is being pushed on with all speed to drain the several workings. This level has (up to the date of the last advices) been cut and driven 275 ft. This adit has the double advantage of draining and saving the labour of hoisting the ore."

Capt. Hodge, writing under date of Nov. 9, gives a general view of his idea of the property and future methods of procedure. He says:—

"I have thoroughly examined the reef in the stopes, both north and south, and find a most valuable piece of stoping ground right to the surface; the reef is from 2 ft. 6 ins. to 3 ft. wide, and samples taken fairly show by pan washing

1 oz. to 1½ ozs.

per ton. A fine-looking reef, and fully bears out all and more than all I have said of the mine. There are several hundred tons of this rich mineral in sight, partly laid open, in which I shall put men to stope away immediately. One white man and six kaffirs will send to the surface from 20 to 25 tons per week at small cost, as dynamite and other charges will be light. As soon as I can open out the ground a little more I shall then put in more kaffirs and white men and so increase the output. This point alone ensures several hundreds of tons that cannot fail to give excellent returns on being milled. Hodge's winze is a most desirable point to push, the reef being regular and well defined, having good strong walls. I notice the water is going down so fast that I am in hopes I may be able to resume sinking. There are other points of great importance, and where samples have been taken giving from 8 to 10 and 12 dwts. by pan-washing. It seems that the deeper the workings the better and richer the reef. I am quite satisfied this will be a genuine paying property. A good deal has been done to prove what I say, but there yet remains a lot of work for me to open the mine in advance and keep our 10-stamp mill running night and day as I hope to do ere long."

It will thus be seen that so far as the present development extends there are two points, viz., Dutchman's shaft and Blignaut's cross-cut, from which Capt. Hodge estimates a good supply of rich milling ore will be obtained. It should be borne in mind that there are many other points, and that at present the property is only partially developed. Capt. Hodge, referring to the mill, says:—"This is a very good mill, and will give us every satisfaction." By last advices the turbine and machinery had arrived at Charleston (the present terminus of the railway), and from thence arrangements had been made for its transport to the property. Capt. Hodge complains of the scarcity of kaffir labour. The enlargement and completion of the water race, and

THE ERECTION OF THE MILL,

are being pushed forward with as much speed as possible, and will be in readiness for the erection of the turbine as soon as it arrives. From these statements your directors are confident of bringing this company shortly into a dividend-paying property.

DISCUSSION.

Mr. LANGLEY SMITH said he would like to ask two questions: one, when it was likely that the turbine and stamps would be at work in the chairman's opinion? and the other question was as to the number of shareholders they had in the new company, and whether there were any forfeited shares? He wanted to know what their capital now was.

The CHAIRMAN: Working capital you mean?

Mr. LANGLEY SMITH said yes, the working capital of the new company. What he wanted to get at was whether they had forfeited any shares, because that would reduce the capital, and would be more advantageous for the shareholders who remained.

Mr. DYER said that the chairman had stated their 10-stamp mill would work the whole 24 hours. He wished to know how much ore they could crush in that time.

The CHAIRMAN said that it varied; it was about 1½ to 2 tons per stamp, but it, of course, depended on the nature of the stuff. He thought they might take the minimum as 1½ tons per stamp. In reply to Mr. Langley Smith, he trusted that the shareholders would not bind the directors as to any statement when the mill would be running, but he believed he might state, although he did not wish it to be held as a promise, that they would be able to have the 10 stamps up and at work before the first three months of next year were passed. But the directors must not be bound to this, but allowed a little latitude. As to the issue of shares, so far they had issued 48,335 shares, and as the shareholders were aware, 17s. 6d. per share was paid up. With reference to the question of forfeited shares, there were none to forfeit in that company. As to forfeited shares, it would be in connection with the old company, and it was a question for a liquidator to answer. It was not a matter to interest this company in the slightest. If there were no further questions, that ended the meeting.

Mr. WILSON proposed a vote of thanks to the chairman.

Capt. SHACKELL seconded the motion, which was unanimously carried.

The CHAIRMAN, in reply, said that he thanked the shareholders for this mark of their confidence and approval.

THE DIRECTORS WOULD DO THEIR UTMOST TO MAKE THE COMPANY A SUCCESS,

and he might, perhaps, mention another thing to show that everything was being done to promote the success of the company. The manager's confidence in the property is shown by his having consented to allow a considerable portion of his remuneration to depend upon results. (Hear, hear.)

THE EXPLORATION CO., LIMITED, AND THE CENTRAL LONDON RAILWAY.

THIS company has, in the course of the year, taken an active part in promoting the Central London Railway Act, 1891, and has been entirely successful in achieving its object, the Bill having passed both Houses of Parliament, and received the Royal assent on Aug. 5 last. The new Bill, of which notice has been given for next session, is only supplemental to the Act already passed. It contemplates the extension of the authorised line from the Royal Exchange *via* Broad Street to Liverpool Street, where subways will connect with the stations of the Great Eastern and North London Railways. The railway will run from the City to Shepherd's Bush under the long series of streets which form the main artery of London from east to west, comprising Cheapside, Newgate Street, Holborn, Oxford Street, Bayswater Road, &c. This artery has been aptly described by an eminent railway authority as—"from a traffic point of view—the greatest thoroughfare in the world." The line is about 6 miles in length, and will consist of two separate tunnels, one for up and the other for down traffic. The motive power will be electricity. The capital authorised by Parliament is 2,700,000*l.* in shares of 10*l.* When 60 per cent. has been paid up, the shares can be divided into preferred and deferred shares. The company has also power to borrow 900,000*l.* on mortgage debentures. The directors of the Exploration Co. hope soon to be able to proceed actively with this enterprise, which is of importance to the welfare of the entire metropolis.

THE letters of allotment in the Tominil Mines, Limited, were posted on Friday evening. The first issue of 50,000*l.*, for working capital, was largely over applied for, the subscriptions amounting to 106,230*l.* A *pro rata* allotment of shares has been made—applicants receiving about 43 per cent. of their applications.

MEXICAN MINERAL RAILWAY.—A telegram from the chairman Mr. Pigou, who is now at Palmarejo, states that on Monday last the water passed through the whole length of the canal, and is now available for working the Palmarejo Co.'s new mill at Zapoté.

NOTICE is hereby given that the second ordinary general meeting of the Jasper Town and Lands, Limited, will be held at Winchester House, on Tuesday next. The transfer books of the company will be closed from Dec. 14 to 23, inclusive.

REPORTS OF MEETINGS.

THE ST. JOHN DEL REY MINING CO., LIMITED.

PROGRESS OF THE WORK FULLY DESCRIBED—WITHIN MEASURABLE DISTANCE OF SUCCESS—A HEARTY AND UNANIMOUS MEETING.

THE half-yearly general meeting was held at the City Terminus Hotel on Thursday.

Mr. Frederick Tendron

(chairman of the company) presided.

The notice convening the meeting was read by the SECRETARY (Mr. C. F. Poole.)

The directors on making their appearance were heartily cheered.

AN ABSENT FRIEND.

The CHAIRMAN: Gentlemen, I very much regret to say that our colleague and friend Sir John Swinburne is not with us to-day. He is suffering from influenza, and writes to say that, although he had hoped to have attended to-day, he finds himself utterly unable to do so. I am sure Sir John is very sorry to be absent, and we are very sorry for the cause that prevents his attendance. (Hear, hear). The superintendent's usual half-yearly report has not been received. I am sorry for it, but, with your permission, I will do all I can to give you the fullest information possible, extracted from his special letters and from the ordinary documents that we receive by the usual mails, so as to put you in possession of all the facts connected with the

HISTORY OF THE COMPANY SINCE ITS RE-CONSTRUCTION IN JULY, 1888.

I will as briefly as possible tell you the principal works that have been carried out, and those that yet remain to be done. I wish to so convey this information to your minds, that though you will see a large sum of money (130,000£.) has been expended at Morro Velho, there has been no extravagance on the part of the superintendent, no money wasted, and I think I may really add not one single blunder has occurred for which he is responsible. The first thing to do before re-opening the mine was to take surveys, and it was essential that those surveys should be correct within a very few feet. The surveys were taken backwards and forwards, and I have no doubt when we are down the required distance we shall find that we are right within a few feet, as we were on a former occasion. On this occasion there is less danger of error and less danger also of accident, because the shafts will not be carried to cut the lode as in the former instance, but northward of the lode at some distance from it, so that in the future workings of the mine the shafts will always be kept clear of the lode, and no accident in the mine will affect ingress to it, should such a thing as a misfortune in future occur.

PUMPING POWER.

The first thing, after taking the surveys and deciding upon the position of the shafts, was to adapt the locality to the construction of the poppet-heads. Unfortunately, from the configuration of the ground, the spot was on the side of the hill, and, therefore, a lot of ground had to be cut away, and secure foundations made for these poppet-heads. They were very successfully carried out, being made to a great extent from the iron pumps of the old mine supplemented by wood, and he says they will last "almost through all time." They are 75 ft. high, and you see them placed on the roof of the sketch exhibited just above the entrance to the shafts. Next, he had to convey power to these poppet-heads, so that the water might be baled out as he went down and the material got up. To obtain that power he utilised the old pumping and hauling wheels, situated at a distance of half a mile from the spot. These are of old-fashioned construction, nearly 50 ft. in diameter, and then by means of wire rope, on stands with rollers, he transferred the power from those wheels to the poppet-heads, and so he has carried on that work successfully, till, as you see on the plan, we are down now

WITHIN A FEW FEET OF THE OBJECT AT WHICH WE ARE AIMING.

To lessen the water in the old excavation and prevent fresh water from getting into the old mines as far as possible, he cut water courses and put pumps in the western part of the mine, and kept the water down there; and to lessen the water that we shall have to pump when we get to the required horizon, he adapted an auxiliary wheel that we had for hauling purposes, of about 30 ft. diameter, and constructed balers, and up to the present time has brought the water down to about 300 ft., which will lessen the amount of work we have hereafter to do. He is also lowering the water about 70 ft. every month, and that will go on during the time we are completing the pumping machinery.

HAULING POWER.

The next thing for consideration was to provide us with sufficient power in the new mine to haul much more expeditiously than before a far larger quantity of mineral. He had all the country surveyed from which we could obtain our various sources of supply. He has enlarged, diverted, and re-constructed the water courses in various places, and with such success that he has now, merely for hauling and reduction power, an effective horse-power of over 500 as against the total effective previous horse-power for hauling and pumping combined of 268. This is an immense work, and in addition to that he has made an entirely new rego, or water course, of some 6 miles in length, so as to have additional power for pumping alone, and in the dry season the effective horse-power, in consequence of the great fall of the water (some 520 ft.), is equivalent to 128 h.-p., so that we have an abundant amount of power for our purposes, and sufficient to last the mine for 40 years, at the same rate of consumption of lode that our past experience has shown us we will require. From the nature of the soil, and the configuration of the country, it became necessary to drive an adit to meet the shafts.

A LONG ADIT.

That adit was driven 1,100 ft. in length, 10 ft. by 9 ft. It has been timbered in many places and rails put down, so as to lessen the height the water would have to be lifted, and also lessen the height the mineral would have to be raised, and it brings it to surface a convenient height, and close to where the new reduction machinery and plant will be constructed.

SECURING THE SHAFTS.

Next came the great difficulty of how to secure the shafts through the soft ground, which is always broken in that country before you come to the really hard rock. For that purpose he found it necessary to have bricks, but where were the bricks to be got? The only chance was to find soil that could be made into bricks, and he had to hunt about to discover it. It was at a long distance from the works, and then

HE HAD TO LEARN BRICKMAKING,

and adapt everything to it, but all this he did so successfully that not only are the shafts provided with the bricks required—and excellent bricks they are—but he has been able to sell a large surplus quantity at a profit. (Cheers.) He then, after this work, began the construction of the winding engine, and here, again, the first thing was to secure the foundations.

WINDING POWER.

The soil is soft for such a distance, that you know with winding engines, as with stamping mills—if you do not have good foundations your work will soon show signs of injury. There was no proper foundation to be had, except by getting out cement from England. He made all the foundations; he designed the winding engines of 200 h.-p. each, and both are at the mines—the one finished and the other in course of erection.

DANGEROUS PART OF THE WORK DONE.

You will see by the plan itself that the dangerous, the uncertain, part of the work, by which I mean the sinking of the shafts, is all but complete. By Feb. 28, you were told in the report, we should be at the required horizon for unwatering the lode, and at the required depth for driving the 1st level into it. The telegram for Nov. sinking was a great disappointment, for instead of the 29 fms. to which we had been accustomed it was but 17 fms. There had been delay caused in the transmission of a wire rope, which, however, was no fault of the board here or of Mr. Chalmers over there. It had been sent out in Aug. and reached Rio in Sept., but the glut of business, the insufficiency of the lighterage and landing accommodation, and the block at the Custom House made the delivery uncertain and late. It was a great relief to us to hear that the rope had at last reached the mine, and I trust that the sinking during the months of Dec., Jan., and Feb. will be the average sinking of between 28 fms. and 29 fms. a month. If so, what we have said will be borne out, and by Feb. 28 we shall be at the required depth for unwatering the old mine, and at the required depth also for

DRIVING THE FIRST LEVEL INTO THE LODE.

(Cheers.) Lessening the water in the mine has been effected by means of the "B" shaft and a wheel. They hope to unwater the mine to something like 200 fms., and the remaining water will be conveyed into the shaft and be pumped up. Making the level into the old excavation for the water is a very delicate operation, and one which, we have no doubt, will be successfully carried out, but the difficulty will be lessened by the diamond boring machinery, which was sent out a few days ago for the purpose. I may say that

THE REAL DIFFICULTY HAS BEEN OVERCOME,

that difficulty being the sinking of the shafts, because you are not absolutely certain what you will meet in going down. You might have met water or hard layers of rock—in fact, we did pass through two layers of pyritic rock, and the sinking at once ceased to progress so fast as it otherwise would. Instead of all this, the rate of speed

effected is almost a marvel in the sinking of shafts. There are very few in foreign countries that have ever been sunk with the rapidity and success that these shafts have been sunk. (Cheers.) Now, we come to our real difficulty—the real difficulty that exists on this side purely and not on the other—I refer to that of finance.

FINANCE.

You must not be led away with the idea that when you are down to the required horizon, you have simply to wait for a very short time before you see the profitable results of all this work. We are becoming more and more impressed with the immense magnitude of the work we have undertaken, but we have not lost faith and courage, and I hope the shareholders of the old company will not either lose faith or courage, but that they will go on supplying us with that which is absolutely necessary, and which Mr. Chalmers is powerless to obtain for us. We must have the money to carry us on while they are unwatering the old excavations. Before they can begin that, the whole of the pitwork must be completed, and hitches must be cut into the rock to bear the transverse girders that are to support the pitwork. It is not merely the expense of the material—it is that of labour during all this time. I will not conceal that Mr. Chalmers' estimate of the time required to put the pitwork down is no less than nine months. A chamber has to be cut into the rock for placing the new hydraulic pumping engine at the junction of the adit and shafts, and it is a moderate estimate to put that work down, and complete it by nine or 10 months—I repeat, it is a moderate estimate. When once the water is under control he can then drive the level into the old lode. He might possibly drive it sooner, but we are not going to press him to do anything that he considers in the least dangerous, though we should very much have liked him to go into the lode before finishing the pumping of the water, so as to let you have some of your old mineral, after which there would be no difficulty in getting the money we require. (Cheers.) The difficulty is to get it while the preparatory works are going on. Do not again be misled by the idea that a small sum will carry this work to its conclusion, for it will not. We must have sufficient money to enable Mr. Chalmers to expedite the work and also to fix the machinery.

NECESSITY OF DOING ALL THE WORK SIMULTANEOUSLY.

What would you think if, when you were in the lode and had a lot of mineral, we had no reduction machinery to take the gold out of it and give you a return. The expenses would go on all that time, and therefore it is the interest of the shareholders to look at this matter from a large point of view, and supply whatever money is necessary not only for the current expenses month by month, but to enable us to order the reduction plant and machinery so that whatever is required from here will be on the spot before Mr. Chalmers is ready, or when he is ready to erect them. The first thing will be to order the roofing, and that alone will cost something like 3,500*l*. Then it has to be sent out, and you have the expense of freight, duty and so on, and therefore it is not for the pleasure of asking you for money that I beg of shareholders—those present and those absent—each according to his means, and according to what he is willing to risk in a mining enterprise of this character, to come forward to our help. There are about 1,000 shareholders, and

A SUBSCRIPTION OF 100*l*. FROM EACH

would be sufficient to carry this matter through to the end. All we want at present, and all we press you for, is to give us enough money to last to the time that the mine will be unwatered, and that Mr. Chalmers can get into the lode. This we call at a minimum 60,000*l*., and then whatever further money is required will be almost offered to us. There will be no difficulty about the remainder when once we are in the lode, because then success is so completely within measurable distance. This is not like a new company that we are dealing with. We have an experience of 50 or 60 years to look back upon, for this is our 62nd year; neither is it like a company that is going for an uncertainty.

PAST DIVIDENDS.

Look at the figures which represent the dividends paid out of the old excavations, 556,600*l*., and 896,500*l*., respectively, and I do not suppose that the lode is smaller in the new mine than in the old. The simple fact is that it was not worked to anything like the same length, because of the necessity of attending carefully to the southern wall. There was always a great expense attending the working of that part of the mine. It was a consequence of the taking away of a piece of mineral ground from the enclosing rock that brought down 80,000 tons or 90,000 tons of stuff to the bottom, smashed the incline plane and all the other works, and left us powerless to deal with the old mines. It was this also that made it absolutely necessary, if ever we wished to get such a lode again, we should reach it by means only of these vertical shafts. There will not be the same danger in future. We are absolutely quite apart from the lode at the bottom. The stopping length was something like 420 ft. long, with an average of 40 ft., and ever since Dec., 1883, there has been

A STEADY IMPROVEMENT IN THE VALUE OF THE MINERAL

of about 4*s*. per ton every year. You were told by me on my return from the mine in 1880 that it had never looked so poor, but the full belief was that the lode would open out better, and so it did. The lode kept opening out good mineral, which had taken the place of the poor mineral in many parts, and taken the place also of the killas—the latter being reduced in size and dying out. When I was there the mixture of mineral and killas went through the mine, and that is the part that, for 150-ft. in length, was only 3 ft. 5 ft. and 8 ft. wide, but in all calculations of profit and returns I have never based a single one of them on any other foundation than this—the actual average yield of the lode for the preceding 20 months, although it was improving each year, as I have told you, to the value of about 4*s*. per ton.

AN IMPORTANT POINT.

It is not only what that mineral will pay you when we get the minimum extraction of 6,000 tons a month, but it is the great saving in expense. (Cheers.) Mr. Chalmers (whose estimates we find can be thoroughly relied upon) believes *he will be able to work at less than half of the old cost*. (Cheers.) I say, then, that there will be handsome returns to the shareholders, without basing my calculations on

any improvement in the lode, which I have not done, if they stick to the company and give us the money so that we may not break down at such a juncture as this, and cover the old mine with disgrace. Never has there been a greater work undertaken in mining. (Loud cheers.) I beg to move the adoption of the report. (Renewed cheers.)

VIEWS OF AN OLD AND EXPERIENCED FRIEND.

Mr. JOHN HOCKIN, who was received with applause, said: I rise with pleasure to second the motion, and would like to say a few words to emphasise the remarks of the chairman. It is no doubt unparalleled in the history of mining to find such a lode as that which we have now worked down to a depth of 2,100 ft., and that during the whole of that period there has scarcely been any diminution of its area. (Cheers.) In the lower part we did not work it to the same extent, because it was more important to shorten the length, but it was wider—considerably wider—and the yield from the beginning to the end was considerably increased; but for the last 6 or 10 months we had an average yield in the stamps of over 4½ oits. of gold. That was a larger average yield than we had had during the first 20 years of our existence—in fact, there has been no diminution in the yield. We have had it richer in some points, but that was more from the way we worked it than from any actual variation in the lode itself. If we had taken it out from end to end we should have had about the same average yield. Now, consider what it has done for the fortunate shareholders. Look at the dividends they have had. For the first 25 years the dividends averaged

25 PER CENT. YEARLY WITHOUT A SINGLE EXCEPTION.

During that time we had accidents, but the average was 25 per cent. for that period. For the first eight years we had a larger average than that, but the machinery became insufficient for our purpose, and we had to suspend dividends for two or three years. Taking even the dividends we paid in the last mine, the average for 12 years, from the opening to the breakdown, was 19 per cent., and there then were three or four years in which no dividend at all was paid. We know very well

WE SHALL COME TO THAT LODE AGAIN,

and we believe if we put up the machinery, as we contemplate, we shall be able to give you very handsome returns once more, and not only for a few years, as was the case with the last mine, but for a much longer period. For myself I have the greatest faith in the mine, and believe it will give you all splendid dividends when we go to work upon the lode in full force. (Cheers.)

The motion was carried by acclamation.

The CHAIRMAN: That concludes the business for which we have called you together. We shall send you a report of this meeting, which is certainly very ably taken down by the representative of the MINING WORLD; and we shall, as soon after as possible, send you a circular, and ask you to do what you can to enable us to continue this great work without interruption, and do not let us have to make a call if we can possibly avoid it. We should like to keep the uncalled capital we have at present, at all events, intact.

LET US ENCOURAGE OUR SUPERINTENDENT.

I believe this stupendous work has almost turned a young man into an old man—the amount of anxiety and work he has had. I should never have had the courage to go on with this enterprise, and neither would any of the directors, if it had not been for the implicit confidence we have in Mr. Chalmers, who is

THE VERITABLE HERO OF ST. JOHN DEL REY.

Lord FREDERICK FITZROY: I was not here at the beginning, but supposing this money does not come in for the debentures, what is the alternative?

The CHAIRMAN: I can answer that question, and did not forestall it purposely, because I never like to put pressure on shareholders. The alternative would be a simple one, but I trust there will not be the necessity. If we did not have money enough, in the first place, we should not order the machinery. We should not stop the chance of getting to the lode for the sake of not having the reduction machinery. That would lessen the expense, and therefore we should get on with a smaller amount of debenture money, but I have indicated the penalty of a policy of that sort in my opening speech. Next, we should make a call, because it is our duty to proceed to the end, and then if we could not get sufficient money, we should have to face that most unpleasant of alternatives—re-construction, which would be most undesirable. But do not let us talk of that. We will jump the hedge when we come to it. (Loud cheers.)

Mr. HOCKIN: I believe the handsome returns of this mine will be won, though whether by you or by others remains to be seen. If you come forward they will be won by you. (Cheers.)

DIRECTORS AND SUPERINTENDENT THANKED.

Mr. BALL: It is not very pleasant to be told that we have to find a large sum of money, but we must all agree in expressing confidence in our directors, and I do not think we ought to part without proposing a vote of thanks to them, and, especially so after what the chairman has said, ought we to pass a hearty vote of thanks to Mr. Chalmers. (Cheers.) He is in charge of the work, which entails upon him a tremendous amount of anxiety, and it will be gratifying to him to know that what he is doing is recognised by us here. I therefore propose, with great heartiness, a vote of thanks to our chairman, our directors, and our superintendent, Mr. Chalmers. (Cheers.)

MR. TENDRON MORE SANGUINE.

Mr. RAMSDEN WALKER: I second that. It has been my pleasure to attend several meetings in this room of this company, and on every occasion I have always noticed the directors have been most modest in their anticipations, and far from sanguine in their conclusions up to now; but I think to-day we have had more golden prophecies and more sanguine views expressed by the directors than we have ever had before, as far as my recollection goes. (Cheers.) I never before heard Mr. Hockin speak with the same amount of confidence of the old mines as I have done to-day, and I have attended here on more than ten occasions within the last six years.

The motion was carried by acclamation.

The CHAIRMAN: In thanking you for this vote of confidence in ourselves and in Mr. Chalmers and the staff abroad, I wish to take the opportunity of stating that Mr. Chalmers's estimate (apart from the uncalled capital) which he made to us in Nov. last, and which took us so completely by surprise and filled us with such alarm, was for the figure that has been given you to-day. His estimate (less the uncalled capital and the cash we had at the time) was a little under 120,000. If you add to that the 16,000. we have still uncalled, and the interest we have to pay on the bonds with which he has nothing to do you will find that the figure as far as we can see at present (we then took power to issue a mortgage of 150,000.) makes it necessary to ask you for 60,000., and I think I can pledge myself to that amount. I can endorse the statement that I have never been over sanguine, because I knew the financial difficulties and the uncertainty of the strata, but

I AM MORE CONFIDENT NOW THAN I HAVE EVER BEEN

since we undertook this great work. There will be no difficulty once we are in the lode in getting the remaining amount of money we require, either on these bonds, or by perhaps some more popular scheme for any amount that may then have to be asked for. Once we have this money we are within measurable distance of success. Mr. Chalmers's mind will very much be set at rest when he reads the report of this unanimous meeting, and knows that the shareholders, as of old, place confidence in those they have entrusted with the management of their affairs. (Cheers.)

The meeting then closed.

THE MYSORE-WYNAAD CONSOLIDATED GOLD MINING CO., LIMITED.

SHAREHOLDERS DECIDE BY A UNANIMOUS VOTE NOT TO PART WITH COL. MALLESON—PLAIN SPEAKING AS TO CONTRACTS BETWEEN DIRECTORS AND SHAREHOLDERS—VALUABLE INFORMATION AS TO TANK BLOCK—COMPANY APPARENTLY ON THE EVE OF STRIKING THE CHAMPION LODE.

The sixth ordinary meeting was held at Winchester House, on Tuesday, for the purpose of receiving a report from the directors, and for the transaction of other business of the company.

Col. G. B. Malleson, C.S.I.

(chairman of the company), presided.

Mr. L. J. Woodman (secretary) read the notice of meeting.

IMPORTANT TELEGRAM.

The CHAIRMAN: I rise to move "That the report and balance-sheet be adopted." Since the report was issued, in fact this very morning, we have received a telegram from Mr. Hodgson, who has spent the last six months in England, and who has just returned to the mine. That telegram is as follows:—

"North shaft has reached the depth of 250 ft.; commence cross-cut towards lode immediately. South shaft has reached the depth of 155 ft. Everything is going on all right."

The Tank Block is, I think, one of the prizes of the Colar Field. You purchased it at a rate which was relatively extremely small when compared with the amount that the Mysore and other companies paid for properties not superior to it in value, and having the same lodes running through it. It certainly has two of the best lodes of the field running through it, and all we have now to do is to go on sinking towards those lodes. To effect that all our efforts have been directed, since a little more than a year ago we purchased the Tank Block, and I think in that time we have made very considerable progress. The telegram I have read to you shows that you are down 250 ft., and that is a level from which by cross-cutting we hope to cut the lode, and the moment we come upon that lode.

THE FORTUNE OF THIS MINE IS MADE.

We are working at about half the expense incurred by some of the best of the other mines. For instance, when the Nine Reefs was working it cost us from 1,100. to 1,400. a month, whereas we are only spending about 600. or 700., or rather less at Tank Block, and, moreover, we have furnished it with a splendid set of machinery, and as you will see from the report of Mr. Evans on the spot, there is only one point in which that machinery has been deficient, and that deficiency we are now making efforts to supply. In fact, about this time he is receiving a great many parts of the machinery, of the want of which he complains. Of course, no one expected we should come into gold all at once when we purchased this block. In all mining there is the necessity of sinking to the spot where the gold lies, and we claim to have done that as expeditiously as possible, and I think you will admit that the reports of the manager, and this telegram from Mr. Hodgson, shows that we have a most excellent prospect of success. So much for the report.

ACCOUNTS.

As to the balance-sheet, I should like to call attention to one or two items. You will see that the amount of over-due calls on Sept. 13, 1891, was 3,816. 17s. 4d. By dint of urging our shareholders to pay to the very verge of persecution we have reduced that to 1,474. 19s., and there is now over-due on calls 2,334. 8s. We have not relaxed our efforts to get in some of them, and I will read you a letter which we received this morning from our solicitor on that point:—

"Dear Sir,—As requested, we send you herewith a list of shareholders, with the amounts due from them respectively. From the enquiries we have made we think it very doubtful whether we shall be able to recover some of them, and it may be, therefore, as well for the board to consider whether they will not forfeit the shares. Of course, this does not relieve the holders from the liability to pay the amount due; but care must be taken that proper notice of the intentions to forfeit is given."

I hold in my hand the list of shareholders, and of the amounts due to whom this letter refers. They number about 20, and the respective amounts are comparatively small. The largest is 37., and the only others in two figures are 32. and 10., all the rest being very small sums. In a great many cases these men have left their habitation; and also left no clue as to where they are at the present moment; but, as I said, the amount is comparatively small and will be covered about 100. We were obliged to give instructions to our solicitors to endeavour to recover every amount which was not paid on the first and second calls, and he has collected 1,414., and as to the rest, we have satisfactory assurances that it will come in, so that altogether there is but 100. apparently lost. I mention that to show you that we have not left the ground untouched, but have used every effort, first, by correspondence and persuasion, and next, I regret to say, by threats, to get in the amount that was due. With respect to the amount which stands at the head of directors' fees, that will be less in the year to come, because 82. was paid last year to the fifth director on the board, who has ceased to be a director, and whose place has not been filled up. By a resolution upon which we convened the shareholders to a meeting 10 months ago the fees were reduced from 1,000. to 800., and at that point they stand at the present moment.

A SHAREHOLDER: How many directors are there?

The CHAIRMAN: There are four directors, who are all here. I should be glad to answer any question, and will now move the adoption of the report. (Cheers.)

Mr. BROGDEN (director) seconded the motion.

FULL DISCUSSION COURTED.

The CHAIRMAN: We court the fullest discussion.

Mr. SELIGSEN: The only point I should like to speak to is that of directors' fees. I am not one who advocates that men should work for nothing, but I do expect that when a company is in low water—when we are living on our capital, and not on our profits, that expenses should be considerably lowered, and I propose that the board be reduced to three—the chairman and two directors.

The CHAIRMAN: If you have read this notice you will have seen that I do not propose to offer myself for re-election, so that only three directors will remain.

Mr. SELIGSEN: I am extremely sorry to hear that, because

WE HAVE LOOKED UPON COL. MALLESON AS OUR BACK-BONE

up to the present, and now he is the one who, after having advocated amalgamation with the other company, is going to leave us when we have all trusted him.

The CHAIRMAN: I will tell you why afterwards.

MR. SELIGSEN'S PROPOSALS.

Mr. SELIGSEN: I propose that the directors' fees be reduced to 50. each, and that the offices of the company be removed to where the work will be done for 100. a year, which is quite sufficient. (Laughter.) If that is agreed to I shall be pleased to recommend to the shareholders a place where they can have an office and secretary for 100. a year.

A SHAREHOLDER: Why, there are over 2,000 shareholders.

Mr. SELIGSEN: At present there are no dealings in the shares, and there is little to be done except to receive the report from the mine. Whatever work is done in connection with this company can be discharged by the secretary in an hour's time in a day. (Laughter, and a Voice, "Ridiculous.") I know exactly what I am talking about, as I am connected with other companies. I, therefore, propose my resolution.

PLAIN SPEAKING TO SHAREHOLDERS.

The CHAIRMAN: I am obliged to remind Mr. Seligsen that I cannot put his resolution to this meeting. It will be necessary to call a special meeting to alter the articles, which say that the remuneration of the directors shall be 800. a year, and it was changed to that figure by the shareholders unanimously, only eight or nine months ago, at a special meeting called for the purpose. The shareholders will bear me witness that

I SPEAK FROM THE STANDPOINT OF ABSOLUTE IMPARTIALITY, because no resolution will affect me, as I shall be out of it; but I cannot do that which is not legal, namely, put this resolution to the meeting. I should like to tell the shareholders who have been kind enough to repose confidence in me so long, and also Mr. Seligsen, who has spoken so flatteringly regarding me, what the real reason is that I do not put myself forward to be re-elected. In fact, this gentleman has touched the point in his speech—

IT IS SIMPLY THIS VERY QUESTION OF FEES.

As I often have told the shareholders, I live at the West End, and I have my own profession (literature) to attend to, and I do not come east of Temple Bar for any gratification to myself. I joined the board of this mine, because having spent several years in India on the spot, it was judged that my experience might be of service. (Hear, hear.) I think there are two gentlemen in this country, Capt. McTaggart and Genl. Beresford, who know more about that ground than I do, but there are only two. I came to devote myself to this mine because I knew its property, and I have given to it the fullest attention. (Cheers.) At our annual meeting last year some of our shareholders, one of them a particular friend of mine—and it reminds me of the proverb, "Save me from my friends"—got up and made a proposition very similar to that which the honourable gentleman has now made, and almost every time I have had the pleasure of meeting the shareholders it has been proposed to me that either I should serve you for nothing, or for such a small sum as would just pay my cab hire in coming from town. Well, as the master of my own time,

I DECLINE TO DO IT.

I give my whole energies to the work, and I am ready to do so still. I do not think I have missed a single board meeting, and have been in constant communication with the secretary in the City five days in the week regarding the affairs of this mine. But I do not want to force myself on the shareholders, and, therefore, last year when these objections were made to paying directors the remuneration stipulated for in the articles, I made up my mind that when my turn came to retire by rotation I would gracefully retire altogether. I would rather retire, and not be on the board to have this document (holding up the articles), which is a contract between us, cavilled at

every time we meet, and that is the sole and only reason why I retire. We are shareholders as well as you. There is absolutely no difference in the position regarding the welfare of the mine and regarding you and ourselves. We wish it success more ardently than you because it will reflect honour and credit upon us; but I will not do anything which is distasteful to the great body of shareholders, and if they think I am not worth the 200%. they are giving me, all I can say is, speaking for myself, I would rather go back to my congenial employment of literature, in which I make a great deal more money than 200%, and you can easily fill my place if you think it desirable to do so. I tell you plainly, and in the best spirit in the world, because I am sure we shall part friends, why I do not wish to go on. It is the text year after year of the discussions in this room, although it ought not to be so at all, seeing that the bargain has been made, and quite lately was revised in favour of the shareholders. (Cheers.) Only 10 months ago you met in conclave, and passed, without a single hand being held up against it, a resolution reducing the fees from 1,000% to 800%, and yet here, and now, the first question which a gentleman raises is this one to the complete neglect of others, which are of infinitely greater importance. (Cheers.) If we are not worthy to receive the small remuneration of 800% a year—a sum which will not, does not, and cannot effect the working of your mine—we are not worthy of your confidence. I, for one, go on the business principle, that as you pay your servants (and are we not your servants?) so you must pay us. Work which is given gratis is never good work. You find in business you have to pay good salaries for good servants and good clerks, and we are acting on that principle, and I, for one, decline to depart from it. I would rather

RETIRE TO MY HUMBLE TUB, LIKE DIOGENES,

than rest here and be cavilled at, because I take the remuneration which you have appropriated to me by your articles for my work. I will conclude by reading article 85, which provides that "The directors be paid 800% per annum, which may be divided amongst them in such proportion and manner as the directors may determine." (Cheers.)

Mr. SELIGSEN: The articles were based on the terms of the prospectus.

The CHAIRMAN: Your argument is not founded on logic, but on a total misapprehension of the facts, for I have told you that this very article was revised only 10 months ago. (Laughter.)

Mr. SELIGSEN: It was reduced because of your flowery speech in which you promised that within 12 months we should have returns.

A CHALLENGE.

The CHAIRMAN: If you can show me that I promised you returns within 12 months I will give you here and now a cheque for 1,000%. (Cheers.) I made no such promise—I was very careful not to do so. I merely told you what the properties surrounding Tank Block had done—Mysore, Nundydroog, Ooregum and Balaghat, three of which are dividend-paying, and I told you that this piece of ground which we own, lying between Nundydroog and Champion Reef, in all reasonable probability contained the same lode, and that we should find it, and I say that again to-day. There is no reason why, when we get to a similar depth, we should not be equally prosperous.

Mr. SELIGSEN: We have only limited means, and we must spend as little as possible, so as to keep on as long as possible.

The CHAIRMAN: Do you suppose the Mysore directors, when their shares were down to 3s. 6d. (as they were within my recollection) drew no fees? If you can get men to work for 100% a year by all means do so, and alter your articles, but you cannot get men on those terms whose work is of value.

THERE IS MY FRIEND, MR. WALKER,

for example, who went out at his own expense to examine the properties of the company, and never asked you to pay a farthing for the purpose. He made the arrangements for purchasing Tank Block, and if in the future you receive dividends it will be mainly owing to the efforts of Mr. Walker, who paid his own expenses to India and back for your benefit and satisfaction.

I WELL RECOLLECT THE ENTHUSIASTIC CHEERS

with which you greeted him on his return, and when we announced to you that his efforts had been crowned with success in purchasing this Tank Block for one-tenth of the sum that other companies paid for similar property. I also recollect how a few months afterwards at the annual general meeting you raised the everlasting question of directors' fees, and

THAT IS WHY I WILL NOT SERVE YOU.

I will not serve men who will not keep up to the letter of their engagements. Your engagements are contained in these articles which you passed 10 months ago, and here at this annual general meeting, instead of criticising the progress made, which, after all, is the most important point, you cavil at payments which you are legally pledged to discharge, and which you cannot escape without calling a special meeting. I say again I am speaking impartially, because I am leaving the board. I am speaking for the interest of the company, and I advise the shareholders not to listen to those who counsel them to have a cheap board of directors. It is like a man in his household dismissing his good servant in order to take the first people he can get out of the streets at a nominal rate. (Cheers.)

MY COLLEAGUES ARE TRIED MEN.

One of them is a member of the Nundydroog board, where a question of this sort never arises. It is only in Mysore-Wynaad where it occurs with never-failing regularity. You must remember that we only pay half the expenses of Tank Block; Mysore-West pays the remaining half, and pays its own directors. There is a committee of both boards, composed of Mr. Walker and myself, and we meet every week to consult over the letters and issue joint instructions, afterwards to be confirmed at our respective board meetings. I beg you not to follow the example of Nero, and fiddle while Rome is burning.

REAL POINT OF DISCUSSION.

If you have remarks to offer, make them regarding the policy we are pursuing, the progress we are making, and the machinery we have sent out, and not as regards questions which you cannot touch practically. (Loud cheers.)

Mr. SELIGSEN: I have not one word to say against the chairman, and I am very sorry he is going to leave us.

The CHAIRMAN: I only leave you on account of the discussions. I do not think life is worth living to come here and be badgered in this way, and I would rather be without the 200% you pay me, and have the time I spend in your service at my command for more congenial employment. I now put the motion—it is carried with one dissentient.

SHAREHOLDERS WILL NOT LET THEIR CHAIRMAN GO.

Mr. BROGDEN: I really wish to call the attention of the meeting to the fact that if you lose Col. Malleon you lose the very backbone of your board. If you only knew, as his colleagues do, the diligence, the intelligence, and the influence he has exercised in conducting the business of this company, I am sure you would pause before you would allow such a man to leave you and for such a cause. I am sure the shareholders as a body will have cause to regret it if they do. I do not think the reasons he has given should be allowed to have weight with him in view of your wish that he should remain, and I do not hesitate, as one of his colleagues, to propose his re-election.

A SHAREHOLDER: I have great pleasure in seconding the motion. I think the question that has been before us has occupied too much of our attention, and it seems to me all about a personal matter. I came here wishing to hear something about our prospects, and I think that now we have got so far, and that we seem to have success in view, it would be most unwise to alter the board. They know all that has been done and that is proposed to be done, and the wisest plan would be to keep them at their posts. I shall be pleased if the chairman will give me some more information about Tank Block.

Mr. BROGDEN put the motion to the meeting, and it was carried with absolute unanimity.

The CHAIRMAN, who was heartily received, said: I am very much obliged to you. I determined I would not offer myself for re-election when my turn came, but if you wish me to devote my services as heretofore to the development of this property, in which I believe, and in which I have lately increased my holding, I shall be glad to do so, but I tell my friend, Mr. Seligsen, that if he carries a resolution reducing the remuneration of the board, I shall then absolutely resign.

DISCUSSION TURNED INTO A PROFITABLE CHANNEL.

With reference to Tank Block, it is on a line with Nundydroog. The map exhibited shows, on the lower level, in succession, the Mysore, the Champion Reef, the Ooregum, and Nundydroog Mine, through all of which the Champion Reef runs. A little further you will see the Balaghat, in which is also the Champion Reef, and to reach that point it must have run through the Tank Block. I need not say a word as to what these mines are doing, and the Balaghat reef (although not marked on the map) runs through Tank Block also. There you have two splendid reefs which have proved to be the best on the Colar field running through your mine, and we are down 250 ft. It is impossible to say accurately at what level we shall cut the lode; but our manager thinks we shall do it by cross-cutting from the 250, and the telegram shows that that is what he is beginning to do. Should that cross-cut fail, we shall have to sink lower; but it is absolutely certain, unless nature has been guilty of one of its greatest vagaries, we shall come upon that reef in a short time, and every letter we receive from the mine points to that result. I really think our prospects are very good, and we only require a little more patience and perseverance. (Cheers.)

Mr. ROBERT WALKER, J.P. (director): I should know something about this matter into which Col. Malleon has gone so fully, but I do not think he is too sanguine in his remarks. It is impossible to tell how soon we shall cut the lode. The Nundydroog cut it in the north shaft, about 40 or 50 yds. from our boundary, and when we discussed with Capt. Plummer where we should sink our shaft, he agreed it should be on the level with Kennedy shaft in Nundydroog about 125 ft. from the boundary. At 160 ft. Nundydroog cross-cutted and got into a reef (not the Champion, for there are many others, but the Champion is so called because it is the richest that has yet been found) 8 ft. wide, yielding rather more than 1 oz., which will pay three times over working in India. On Dec. 7 at this cross-cut the lode by assay was 18 dwts. 12 grs., or nearly 1 oz., but, of course, the quality varies in this as in every mine. I have studied these matters closely, and my idea is that we may get to the lode sooner on the south shaft, which is only 200 ft. deep, than we may get to it in the north shaft, which is 250 ft. deep, in consequence of it being so near the Nundydroog boundary. I may be wrong, but that is my idea at the moment. (Cheers.) The reports of the principal mines are published in some of the papers, but not in all, though in the MINING WORLD you will see every week given *in extenso* the reports from our Tank Block property. So far as I know it is the only paper which publishes them with regularity every week.

Mr. SELIGSEN: What is the total available capital?

Mr. WALKER: About 17,000% in all in hand, and to call, of which one-half will be contributed by Mysore-West.

OVER 2,000 SHAREHOLDERS.

The CHAIRMAN: A remark has been made as to the expenses in London, but I should like the shareholders to give a moment's consideration to the fact that we have on our register the names of over 2,000 persons, and the work they entail can be known to but few. (Hear, hear.)

A SHAREHOLDER: I understand that 6d. remains to be called. When will it be called?

The CHAIRMAN: Not a moment earlier than it is absolutely wanted, but probably six months hence.

Mr. SELIGSEN proposed the re-election of Messrs. Price, Waterhouse and Co., and said he received with satisfaction the statement that they had reduced their fees from 40 guineas to 30.

Mr. SHUTT seconded the motion, which was carried unanimously.

A SHAREHOLDER: I have great pleasure in proposing a vote of thanks to our worthy chairman for his kindness and attention.

Carried unanimously.

The CHAIRMAN: I thank you very much for electing me after the discussion we have had, and can assure you I will give you my best energies.

NORTHERN TRANSVAAL LANDS CO.

A LARGE LAND INVESTMENT—IMPORTANT REALISATIONS EXPECTED IN THE NEAR FUTURE—UNSETTLED CONDITION OF THE TRANSVAAL.

THE ordinary general meeting of the shareholders in this company was held at Winchester House, Old Broad Street, E.C., on Monday.

Mr. Sydney Thompson

presided.

The SECRETARY (Mr. A. W. Heron-Maxwell) read the notice convening the meeting.

TRANSVAAL AFFAIRS.

The CHAIRMAN at the outset expressed regret at the retirement of their late chairman, Mr. Alderman Dimsdale, on account of magisterial and other duties. Proceeding, he said: I think the result of the year and 10 months' working—the period covered by the report and balance-sheet—although extremely disappointing as far as the discovery of minerals is concerned, is not on the whole unsatisfactory. Quick returns ought not to be expected from an investment in land wherever it is situated. The value of land must depend upon the demand created by the growth of the locality, and there are four important causes which have delayed the growth of land in the Transvaal during the past two years, exclusive of the want of railway communication. The first is the reaction which followed the bursting of the "boom bubble," the effect of which was to enormously decrease the population of Johannesburg; secondly, the rush to Mashonaland, large numbers of people in the Transvaal being dazzled by the glitter of the gold promises in the northern district; thirdly, the anti-progressive principles of the Boer Government—I would almost say the prejudices—and of its people, which lead them to set their faces against emigration and against foreigners taking part in the development of the country. The ideal of the average Boer is to own a large tract of land, with a big run for his oxen, and only to cultivate such portion of it as is sufficient for his own immediate requirements. He sets his face against railways and against emigration—the two great aids to the development of any country. Mr. Gladstone, when he gave the Transvaal to the Boers, could not have known what out-and-out Tories they were; at the same time they are good Home Rulers—(laughter)—for no outsider is allowed to have a voice in the management of the country. There is a fourth cause which has delayed the development of the country, and that is the re-inspection of the farms in the northern districts. The original inspection was very roughly made. The farms were supposed to be measured by a man riding from one point to another, and then again at right angles; and, on looking up the Volksraad resolutions, I see that the pace of the horse was to be 300 ft. per minute. That was a very casual way of taking measurements, as one could ride a horse fast or slow, according to his inclination; and where the Boer commissioners had friends whom they wished to benefit they would ride quickly, and where they did not know the owners they would ride slowly. The result has been very unsatisfactory. When in Pretoria last year I had a long talk with the Assistant Surveyor-General who told me he had known a case in which a farm, after re-inspection, was located 70 miles from where it was supposed to be by the original inspection. Before prospecting, therefore, the land companies must await the result of the re-inspection, which is now almost completed. The Boer's hands are being gradually forced by their country being approached by railways on all sides, and running along their western boundary, and by the inflow of English and other foreigners attracted by the gold discoveries. Mashonaland is getting better known; there is no longer the rush there; and people are finding out that, like other new countries, it takes time to develop. The

THE REACTION AFTER THE BOOM

has, I think, found its bottom, and we see a steady rise in the output of gold in the Witwatersrandt. The gold mines are coming more into favour; the output is steadily increasing, this last month's being over 73,000 ozs. At the same time the Heidelberg district is advancing and many claims have been re-pegged there; the Nigel, having just re-commenced work, has given an output of 4,000 ozs. for last month. The Lydenburg district is coming to the front, and one of the companies working there—the Transvaal Gold and Exploration Co.—is now producing a steady return of gold and has entered the dividend-paying list. The Murchison and other districts are being opened up, but these being more to the north must await railway communication before they can be economically developed.

RE-INSPECTION OF THE FARMS.

Of our 66 farms, 65 are in the Waterberg and Zoutpansberg districts which are now being re-inspected. We only know at present the result of the re-inspection of 34 farms. Others have been re-inspected, but the reports have not yet come to hand, and, therefore, we can say nothing about them. So far, there has been a reduction of over 40,000 acres, but that is no indication of what the ultimate result will be. When in Pretoria I inquired at the Surveyor-General's office about one large district where we have a good many farms, and he told me that, although it had not then been re-inspected, he did not think there would be any material reduction in the size of the farms. The principal reduction has been in the district between the Palala and the Sand rivers. By the last mail we heard that the re-inspection of Mahalaquindistrict had been revised, and that the result was very satisfactory to us—we have secured an increase in the farms we possess there, including one with water on it, which adds considerably to its value. We shall, however, await the ultimate result of the re-inspection, and then probably join with other land companies and large landowners in making an application to the Government of the Transvaal to give us some equivalent for the land they now take away from us. We hope that the Government will see the unfairness of their granting titles showing that persons are the owners of farms of 3,000 acres apiece, and then coming to them afterwards and saying "Although we have granted you this title for 3,000 acres you are only entitled to a farm of 1,500 acres." As a matter of fact, the Government have charged taxes on the full extent of farms; so that we have a strong case to go before them with.

PROSPECTING.

During the first year of the company's existence we expended a considerable sum of money in prospecting—unfortunately, without any satisfactory result; but you will recollect that the somewhat exaggerated idea that was then prevalent as to the value of the Silati district seemed to justify a prospecting party being at once sent to that district, and this course was approved by the shareholders last year. There is no doubt that a quantity of gold is there, but at the present time the cost of working it is very high, owing to the lack of railway communication. We sent a party there in Dec., and kept it there for eight or nine months. Unfortunately, the fever was very bad, and they suffered greatly from sickness. One difficulty in that district is that the grass grows very high—sometimes as high as 14 ft.—consequently, prospecting is difficult except on the hilly portions of the property. When I was there last year I saw Mr. Button, who had charge of the prospecting party, and after consultation with him I authorised him to discontinue it for the present. We have, however, heard from Mr. Anderson, our manager, that he thinks the farm Pretoria was not sufficiently prospected, and I can understand why. Within the last few months we have been asked by our neighbours, the Oceana Co., to join them in the expense of sending out an expert to report upon that farm. They tell us that they have discovered gold on two farms of their own close by, and that the reefs upon their farms run into our farm, Pretoria. I hope that is so. We think it, however, wiser policy not to spend any more money at the present moment on that farm, but to wait and see what other people do. The Oceana people are not the only people prospecting there. Their farm is to the north of us; the farm on the west is also being prospected, with what result I do not know, but our manager says that the reefs on that farm run into our farm Pretoria. The question is: Are those reefs payable? If they are, we shall have a very good property in that farm; if they are not, we shall not have spent any more money in developing it. We understood that two other farms in the Waterberg district were gold-bearing, and we had prospectors on them for some months. I believe they found indications of gold, but not payable gold, and, therefore, we have discontinued prospecting there. We also prospected for diamonds on a farm we possess in the Bloemhof district. Diamonds have been found in the district in small quantities; and, although we have got good-looking diamond ground, we limited the expenditure to a certain amount, which was exhausted before we found any diamonds. Prospecting at the present time runs into a good deal of money, and I think that the shareholders may justly complain if we continue it without there being some degree of certainty that we shall find something. Upon that policy we have recently been acting. (Hear, hear.)

TRADING.

Trading has hitherto proved a most profitable investment to people in the Transvaal, and I hope it will prove so to us. We have opened two stores in the Silati district, one of which is on our farm Pretoria. The item in our account referring to these stores shows that we have expended in this department up to July 31, 500*l.* only. The stores were opened towards the end of Aug. Our manager advised us that the amount he had received up to the end of Sept. was some 120*l.*, and for the following month 220*l.*, so that there is money coming in from this source. The second store is on Government ground, about 8 miles distant, which is worked as a subsidiary store, so as to catch the trade of the Thabane Valley. The store erected on our farm cost some 150*l.* It was put up without our consent, but we agreed to pay for it. We paid 65*l.*, and took over the goods in stock for 75*l.*; so that we practically got the store and the goods in it for what the store alone had cost. We are now about to open a new store on the farm Turkey. We had also an offer from a neighbouring storekeeper named Skinner for permission to put a store on our farm Willows; but we thought we could do better to keep it in our own hands and open a store there ourselves. Skinner has since died, and, as far as I know, no one has taken on his store, so that we really have the trade of the natives round for about 30 miles from the south of the Murchison range.

CATTLE STATIONS AND AGRICULTURE.

We have made an arrangement with a farmer, who has lived many years in the Waterberg district, that he should occupy one of our farms on a six years' agreement. He is to build a brick house upon it, and we are to find the timber for doors and windows. We agreed to supply him with stock up to 200 head of cattle, of which we bought some 120, and we reckon that they will cost us at the farm about 5*l.* a head. Amongst them were three very well-bred bulls. In a case like this we take our rent in kind and not in cash. We are to receive two-thirds of the increase of the stock and one-third of the increase of the agricultural produce. The stock, I am glad to say, has already begun to increase, we having had about 20 calves. We sent out tobacco seed, and hope to get a good return from that. Part of our arrangement with this man is that he shall irrigate a portion of the farm, which, of course, adds to its value. I have a letter here from the manager, dated July 11 last, in which he says:—

"I have been approached by some Dutch farmers with reference to the purchase of the farms lately re-inspected, but as they are amongst the best of the company's farms I did not entertain the offer to submit to the directors."

So, gentlemen, you see we have some valuable farms. We may take it that if Dutch farmers want to buy them they have a considerable agricultural value. (Hear, hear.) As regards letting some of our properties—we have heard from our manager that one man wants to take one of two farms in the Silati district, and another man is to take one of two farms in the Waterberg district; we hope that by this time arrangements have been made for letting them.

RAILWAYS.

The proposed railway from Komati Poort up to the Murchison range will pass pretty close to some of our farms, and, I think, add to their value. The farm Pretoria is about 11 miles from Leydsdorp, where the railway is to have its present terminus, and, according to one plan which I have seen it will be very much nearer than 14 miles. I understand that the line is to be completed within two years from now, and that all the capital for constructing it has been satisfactorily arranged.

MINERALS.

As regards minerals, I can say very little. I look upon the discovery

of minerals more as a matter of luck than good management. I have already told you that we prospected without success in certain places where we thought we might find them, but we have other properties upon which we have reason to think they exist. There is, for instance, the newly-opened district of Letaba, where we have three or four farms. What that district will ultimately prove it is impossible to say; but the returns from the only mine which is crushing up there—of course, only in a small way—have been very good indeed. I think it was 2 ozs. or 3 ozs. to the ton—that is, the Birthday reef. (A VOICE: 5 ozs.) A great portion of that district has been proclaimed as a goldfield, and a small portion of two of our farms is included in the gold area. We may say, therefore, that we are within measurable distance of the gold, whether we have it or not. We hope when the cost of transport is less to endeavour to ascertain what we have there.

MASHONALAND.

As regards Mashonaland, we have taken an interest to the extent of 1,500*l.* in a small exploring company, who have sent out a very good man to secure proved properties there. As yet I believe he has not found anything sufficiently good to take for himself, but he is carefully looking out, and from what we understand of him he is not likely to give himself away. If he takes up anything, it is pretty sure to be good.

MANAGEMENT.

The directors thought it right to secure the best man they possibly could to look after the company's interests in the Transvaal. To secure a thoroughly capable man, with a knowledge of the country, and of undoubted integrity, you must pay a high salary—indeed, it has been said that the number of men in the Transvaal who can answer to such a description could be counted on the fingers of one hand. I believe we have secured such a man in Mr. Anderson. He had the management of Moodie's property and conducted affairs there with very great tact, at a time when they had a deal of trouble with their miners. Subsequently he was with the Luipaard's Vlei Co., and he is now looking after your interests. We have had to pay him a high salary, namely, 2,000*l.* a year, and in our present position we think this is more than we ought to pay. At the termination of his agreement, therefore, in May next, other arrangements will be made. I think it would have been false economy to have got an inferior man in the earlier stages of the company, but as a good man has now laid the lines upon which the company should be worked, he may be followed by those who will be able to continue on those lines. In London we have reduced everything all round. The directors' fees have been reduced from 2,000*l.*, as authorised by the articles, to 1,000*l.*—being 200*l.* a year for each director—the salaries have been reduced to 250*l.*, and the rent and office expenses to 100*l.* a year. Three of your directors have been out to the Transvaal, and none of them went at the company's expense. The chairman then referred in detail to the balance-sheet, particularising the various items. Proceeding, he said: The policy of your board has been to place the control of the company in thoroughly efficient hands in South Africa; to steadily develop, or get others to develop, the property of the company, apart from the question of minerals; to encourage the search for minerals by the occupants of the company's farms, or others, without cost to the company unless anything payable is found.

THE GREAT WANT OF THE TRANSVAAL

—and upon this the future of the country depends—is a working, non-speculative population, who will look to the land rather than to gold to support them. The white population consists of about 50,000 Boers and a rather larger number of other foreigners. Most of the other foreigners are engaged in the mining interests, or are traders or speculators, none of whom do much towards the advancement of the country from a land point of view. I have always understood that the three necessary things to produce wealth are land, labour and capital. We have the land, we will assist with the capital, we want the labour; and in that, gentlemen, by inducing people you know to go out there, you can assist us and assist yourselves also. The chairman concluded by moving the adoption of the report and balance-sheet.

Mr. PERCY TARBUTT, M.I.C.E. (director), seconded the motion.

QUESTIONS.

Mr. WILKINS asked what was the present value of the land owned by the company, and had anything been done with the development of the timber lands?

Major COTTON wished to impress upon the directors the desirability of still further husbanding their resources. He thought they should see what could be done in the direction of affiliation with other South African land companies to still further curtail expenses on this side.

AN AMENDMENT.

Mr. HOLLAND moved an amendment: "That no statement of the company's true financial position having, as provided by the 119th article of the company's articles of association, been laid before the meeting, such meeting should be adjourned for one month to enable the directors to comply with the company's articles and submit a proper financial statement." The articles, he explained, provided that a statement of the financial position of the company, made up to a date not more than three months previous to any ordinary meeting, shall be laid before such meeting. The accounts now submitted were only up to July 31. He then read a long letter which he had addressed to Mr. Dicey, a director, in which, among other things, he alleged that certain of the directors, namely, Mr. Fuller and Mr. Rose, had trafficked in the shares to a larger extent than was proper.

Mr. HOYLE seconded the amendment, which was supported by Major COOPER.

Mr. E. F. B. FULLER emphatically denied the charge that he had in any way whatever trafficked in the shares. From the commencement, he said, he had been a large shareholder, and he was so still. He held upwards of 8,000 shares, and was perfectly satisfied with his investment. (Cheers.)

THE CHAIRMAN'S REPLY.

The CHAIRMAN, in reply to Mr. Wilkins, said it was impossible to tell the present value of the company's lands. Nothing had been

done yet in the way of growing timber, the mining industry having been somewhat depressed during the past two years. As to the affiliation of land companies—the proposal hinted at some time since seemed to have hung fire, and nothing definite had been put before them. As to the directors' dealings in the shares—he could tell Mr. Holland that so far from reducing his holding he had added to it. (Applause.) He originally took over 2,000 shares, and at the present time he held about 2,200. But he did not see why he should be called to account if at any future time he reduced his holding. (Hear, hear.) The accounts had, unfortunately, been delayed owing to Mr. Anderson's absence up country, but the fact of that provision in the articles not having been complied with need not prevent the shareholders from passing the accounts if they chose to do so.

The amendment was rejected by a large majority.

The original motion was then put, and carried unanimously.

On the motion of Sir FREDERICK YOUNG, seconded by Mr. WILKINS, the auditors, Messrs. Cooper Bros. and Co., were re-appointed, and the proceedings then terminated.

WEARDALE LEAD CO.

A YEAR OF ANXIETY AND DISAPPOINTMENT—NEGOTIATIONS FOR A REDUCTION IN THE ROYALTIES—THE PRICE OF LEAD.

THE ordinary general meeting of the shareholders in the above-named company was held at Cannon Street Hotel, London, E.C., on Tuesday.

Mr. George Richardson

presided.

Mr. R. S. MACLARAN (secretary) read the notice convening the meeting.

LOW-GRADE ORE.

The CHAIRMAN: Gentlemen, the directors naturally regret as much as the shareholders, and perhaps more so, the account that we have to present to you on this occasion, but in the report you will see exactly what we have been doing during the year. The gist of the whole matter is this—that the mines have continued poor, and, in fact, are poorer now than they have been for some time past. The result is that we have raised 1,100 tons less than in the previous year. We have removed more stuff, but the produce has been less, and that accounts entirely for the difference between a profit last year and a loss this year. Then again, the price of lead, although it was very fair at the beginning of the year, has steadily declined. The large increase in the importations of lead from Australia depressed the market, and it has continued to do so ever since. Whether this increase will be maintained or not I cannot say; but had it not been for the importation of Australian lead, the price of our lead would have been very much higher, and I am certain that if that had been the case you would have been in a very flourishing condition to-day. But as we cannot see what is in the ground we have just to labour to bring to the surface as much stuff as possible, and endeavour to make it a paying concern. Nevertheless, our mines have been poorer than ever they were in Mr. Beaumont's time, and although we have raised more stuff than he did in any year, the produce has been considerably less.

IMPORTANT WORKS AT SEDLING.

Whether we shall come upon any great finds sooner or later we cannot say, but we are in great hopes of doing so at Sedling. We have been spending a great deal of money in re-opening that mine, and from all we can learn there is a very good property there. Mr. Beaumont not only opened up that mine, but he made all preparations for taking the ore out; in consequence, however, of certain disputes with the men, and a difference of opinion with the agent, that was abandoned. Sedling is where the old Burtree Pasture Mine is; and we have taken out from the old mine, which was flooded some years ago, a water-wheel, and made all the works necessary for opening up the mine. We were in hopes that we should have been able to give you some account of it to-day; but owing to the surface water coming in from time to time, we have not been able to make that progress in pumping out the water that we expected. That, however, we believe, is only a question of a short time, and we shall then get into that mine. We have got the water well down, and we have enlarged the shaft and put up all the necessary hoisting machinery, &c.

THE ROYALTY QUESTION.

With regard to the question of royalties—we have had Mr. Porter and Mr. Lindsay Wood down at the mines. They went all through our books and accounts, and spent two days at the mine; and we are glad to be able to report to you that we have succeeded in getting some concession. The Ecclesiastical Commissioners have agreed to a reduction in our rents and royalties, amounting to nearly 2,000*l.* (Hear, hear.) If the price of lead continues as low as it is at the present time, we cannot afford to go on working on the royalties that we have been paying; and we, therefore, believe that upon a further representation being made to the Ecclesiastical Commissioners, they will meet us still further in the matter. We certainly do not intend to spend your money in developing the Dale without deriving any benefit therefrom, and it is absolutely necessary that we should get some considerable abatement in our rents. Other landlords have made abatements, and I am sure our request is not an unreasonable one. I think we should only pay royalties when there are profits. (Hear, hear.) When we get fair profits we can afford to pay fair royalties. You have expended a large sum of money—everything almost that you have received in the shape of produce has gone back to the Dale, and has found its way into the hands of the Ecclesiastical Commissioners as rents and royalties. If the lead interest goes they will get nothing to speak of. The Dale will be depopulated, and, consequently, they will lose their tenants. As a matter of fact, so far as the ironstone works are concerned, they are already practically stopped.

NEW MILL AT RISPEY.

Our new mill at Rispey has been examined by experts from all parts of the world, and we are perfectly satisfied as to the judiciousness of having put up that mill. It enables us to deal with our poor house,

and if we had not had it we should not have been even in the position we are to-day. The experts have approved of it; it has now stood the test of time, and, notwithstanding the great opposition to it which was raised by agents and others in the locality, we may say it has been a most successful work. (Cheers.)

AN ADDITIONAL ENGINE AT GREENLAWS.

In order to facilitate the getting out of stuff from the mines at Greenlaws and keep them continually going with the view of having sufficient for our smelting purposes, we are putting up a supplementary engine at Greenlaws. I think it will be completed to-day. The cost will amount to about 400*l.*, but most of it will be paid for out of the proceeds of the sale of some old and obsolete material which was in the place. I do not think there is anything in the accounts that calls for special remark on my part, but I will with pleasure answer any questions you put to me to the best of my ability. I will now formally move "That the report and statement of accounts be received and adopted." (Applause.)

HEAVY EXPENDITURE IN DEADWORK.

Mr. GEORGE HOPKINS (director): I have much pleasure in seconding the resolution. The report shows you the very large amount of deadwork that has been done during the year in order to open up and develop the mines to find better ore if possible. The chairman has summed up the whole case in a few words—namely, that the mines are very poor, and have not yielded ore of the value that they have done in former times. Of course, every reduction that we can get from our landlords will be an improvement; but, whatever they can do for us will not help us to any great extent unless the mines themselves improved.

Mr. LANE asked if Mr. Maxfield, who had frequently visited the mines, would address the meeting.

THE CONDITION OF THE MINES.

Mr. JOSHUA MAXFIELD (director): I am very sorry, gentlemen, that I cannot make a bad report into a good one. I might tell you a great deal, and use language that would lead you to believe that we are going to have a very grand thing in the future, but, as the chairman says, I cannot see any further through a brick wall than anybody else. All I can say is that what has been done has been done for the best. We have never worked harder. The results are bad; but that is not our fault—it is the fault of the mines being poor. We are, as you have heard, raising more stuff than could have been dealt with by Mr. Beaumont when he had possession of the whole of the Dale, and when he was making very large returns. So that it is not in the quantity, nor in the work, that there has been a falling off; it is in the poverty of the mines which is our misfortune, not our fault. I have made 10 journeys to the mines this year, which means pretty hard work, each journey occupying about a week. With respect to the workings at Killhope, some two years ago we had a block of ore there which did good work for us, and gave you the dividend which you had recently. Unfortunately, that vein in Killhope Head has gone completely blind. There is not as much ore there to-day as would dust your hand, and there has not been for some months past. We had a large cross-vein there—the other side is virgin ground—and we were hoping, when we got to that cross-vein, to find that the vein carried in full strength. We found the vein, and have been following it, but, unfortunately, it is perfectly barren. What the result may be upon further development we cannot say; our hopes are that we will come to another cross-vein directly which will be profitable, but, of course, we are not able to say that. Our returns from Killhope have, owing to this cause, gone down from a very considerable figure to almost *nil*.

BRIGHTER OUTLOOK AT GREENLAWS.

At Greenlaws we are doing a little better. We have practically stopped some of the poorer workings at the east end; but to the west, in Watson's drift, and going out further west, our hopes are very much brighter than they have been for some time past. We appear to have a fairly good mine there; but we have not been able to deal with the stuff as fast as we could break. We have a very considerable quantity of bouse in that mine which we cannot deal with on account of the shortness of water. We have, therefore, thought it advisable to erect an engine, especially as we could do it without feeling the cost very much, by the sale of old material about the place. They will now be able to deal with more stuff than they are raising, or are likely to raise, in that mine for some time to come, and we shall overtake the stocks which are lying dead at present.

WORK AT GROVERAKE.

At the Groverake Mine we have a large amount of ground opened up, and we can get the bouse pretty quickly there. We were in the same position there as we were in at Greenlaws—we had only one mill, and could not deal with our stuff. The stuff being poor, it would never have paid to work with one mill, because we could not have dressed sufficient to pay the dead expenses of working that big mine. We have now, however, two mills, and we are dressing about 1,200 tons of bouse per week. Had we not been able to deal with that, our difficulties would have been very much greater, and nothing in the world that I can see would have saved us from making a call in order to carry on operations, because we could not have got sufficient to have paid our way. The two mills are doing the work now, and we are overtaking the stocks which were lying fallow in that mine.

DRIVING THE LEVEL AT BOLTSBURN.

With respect to Boltsburn, that is a very hard mine. We have been driving a long level there, and, on account of the hardness of the rock, it was a very costly one. That level is in the Great Limestone. We had workings above, but it did not open out so quickly as we anticipated, and certainly not as we should have liked. At the present moment we have come upon ground that is payable, and we have every reason to believe that when we get a little further we shall have better ground there than we have just now. I think that the chances for Boltsburn are very much brighter than they have been for some years. The works at Sedling are, of course, a speculation. We have been told—and we believe it—that the late owner had great faith in this mine; at any rate, he was making provision for opening it, and spent a considerable sum of money in, figuratively speaking, preparing the garner in which to store the wheat, and he would not

have done that if he had not believed there was something there. Owing, however, to the circumstances to which the chairman has referred, the thing did not go on, and it was standing in that condition when we took it in hand. At the present moment all the machinery is fixed, the pumps are at work, and we have cleared out two shafts—one a drawing shaft and the other a pumping shaft. We have put in two 11-in. pumps and the water-wheels, and everything works like clockwork. We have got the water down 14 fms., and we have just come to the top of what they call the "Old Man's drift." It was into that drift that we wanted to get before this meeting, but owing to the heavy rains we have not been able to do so. We had just got down to the roof and could see into the level when these tremendous floods came, and filled us up some 2 or 3 fms. again. Meantime we are going on pumping, and with moderately fair weather we ought to be into that mine almost any day. They have sunk the drawing shaft 23 fms., and everything is ready for raising the ore, which we believe to exist there. I have been in the old workings, and I know it was a magnificent vein; we hope that when we can get into it we shall have a payable mine. We have the dressing floor close at hand, so that if we got the bouse to-day we could dress it to-night. There will be no further expense on that score.

DISAPPOINTMENT AT MARY'S VEIN.

With respect to Mary's vein—we have been rather disappointed there. We sunk a shaft considerably below the Great Limestone, and drove off, and there found the vein was all split up. We have taken out the ore as far as it was payable. We have now ceased operations at the western end; seeing that there is some ore lying at the eastern end, and a good deal of barren ground between it. We have simply moved our portable engine to the eastern end, and unless the vein continues forward at a greater depth, we are not going to spend any money in sinking a shaft. We shall get to the bottom of the ore, and when that is done, we are done. We shall take out what there is there, and we think we shall get more than sufficient to pay all costs; but if it is not going to be a permanent success we do not intend going on with it. I ought to have said, with regard to Groverake, that we spent a good deal of money in making a long cross-cut—and a very expensive and hard one—to cut a vein. We ought to have cut it a considerable time before we did. However, we have now cut it, and have driven along that vein for 40 or 50 fms. Some portions of that vein are looking very well; the whole of it is certainly very soft—hence, it will not be an expensive vein to work, as almost all the veins in Groverake are cheaply worked. The only misfortune is that they have not more ore.

THE POLICY OF THE BOARD APPROVED.

Mr. LANE: I think the directors deserve our thanks for the stand which they have determined to make—that unless they get some substantial concessions from the Ecclesiastical Commissioners it will be a question with them whether they will continue the workings or not. (Cheers.) I think that is a very proper course to take in a matter of this magnitude. But, after all, I do not think we have done very badly this year. What has been our loss? About 200*l.* per month—and that with the price of lead as low as we have experienced it for some time past. Our returns have been 3,000 tons. If we had had a rise of 1*l.* a ton it would not only have paid our landlords, but left us a fair profit—at a time when our mines are very poor. We all know that in mining the veins vary in quality—you never knew a vein yet of any magnitude that was regular in its production. During the past year our mines have been in an unproductive state; but we must not lose hope in Weardale just because Mary's vein, which is only a very small affair, has turned out badly; for we have other veins that have not only been productive with us, but also in Mr. Beaumont's time to a very considerable extent. Now we are getting lower down, and we may expect that those veins in depth will make mineral. But I agree with the board, that we ought to pay royalties only upon profits, and I think, if properly approached, the Ecclesiastical Commissioners will give us the assistance that we have a right to expect in developing a large property like this. (Applause.)

NUMBER OF MINERS AT WORK.

Mr. HOLFORD: How many men have you employed at the mines? The CHAIRMAN: Between 600 and 700.

Mr. HOLFORD: Can we not get rid of those who are on unproductive work?

The CHAIRMAN: No; these men are developing the property. We have to look to the future.

Mr. HOPKINS: We have greatly reduced the number of men employed on dead work.

Mr. LANCASTER: I think all of us are of opinion that unless the Commissioners are prepared to meet the company to the extent of not exacting any royalty unless a profit is made on the working, it will be for

THE INTERESTS OF THE COMPANY

to terminate the agreement and get out of the Dale. (Hear, hear.) Why I take this apparently pessimist view is, that as regards the price of lead, the imports from Australia are constantly increasing; and even supposing that this year we have come to a maximum, that maximum represents the extraordinarily large quantity of 60,000 tons, of a sterling value of 3,000,000*l.*, owing to the silver contained in this rich ore. If the Commissioners wish to preserve the lead industry in the Dale, I feel convinced that they will have to meet us in the way suggested.

Mr. BLENKIRON: What was the total cost of the erection of the new dressing-floor at Groverake?

The CHAIRMAN: Including the railway which we made, and all machinery, &c., about 6,000*l.*

In answer to a further question,

The CHAIRMAN said the quantity of stuff put through the Rispey mill was 800 bings per week. On the whole the Rispey mill was cheaper to work than that of Groverake; but it all depended upon the richness or poverty of the stuff put through.

Mr. HOPKINS: The cost is about 19*s.* per ton at Groverake, against 16*s.* at Rispey.

Mr. SUCKLING: Did the agents of the Ecclesiastical Commissioners make any suggestion to the directors with regard to the future working of the property?

The CHAIRMAN: The agents were so satisfied with the way in which things were going on that they gave us this reduction; but as for giving us any idea as to how we could work the property, they could not. They know that our interests in the Dale are their interests, and I am satisfied that they will grant us further concessions when they consider our position.

Mr. SUCKLING repeated his question.

Mr. MAXFIELD: Mr. Porter was fully satisfied with the manner in which we had treated the mines, and he said, "I am perfectly satisfied that you have done all that men can do for this property." He recommends us now to go in, as far as we can, for

MAKING MONEY OUT OF IT.

He recommended us, to a certain extent, to stop developments. I said, "As far as we are concerned, by our license to work we have to employ so many men; but we could not carry on the mines unless we employed more than that number." As far as I can recollect, that is the only thing in the way of a suggestion he made to me.

Mr. SUCKLING said he understood that suggestions were made to one or more of the directors that a careful account should be kept of the doings at each of the mines, so that it might be ascertained which were profitable; and that the directors in the present circumstances should husband their resources as much as possible by not continuing the unproductive labour.

Mr. HOPKINS: The accounts of each mine are kept perfectly distinct, and always have been. It was a very proper suggestion, but at the same time it was one that we had in mind long before. We have always been trying to keep down the deadwork as much as possible, but if you are going to stop your deadwork altogether, you may as well stop mining. It is very hard to draw the line.

The report and accounts were then unanimously adopted.

On the motion of the CHAIRMAN, seconded by Mr. HOPKINS, the retiring director—Mr. Benjamin Broughton—was re-elected.

The auditors having been re-appointed,

The proceedings closed with a vote of thanks to the chairman and directors.

LATEST REPORT.

Week ending Dec. 12:—Groverake—Slate Sill drift east: Vein sparry, but poor in ore, worth 8 cwt. per fm. Allen Water vein east and west holed, but rise not made good yet. The 50 level west: No change, worth 8 cwt. per fm. Ridley's rise: Vein sparry, worth 10 cwt. per fm. Boltsburn—Watt's level east: Vein not looking so well, more twitched, worth 12 cwt. per fm. Stopes under coal sills worth 20, 22, 18 and 20 cwt. per fm. Greenlaws: Watson's drift, driving in north part of vein, 4 ft. wide, of good fluor spar mixed with ore; vein improving, worth 14 cwt. per fm. Stopes worth 12, 16, 12, 20, 30, 16, 14, 16, and 14 cwt. per fm. Hill's rise: Vein chiefly plate rider. Lowe's drift: Driving in alternating beds; vein 2 ft. chiefly rider, some spar threads, and traces of ore; stopes worth 20, 14, 16, and 16 cwt. per fm. Egglestone's sump, stopes worth 12 and 16 cwt. per fm. North string, driving west below scar limestone, vein 1½ ft. wide, of good spar, mixed with ore, worth 8 cwt. per fm. Killhope: Trent level east vein heading fast to the south; no signs of improvement. Plate drift: A rise is up 9 ft. from roof to top of Quarry Hazel. There is a little ore in top of sill, but not payable; stopes worth 16 and 30 cwt. per fm. Stopes in Killhope head vein worth 16, 30, 16, 16, 14, 16, 14, 16, 16, and 16 cwt. per fm. Stope in Tweed vein worth 30 cwt. per fm. Ore raised for week, 78 tons; ore dressed for week, 56 tons; ore and slag smelted for week, 144 tons, producing 74 tons of pig lead.

THE HARMONY GOLD FIELDS, LIMITED.

THE DIRECTORS ADOPT A WAITING POLICY—THE PROPERTY DESCRIBED.

The second ordinary general meeting of the shareholders of this company was held on Thursday, Dec. 17, at Winchester House, Old Broad Street, London, E.C.

Commander F. C. de Lousada, R.N.

presided.

Mr. FRANCIS C. O'NEILL (secretary) read the notice convening the meeting, and the report and accounts were taken as read.

THE SHAREHOLDERS HAVE ALL THE INFORMATION.

The CHAIRMAN: Gentlemen, the report which you have before you is very ample in the information which it gives, but in addition to that you will remember that last Feb. you were informed all about the work done on the property by one of our managers who was over here, and those shareholders who were unable to attend that meeting received a full report of the proceedings, which was published in the newspapers, and which was sent to all the shareholders so that they could study it at their leisure. Since then, as regards the development of the property, I have absolutely nothing to add, because it was considered by the directors, in conjunction with the consultative committee, that, considering the state of the markets over here, it would be far better to do nothing on the property at present than to go on prospecting, and perhaps making valuable discoveries, such as we have already been doing, when by so doing we would only encourage the Transvaal Government to declare the farms public goldfields. Of course, it will be of great advantage for us to have these farms declared public goldfields when the time is ripe, but it would not be at all to our advantage at the present moment, because they are not sufficiently getatable for the number of prospectors that we should like to see there. These goldfields, however, are being made more accessible every year, and we hope the time will come when not only will they be declared public goldfields, but also goldfields which will be very accessible indeed. Under these circumstances, I have nothing to tell you in respect to any further findings on the farms, but I will recapitulate shortly what has already been said by one of our managers, and what has transpired from the reports we have received.

A RECAPITULATION.

In the first place, we commenced work in May, 1890. We were not able to commence until then, as the grass had to be burned, and it was not sufficiently dry until then. You must bear in mind the enormous

extent of the property, some 120 square miles. The farm Berlyn alone is 3½ miles by 2½ miles, or about 6,000 acres. Most of the work has been done upon that farm. Our managers out there apparently had a knowledge that there were some goldfields upon it, so they attacked this part of the property first. It appears to be very nicely situated. There is a river at one corner of it, and also another river running into that one. It is an exceedingly healthy farm, being the highest on our property. The altitude is about 3,200 or 3,400 ft., and we are told that any altitude of that kind is very healthy. So there is no wonder that our managers and prospectors who are out there in that not particularly charming climate should choose that place to work in which is most healthy. A great deal of work has been done, and several reefs have been found. We have received several reports on the mines, and also an assay of some of the ore which has been taken from the shafts. The assay is by a Mr. White, a gentleman who I understand is exceedingly worthy, and in whose statements reliance can be placed. The Mint reef assays 16 dwts. 18 grs.; Da Lacy, 10 dwts.; Lynches, 1 oz. 3 dwts. 12 grs.; Godfrey's, 1 oz.; Emin Pacha, 16 dwts.; Godfrey's No. 5, 1 oz. 4 dwts. 12 grs. All these are situated on the Berlyn farm alone. The depth to which the shafts have been sunk is altogether 350 ft., and the drive is 150 ft. It appears to be a very rich farm from all I can hear about it. It certainly wants a great deal more development. It is my own opinion, and I have not consulted my colleagues yet, that when the time comes we should sell this farm to a sub-company, and let them develop it, but, of course, it is not worth while taking such a thing into consideration just now. On the farm Coblenz, which is the next one to that, good reefs have also been found. On the Dusseldorf farm several shafts have been sunk, amounting altogether to 121 ft., and drives to the extent of 50 ft. So far they have not found it payable, but they believe at greater depth it will become so. On the Bonn farm a new reef had been struck. Of course, on an enormous property like this, we can only be said to have

BARELY SCRATCHED THE GROUND,

and we do not know what is there. But from all accounts, not only from our own people, but from outsiders also, we here it is a remarkably rich country. We have also got the word of the Minister of Mines in the Transvaal, who has lately been down into this district. He says, "I have seen here gold such as I have never seen in any other goldfield." As regards the railway, we have news from our manager that the ground has been surveyed to a place called Leysdorp, which is within two miles of our border, and they believe this railway will be commenced next May. They cannot commence at present because it is the rainy season. A circular has also been issued by a Frenchman in which he asks the French to go in for the glory of France and cut out the Englishmen, who had got all the goldfields in their hands, by building a railway as far as the northern part of the Transvaal country. We do not wish to deprive them of that glory, as it will be to our advantage. Another thing which will tell in our favour is that the Potsdam farm we hear will be declared a public goldfield in May. Although the Potsdam farm does not belong to us, it will be an advantage to us, because it will bring prospectors to our neighbourhood. All we have to do, gentlemen, is to wait patiently. I am hopeful, and I think we are

ALL HOPEFUL,

that the time will come, although it may be a little further off than we imagine, when we shall be able to dispose of some of our property. As to the accounts, you have them before you. I do not think the expenditure has been excessive. The managers say they are very careful about it, and that the expenditure of this company is very much lower than that of other companies in the neighbourhood. I now beg to move the adoption of the report and balance-sheet.

Mr. JOHN PROCTER (director) seconded the motion, and the motion was carried unanimously.

The retiring director was then re-elected.

Mr. Arthur Dent was elected to a seat on the board, and Mr. Dillon-Trant's election was confirmed. The auditors were also re-elected at a remuneration of 10 guineas.

The proceedings then closed.

HOLLOWAY'S PILLS.—The chief wonder of modern times. This incomparable Medicine increases the appetite, strengthens the stomach, cleanses the liver, corrects biliousness, and prevents flatulency, purifies the system, invigorates the nerves, and re-instates sound health. The enormous demand for these Pills throughout the globe astonishes everybody, and a single trial convinces the most sceptical that no medicine equals Holloway's Pills in its ability to remove all complaints incidental to the human race. They are a blessing to the afflicted, and a boon to all who labour under internal or external disease. The purification of the blood, removal of all restraints from the secretive organs, and gentle aperient action, are the prolific sources of the extensive curative range of Holloway's Pills.

INTEREST ALLOWED ON DEPOSITS—
For 1, 3, 5, or 7 years certain, $4\frac{1}{2}$ per cent
per annum.

THE Liquidator of the YURUARI COMPANY, LIMITED, is prepared to receive OFFERS for the PURCHASE, as a going concern, of all the VALUABLE PROPERTY OF THE COMPANY IN VENEZUELA. The Concessions comprise in all 667.29 hectares. The mill consists of 60 stamps. There is a very large amount of machinery, tramways, &c., including 20 stamps, unfixed, on surface, which has cost about £150,000 in all. The two main shafts of the Company are sunk respectively to depths of 500 and 1,000 ft., with extensive levels and connections underground. The Eureka property has 20 stamps and a large amount of machinery on surface, making 100 stamps in all. The Mine has produced during the last six years about £350,000 sterling of gold, and is in good working order, &c.

For further particulars apply to the Liquidator, Mr. Alfred Good, Chartered Accountant, 57, Moorgate Street, E.C.; or to Mr. A. Pulbrook, 20, St. Helen's Place, E.C.

THE AGENCY CAN COMMAND AND SUPPLY THIS TO INVESTORS.

GENERAL FOREIGN MINES.

Many of these deserve special attention. Profits may be secured by acting upon sound advice in Buying certain Shares, whilst losses may be avoided by timely sales.

INDIAN MINES.

The information possessed by the Agency is invaluable for those wishing to Buy or Sell Shares in this Market.

KAFFIR MINES.

Special efforts have been made to secure the best and most reliable information as to the management, resources, and prospects of South African Mines in which the profits and losses have been alike phenomenal.

GREAT CARE IS NEEDED BEFORE INVESTING.

Those doing business through the Agency are kept informed as to any exceptional news in connection with the Companies in whose Shares they are interested. Purchases can be made for forward delivery, and sales effected for Cash.

All communications should be sent to

The best Ore Granulator for leaching and concentrating in the world.

SIZE 00 FOR CHEMISTS' SAMPLING, OR THE LABORATORY, £25 COMPLETE.

THE INGERSOLL-DUPLEX HAND-POWER ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, Price List, &c., to

WELLINGTON & CO.,

MANUFACTURERS, 73A, QUEEN VICTORIA STREET, LONDON.

It is perfectly automatic, and bores holes from ¼ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made.

SHOWING DRILLS AT WORK SINKING AND DRIVING,

DIAMOND-CORE DRILLS for Hand or Steam Power for PROSPECTING or DEEP BORING.

PELTON WATER WHEEL CO.'S MOTORS. A MARVEL OF ENERGY AND POWER.

No. 2 DRILL.

ROBEY & CO.,

ROBEY AND CO'S EXPANSION PORTABLE ENGINES

Possess the following advantages:—Great Strength, Extreme Simplicity of Design, First-Class Workmanship, Great Economy in Fuel, Ease of Management, Absolute Safety in Working, Great Power, and Durability.

N.B.—Robey & Co. are also manufacturers of Portable Engines, Semi-Portable Engines, Robey Engines and Locomotive Boilers combined (both Compound and Simple), Vertical Engines, High Speed Engines, Horizontal Fixed Engines (Simple and Compound), Sugar Mills, Locomotive, Cornish and Vertical Boilers, Winding Engines, Head Gears, Mine Pumps, Centrifugal Pumps, and every description of Machinery for Builders and Contractors.

IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO'S Stone Breaker and Ore Crusher, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame a neat and much stronger Frame of Rolled Steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the Machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the Machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

GLOBE WORKS, LINCOLN.

TONITE

IS RECOMMENDED TO CONTRACTORS, MINERS, PIT SINKERS, QUARRYMEN, AND OTHERS, AS BEING THE SAFEST OF ALL EXPLOSIVES.

TONITE is a most efficient and economical blasting agent, and is largely in demand. It does not contain any Nitro-glycerine, and, is, therefore, exempt from the dangers of exudation, or of freezing and its attendant process of thawing.

THE COMPANY MANUFACTURE

PATENT DETONATORS FOR USE WITH TONITE.

Also supply Safety Fuse and Electric Firing Appliances of best description.

Address: THE COTTON POWDER COMPANY (Limited),
116, QUEEN VICTORIA STREET, E.C.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, THURSDAY EVENING.

A WEEK OF FROST AND FOG, BUT CHARACTERISED BY A FAIR AMOUNT OF BUSINESS—COURSE OF PRICES.

THE week has been one of continued frost and fog, and well has the market known it. Outside as well as inside the doors of the Stock Exchange the market has suffered the unutterables. This unwonted spectacle has been witnessed—brokers have all been in tears, but neither of joy nor sorrow. This ebullition of feeling has not been due to the tender influences of the heart so much as to the penetrating powers of the fog, and so for the time their eyes have become fountains of tears, and they themselves have posed as modern Jeremiahs. To describe the sufferings of these gentlemen in the interests of their clients this week would require the traditional three-volume novel, but as our space is occupied in other ways, we must check the spirit of romance, though it rises within us after the sights we have seen and the sounds we have heard.

In the eager attempt to do business, brokers have beheld each other as through a glass darkly, and a mantle of fog has enveloped them almost as closely as the ulsters in which they have been embedded. They hardly knew each other, and judged to whom they were speaking rather by the accents of well-known voices than the lineaments of familiar features. In the Mining Exchange matters were scarcely any better than outside the Stock Exchange doors, and even within the precincts of the last-named edifice, brokers walked by faith rather than by sight. The week has been dreadful from the weather point of view, and sufficient punishment has been meted out to the mining fraternity to give them absolution for their little shortcomings during the whole of the year of grace that is now about to expire.

But, though hateful from the weather point of view, the market, looked at from the standpoint of business, has not been such a blank as one would think. Perhaps the most active concern upon it has been Yankce Girl. These shares could have been

bought, when last we wrote, at about 9s., but this week they have risen to over 15s. It is said the upward rise is due to the news which has leaked out, that the company has got again into its ore chimney, and that the returns will be rapidly increased. On this idea many bought, and some sold, the former predominating. The shares do not quite close so firm as they have been. The sister company, American Belle, was firm in sympathy, but New Gustons were practically unmoved, because these shares are tightly held by people who evidently know they have a good thing, and mean to keep it. Generally, the market for American mining shares has been good.

The meetings this week have been simply overwhelming. A note will be seen in another part of our impression in which we apologise for having to omit, or postpone, many interesting reports and communications of various kinds. It seems a great pity that so many companies postpone their meetings to the very last moment. Many of these meetings are long overdue, and in most cases the directors were not able to give sufficient reasons why they should have been so long delayed. Market gossip speaks of such companies as "shady ones," but that description is not always correct. Many of these concerns are amongst the most respectably managed of the mining companies, the centre of whose administration is in London, and, therefore, the more the surprise that they have postponed meeting their shareholders until the inconvenient Christmas week.

The interest of the Diamond market has again been chiefly concentrated in the dénouement of the great pearl case, to the exclusion of anything like heavy dealings in such shares as De Beers, North-East Bultfontein, and New Jagersfontein, though the former have improved on dividend rumours. In the Land section the movements have been uneventful, though confident opinions are expressed of the glowing future that awaits the Transvaal Gold Exploration and Land Co. This feeling was engendered by the satisfactory meeting of the shareholders. In the Gold section the changes, too, have been fractional, the greatest rise having been 5s. in Ferreira, and a fall of 2s. in Great Gold Zone. With the dividend just declared, the London and South African Exploration Co. has paid 12s. 6d. per share for 1891.

The Copper market has been better, Rio Tintos and Tharsis both being up; but brokers did not seem to read the Cape Copper meeting quite favourably. They never like an increase of capital, however good the reasons may be for augmenting it.

In the Indian section the changes have been purely nominal, and there is little to record either in the way of buying or selling.

In the Australian section the dealings have also been without marked feature. Day Dawn Block has declared a dividend of 6d.

On the other hand, the general Foreign market shows an almost all-round improvement. We have already referred to American shares, and we may go on to remark that there has been an active market for Elkhorn, Golden Feather and Golden Gate. The fluctuations in Golden Feather have been very great. At one time during the week they rose to 15s., but now close at just about half that price. Reference to these two concerns will be found in our leader columns.

The Home market has been weak, and, with the solitary exception of South Frances. shares have fallen. Carn Brea, as usual, led the way, with a fall of 3½, and was followed by Tincroft, Dolcoath, East Pool, and several others. East Pool has declared a dividend of 8s. per share, and Prince of Wales to-day made a call of 2s. 6d. a share.

AFRICAN.

Remarks.—The market has been better, but does not close at anything like its best. The chief rises have taken place in Ferreira, Jubilee, Jumpers, and Kimberley Roodepoort, while Crown Reef, Great Gold Zone, Henry Nourse, Robinson, and Simmer and Jack have fallen. The market closes dull.

Business.—A rise is shown in Pigg's Peak of 6d.; Bantjes, 1s.; Ferreira, ¼; Forbes Reef, 1s.; Jubilee, ½; Jumpers, 1½; Kimberley Roodepoort, 1½; Langlaate, 1½; Modderfontein, 1s.; and Moss Rose, 6d. The falls are in Bothas Reef, 3d.; City and Suburban, 1½; Crown Reef, ½; Great Gold Zone, 2s.; Henry Nourse, 1½;

Luipaards Vlei, 6d.; Main Reef, 1s.; May Consolidated, 6d.; Randfontein, 6d.; Robinson, 1 $\frac{1}{2}$ s.; and Simmer and Jack, 1 $\frac{1}{2}$ s.

South Africa, 1 $\frac{1}{2}$ s.; Ophir, 3d.; Southern Land, 1s.; and Sutherland Reef, 1 $\frac{1}{2}$ s.

DIAMONDS.

Remarks.—There has been a somewhat restricted market for these shares with the exception of De Beers and North-Eastern Bultfontein. The former have had a considerable rise and have been purchased on dividend rumours. The latter were firm on the meeting. New Jagersfonteins are a shade lower.

Business.—A rise is shown in De Beers of 1 $\frac{1}{2}$ s., and North-Eastern Bultfontein, 1 $\frac{1}{2}$ s.; whilst the only fall is in New Jagersfontein, 1 $\frac{1}{2}$ s.

AFRICAN LANDS.

Remarks.—The dealings in Oceana have been fairly free, and prices hardened somewhat, though Bechuanaland, British South African Exploring, and Sutherland Reefs are all lower. The market closes without life.

Business.—A rise is shown in Moodies of 6d.; ditto, partly paid, 1s.; New Grahamstown, 1s.; Oceana, 1 $\frac{1}{2}$ s.; Transvaal Gold, 6d.; and Virginia Transvaal, 6d. The falls are in Bechuanaland, 1 $\frac{1}{2}$ s.; British South African, 1 $\frac{1}{2}$ s.; Exploring, 1 $\frac{1}{2}$ s.; Exploration, 1 $\frac{1}{2}$ s.; Goldfields of

INDIANS.

Remarks.—The market has been somewhat restricted, and very few alterations have taken place, the changes being a fall in Mysore and Ooregum Preference, while Ooregum Ordinary are slightly firmer.

Business.—A rise is shown in Balaghat of 6d.; Indian Consolidated, 3d.; Mysore Harnhalli, 6d.; Nine Reefs, 3d.; Nundydroog, 1 $\frac{1}{2}$ s.; and Ooregum Ordinary, 1 $\frac{1}{2}$ s. The only falls to note are in Mysore of 1 $\frac{1}{2}$ s.; Mysore Reefs, 3d.; and Ooregum Preference, 1 $\frac{1}{2}$ s.

COPPER.

Remarks.—The chief business has been in Rio Tintos, which have had a considerable rise, but with this exception there is no alteration to call for attention.

Business.—A rise is shown in Rio Tinto of 1 $\frac{1}{2}$ s., and Tharsis, 1 $\frac{1}{2}$ s., whilst others remain unchanged.

AUSTRALIANS.

Remarks.—There has been but very little doing in these shares. South Australian are firmer, while Australian Broken Hill Consols are slightly lower; Kangarilla are weaker on the report of debenture issue. Other Colonial shares are without change.

Business.—A rise is shown in Cumberland of 3d.; Day Dawn Block, 3d.; New Queen, 3d.; and Scottish Australian, 1 $\frac{1}{2}$ s. The falls are in Australian Broken Hill of 9d.; Gympie Golden Crown, 3d.; and Kangarilla, 1 $\frac{1}{2}$ s.

GENERAL FOREIGN SHARES.

A fairly good amount of business has been transacted, considering that in several cases jobbers have simply been clearing up their books for the end of the year, whilst others have posed as bears. The week shows a rise in Callao Bis, Don Pedro, Elkhorn, and Yankee Girl. Golden Feather, after being 14s. 3d., close lower than last week.

Business.—A rise is shown in Alamillos, 1 $\frac{1}{2}$ s.; American Belle, 6d.; Balkis, 3d.; Cantabrian, 9d.; Colombian Hydraulic, 6d.; De Lamar, 6d.; Don Pedro, 1 $\frac{1}{2}$ s.; Edwin Bray, 6d.; El Callao, 1 $\frac{1}{2}$ s.; Elkhorn, 1s.; Montana, 3d.; St. Augustine, 3d.; and Yankee Girl, 5s.; The falls are in Amador of 3d.; Colon, 6d.; Colorado, 6d.; Flagstaff, 3d.; Garfield, 3d.; Glenrock, 3d.; Golden Feather, 2s. 6d.; Golden Gate, 3d.; Gravel Gold, 6d.; Pinos Altos, 3d.; and St. John del Rey, 3d.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

INDIAN MINES.

NERBUDDA COAL AND IRON.—The coal sales for the month of Nov. are 1,245 tons.

COLONIAL MINES.

BLUE SPUR AND GABRIEL'S GULLY.—The superintendent cables the return of gold for the four weeks ending Dec. 19 as 126 ozs.; partial clean up only.

BROKEN HILL PROPRIETARY.—A cable states that the half-yearly general meeting will be held in Melbourne on Jan. 27 next, when the directors' report and balance-sheet to Nev. 30 will be presented.

DAY DAWN BLOCK AND WYNDHAM.—The directors announce an interim dividend of 6d. per share, free of income-tax, payable on Jan. 19. The result of the crushing for the fortnight ending 19th inst. is: "Tons crushed, 680; yield of gold, 1,011 ozs.; approximate value, 3,485l.; fortnight's expenses, 1,250l." P.S.—The directors are advised by the cablegram of this date that a further shipment of bullion, valued at 5,900l., has been made, making a total *in transitu* of 14,300l.

DAY DAWN P.C.—Crushing for fortnight ending Dec. 19, viz.:—"1,100 tons 1,126 ozs. (estimated value, 3,941l.)."

KAPANGA.—Telegram from the manager:—"We have crushed for the month 75 tons of ore, the yield has been 350 ozs. of gold, leaving a profit of 300l."

MIDAS.—Yield for week ending Dec. 19, 52 ozs.

MOUNT LEYSHON.—Fortnight crushing:—"970 tons crushed, 290 ozs. gold; 30 stamps mill ran 288 hours."

SUNBURST.—A cablegram from Charters Towers, Nov. 19, states that the mine has again cleaned up, 259 tons for 334 ozs.; value, 1,250l. A dividend of 6d. per share has been declared. The cablegram adds, the mine continues to improve.

FOREIGN MINES.

CALLAO BIS.—The directors have sold through Messrs. Johnson, Matthey and Co., Limited, the gold obtained during the month of Nov., viz.:—859 ozs., for which the sum of 3,371l. 17s. 2d. has been realised.

COLOMBIAN HYDRAULIC.—Cablegram:—"We have cleaned up after a run of 56 days, during which time we have washed 1,160 hours. The gross returns are 2,200l.; the nett profit is 1,200l."

ELKHORN.—Cable from the mine:—"Bullion produced for week ending Dec. 19, \$9,040."

JAY HAWK AND LONE PINE.—Telegram from the manager, Capt. H. Prideaux, viz.:—"Estimated mill returns this week, 6,500 ozs. silver. Mine is looking well."

MAMMOTH.—Cable:—"Shipped bullion amounting to \$7,800, product Dec. 13. Cross-cut from level No. 6 is driven 34 ft.; without walls."

MAID OF ERIN.—Cable from the mines:—"Gross yield for the week ending Dec. 19, 1,100 tons; estimated value, \$15,000."

RUBY.—Telegram:—"30 tons tribute ore shipped and smelted, producing to company \$87; 29 tons ore on company's account shipped."

AMBAS EXPLORATION.—Cable:—"We shall commence crushing ore early in Jan.; the mine continues to improve; the mines are valuable prospects; requiring development."

ZARUMA.—Cable as to Nov. produce:—"Mill working 19 days; crushed 360 tons of quartz, producing 255 ozs. of bullion, estimated to realise 690l." The produce for Oct. has been sold, and realised 522l. 16s. 9d. net.

HOME MINES.

COLORADO BOY.—The manager reports the vein cut in the bottom drift Colorado Boy shows that the ore improves as it goes down. A streak of ore in the drift towards No. 2 ore body assays: Gold, 18 dwts.; silver, 250 ozs. to the ton.

EAST POOL.—A dividend of 8s. per share has been declared. The accounts for the 12 weeks showed that on the debit side the labour costs were 7,878l.; merchants' bills, 3,186l.; stannary assessment, 14l.; Wheal Agar adventurers' contributions to water charges, 75l.; dues, 751l. On the other side, tin sold realised 12,367l.; wolfram, 643l.; arsenic, 1,229l.; halvans, 77l.; discounts, 88l.; carriage on tin ore sold, 16l.; income tax on dues, 20l.; sundries, 27l.; showing a profit on the quarter's working of 2,568l.

GLENROCK.—A cablegram was received on Tuesday from Mr.

L. O. Beal, consulting engineer in New Zealand, to the effect that a strike has been made in the low level adit, quartz moderately rich, and the new find in the upper level is improving in value.

INDIAN CONSOLIDATED GOLD MINING CO., LIMITED.—At an extraordinary general meeting held at the offices Dashwood House, on Thursday, the special resolution altering certain articles of association of the company, which was unanimously passed at the meeting on Dec. 7, was confirmed on the motion of Mr. Malcolm Low, M.P., chairman, seconded by Mr. Winterman.

PESTARENA.—The manager states there are still 10 mills running, but it is doubtful whether there will be sufficient ore to continue working throughout the present month.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

WYLDSDALE.—Cable: "Crushing commenced Dec. 21."

DURBAN ROODEPOORT.—The interim dividend is payable on Jan. 21, and not Jan. 11, as previously announced.

HORO CONCESSION.—The 20 stamps have ran six days four hours to the end of the 15th. Shortness of water was the cause of the short time. Rain has now come, and I hope this hindrance has gone.

LONDON AND SOUTH AFRICAN EXPLORATION.—The directors of this company have declared a dividend of 3s. per share, less income tax, for the quarter ending the 31st inst., payable on and after that date, making, with the interim dividends paid, a total distribution for the year of 12s. 6d. per share.

MATABELELAND.—The directors are satisfied with the future prospects of the Chartered Co., but say it cannot be expected that the large and remote territory now being developed can be opened out at once; nor is it likely that rich and phenomenal discoveries, such as the Kimberley diamond mines and the Randt gold formation, which characterise South Africa, will be met with at so early a date. They "cannot, so far as they are at present informed, express the same satisfaction respecting that portion of the Chartered Co.'s business having reference to the arrangements with the promoters of the company and the allotment of the shares. The matter being, however, at present *sub judice*, the directors are precluded from giving further information to the shareholders."

OTTOS KOPJE DIAMOND.—The manager's advices of Nov. 30, just to hand, inform the directors that, owing to flood water in the new open workings, he was to open a new prospecting shaft to the south of the present workings, and would test the ground got out of the new shaft by a hand-working machine. The directors have received the following cablegram, viz.:—"First wash to-day from prospecting shaft, yield half-carat (per) load; diamonds good, 18 loads (yielding) 8 carats." The directors consider this highly satisfactory, proving the value of the southern portion of the mine which the company is now opening up, and even if the ground now being washed does not get richer than the above at a deeper level (according to all experience in diamond mining) the profits on the working must be very large, considering that 100 loads will yield 50 carats of the value of, say, 75l., while the cost of working 100 loads will not exceed 2s. 6d. per load, equal to 12l. 10s. The company has machinery in working order able to wash 500 loads per day.

COMMERCIAL NOTES.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING DEC. 26.

Banco National de Mexico	6 per cent.
Bank of Roumania	6s. per share.
Bond's Brewery	10 per cent.
Canada Co.	1l. per share.
Ceylon Land and Produce	10 per cent.
Doom Dooma Tea... ..	5 per cent.
Manchester Trust	1s. 6d. per share.
North Queensland Mortgage	10 per cent.
Newcastle Breweries	10 per cent.
Naval Construction and Armament Co. ...	8 per cent.
Peter Schoenhofen Brewery	11 per cent.
Quebrada Railway Preference... ..	10 per cent.
Quebrada Railway Ordinary	5 per cent.
St. Anne's Well Brewery	4 1/2 per cent.

THE CHIAPAS MINING CO.

THE directors' report states:—Of the 78,814l. of subscribed capital, 25,500l. was paid towards the purchase of the property, leaving a cash working capital of 53,314l. From this has to be deducted the amounts unpaid on the shares which have been forfeited, amounting to 1,019l. 4s. 2d. The mining operations which have been carried on have conclusively demonstrated that very large quantities of ore, yielding concentrates rich in gold, silver, and copper, can be very cheaply mined, and that there is a very large amount of such ore in sight. The cost of mining 4,000 tons of this ore is given by Mr. Stockdale as averaging \$1.82 (5s. 8d. per ton). The time has now arrived when practical results on a large scale may be expected from the expenditure which has been made.

FERREIRA GOLD MINING CO.

THE directors have issued their report for the six months ending Sept. 30 last. During this period 23,163 tons of ore were crushed, producing 22,461 ozs. of gold, of the approximate value of 80,850l. 4s. The profit and loss account shows that the sum of 49,099l. 17s. 1d. was consumed in working expenses and 22,000l. in payment of dividend, leaving a balance of 86,665l. 16s. 9d. to be carried forward to the new account. The actual profit from working during the period under review—namely, the entire working expense, including depreciation (49,099 17s. 1d.), deducted from the value of the gold produced (80,850l. 4s.)—amounts to 31,750l. 6s. 11d., being at the rate of 144 per cent. per annum on the capital of the company.

REPORTS OF MEETINGS.

PRINCE OF WALES MINE.

A BETTER REPORT—CALL OF 2s. 6d. A SHARE.

A GENERAL meeting of the shareholders in this mine was held on Thursday, Dec. 24, at the Offices, Gracechurch Buildings, Gracechurch Street, London, E.C.,

Mr. Alfred Thomas

presided.

The notice convening the meeting was read, and the minutes of the previous meeting were also read and confirmed.

AGENTS' REPORT.

In submitting our report for the general meeting, to be held on the 24th inst., we beg to say that since the last meeting we have continued operations (as before) in developing principally the bottom part of the mine. The 180-fm. west has been driven 9 fms., which makes it 17 fms. west from shaft. The last 8-fms. drifage here has been on a productive lode, from 3 to 4½ ft. wide, of a very splendid character in tinny capel, spar, and peach, and worth from 30% to 35% per fm. We are now driving by its side, and when sufficiently advanced, we purpose blasting it down, and we believe we shall find it equal in value to any thing yet seen in this level. The 180 east has been driven 11 fms., making it 18 fms. 4 ft. 7 ins. from shaft. In this drifage the lode has been generally small and disordered by the influence of the flucon lode which runs with it. Our object in pushing this end is to reach the point where those lodes part, where, doubtless, the main lode will be found very productive, as it is analogous to this level west. The 166 west is driven 8 fms., and is now 45 fms. from shaft. This drifage is on a lode from 2 to 4½ ft. wide, of a very strong and masterly character, and worth from 10% to 15% per fathom, at present worth 10% per fathom. In the last two months we put four men to stope the back of this level, where the lode is worth 12% per fathom. We have also four men stoping in the back of this level east of shaft; lode large, and has a splendid appearance, worth 10% per fathom. The cross-cut south at this level (166) towards the Goodluck lode has been driven (by a full party of men) 18 fms. 1 ft., and is now driven from the main lode 53 fms. From the original plan we were led to believe we should find both the lodes near each other at this level, but from a recent dialling by a competent surveyor we find there is yet 3 fms. more to drive before we may expect to reach the Goodluck lode, and should it be found productive, as anticipated, with a continuance of the late discovery on the main lode in the bottom of the mine, success may yet be realised in the near future.—S. ROBERTS, J. PROWSE.

CONTINUED IMPROVEMENTS.

The CHAIRMAN: Gentlemen, as to the accounts, it will be observed that they are for a period of five months, as we have brought in the extra month as stated at the last meeting. The loss upon the five months is 1,522l. 17s. 11d., and the balance of liabilities over assets is 536l. 3s. 10d., and the sales of mineral 360l. As promised we have reduced the costs to as low a level as possible. We have continuously driven the 180 levels east and west, the 166 west and the cross-cut at this level. At the last meeting we had the pleasure of announcing a good improvement in the 166 west, and we are pleased to be able to state that this lode holds good, and is laying open a valuable section of ground which will shortly be available for stoping. In this level east no improvement has yet taken place, as the lode is still in the influence of the disturbing ground, but we are daily expecting a favourable change. The 166 west continues worth from 10% to 15% per fm. The cross-cut towards Goodluck lode is now in 53 fms., and 3 fms. further driving should bring us into this lode, a point I need not say of the utmost importance for our future. Looking at the fine lode we are opening up in the bottom level, and considering our near approach to the Goodluck lode, our prospects are brighter than they have been at any former time.

AN APATHETIC PUBLIC.

We must all regret the apathy shown by the public to mining in general, and Cornish mining in particular. During the whole course of my experience, extending over a period of 30 years, I have never known so long and continued depression. When we see the shares of the best mines in the country so dreadfully depreciated it is little wonder that progressive mines such as ours should be almost absolutely neglected by the investing public. Still there must, some day, be an end to this state of things, and what, in my opinion, is required is a good discovery somewhere to make our home mines go, and I sincerely trust that this may fall to our lot upon the intersection of the Goodluck lode. I have great faith that this will be the case. The arrears of calls have our attention, and we hope, upon the turn of the year, that this item will be greatly reduced.

The report and accounts were adopted, and a call of 2s. 6d. made.

SAPPHIRES AND RUBIES OF SIAM.

A CALL SHORTLY NECESSARY.

THE ordinary general meeting of this company, was held on Monday, at the Offices, 19, St. Swithins' Lane,

Lord Thurlow

presided.

The CHAIRMAN said that the reason there were such a small number of shareholders present was that many of their more important shareholders, including the royal princes, resided in Siam. He was pleased to say that the Government of Siam, were largely interested in the company, both financially and politically. The company had at the present time taken possession of 9 square miles of gem-producing ground, and had already obtained, without the use of expensive machinery, 210,000 carats of sapphires and rubies. One parcel had already come to hand amounting to 40,000 carats, and consignments of 130,000 carats and 40,000 carats were on their way. The board expected to receive parcels of gems every fortnight, or at least every month. They were giving their best attention to the manner of disposing of their gems, and he had no doubt they would be able to come to a satisfactory arrangement. The accounts were on a very modest scale, but he considered that they were fairly satisfactory. The board had not sent out any valuable machinery to extract the gems, but were depending largely on the simple appliances which

the natives were accustomed to use. The bank balance in London was very small, and the board would, therefore, have to shortly make

A CALL.

of 2s. 6d. in the pound. The board had only taken up 9 square miles out of the 40 miles they had under the concession, and they had a promise of a further 20 square miles from the Siamese Government to select later on. The report was adopted, and the proceedings closed with a vote of thanks to the chairman.

MOUNT MORGAN EXTENDED GOLD MINING, CO., LIMITED.

ENCOURAGING PROGRESS AT THE MINE.

Nov. 2.—This is a three weeks' report, showing the work done from Oct. 12 to Nov. 2. Immanuel shaft No. 3: During the three weeks we have sunk 18 ft., viz., from the 114-ft. level to the 132-ft. level, having gone down exactly 6 ft. each week. On the 19th the indications of a defined lode were getting more marked every foot we sank. The mine was visited by the managers of the Great Northern Co.'s shaft, and of the Senior Co.'s Sugar Loaf shaft, who expressed good hopes of our touching rich stone as we go down. On the 26th the slipping heads gave us some trouble; the wall marking the vein runs exactly parallel with the shaft perpendicularly. The rock has been changing gradually for the last 20 ft., and takes a more decided form of clean hard quartz containing plenty of mineral and getting harder. To-day (Nov. 2) the manager reports the stone as harder to bore, the water not so white in colour; the slipping heads continue, so that we can only get down 6 ft. at a time safely without timber, therefore we are somewhat delayed every week in cutting the necessary hitches, &c. We have received returns of the following assays from our assayer at Gynpie, being general or bucket samples, giving a fair return of the character of the whole of the stone raised, as near as we can get at it, viz., as follows:—

Sample No.	From depths. Feet.	Gold. Dwts. grs.	Silver. Dwts. grs.
810	109 to 114	5 0	10 2
811	114 to 120	5 0	17 15

The assayer reports the character of the stone to be much changed from the dark grey to white, some parts with a faint greenish tinge, silicious with some lime and a little mundic, some stones carrying nests of foliated mica, also that the bluish grey colour has quite disappeared. The above report was upon sample 811. Samples: 812, from 120 to 123 ft. deep; 813, from 123 to 126 ft. deep; 814, from 126 to 132 ft. deep, are still in the hands of the assayer for his report, being the results of the work done during the past two weeks. It is a remarkable and encouraging fact that, with the exception of the first 49 ft. of sinking down to the solid strata, all the stone raised from this shaft has been regularly auriferous. 28 assays from the 49-ft. to the 91-ft. level having averaged—gold, 5 dwts. 14 grs., and silver 1½ dwt. 2 grs., and seven assays from the 91-ft. to the 120-ft. level having averaged—old, 6 dwts. 10 grs., and silver, 10 dwts. 10 grs. The total bullion having increased to the extent of ½ oz. to the ton since we resumed sinking the shaft at the 91 ft. level. The miners engaged at this shaft are 11, and sundry men getting firewood and sawing timber three. Phoenix: We started sinking this shaft on the 12th inst. It was then 146 ft. deep. During the three weeks we have sunk the shaft 6 ft., being exactly 2 ft. a week, to a total depth of 152 ft. We have three men at work in addition to the working manager, total four. Up to the 17th the water was very troublesome, taking five and a-half hours to bale. On the 24th it got less, taking only two and a-half hours to bale. It appears to be coming in from the eastern and along the reef, which is a good sign for the unexplored country east of the shaft. Water also comes in from the western side, because at the 100-ft. level west of the shaft there is a drive, above which are the workings from which the old company raised most of their stone. At 50 ft. along this drive there is a winze which is 53 ft. deep, at the bottom of which the old proprietors came into some nice stone. They drove westward from this winze some 20 ft., and took out a couple of stones about 18 ft. high. The stopes were full of water on the 17th inst., and we were only lowering it by baling in our shaft about 4 ins. a day. On the 17th the general formation at the bottom of the shaft was about 2 ft. wide, and soft at the eastern end, whilst at the western end it was about 5 ft. wide, and hard. Just below the 100-ft. level the vein carrying gold was about 10 ins. wide. Is cut out altogether at 143 ft. At 146 ft., where we began to sink, it began to come in again, as on the 13th we found a small vein about 2 ins. thick, carrying coarse gold half way across the shaft, in a soft formation about 6 ins. thick, and 1 ft. from the footwall. A bit of this stone sent for assay to Lynburner on the 20th yielded, gold, 1 oz. 12 dwts. 6 grs.; silver, 1 oz. 1 dwt. 9 grs.; total bullion, 2 ozs. 14 dwts. 3 grs. On the 24th the vein was still small, but extended nearly across the shaft. On the 31st the reef was 1 ft. wide on the eastern end, while quartz with mundic through it, resembling the top of the mundic reef that Linde Bros. cut in the winze 50 ft. to the westward, just before they sold out, which reef it probably is. The formation at the bottom of the shaft is much broken up and thrown about. There is no regular footwall, but a small defined hanging-wall, against which the quartz vein above referred to lies. Capt. Bennett, inspector of mines, informs me by letter that he visited the Phoenix on 23rd ult., found the machinery in excellent order, joints perfectly steam tight, upon which he had complimented our men. He reports that he went underground, found a decided improvement in the reef at the bottom of the shaft, more mineral, with occasional stone, showing free gold. Mill shed: During the past three weeks we have had three men engaged in building an addition to our mill shed, 48 feet long and 43 feet wide. This is to cover our furnace and chlorination plant. This shed is now completed. Chlorination plant: We have had four men erecting the chlorination barrel, one leaching vat, and two weak liquor tanks, and taking out ground for the same. On the 26th the vats and other things came up from Rockhampton, and on the 31st we shifted our small spare engine to drive the chlorination barrel. I hope next week to get this plant to work. Tailings: During the past three weeks we roasted 27 tons of tailings ready for chlorination. Previous to that we had already roasted about 27 tons, so that we may say that we have at present about 50 tons of tailings ready for chlorination, from which Mr. Paton, our mill manager, hopes to extract 1 oz. to the ton.—R. BOLLAND.

THE COLAR CENTRAL GOLD CO., LIMITED.

REASONS GIVEN WHY SHAREHOLDERS SHOULD NOT DESPAIR OF SUCCESS—PRESENT OPERATIONS ENCOURAGING FROM SEVERAL POINTS OF VIEW.

The fifth ordinary general meeting was held at Winchester House on Monday, to receive the report of the directors and the balance-sheets for the year ended Dec. 31, 1890, and up to June 30, 1891, and to elect two directors and an auditor.

Mr. Malcolm Low, M.P.

(chairman of the company), presided.

The SECRETARY read the notice of meeting.

The CHAIRMAN: Gentlemen, I regret to see such a small attendance, but really I cannot wonder, considering the state of the weather (it was a dense fog outside) we have in London, that shareholders refrain from presenting themselves here to-day. I am sure anyone who can remain in-doors on a day like this, and avoid business engagements, is wise in doing so. With regard to the report and accounts, I presume you will take them as read. (Hear, hear.) Let me very briefly recall to your recollection the scope and the nature of the working programme which we submitted to you at the last general meeting, and which you unanimously approved. We were

WORKING ON TWO DISTINCT MINES.

Both are situated on the same run of ground, but are separated by an interval of at least 3,000 ft., and constitute, of course, two distinct mines. As to the southern mine, our programme was to sink the Main and Marden's shafts, to a depth of 240 or 260 ft., and then to drive out on the course of the lode, thus proving it below the long 80-ft. level, at a distance of 160 ft. or 180 ft. below that level. When we had sunk the two shafts to the intended depth, and as the driving of the two levels on the 240 and 260 proceeded, our hopes grew fainter and fainter, as you must have seen by the fortnightly reports. The quartz we found was poorer and even less regular than it had been in the 80-ft. level above, and at last, the intended work having been accomplished, we had no choice but to acquiesce in our want of success, and to refrain from spending more money in endeavours which the work accomplished had now proved to be fruitless.

MINE TO THE NORTH.

As to the northern mine, our programme was to sink the New shaft to a depth of 200 ft. below the surface, then to cross-cut to the lode, and then to drive north and south on its course. That programme, too, has been carried out with results, I am glad to say, very different indeed, and much more favourable than those in the other case, as you must also have seen from the fortnightly details, and also from Mr. Bullen's and the directors' reports which you have under consideration, wherein those results are set forth and summarised. The mining here was a little complicated by reason of an east and west trap dyke which crosses the lode, also from a floor which was dipping from north to south, but south of New shaft, the result being that the lode was doubly cut off in the case of the operations of the late Eastern Mysore Co., all of whose works were to the south of New shaft. Our design was to place the shaft so as to intersect the lode both a little way from the influence of the trap dyke, and also underneath the floor. Therefore, we sank north of the trap dyke and we put it down 200 ft. We cross-cut some little distance and found the lode as we expected. At the point of intersection it was 2 ft. wide, and worth 15 dwts. Since then the work of driving the levels north and south has proceeded slowly, of course, but regularly—slowly, because our funds would no longer enable us to work otherwise than by hand labour. The result is, as we have mentioned in the report, that "the work done on the 200-ft. level has laid open a run of ground 110 ft. long (since extended to over 120 ft.) all of it (excepting the dyke itself) in gold-bearing ore, the average assay being 7 dwts., but some (pockets) of it very rich. The winze sinking below the level with quartz also averaging 7 dwts., seems to show that the ore holds down in depth." I must add that according to the most recent advices (Nov. 28) that length of 120 ft. has become 143 ft., of which 78 are north and 65 south of the shaft. The north end is in quartz 2 ft. wide, worth 10 dwts., while we have more recent and more gratifying intelligence by wire that the end south after crossing the dyke has again found the lode, and is

NOW IN QUARTZ WORTH 10 DWTS.

It is worth while to mention that we have here (although they are not placed on the plan) very considerable old workings to the south of the shaft. On this field we are always more hopeful when we have these vestiges of the labours of the ancient workers. They had the advantage of seeing the outcrops and testing them before they commenced underground excavations. I am far, indeed, from saying that we never find good ore except in continuation of old workings, but I do say this, that we always feel more assured when we are following the track, or have unbottomed the track of these prehistoric predecessors of ours, whom we familiarly designate "the old men." In this case I can say that these old workings had a very considerable effect on our minds in raising our hopes from the very first in regard to this portion of our property. We have these old workings, and beneath them a lode, the assays of which average 7 dwts. for the whole distance driven, some 150 ft., and we also find from sinking on the reef below that level that the ore also averaging 7 dwts. holds down in depth, while the quartz, though not regular, is yet sometimes rich, and even extremely rich. I may mention 4 and 6 ozs. as its value at times, though, of course, this obtains only with regard to small patches. Still, we must remember that a depth of 200 ft. is after all very shallow. It may happen that the lode will settle, and may improve as it attains depth. We have proved that the lode holds good across the dyke and below the floor, and the whole of the conditions are in the opinion of your directors, such as to justify Mr. Bullen when he says, "I certainly think the lode is well worthy of a trial, and that the prospects of success are such as to warrant a further outlay." We have a remark in the report which we did not make without carefully weighing it, that "the case is one where no responsible mining authority could do otherwise than advise continued prosecution of the work both in sinking and in driving if funds could be made available," but can the funds be made available? That is the question. But it is not a question which we intend you to answer to-day. We have

an opinion, and hope you will agree with us that it will be better to go on for a little while longer as we are doing now, in order that a more extensive survey of the underground position may precede any scheme which we may hereafter have to submit to you for raising additional funds. There are very few gentlemen present, but I hope of those few no one will think it necessary to question us to-day as to the details of any such scheme. I should sympathise with such curiosity, but should be utterly unable to gratify it. That must be a secret for the present, for the best of all reasons, that there is no scheme to disclose. (Laughter.) We have

NOT YET FORMULATED ANY SCHEME,

but I may venture to foreshadow this, that any proposal we may hereafter have to submit to you will have this essential condition, that only a small sum, sufficient probably to prove our ground for another 200 ft., shall be called up at once, and that no further call shall be possible unless with the consent of the shareholders in general meeting on a survey of the prospects of the undertaking, as they may then appear to be. Working as cheaply as we now are, with no debts and with our

HOME EXPENSES REDUCED TO PRACTICALLY THE VANISHING POINT,

we can go on for some months longer, and hope to lay open a little more ground both in dip and in strike before we come to you to ask you to consider whether you will submit to some small sacrifice for the purpose of proving what is just now, at all events, turning out day by day a most promising piece of ground. I am very much obliged to you for the kindness and attention with which you have heard me.

SERVICES LOST BY RESIGNATION AND DEATH.

I may just say one word as to our regret at the withdrawal of the services of Mr. Oakley. We have every confidence in Mr. Bullen, who is now in charge. Let me also add one word of regret as to the loss we have all sustained by the deaths of our colleagues, Mr. Lambert and Col. Lindsay, both of whom were with us at the last meeting, and both of whom were esteemed friends, as well as admirable colleagues. We deeply lament their loss, not only to us, but to the undertaking. (Hear, hear.) To fill their places we have appointed (subject to your re-election) this day, Mr. William H. Long and Mr. Alfred O. Lumb. I am sure you will appreciate the services these gentlemen have given us at a time when not one of the directors is taking fees, but they both are much interested in our success, and have freely given us the support we sought.

DIRECTORS WITHOUT FEES, SECRETARY ON HALF PAY AND CONSULTING ENGINEER WITHOUT PAYMENT.

I think we mentioned in our report that our eminent consulting engineer, Mr. John Darlington, while continuing to give us the benefit of his advice and assistance, declined most generously to take any fees at all, and it ought to be known to all that our experienced and able secretary, Mr. Grady, has, at his own suggestion, had his salary reduced to half. (Cheers.) I do not think I need detain you on the subject of the accounts, which are clearly and sufficiently set out, but either with regard to them or any other matter connected with the undertaking, I shall be very happy to answer any questions you may be pleased to put. I now beg formally to propose the adoption of the report and accounts. (Hear, hear.)

Mr. THOS. G. GILLESPIE (director): I beg to second the motion.

DISCUSSION.

Mr. McIVOR: There is another company working south of us—the South-East Mysore—at a considerable distance from our mines. We have no reason to suppose that we are not on the same line of reefs as that company. That is the only company, so far as I know, that is working east except ourselves of what is supposed to be the Champion Reef. There are also companies working to the west of the Champion Reef. No such company has done any good on the field, or shown any appearance of doing so, beyond occasionally good finds for a few days either east or west, north or south, of what is ascertained to be the Champion Reef, between the southern boundary of the Mysore and on the south and the northern boundary of Nundydroog or Ballaghat on the north. I should like to have the information, in view of the possibility of the scheme for working if other companies are exploring on other reefs and other parts of the field, because, if so, I think we may fairly wait for some of the results of their explorations in preference to wasting any more money on our own. Let the experiment be made on the vile bodies of others. (Laughter.) I have been very

MUCH ENCOURAGED, SIR, BY YOUR STATEMENTS

as to our prospects. I had pretty well given up both Indian Consolidated and Colar Central as a bad job, but you have stated that we are getting now on the northern part of the reef quartz that looks like an average of 7 dwts., with an occasional rich pocket of ore. I am afraid that this and the sister company have been extravagantly managed until just now, when everybody is reducing everything. Other companies, I understand, with a fair extraction make 6 dwts. or 7 dwts. pay, with occasionally a little rich quartz to mix with it.

The CHAIRMAN: In reply to the last speaker, as to what the South-East Mysore is doing, I am informed that it has just passed through an entirely successful re-construction, founded upon the great hopes they had of striking rich quartz in depth. They are deeper than we are here, and it is perfectly certain, such managers as Messrs. John Taylor and Sons, would not have agreed to re-construct without a good basis to go upon. We have reason to believe the South-East Mysore is not only closely connected with us by contiguity, but is absolutely on the same run of ground—in fact, upon the same lode—as that upon which we are working. Anyhow it is a little distance south of us, and the lodes run north and south. With regard to what Mr. McIvor said about no mining company proving successful in this field except upon the Champion reef, that is true, but we know that it is very rarely indeed that there is a run anywhere in the world on a great champion reef without the sister reefs or parallel reefs being able to produce here and there a good mine. There have been only so far as I know four mines worked east and west of the Champion reef, and because they have not been successful that would be no ground to abandon hope in regard to our working of the reef in this particular case. Mr. McIvor mentioned, rather than specifically stated, that this company and

Indian Consolidated had been extravagantly managed in former days. I take no further notice of that than to say that if he were to go into details he would find that so far from these companies being extravagantly managed, companies more economically managed than these do not exist on the whole of the Colar field. (Hear, hear.) As to what richness of quartz will pay, it depends on the extent of the extraction. Mysore West and Mysore-Wynad had mines on the west which I understand they have abandoned for the present in order to work the Tank Block which is on the run of the Champion lode.

The CHAIRMAN proposed, and Mr. McIVOR seconded, the re-election of the retiring directors, Mr. Long and Mr. Lumb, and Mr. LONG briefly returned thanks.

Mr. McIVOR moved the re-election of Mr. Hicks, the auditor.

Col. FITZGERALD seconded the motion, which was carried.

A cordial vote of thanks to Mr. Low for presiding closed the meeting.

VAN MINING CO., LIMITED.

SHAREHOLDERS DECIDE, IN THE FACE OF THE ACTION OF A PRESSING CREDITOR, TO HAVE A TEMPORARY LIQUIDATION.

AN extraordinary general meeting was held at the Office at Dashwood House on Saturday, for the purpose of considering, and if thought fit, of passing the following extraordinary resolution, viz. :—

"That it has been proved to the satisfaction of this meeting that the Van Mining Co., Limited, cannot, by reason of its liabilities, continue its business, and that it is advisable to wind-up the same voluntarily," and to appoint a liquidator.

Mr. Charles Clark

(chairman of the company) presided.

Mr. A. J. LAVINGTON (secretary) read the notice of meeting.

SAD NECESSITY.

The CHAIRMAN: Gentlemen, I need not tell you that the debenture scheme having failed, the directors have felt constrained to ask you to pass the resolution just read. They have done all in their power to avoid this step, but circumstances have been too strong for them, and when they found last week that in response to their second circular of Dec. 7, in which they shadowed out what must necessarily follow if the debentures were not taken up, the response was so inadequate that they found in order to protect the shareholders and all others concerned, there was no other course except to ask you to meet with the least possible delay and pass this resolution. The total amount promised in debentures was 2,280*l.*, and that includes 500*l.* which Lady Londonderry would have subscribed, and 500*l.* which the directors have subscribed. Therefore, the shareholders outside the board have only promised to contribute 1,280*l.* out of the 4,000*l.*, which we stated was the minimum upon which we would go to allotment. We must accept that as evidence that the shareholders are more or less apathetic, and, therefore, the step we have taken to-day is fully justified. I have no doubt if we had a longer time we might have brought up the subscription to 4,000*l.*, but creditors were pressing—one in particular—perhaps, the last man in the world from whom we should have expected pressure—

MR. THOMAS, MAYOR OF LLANIDLOES,

to whom the Van Mine has been a veritable annuity during the whole of its existence. This creditor took steps, by which he would probably have obtained the preference over other creditors to which we thought he was not entitled, and hence our action to-day. We regret the work should be stopped at the most interesting period of the mine's history since its first re-construction, and when we are on the eve of proving two or three important points. At the same time our course is unmistakably clear, but we believe the liquidation will only be temporary, and perhaps it will be the means of enabling us to resume work at no very distant date in a more comfortable financial position than we have been in for some time past. I move the resolution.

Mr. CATLING: I second it with regret.

DISCUSSION.

Mr. HOLFORD: When I was at the re-construction meeting a year ago, it was stated that the whole of the liabilities were 3,000*l.*, and that was endorsed by you as chairman.

The CHAIRMAN: You are mistaken, I think—the matter was fully explained at the meeting a month ago.

Mr. HOLFORD: I am referring to the meeting 12 months ago.

The CHAIRMAN here read the MINING WORLD report of the last meeting to show that the whole matter had been explained about a month since.

Mr. HOLFORD said he would not have joined the re-construction had he known what the liabilities were.

EXPLANATION.

Mr. PETER WATSON (director): It was represented to us that there were 40 tons of lead, but this lead did not exist, so that 400*l.* had to be added to the liabilities of 3,000*l.* then stated. Then there were the costs for seven weeks, as between Dec. 12 and Jan. 16 to the date of the liquidation, which came to 1,677*l.*, and the rents and royalties 415*l.*, giving a total of 5,492*l.* or about 2,000*l.* less than the actual amount as ascertained and shown in the balance-sheet presented.

The SECRETARY, in reply to further questions, said he had stated the amount of the ascertained liabilities 12 months ago to be 3,000*l.*; but there were others of which at that moment they knew nothing, and there was also, as Mr. Watson pointed out, seven weeks' costs at the mine, and a practical loss of 400*l.* from lead stated to be on the mine which was found not to exist.

A SHAREHOLDER: I think the explanation is quite clear, although it is not very pleasant.

Mr. McILQUAHAM (director): I have here the MINING WORLD which reported the meeting on Jan. 9 when we met to decide upon the re-construction. Mr. Lavington was asked our financial position, and said "the liabilities at the present moment stand at about 3,000*l.*, and Capt. Hodge and Capt. Francis say about 5,000*l.* will be required—or a total of 8,000*l.* A call of 5*s.* will produce 11,000*l.*—and the assessment made was based upon those figures which I now say

were misleading. If there were other liabilities why did the secretary not mention them? The chairman at the last half-yearly meeting (Nov. 21) explained this by saying that the liabilities were exclusive of accruing costs, local taxes, debts and royalties. Our present position is due in a great measure to what was told us—or rather what was not told us at that meeting.

Mr. KEMPSON: I think the feeling is that the re-construction has been muddled, and who is to blame, I am not prepared to say? But I think a portion of it is due to the board and secretary. We have all been misled. We thought we had put our shoulders to the wheel, and found plenty of capital, but now the result is liquidation. Still, it is no use crying over spilt milk. We have to consider what is best to be done under the circumstances. We are told that we have a promising mine, and that at all events by a small expenditure we can test it. It does seem to me a thousand pities that having done what we have we should not be content to put a little more money into it to see if we can reach that success which we have good reason to believe is not far off. I must say I would never have joined the re-construction if I had not fully believed the statement that we were finding more than sufficient capital, but before we have got well into the matter we are told we must wind up, because creditors are pressing. I understand there is only one, and he is a man who has made a considerable sum of money out of the concern, and is now in a fair way of killing the goose that laid the golden eggs. I hope if we can get the work done elsewhere we shall hereafter put it into somebody else's hands. (Hear, hear.) It is

A PITY WE CANNOT RAISE THIS MONEY,

for liquidation means that everything will be stopped, that we shall have to pay up our calls, and that we will get nothing in return, whereas if we can keep on a little longer we can test the mine, and in all probability bring it to success.

Mr. McILQUAHAM complained that excuses were made at the office for not giving him a list of shareholders, and five weeks afterwards he was told that he must pay 17*s.* 6*d.* before the names and addresses could be given to him. Was that treating him with proper courtesy?

Mr. HAMILTON (after mentioning the well-known circumstances under which he had joined the board) said: It is no use to recriminate. The mine has been a heavy loss to me, and I should not have come upon the board unless with the desire to try and make the property remunerative. If we do not pass this resolution for liquidation the result will be that there will be a petition for compulsory winding-up, and that we will be ruined. We have already had one claim which has been heard before the Judge in Chambers, and, probably, in less than a week that claim may be enforced and execution put in, so that we should have been to blame if we had not protected you. I have put myself in communication with many clients. They do not care to take up debentures, but say that if the mine is to be re-constructed and the royalties are to be dealt with and the dead rent reduced, then they do not object to coming in. The dead expenses there are tremendous (250*l.* a month), and they eat up the capital of the shareholders. Vigorous development has gone on, so that no time has been lost in that respect. I am not prepared to do anything further

UNLESS I SEE THE OWNERS OF THE LAND,

who have obtained a fortune out of it, are prepared to meet us under the altered circumstances of lead mining. (Cheers.) The gentleman who is pressing us for a claim of 550*l.* is the Mayor of Llanidloes. It would be a somewhat serious thing for that town should the mine stop. Part of the claim is for new machinery.

Mr. McILQUAHAM: Which we could have done without.

Mr. HAMILTON: That may be. You can appoint what liquidators you like, but if you wish to protect your interests you had better pass this resolution. We shall have a balance in hand after paying all our liabilities.

A SHAREHOLDER: What was the cost of the last liquidation?

The CHAIRMAN: The costs cannot yet be ascertained. The liquidator's personal remuneration was fixed at 10*l.* 10*s.*

Mr. PETER WATSON: I have taken a great deal of trouble with the creditor who is pressing us who has acted straightforwardly in all the transactions I have known him to be engaged in. In fact, I have known him for many years. He is Mayor of Llanidloes, and I cannot understand his action now. I agree with all Mr. Hamilton has said in regard to the royalties being reduced if this mine is to be resuscitated. The liquidators will try to carry on the concern if the resolution be passed, and it would be

A SERIOUS THING FOR LADY LONDONDERRY,

and also for the town of Llanidloes if the mine were stopped. I will say this in justice to Mr. Paull, that he has worked most vigorously and honestly, and has saved this company large sums. We are all agreed on that point. (Cheers.)

Mr. BLAKESTONE: After the remarks of Mr. Watson and Mr. Hamilton, I think the resolution should be passed. I cannot help thinking there is a future for this mine as there has been a marvellous past.

The resolution was carried by 16 votes to two, and as one of those two had not paid his calls, his vote was disallowed. The resolution was passed with but one vote recorded against it.

Mr. HAMILTON proposed "That Messrs. Clark, Watson, and W. J. Lavington, be appointed liquidators of the present company." We want to have men in whom we have confidence, and I have every confidence in Mr. Clark, whom I did not know previously, but whom I have found to be an honourable and straightforward man.

Mr. NEWTON seconded the motion, which was carried, and the meeting ended.

THE PETER SCHOENHOFEN BREWING CO., LIMITED.

A COMPANY THAT IS, THE CHAIRMAN STATES, "REGARDED AS IN THE FRONT RANK OF AMERICAN BREWERIES."

The general meeting of shareholders of this company was held at the Cannon Street Hotel on Monday, Dec. 21.

Mr. J. L. Hale

presided.

Mr. W. McDONELL (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said: Gentlemen, we are glad to meet you again under circumstances of continued prosperity, and, judging from the past history of this brewery, I think we need feel no anxiety as to the future, whether the seasons be hot or cold, or materials cheap or dear, or competition greater or less. The sales of beer for the year are 163,698 barrels, being an increase of 14,122 barrels over the previous year. The profit and loss account of the American company, the accounts of which have been examined at Chicago by Messrs. Price, Waterhouse and Co., this company's auditors, shows that the total income from the brewery for the year amounts to 80,319*l*. 8*s*. 7*d*., which is an increase over the corresponding revenue of last year of 6,212*l*. 13*s*. 1*d*. These large increases, both of sales and of profits, may be considered especially satisfactory, in view of the cold weather and of the high price of hops and malt which have prevailed in America during a great portion of the year; and the more so when regard is had to the fact that the previous year, with which comparison is made, itself showed an increase in the barrelage of 12 per cent. It has, however, been deemed a wise course to adopt a strong and conservative policy in the management of the company, and to place as large a sum as possible to the reserve fund. Accordingly the considerable sum of 23,342*l*. 2*s*. 9*d*. has been retained for this purpose by the American company, besides a provision for repairs and depreciation to the extent of 4,615*l*. 17*s*. 11*d*. There remains to come into the revenue account of this company the sum of 48,240*l*. 2*s*. 10*d*., and after payment thereof of the London expenses, &c., and the interest on debentures, there exists a balance of 35,669*l*. 9*s*. 5*d*., which, with the addition of 1,083*l*. 16*s*. 6*d*. brought forward from last year's account, makes the sum of 36,753*l*. 5*s*. 11*d*. available for dividend for the year. The interim dividends already paid on the preference and ordinary shares have absorbed 18,000*l*., and the directors now recommend the declaration of a dividend at the rate of 7 per cent. per annum on the preference shares, and of 11 per cent. per annum on the ordinary shares, for the six months ending Sept. 30 respectively, leaving the sum of 753*l*. 5*s*. 11*d*. to be carried forward. Our profits for the year would enable us to pay 21 per cent. on the ordinary shares, but we think it wise to pay only 11 per cent. and carry the balance to a reserve fund. We pay 11 per cent. instead of recommending 10 per cent., because the vendor guaranteed 11 per cent. for three years. We think a steady 10 per cent. and a continued addition to the reserve fund likely to create more confidence amongst investors than a large dividend and no reserve fund, especially as some brewing companies, after paying a high dividend, in a year or two have suddenly collapsed, and paid no dividend at all on their ordinary shares. Any industrial undertaking that pays 10 per cent. for a sufficient number of years to prove its soundness rises to a good premium, and, therefore, if you wish your shares to rise and maintain such a premium, I advise you to be content in future years with 10 per cent. as a maximum, and to consent to any balance of undivided profit being put to the reserve fund. Of course, when the reserve fund grew sufficiently large you could distribute a portion of it in the shape of a bonus. If anyone hesitates to invest in brewery shares on account of the great difference he sees in the results of these undertakings, and is unable to choose between the good and the bad, I advise him to go to Chicago, and spend a day at this brewery—he will be made thoroughly welcome, and have every question satisfactorily answered. He should then go about the city and make enquiries about the brewery, he would find it regarded as

IN THE FRONT RANK

of American breweries, that it has been established more than 30 years, that its success has been uniform, and its trade continuously progressive, and that it has been under the same esteemed management from the beginning. The accounts, I think, are very clearly put before you in the balance-sheet and profit and loss account, and I do not propose to occupy your time with any remarks thereon, except in the way of answers to any questions that may be put. I will now move that the report and accounts be received and adopted, and that a dividend at the rate of 7 per cent. on the preference shares, and 11 per cent. on the ordinary shares for the six months ending Sept. 30 last be declared.

Mr. A. A. PRANKERD, D.C.L., in seconding the chairman's motion, said he did not know that he could add very much to the lucid remarks which had been made by the chairman. The explanation, too, which the chairman had given of the accounts was very clear, and did not require any remarks from him. It was quite clear that a company such as theirs, which in face of the unparalleled cold weather which had prevailed in America during the summer weather, and in spite, also, of the excessive dearness of materials, neither of which facts was likely to occur again, especially in conjunction, it was quite evident that their company was a most prosperous and efficient one. They all thought that very great credit was due to the management in America, which had produced such good results, and he was sure the thanks of all the members should be tendered to their managers on that account. They would notice that this year the company had set aside for repairs a considerably larger sum than was done on the last occasion, and the very large sum of 23,000*l*. odd had been placed to the general reserve fund in the accounts, and the American shareholders might ask some questions with regard to that matter, and, therefore, it was as well for him to meet them frankly on that point beforehand, and to say that that sum would to a certain extent be used for the purpose of enlarging or improving the company's buildings and plant at Chicago, that was to say, it would be used as working capital. That, he thought they would think, was very satisfactory, because it would enable them to earn more, and in the absence of such a provision it might be that further capital would have to be raised in a manner which would not be so convenient or so profitable to the company. The sum put aside to reserve was very large, especially in proportion to the capital of the company, and when compared with other American breweries, all those who had shares in other undertakings will at once acknowledge that it was a very satisfactory amount to place to reserve. The company's prospects for the ensuing year were exceedingly good, and not only were the circumstances that had oppressed breweries during the past year no longer so prevalent, but there was one additional circumstance which he might mention to them, which was that during the past month of the past year, without one exception, there was a steady increase in the barrelage over the correspond-

ing month of the previous year, and that increase was still going on. There was one more observation that he would make in order to induce them to most favourably consider, and to carry the report, and that was that during the year they were able, after some difficulty, to place some of their shares on the Chicago market in the shape of share warrants to bearer. Although this did not affect the intrinsic value of the shares, yet it would improve their market value. In conclusion, he said he had confidence in assuring them that they might go home to their Christmas holidays with an assurance that their investment in this company is one of a very flourishing character, not only with improved prospects with regard to dividends, but those prospects of a most encouraging and safe character. (Applause.)

VIEWS OF A BREWERY EXPERT.

Mr. W. W. DUNCAN congratulated the board on being able to put before them so favourable a report, for not only had the sales materially increased, but in spite of dear material the directors had been able to show them a largely increased nett revenue. As they were aware, he had during the past 15 months twice visited the United States, and on each occasion he had thoroughly inspected the brewery; in fact, he had three times gone over the entire premises, and he could assure them it was a great pleasure to do so; everything was in such apple-pie order. He had, during his visit to the States, inspected nearly every important brewery in that country, and he was, therefore, speaking with some authority in saying that this brewery for its size surpassed every one of them—(applause)—in the substantial character of its construction, the compactness of its general arrangements, and the quality of its machinery. There was no doubt about it that their brewery was a perfect model of a brewery, and those who had the credit of its construction must have exercised the very greatest foresight, and have had the benefit of very great experience. Everything that was possible had been done to save labour, and he did not believe that there was a brewery in the world where the cost of production was less. They must bear in mind that while this business was a very old established one—the chairman had said it was 30 years old—the whole brewery had been rebuilt within the last five or six years, at a cost, he believed, of upwards of 60,000*l*., so that everything was of the most modern description. The company were exceedingly fortunate in the men they had in America to control this magnificent business. They were the two sons-in-law of the old Mr. Peter Schoenhofen, and they were, undoubtedly, very shrewd men of business indeed. Not only were their whole hearts and souls in the business, but also their own money and the money of their relations and friends. Mr. Carl Buhl, the treasurer, had a complete grip of the commercial part of the business, while Mr. Theurer had the entire management of the manufacturing department, and was constant and unceasing in his efforts to reduce the expenses, while, at the same time maintaining the high reputation which this company possessed for the quality of its beer. They were also, which was a very important point in a city like Chicago, where competition was very keen, exceedingly popular with their customers. In conclusion, he said he should like to propose a hearty vote of thanks to these two gentlemen for the satisfactory result of their labours for the past year, for he was sure they very well deserved it. (Applause.)

Mr. OCTAVIUS BEATTY also made a few remarks with reference to the economical and efficient management of the company, and observed that it was a satisfactory feature that the profits had increased notwithstanding the adverse conditions of the past year. He begged to second most heartily the vote of thanks which Mr. Duncan had moved to the board for the very excellent manner in which they had managed the business. (Applause.)

Mr. TOYE asked what progress had been made in the matter of a Stock Exchange quotation, the present holding in ordinary shares of the vendors, and the total amount of the reserve fund.

The CHAIRMAN said, with reference to a

STOCK EXCHANGE QUOTATION,

that about three-fourths of the shares must be placed amongst investors before they could obtain a quotation. He did not know exactly what number of ordinary shares the vendors held.

Mr. RADFORD, in reply to Mr. Toye, said his instructions were to sell a sufficient quantity of ordinary shares to enable them to obtain a Stock Exchange quotation, and when that was accomplished to sell no more.

The result was then put and carried unanimously.

A hearty vote of thanks was accorded to the members of the American board for their efficient and economical management.

On the motion of Mr. TOYE, seconded by Mr. HUGO, the auditors, Messrs. Price, Waterhouse and Co., were re-elected.

Mr. BEATTY proposed a vote of thanks to the chairman and directors for their excellent management during the past year.

This was seconded by Mr. SCOTT and adopted.

The proceedings then terminated.

BELLITE EXPLOSIVE, LIMITED.

THE EFFORTS OF THE NEW BOARD TO INITIATE A POLICY OF SUCCESS, AND TO GET THE COMPANY INTO SMOOTH WATER AGAIN, ARE COMMENDED BY THE SHAREHOLDERS—SALES OF BELLITE ALREADY MADE, AND PROSPECTS OF LARGE CONTRACTS.

An ordinary general meeting of this company was held at Winchester House, 50, Old Broad Street, E.C., on Wednesday, Dec. 23, 1891, for the purpose of receiving the directors' report and balance-sheet.

Mr. F. Render

presided.

Mr. CHARLES A. GODFREY (the secretary) read the order calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said that the secretary had read the notice calling the meeting, and it was now his (the speaker's) duty to propose that the directors' report and balance-sheet for the last year should be received and adopted, and in doing so he would like to offer a few remarks. The shareholders would all be aware of what occurred at the last meeting in reference to the appointment of a committee, but before he proceeded further, he would like to allude to the step taken by Lord Bateman, who had retired from the position of chairman of

the company, in consequence, he (the speaker) believed, of some little difference he, Lord Bateman, had with the other directors, and he not being able to get all his own way. That, he believed, was the simple reason why Lord Bateman retired. The other directors carried on the business for a little while, and at last it became necessary for an entire change to be made in the management, and that the present directors who were then finding the money should have the control of the affairs. After some considerable discussion an arrangement was arrived at with their late chairman (whose death, he regretted to say, had been recently announced in the papers)—Lord Combermere, by which those who had put their hands in their pockets, and found the money to help the company, should have the control of its affairs. During the time that the present management had had the control of the company's affairs they had done all in their power to further the interests of the company, but the fault had been that the past management—which he stigmatised in strong terms—instead of spending the company's money for the purposes of making bellite widely known, had devoted it to the purpose of manufacturing bellite, only with the result that they had now a larger stock than there was demand for. He (the speaker) regretted that the directors could not pay a dividend upon the present occasion. They were working their very best, but he did not care, like their previous chairman, Lord Bateman, to make a great many promises which might not be fulfilled. He could, however, tell the shareholders this, that even from a selfish point of view

THE DIRECTORS WOULD DO THEIR VERY BEST FOR THE COMPANY

for their own sakes, they having a large number of shares in the concern and having advanced a considerable amount of money. He concluded with the formal resolution for the adoption of the report and accounts.

Mr. J. K. NICHOLLS, of Cardiff, said that he had come up from Wales on purpose to attend the meeting, and he wished to move either a resolution or an amendment in regard to this company and the vendor company. He was now glad to see the Bellite Co. well represented on the board, and he trusted that they had now some better prospects before them. The opinion of many shareholders in South Wales was that the loss that had been made should be got rid of by reducing their shares by the amount of the deficiency now standing against the company. He thought this was the only way of dealing with it, as it would be a very long time before they would make up the deficiency of 16,000*l.* He would conclude, he said, with a proposal to the effect that such an arrangement should be carried out, which he said he considered would be of advantage to everybody, and he hoped that his proposal would be duly adopted. He repeated that they would have to wait a long time before they wiped off the deficiency, and were able to pay a dividend unless they did something of this kind. He did not know whether he would be in order at the present time in proposing a resolution to this effect. He represented some of the largest shareholders, and the proposal he would have to make would be that the value of the shares should be reduced by 16,000*l.* or 20,000*l.*

The CHAIRMAN said that before going into this it would be best to pass the report and accounts, upon which he invited any questions, and they would have ample opportunity afterwards for discussing any other matters.

Mr. NICHOLLS: I am much obliged to you.

The CHAIRMAN asked if somebody would second the resolution for the adoption of the report.

Mr. SANDERSON seconded the motion.

Mr. WILCOX said that he would later on have to ask some questions, but not at that moment.

The CHAIRMAN, in reply to the various remarks said, that in regard to getting the shares of the vendor company reduced, it was an awkward position for him that day to speak upon. He was the representative of the interests of his company, and he was also connected with the vendor company, and instead of Mr. Nicholls moving a resolution, he thought it would be much better if the proposal was written down and sent in, that they might have time to consider it, and to answer it. He did not care to give an opinion upon it now, but he wished to point out that in agreeing to some such suggestion, which, after all, was not an unjust one, he would have to object if it were left possible for anyone to come in and have the power to wind up the company. Should the alteration of shares give such powers they would not be able to agree to it.

The SOLICITOR to the company said that it was his experience that in cases of a vendor company selling certain patents to a subsidiary company and holding other patent rights, that friction was bound to occur.

A SHAREHOLDER asked the chairman's opinion as to the carrying of such a resolution, whether the directors would object, in order that the matter might be brought forward for discussion.

The CHAIRMAN in reply said that the only desire the directors had was to do everything they could to promote the success of the company.

Mr. SANDERSON expressed the view that a wiser policy would be to endeavour to

CARRY OUT AN AMALGAMATION

between the two companies.

The CHAIRMAN pointed out certain difficulties in the way, and said that it could be plainly seen that he could not in such a matter be buyer and seller both.

After some further discussion it was suggested that perhaps a committee might be formed to consider the matter in a friendly way.

The CHAIRMAN said that he could see no objection to such a course.

A SHAREHOLDER expressed his disappointment at the result up to the present time, but which was attributable to the action of the late management. Himself and friends had about 10,000*l.* to 15,000*l.* worth of the shares of that company, and, in his opinion, instead of proving the success that it ought to have done,

BELLITE BEING ONE OF THE BEST EXPLOSIVES

he knew of in the world, it had been in reality strangled by the manner in which the company's money had been expended on manufacturing bellite, instead of making bellite known and increasing the sales. He referred to the market quotation of their shares—he meant both companies, for he held 260 shares in the parent company, and he did not know what they were worth.

The CHAIRMAN: That has nothing to do with it. Keep to this company, please.

The SHAREHOLDER said that the remarks applied equally to that company, and he would like to know whether or not their shares had any market value?

After some further discussion, Mr. SANDERSON suggested that if Mr. Nicholls would amend his proposal, so that it stood for an amalgamation of the companies he would be prepared to support and second it.

Mr. NICHOLLS then proposed the following resolution: "That it is desirable that the two companies should be united on fair terms, and that the chairman should take immediate steps for such amalgamation."

The SOLICITOR of the company suggested that the wording should be "to bring about such amalgamation."

Mr. NICHOLLS accepted the amendment, and proposed his resolution in the following amended terms: "That it is desirable that the two companies should be united on fair terms, and that the chairman should take immediate steps to endeavour to bring about such an amalgamation."

Mr. SANDERSON said he would second that resolution.

The CHAIRMAN said: Before the resolution was put to the meeting there was one thing he would like to say, and that was, that

HE WAS ONLY HUMAN,

and that he had to bear in mind his other children as well as this company. He thought that a better way would be for an independent party to go into the matter.

A SHAREHOLDER said that there was no harm in this company formulating a proposal to be submitted to the other company (vendor) for their consideration, as that company had the option of acceptance or refusal.

The CHAIRMAN said that that was so.

A SHAREHOLDER said that equally the other company might make a suggestion or offer terms for amalgamation with this company.

The CHAIRMAN said that whatever was suggested he could carry, however preposterously unfair it might be.

A SHAREHOLDER said that they knew the chairman too well to think that he would do that. (Hear, hear.)

The CHAIRMAN suggested that steps should be taken for the consideration of the matter by a committee. The knew that

"IN A MULTITUDE OF COUNSELLORS THERE WAS WISDOM."

A SHAREHOLDER: I am not so sure of that.

After some further discussion, and a consultation having taken place with the company's solicitor,

Mr. SANDERSON said that he was prepared to move a resolution to the following effect, in place of the other proposal, namely: "That a committee of shareholders should be appointed in both companies to consider the subject of amalgamation and to appoint a committee to go into the whole matter at once."

The CHAIRMAN pointed out that this left the directors out of the question.

The resolution was then amended to the effect that a committee of three should be appointed to go into the subject and confer with the directors.

Mr. NICHOLLS seconded the motion.

The CHAIRMAN then said that they would have no objection to this resolution as to the committee being passed as a recommendation. It could not be done otherwise, as no notice of it had been given.

The resolution was then agreed to.

The meeting then proceeded to deal with the question of the appointment of the members of the committee.

The CHAIRMAN asked Mr. Wilcox if he would serve.

Mr. WILCOX said that as he was such a small holder in the undertaking he did not care to do so, in case his interest might be misunderstood.

The CHAIRMAN said that when they could get intellect they preferred it to shares.

CONSULTATIVE COMMITTEE APPOINTED.

Mr. WILCOX: Thank you.

The CHAIRMAN: Joking apart we should be very glad if Mr. Wilcox will serve.

After some further discussion on the subject, the following gentlemen were elected members of the committee, namely, Messrs. Nicholls, Sanderson and Hildred.

THE FUTURE.

Mr. WILCOX asked some questions in regard to the sale of bellite at the present time.

Mr. NICHOLLS also asked questions as to the prospects of their sales, and expressed the opinion that if they had had better management in the past they would not be in the position they occupied that day, but would be obtaining very large orders for their bellite.

The CHAIRMAN, in reply, said that he could offer a few words upon that point, and as he had said before, the directors in the past ought to have spent money in making bellite widely known, instead of devoting the whole of their working capital to its manufacture. He regretted to say that the chances at present were not too good for very large orders, but still they were doing fairly well. Their manager had recently sold several lots of bellite, three or four lots of half tons each, and they were trying now to get an order for 60 tons for abroad. They had sent in two tenders for 20 tons and 23 tons respectively for the Manchester Ship Canal, and if they succeeded in getting these it would pull the company into smooth water again, and there would be every hope of their continuing to progress satisfactorily, and of retrieving the mistakes made by the old board in the past. The only other business that day was the re-election of auditors. It would be seen from the following paragraph in the report that there was no re-election of directors that day. "Since the accounts were prepared a vacancy has been caused on the board by the death of Lord Combermere, which your directors very much regret, as he always gave them his cordial co-operation. They do not purpose to elect anyone in his lordship's place, as they do not think the interests of the company will be advanced thereby—at any rate, not for the present, but they leave the matter in the hands of the shareholders."

Mr. WILCOX then moved the re-appointment of the retiring

auditors, Messrs Deloitte, Dever, Griffiths and Co. at the same remuneration as heretofore.

A SHAREHOLDER seconded the resolution which was carried.
Mr. NICHOLLS proposing

A VOTE OF THANKS

to the chairman and directors said that he would like to remark that they were much indebted to them for continuing their services without remuneration, and also for the assistance that they had rendered to the company from a monetary point of view. He expressed the hope that the bad times of the past would be overcome, and that before very long the concern would be again placed on a favourable and paying basis. The present board of directors, he believed, were doing their best in the interest of the company. (Hear, hear).

A SHAREHOLDER seconded the motion, which was carried.

The CHAIRMAN returned thanks on behalf of himself and colleagues, promising that in the future as in the past he would do his best to promote the interests of the company, and he knew that on behalf of his colleagues he could promise the same thing. (Applause.)
The proceedings then terminated.

THE TRANSVAAL GOLD EXPLORATION AND LAND CO., LIMITED.

ANTICIPATIONS OF THE BOARD AT THE LAST MEETING JUSTIFIED BY RESULTS.

THE sixth ordinary general meeting of the shareholders of the Transvaal Gold Exploration and Land Co., Limited, was held at the Cannon Street Hotel, London, on Tuesday, to receive the directors' report and statement of accounts to Sept. 30 last, to declare a dividend, and to re-elect the auditor and fix his remuneration.

Mr. W. M. Farmer

presided.

Mr. C. E. WELLS (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN: Gentlemen, I have to express pleasure at meeting shareholders again, and having so favourable a report, with accounts, to present to them, and also my satisfaction that the anticipations of the board at last meeting, and commented on as "over sanguine" by the Press, have fully been justified by results. We are more certain to-day of the good prospects of the company than we have ever been before. This is all the more gratifying, as it presents a contrast to many of the gold mining companies, by the announcement of our having entered into the list of dividend-paying companies instead of an appeal in re-construction or an apology for not having won gold owing to bad times. Although the statement comes from this side of the table, I cannot but remark that success has been achieved by the conservative (not political) action and care of your directors, whose policy has been ably carried out by an intelligent and painstaking manager, who has himself worked well for your benefit, and also got all round him to throw their whole interest in the work of development of the property.

ACCOUNTS.

Turning to balance-sheet, I do not think you could have a clearer or cleaner one. Capital the same:—Liabilities, one short-sight draft against gold afloat, and outstandings (500*l.* commission to manager and 1,000*l.* for wages and salaries, &c.), leave only 700*l.* for the open trade accounts due Sept. 3). There is a new entry, and one that is preferable to the old debenture item, viz., a

RESERVE FUND.

to provide against accidents to machinery, mill, &c. We have written off a large amount for depreciation, resulting from the loss at Ophir Hill, as we had a good amount on the right side of the balance-sheet, and we have reduced the value of your plant to what we think is its value. That is not to say you could get that amount for it, but it would cost that to replace it. Debenture debt has disappeared, as it was the wish of the directors, and endorsed by the shareholders at the general meeting, that it should be paid before it was due. On the credit side, lands the same, but you will see a reduction on buildings, works and machinery account, and two new lines, Consols, to represent the reserve, and a recent tailings account, being expense attending the saving and stacking of tailings. The working account goes into detail to such an extent that I need trouble you very little about it. The result is, I consider, satisfactory, the rate for winning gold, being 50*s.* 0*d.* per ton this year against 70*s.* last year. Mine expenses naturally are greater, as we have done more work. London charges are very moderate. Profit and loss account: You will in this notice 14,133*l.* at credit of No. 1 account of this the board invested, as nucleus of a reserve fund, 3,000*l.* in Two and Three-quarters per Cent. Consols, and, as no adequate depreciation has been written off since the company started, we devoted the balance to clearing up, ascertained loss on sale of old mill, and depreciation on items of plant and machinery not in use. In 1891 we wrote down plant and machinery account by a further amount of 5,845*l.*, bringing down their value from 33,000*l.* to 17,286*l.*

DIVIDEND OF 7½ PER CENT. FOR THE YEAR.

An interim dividend of 6,217*l.* was paid, and it is now recommended that a further sum of 12,434*l.* be devoted to the same laudable object. Gentlemen: The reports are so extensive and full of detail that little is left for me to say. Had such statements as are to be found in the manager's report on pages 16, 17, 18, respecting Nu, Theta, and Rho deposits been sent to shareholders in 1884, the shares would have gone up to 5*l.*, but persons are so averse to mining securities just now that a 50 per cent. dividend will only rouse the public.

MINING.

With regard to mining operations, the work of stripping the overburden from an important section of Theta Mine has gone on throughout the year. This has been done by removing terrace after terrace of the waste ground overlying the gold-bearing rock. As the work of stripping proceeded, the strata immediately overlying Theta reef proper were found to carry gold in payable quantity. The gold from this ore so unexpectedly obtained, more than paid the expense of stripping, and would not have been found if shaft and tunnel work

had been followed. The gold-bearing rock as shown in the section given on the sheet of plans, is at certain points 23 ft. thick. The richest portion of this is, of course, Theta reef proper, which is also the lowest auriferous stratum in the section. The manager points out in his report that if this lode or deposit continues as at present the quantity of ore available will be very great. When the present work has been completed we will have attained a depth of 80 or 90 ft., and the question of proving and working the ground beyond the present large open mine is engaging careful attention. In the beginning of November a drive was started to the west on the reef, which at this point was strong and very rich. According to the latest letters received, this drive which was being securely timbered has been carried 30 feet into the hill, and the reef was strong and very rich. The ore extracted while making the drive assayed 18 ozs. to the ton. Upon the result of exploration in this drive will depend the character of future mining operations in a westerly direction. With regard to the north section of the Theta Mine advices to hand this week announce that stripping is now complete and the auriferous beds laid bare. The ground is being surveyed, and when all the ore which is thus exposed has been removed, further proving of the ground in a northerly direction will be gone on with. In view of the possible development of our underground operations at Theta Mine and elsewhere, a large supply of portable rails and suitable trucks has been ordered from England, and is now in course of shipment. Turning now to Nu reef, the deposit of rich ore at the south-eastern working No. 1,209 has maintained its high grade, as will be seen by reference to the figures given in the production of gold from the pans. All the parcel of 238 tons of rich ore, which yielded 3,850 ozs. of gold came from this deposit. The course of the ore body is being carefully followed by experienced miners. A reference to the sections of this mine, given on the sheet of plans, will enable you to realise the difficulty of mining such a tortuous bed of rock, or of proving it for any distance ahead. At latest date the prospect at this place is decidedly favourable, the largest pocket of ore yet met with in the reef being in process of extraction, and the general manager hopes still to obtain a further considerable supply of ore, and much of it of a very high value. Since the half-yearly meeting in July two discoveries of some importance have been made. At that meeting it was stated that on Edin Hill a large body of low-grade ore was being proved. Further work upon this body of ore showed that it was of no practical value. Lower down the hill, however, the Rho reef was afterwards struck, and has proved to be a somewhat flat reef or deposit of fair-grade ore of considerable extent. The quantity now in sight is estimated at 3,000 tons, and the drives are still being pushed ahead. The ground is firm; and the ore will, therefore, be stoped rapidly and at small expense. The average assay of the ore extracted is 2½ ozs. per ton. The other discovery is that of "Sigma reef," on Brown's Hill, and not far from the "Nu reef" workings. "Sigma reef" is an irregular deposit of fair-grade ore, which is being followed into the hill by stripping the overburden. In one direction it has been followed right out to surface, but on either side of this place it still continues, and will probably yield a considerable quantity of payable ore.

PROSPECTING

is being carried on at present on the company's farm, Drickop, which lies between the Graskop property of the Balkis Co., and the farm Lisbon belonging to the Lisbon Berlyn Co.

MILLING.

In order to economise labour in the handling of ore, a system of tram lines is being laid down between the mill and the dumping ground, so that the ore will be fed into the battery, dry crusher, &c., at much less expense than formerly. A large dumping ground is being laid out at a convenient level behind the mill, so as to furnish storage room for several thousands of tons of ore, and thus provide a substantial reserve against any stoppage of transport on account of droughts, floods, &c.

MODE OF WINNING THE GOLD

from ore and systems adopted. The company has one mill of 10 stamps, four grinding pans with necessary agitators, separators or settlers, a stone breaker, and a dry crushing mill. These are worked by a turbine 50 h-p., the water for which is conveyed some two miles by a water race, with a flume across the river Blyde. This is about the extent of power we can obtain with present water course, unless we re-utilise the water some way lower down. The stamps have crushed 7,235 tons during the year, and by their work about 33 per cent. of the assay value has been extracted. The pans have treated 1,924 tons of tailings and rich ore. The tailings (of the ores crushed by the stamps) underwent a second treatment, resulting in a return of 34 per cent. of the assay value of the 1,495 tons treated, and of 85.295 per cent. of the assay value of 165 tons blanketing. The rich ore was subjected to the dry grinding process and subsequently amalgamated. This year 238 tons, average assay of 23 ozs. per ton, gave 3,849 ozs., or 16 ozs. per ton, equal 75 per cent. of assay value. The result of the first experiment of dry crushing was so satisfactory that it was decided to increase our power for treating by this process, and a dry crushing mill was ordered, capable of treating from 10 to 12 tons per day, sent out, and is now at work. Like so many of these experiments no end of worry and anxiety ensued, and much time was wasted before our manager got the mill into working order. About 126 tons were crushed in Oct., and the result was 74 per cent. of the assay value as compared with 58 per cent. from the stamps. The life of the wearing parts of this mill seems to be about 170 tons, after which renewal appears to be imperative.

UP TO DATE.

I wish to impress on you, notwithstanding the numerous criticisms as to the want of energy in the working of your property shown by the board, that the result of our operations in the matter of extraction of gold compares most favorably with any company in the Transvaal "up to date." No doubt 1892 will see the trials completed, and the value proved, of the several rival systems now undergoing careful and severe tests by the various companies in the Randt, and if the results realise the promises you will find your directors well to the fore in adopting the machine or systems best suited to deal with the class of ore found on your property. I have taken out the returns of six months' work, of 12 of the dividend-paying companies of the Randt,

and I find the average returns by these 12 companies, with 740 stamps and other methods not mentioned, to be about 30,000 ozs. per month, or 42 ozs. per stamp per month, whilst your company, with 10 stamps and pans as before mentioned, has yielded you during the same time an average of 1,106 ozs. per month, or about 110 ozs. per stamp per month. (Cheers.) The turbine water-wheel, which has been in use since 1888, has given satisfaction, and is fully equal to drive all the plant that is now on the ground, at its proper speed. The cable I hold in my hand announces that 3,000 tons ore are at surface, and that 10,000 tons are in sight. This to my mind is

THE BEST NEWS OF THE DAY,

and authorises us in deciding to increase our plant, and before we meet again our crushing facilities will have been considerably augmented, and our output proportionately increased.

TAILINGS.

Turning to last year's report you will notice the estimated stock of tailings was some 9,000 tons, and we gather from manager's report that the stock this year is some 11,000 or 12,000 tons. This does not appear as an asset in your accounts, but it is really one of considerable value. An offer has been made to purchase the entire stock of our tailings by the agent of one of the companies on the Randt working one of the new processes there. But, gentlemen, we treated during the year 1,495 tons mixed tailings, and recovered 946 ozs., or 47s. per ton, and with this experience we consider the offer "not good enough," and intend doing much better, even if we have to put up extra plant to treat them by ourselves. Additional pits of large size are being prepared for affording increased storage for tailings, which are still accumulating.

LATEST ADVICES FROM THE MINES

are for the fortnight ending Nov. 23. The total weight of ore mined during the two weeks was 463 tons, with an average assay value of 5 ozs. 4 dwts. per ton. At Theta reef, 230 tons, assay value 4 ozs. per ton, were extracted from the large open working, and 38 tons, assay value 18 ozs. 3 dwts. per ton from the western drive. At Nu reef, 50 tons, assay value 9 ozs. 10 dwts. per ton, were extracted at No. 1,203, where stripping was going on round the large pocket of rich ore. At Rho reef, 75 tons were extracted, assay value 2 ozs. 3 dwts. per ton, and 20 tons, assay value 1 oz. 9 dwts. per ton. Above the levels the reef was being cut into pillars for future stoping. At Sigma reef, 50 tons were extracted, assay value 3 ozs. per ton. All the machinery was in good order, and over 1,000 tons of ore was on the battery dump. The manager's report deals fully with tree planting and rearing of tobacco and agricultural produce, and the progress made in this direction. Fire Insurance: The board have considered the question of insuring the company's buildings (store and bungalow) against the risk of fire, and enquiries were made at various offices, and plans, with description of the property to be insured, were submitted, but in each case the offices preferred not to take the risk offered them.

RAILWAY.

We have been informed on the best authority that the Delagoa Bay Railway, when constructed, will be within about 50 miles of Pilgrims' Rest. A map showing the proposed route can be inspected at the company's offices. With regard to the staff, I wish to bear testimony to the excellent manner in which Mr. J. Spiers has managed the company. He has worked harmoniously with all those under him, and I think you will consider, from the valuable amount of information received, he is a very good man to manage your property. In the report you will see that his commission of profit amounted to the full total of 500%. That I am sure you will be glad to see, as the larger the commission the larger the profit, and the better for all of us. I have very little more to add, as the report is voluminous, but the secretary has just reminded me that the ore raised since Sept. 30 was 1,536 tons, at an average assay value of 3 ozs. 8 dwts. of gold per ton. The gold produced since Sept. 30 was 2,474 ozs., being 924 ozs. in Oct. and 1,550 ozs. in Nov. If you do not get so much this month you must put it down to the Christmas holidays, as, although the darkies are not Christians, they always take advantage of a Christian holiday. (Laughter.) I now beg to move, "That the report and accounts presented to this meeting be hereby received and adopted, and that the recommendation of the directors as to declaration of a 7½ per cent. dividend be, and is hereby, confirmed," and I call upon my colleague, Mr. Nicol Brown, to second it.

Mr. NICOL BROWN seconded the motion.

Mr. CARY asked if they were getting out any of the manganese that had been referred to.

The CHAIRMAN: Manganiferous earth.

Mr. ALFRED GILES, M.P., said that the shareholders had had distributed amongst them one or two little plans in respect to the various parts of the property of the company, but, used as he was to plans, he regretted to say that he failed to thoroughly comprehend these. He wished to suggest that they should have a further plan presented on the next occasion of their whole estate of 55,000 acres, or about 90 square miles. If this could be done it would be useful to the shareholders, and afford a large amount of information. He considered that the report was full, and the speech of the chairman had been so exhaustive that there was no need for questions, the chairman having told them all they wanted to know.

The CHAIRMAN produced a map of the company's property, and stated that with regard to the question of Mr. Cary, with reference to the manganiferous earth, they learnt from Mr. Nicol Brown, who was their authority on this question, that unfortunately it was not mineral that they could take out of it. It was merely certain indications of the presence of

MANGANESE,

and to which they gave the name of manganiferous earth. As to the point raised by Mr. Giles, he could only say that they had a plan of the estate at the meeting (exhibiting the same), but at the same time he might tell them that instructions had been sent out about two months ago to have all particulars in connection with the

PILGRIMS' REST MINES,

and everything arranged on a plan, and the board had hoped in that matter to have anticipated the question.

The resolution was then put and carried.

FORMAL BUSINESS.

The CHAIRMAN said that the only other business was the re-election of the auditor.

Mr. PERVANOGU then proposed the re-appointment of the company's auditor, Mr. C. L. Nicholls, for the year ending Sept. 30, 1892. The sum of 30 guineas was voted him for his services during the past year.

Mr. JENKINSON seconded.

The motion was carried.

The CHAIRMAN: Gentlemen, that completes the business of the meeting, and I trust that next year's meeting will not be held in such a fog as there is outside to-day, although inside we are pretty clear as to what we are doing. (Laughter and hear, hear.)

THANKS.

Mr. STEVENS moved a vote of thanks to the chairman for presiding, and to the directors and manager for their services.

Mr. ALFRED GILES, M.P., seconded.

The motion was carried.

The CHAIRMAN: Thank you, gentlemen; we hope to have as harmonious a meeting next time as this one has been. (Hear, hear.)

The meeting then separated.

THE ELECTRIC CONSTRUCTION CORPORATION, LIMITED.

A COMPANY WITH IMPORTANT CONTRACTS IN HAND, INCLUDING THE LIVERPOOL OVERHEAD RAILWAY, ELECTRIC LIGHTING OF THE CITY OF OXFORD, AND CRYSTAL PALACE DISTRICT PLANT.

THE third general meeting of this corporation was held at Cannon Street Hotel, on Tuesday, Dec. 22, to receive the report of the directors, and the balance-sheet and profit and loss account; to elect directors and auditors; to declare a dividend; and generally to transact the ordinary business of the Corporation; and notice having also been given by a duly qualified shareholder of his intention to propose at such meeting the following resolutions:— "That the directors shall, in conformity with the power given them by clause 123 of the articles of association of the corporation, pay half-yearly an instalment on account and in anticipation of dividend." "That the directors be requested, with a view to keep the shareholders informed of the position and prospects of the corporation, either to hold half-yearly meetings, or this failing, to forward to each registered proprietor in Apl. of each year, a short *resume* of the corporation operations for the previous six months." Notice was therefore, in accordance with the articles of association, given that such resolutions would be proposed.

Mr. J. S. Balfour, M.P.,

presided.

Mr. W. SAMSON (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN, in moving the adoption of the report and accounts, said he presided on this occasion owing to

THE ILLNESS OF SIR HENRY MANCE,

their chairman, whose speedy recovery he was sure they would all greatly desire. In one respect he was grateful that the task of presiding had fallen upon him, because he thought he could easily satisfy the shareholders of the highly satisfactory character of the report and accounts. He would just go through the striking features, and then make a few remarks on the general prospects of the undertaking. Turning to the profit and loss account they would see that by sales and work executed during the year ended Sept. 30 they had realised a total of 160,000% odd. That, of course, was a large figure, and proved that during the whole of the year their works had been fairly busy. It meant something over 3,000% of work of a manufacturing character a week. The next item in the accounts was cash and shares for licenses granted, patents sold, and profits upon the formation of subsidiary companies, 64,710%. That was an important feature, and he wanted to point out that it represented nearly all profit. The patents which had been sold were not, he was informed, included in the original sale from Mr. L. Parker to the corporation, and were chiefly patents which were the outcome of the mind of their extremely able engineer and works director, Mr. Thomas Parker. Those sales did not in any way diminish the corpus securities which the company acquired when they purchased the business, but were additional profits and additional securities acquired since, thanks to the genius of Mr. Thomas Parker. (Cheers.) Out of that 64,000%, they had written off no less an amount than 20,000%, in diminution of capital account, which he ventured to think was an exceedingly wise proceeding, and one which he hoped would be persevered in in future years. If these sales and payments in respect of patents continued, as he had every belief they would, their capital charges would be very materially reduced by that means, adding largely to the capacity for the payment of dividends. This year they proposed to write off 20,000%, or practically one-third of the total amount received. After that there still remained a profit of 44,710%. Referring, then, to the other side of the account, they would see they had debited themselves with 3,000% for works consequent on depreciation of machinery—that was to say, they had endeavoured to keep their machinery up to the highest point of efficiency possible, and to charge the repairing to the working expenses of the year. Although they had deducted 10,000% from the profit and written it as a charge to meet depreciation of machinery, they had spent 3,000% in preventing any depreciation of machinery arising. He thought they would say that was a very good course, and a somewhat singular one for directors to take, he might fairly describe it as

AN EXAMPLE

to nearly every other manufacturing company in the City of London; (Applause.) Their head office expenses, including directors' fees, managing director's salary, accountancy, &c., stood at 11,400% odd. At their meeting last year the amount of those charges was challenged, and he then stated that, so far as he was concerned, they

should be kept down to a minimum, and they would observe that this year they were 11,000*l.*, as against 14,400*l.* in the previous year, proving that at least he had kept his word with the shareholders, and that the directors had really been anxious to keep down the dead charges of the company. (Hear, hear.) The other expenses included the cost of advertising the issue of debentures, law charges, &c., 13,000*l.* odd. That was a considerable increase on the expenditure of the year before; but it was largely owing to the fact of the debenture issue. They might have spread those expenses over three or four years; but the board preferred to get rid of the item at once, and had brought it into the year's accounts. In addition to that, there had been heavy legal expenses which had had to be incurred from time to time on asserting and maintaining their position and the position of their patents. He could promise them every vigilance on the part of the board, and every effort to keep those expenses down; but whilst competition was so keen, and their opponents so willing to take every advantage, fair and unfair, he could not promise any material reduction of the legal charges of the company. The company must prove its capacity for fighting and maintaining the rights of the shareholders in the various properties in which they were interested, and to do that they must never be unwilling, if necessary, to fight, and fighting, of course, involved expenditure. The accounts showed a general result of 46,000*l.* profit. Out of that they had carried 10,000*l.* to reserve, leaving a net balance of 36,166*l.* In the report the directors referred to some most interesting transactions during the year in reference to the electro-chemical patents, for which they were indebted to the ability, the skill, and the marvellous ingenuity of Mr. Parker. Their experience in reference to Mr. Parker had been that, instead of not getting all that they had bargained for from him, they had got a good deal more, for they derived the benefit of all the electro-chemical patents referred to, which were not valued at one farthing at the time that the property was taken over. (Cheers.) So valuable and growing had been the business connected with electro-chemical patents that the directors had thought it well to place them in the hands of a separate company, and their friend and colleague, Mr. Ebb Smith, who had been the managing director of the company from the beginning, and had had practical experience of the negotiations attending the

ELECTRO-CHEMICAL PATENTS,

elect to take charge of that company. He might mention, as an illustration of the success attending the floating of that company—in which they were the largest shareholders—that during the last few days they had sold one of the electro-chemical patents for a sum in hard cash representing close on 30,000*l.*, and with contingent profits of tens of thousands besides. (Cheers.) In a business of this kind they could not have too much subdivision. Working the electro-chemical patents was quite a business in itself; the conduct of a vast establishment such as they now had at Wolverhampton was a business of itself, and claimed the whole energy and time of the very ablest man they could place there. The same remark applied to the great subject for storage batteries. They found they were not holding their own in that field, and not doing so much work as they had hitherto done; but their friend Mr. J. I. Courtney, then took up that question vigorously, and the result had been that the business had grown to such an extent that it had yielded very large profits since it had been in separate hands. Therefore, whilst union of interests, union of aims, and union of working was of the utmost importance—in fact, a vital condition for the success of the company, or any company of the sort—independent management, and independent branches were equally valuable and equally important. (Hear, hear.) He should like to express his thanks to Mr. Courtney for the services he had rendered, and was rendering, to the corporation. The retirement of Mr. Ebb Smith from the board on his assumption of the position of managing director of the electro-chemical branch of their business involved a considerable readjustment of the office staff, but he was pleased to say that the office was being worked most successfully, vigilantly and economically under the direction of their friend, Mr. Samson, who had been appointed secretary and chief accountant of the corporation. (Applause.) The chairman again spoke in eulogistic terms of the services rendered by Mr. Parker, who, he said, was being consulted in relation to most of the big electrical works being carried out, and was being more and more recognised every day as one of the greatest living authorities as regarded the manufacture of electrical machinery in the country. The biggest electrical work the company had ever undertaken was

THE LIVERPOOL OVERHEAD RAILWAY.

That company invited applications from the most eminent electricians in the country who could supply an installation for equipping and working that company, and he was pleased to say they accepted Mr. Parker's plans, and this corporation was carrying out a large and profitable contract, by which they would equip what would be the first *bona fide* mercantile electrical railway ever started in this country. (Applause.) They were dealing with the question of the electric lighting of the city of Oxford, having accepted a contract from the city authorities, and were also supplying the plant to a company formed for supplying electric lighting in the Crystal Palace district. He thought he had now dealt with the salient points of the position; but turning to the balance-sheet, he would just point out again that they set aside 16,000*l.* last year for depreciation and had added 10,000*l.* this year, which made 26,000*l.* as a reserve for depreciation; they had written off their capital account 3,000*l.* for depreciation of machinery, and transferred from profit and loss account 20,000*l.* for the same purpose, while they had reduced their capital charges from 312,800*l.* to 288,700*l.* With regard to the subsidiary companies in which they had taken shares, he found that there was not one of them but which had either paid a dividend or was about to do so. The shares were, therefore a good investment *per se*, in addition to the advantage to them that they were thus enabled to secure the business which the subsidiary companies were able to bring. Before sitting down, he would like to mention that since the publication of the report the company had had some very important negotiations with regard to electric traction, having been approached by one of the leading tramway companies, who considered that electricity was to be the motive power of the future, and had offered them a contract, which they were now considering. If they should decide to accept the contract—and

he believed they would—they would come to the shareholders to secure a further issue of debentures. The company were full of work, and the directors were proud of the operations that had been carried on. They appealed to the shareholders to give them their continued confidence, and he firmly believed they would be able to make the undertaking even more successful than it had hitherto been. (Cheers.)

Sir DANIEL COOPER, G.C.M.G., seconded the motion.

Mr. HANCOCK complained of the want of detail in the accounts.

Mr. OELRICH congratulated the directors on the management of the company and the very satisfactory report they had put before the shareholders. He thought that to declare a dividend of 6 per cent. in the first year and the same amount in the second was a very promising state of things in the early days of a company like this. (Hear, hear.)

Dr. DRYSDALE asked whether the tramway to which the chairman had referred as being about to adopt electrical traction was in London.

The CHAIRMAN replied in the negative, but said it was one of the most important companies in the Midlands. Replying to Mr. Hancock, he said it would not be in the interest of the company that everything should be given in detail, because it would be showing their hands too much to their competitors.

The motion was then put and unanimously carried, the dividend as recommended—viz., 6 per cent., being afterwards declared.

The retiring directors—Sir Henry Mance and Messrs. Ebb Smith, Holt and Moseley—were re-elected. Messrs. Broads, Paterson and Co. were re-appointed the auditors.

Mr. WILLIAMS, in accordance with the notice, brought forward the two special resolutions given above.

After some further discussion, the resolutions were withdrawn.

Dr. DRYSDALE proposed a vote of

THANKS TO THE SCIENTIFIC OFFICERS OF THE COMPANY.

for the way in which they had conducted the affairs of the company, which was seconded by Mr. WILLIAMS, and carried unanimously.

Mr. THOMAS PARKER acknowledged the compliment, and said nothing would satisfy him but the complete success of the company.

Dr. DRYSDALE proposed a vote of thanks to the directors, which was also passed, and the proceedings then terminated with a vote of thanks to the chairman, proposed by Mr. GEORGE DIBLEY.

THE MONEY MARKET.

CITY, THURSDAY EVENING.

THE slight indications of a hardening tendency in the Money market towards the close of last week have further developed themselves, until now discount is quoted 2½, 2½ per cent., many brokers making 2½ their minimum, while money at call has been in request at 1½ with 2 per cent. for loans within the year, 2½, 2½ for those into Jan. next. The Treasury Bills allotted early in the week were taken practically all at three months' date, at the equivalent of a discount rate of 2 per cent., which helped the upward movement, which has since been strengthened by the withdrawals of gold for Germany.

The Stock and Share markets throughout this week have been exceedingly quiet, for business of all kind was restricted by the fog that has reigned supreme since our last. Still in the face of stagnation, prices have even advanced solely upon an assumption that when the account is over next week, and the New Year fairly opened, there will be a universal recovery. American railroads continue to be a tower of strength, owing to immense earnings and good dividend anticipations, which, to date, have been partly verified by the distributions just announced by the Vanderbilt group, but Canadian railways have scarcely been in the front rank. The Pacific lines show a pronounced improvement, and Readings, too, are much better, although the dividends upon the Income Bonds appear doubtful, but it is just possible that they may be provided in script. Consols are a shade easier, while Home railways, if irregular, exhibit more gains than losses, North British Deferred being rather more of a leading feature than Brighton "A" for the moment, as the traffics of the Scotch lines now come in with the strike period of last year. Foreign bonds have displayed steadiness, but Argentine, Brazilian and Portuguese Rentes gave way. The coupon on the latter debt will be paid as usual in Jan. Miscellaneous were undecided, still brewer's, banks and iron descriptions have been bought at enhanced levels.

Annexed are the final quotations to-day:—Great Eastern, 89½, 9½; Great Western, 158½, 159; Brighton "A," 151½, 151½; North Western, 171, 174½; Metropolitan, 89½, 90½; Metropolitan District, 31½, 31½; Midland, 162½, 162½; North British, 46½, 46½; North Eastern, 160½, 160½; South Eastern "A," 85½, 86½; Mexican Ordinary, 29½, 30½; Grand Trunk, 10½, 11½; Grand Trunk First Preference, 71½, 72½; Grand Trunk Second, 52½, 53½; Grand Trunk Third, 28½, 28½; Canadian Pacific, 93½, 93½; Denver Preferred, 46½, 47½; Erie, 33½, 34; Guinness, 319, 321; Allsopp's Ordinary, 26, 28; Bryant and May, 13½, 11½; Eastman's Ordinary, 3½, 4½; Elmore's, 2½, 3.

ELMORE'S PATENT COPPER DEPOSITING CO., LIMITED.

THE directors, in submitting to the shareholders their report, congratulate them on the satisfactory technical and commercial prospects of the company. The accounts show credit balances on June 30 last of 14,261*l.* 17*s.* 10*d.* made up of 5,000*l.* royalties on copper sheets received in advance, 8,558*l.* 7*s.* premiums and profit on land, and balance of profit and loss of 703*l.* 10*s.* 10*d.*, a satisfactory result considering that the company had only been able to manufacture small quantities of articles at the date of the making up of the accounts—work on a large commercial scale not having been then commenced. They announce the successful completion of the 20-ton plant. The cost of manufacture has also now been found to be only about ½*d.* per pound weight of finished goods, or about one-half the cost that the directors estimated in the prospectus, whilst the statements as to the technical features of the process have been entirely proved. The report is in every respect satisfactory.

BANKERS: LONDON AND NORTH-WESTERN.

MINING AND MISCELLANEOUS SHARES are somewhat in
 demand for new account; prices have improved to-day, and heavy
 buying was perceived by shrewd operators, who as usual make it a
 speciality to accumulate shares standing at low prices before the
 termination of the year, and it would be prudent for the speculative
 public to take advantage of present prices.

Special price list will be forwarded on application, also terms of
 business and advantages offered.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
 may be necessary.

Silver.—You cannot do better than keep them.
Cromwell.—Have nothing to do with it.
J. Roberts (Plymouth).—Sell at first market rise. Only a poor speculation.
M. P. S (St. Agnes).—Good to hold for substantial improvement in price.
Portuguese.—Unsaleable.
J. M. C.—Sell New Queen.
Atlas.—Only chance is to wait for better prices.
Parlington Arcade.—It would be as well to average.
Realisation.—Considering the firmness of the market, advise you to hold.
Annual Sub. (S. W.).—Sell at once.
Timid.—Highly respectable management. Shares should go better eventually.
Startler.—Callao Bis should be kept for better prices.
M. E. S. R.—Sell No. 4 and 6, but hold others. Markets will improve.
S. Davids.—The buyer is entitled to dividend naturally, although paid to you.
Manchester Sub.—Do not risk more, but keep those you have for the present
 anyhow.
Perplexed.—We hardly know what to advise under the circumstances. You
 seem certainly in the wrong.
Waiting.—Undesirable investments.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
 COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
 securities for European investors.

Professional and confidential reporting upon companies, mines,
 mineral properties, lands, and generally advising European share-
 holders and others in South African ventures.

To act as agents on behalf of principals interested in South
 African investments, and for the protection of their interests, and
 where desired, to register shares in such undertakings, and to issue
 certificates in exchange for same, thereby enabling European holders
 to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
 cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
 African securities or interests.

A Mining Circular containing special information will be posted
 weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
 CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
 Company.

We regret that the extreme pressure upon our space,
 caused by numerous and important meetings, necessi-
 tates the omission or delay of many interesting
 progress reports and other communications.

The Mining World.

The "MINING WORLD" is not the property of a Mining
 Speculator nor under the control of any clique.

BRITISH SOUTH AFRICA CO.

THE statements made by the chairman and others at the British South
 Africa meeting emphasised the pithy remark of the Earl of Fife,
 that "you cannot expect to drop all at once into ready-made El
 Dorados." The work of the past 18 months has been almost wholly
 preliminary, and we congratulate the directors and those who have so
 well served them on the spot, on this—that they have laid the
 foundations of what has every appearance of being a prosperous
 future. A concern of this sort, administering a territory
 as large as France and Germany combined, of course has its political
 side; but the directors must never lose sight of the fact that they have
 a body of shareholders behind them, who, having put their money
 into the venture, are somewhat more disposed to look at it from its
 purely commercial side. When they took shares in what is called "the
 Chartered Co." they had less an eye to the glory of the Empire than to
 the reimbursement with interest of the money they subscribed.
 Whilst admitting that the company has been a complete success from
 the administrative point of view, it cannot be denied that those who
 bought their shares at 6l. and upwards, have reason to
 look with rueful expression at market quotations as they
 stand. Still, the board cannot be held responsible for the
 market. What they can be held responsible for is mal-
 administration of the company's affairs, and in the face of the
 facts adduced by the chairman, such a charge, if made,
 would wholly break down. The record of their 18 months' work is
 extremely creditable, and the revenue of the company from Mashona-
 land alone is already equal to 10,000l. a year, whilst but a little more,
 it is said, will cover the expenses of administration. The discussion
 was not worthy the position of the company, or the speeches made
 from the board's side of the table, and therefore need not have
 special mention. We may, however, conclude by expressing our
 belief that the directors have succeeded in placing the affairs of the
 company on what looks uncommonly like a solid basis of prosperity,

RETROSPECTS AND PROSPECTS.

BEFORE we again have the pleasure of addressing our readers old Time will have turned his glass once more, and the year of grace eighteen hundred and ninety one will have been added to the ages of the past. The year has not been a propitious one for business generally. It commenced under the shadow of the Baring crisis, and although in its course it has witnessed a gradual restoration of the public confidence, so much shaken by the collapse of that once great house, it would be too much to say that the year which is now drawing so fast to a close finishes in a very jubilant spirit. But this much can safely be affirmed, that the city has borne the strain of the liquidation of the bad business which had been accumulating for a considerable period, much better than seemed at all probable 15 months ago. Undoubtedly, the strain has been a severe one, but the undercurrent of strength has at all times been evident, and without indulging in an undue amount of optimism, we cannot help believing that the new year will set in under brighter auspices than its predecessor did. Let us, therefore, adopt the Laureate's imagery and request the bells, when they ring out the old year and ring in the new also to "ring out the bad and ring in the good." If the bells behave in that way, we shall very readily forgive them for breaking in upon our nocturnal slumbers, if those have commenced.

Whatever may be said of business generally, we do not hesitate to say that the mining industry, as represented by British capital, has no reason to be ashamed of itself. There have been comparatively few appeals to investors to provide capital, whether for new or for re-constructed mining undertakings; but the invitations that have been sent out have been fairly well responded to, and the results achieved by the employment of that capital have been very largely successful. We may point out, moreover, that the proportion of dividend-paying to non-dividend mines has seldom been as great as it is at the present time. And yet, because other departments of the Stock Exchange have been more or less depressed, mining shares have also been depreciated, though the conditions are frequently entirely different. What connection is there for example, between the troubles of the River Plate Republics or the vicissitudes of the American railroad companies, and the fortunes of gold mining undertakings in India, Queensland, or South Africa? Clearly there is no connection whatever. How absurd it is, therefore, that mining shares should suffer in market value, because wholly dissimilar securities drop away from entirely different causes. The only consolation in the matter is, that these market movements provide excellent opportunities for people blessed with pecuniary means and common sense.

It is not our intention to enter into any minute particulars of the progress which mining has made in the chief districts during the past year, but just a brief survey may not be out of place. In South Africa, and particularly in the Randt district, the development of the gold mining industry has been productive of very handsome results in the aggregate, though the number of companies contributing to that aggregate is still smaller than it should be. In Jan. last the production of gold from the Randt mines amounted to 53,205 ozs., whereas in Nov. it reached a total of 73,393 ozs., and in the eleven months of the year which is now closing, the output of the precious metal was 648,901 ozs., in contrast with 494,869 ozs. in the preceding 12 months. In the De Kaap district, too, much larger returns have been made, and the Sheba and Transvaal Gold Cos. have entered the dividend lists. In the Mysore district of Southern India, magnificent progress has been shown by the Mysore, Ooregum, and Nundydroog Cos., and the prospects of these undertakings, as well as of Balaghat-Mysore, Champion Reefs, Mysore Reefs, and one or two other concerns appear to be full of hope. Then in Queensland, as our readers are doubtless aware, the Day Dawn Block, Day Dawn P.C., Gympie Great Eastern, New Queen and Mosman Cos. have met with a considerable amount of success, and the outlook for Queensland mining was never more assured than at the present time. We need not stop to refer to the magnificent dividends paid by some of the Anglo-American companies, such as Elkhorn and New Guston, nor need we enlarge upon the progress shown by such undertakings as Frontino and Bolivia, Colombian Hydraulic and some other among the Colombian companies. We have only desired, in the briefest manner possible, to show that the mining industries in which British capital is interested have given a good account of themselves as a general rule. That better results will follow from many of them we thoroughly believe, and in that belief we venture once more to wish our readers the happiest of Christmases, and the most prosperous of New Years.

MINING AND TRADE PROSPECTS.

THERE is no branch of securities which would benefit more immediately from any relief in the present somewhat dismal aspect of trade than those of mining companies. Any revival in commerce and industry would not only stimulate speculation in mining stock, but would also afford a substantial factor towards prosperous working by inducing an upward movement in the metal market. It is, therefore, earnestly to be desired, in the interests of mining, that the prophecies of those who take a cheerful view of the present situation will be justified in fact. It is hardly an easy task, certainly, to assume a favourable opinion of the present trade outlook in its relation

to mining. The depression of the country's staple industries is shown in the falling off of 12½ per cent. in our exports during Dec., and there is not much present evidence of a revival in our foreign trade. South America has almost effaced itself from the list of markets for British products, and there is no great compensating activity in the demand from Australia and India. The financial position at home remains one of distrust, and it is clear that we must depend upon external influences for any marked improvement. On the Continent, however, the depression is still more profound, and the effects of the failure of this year's crops are not likely to exhaust themselves very rapidly. While these adverse conditions prevail we can hardly hope for a development of activity in mining, and a favourable view of the future must depend upon the indication of healthier influences ahead.

In respect of the metal markets, mining shareholders have so far cause for confidence that the statistics of supply strongly favour a rapid advance whenever the upward impulse shall come. In the iron and steel trades, stocks have not been for years so low as they are at present, and production tends rather to diminish than to increase. The supply of pig iron at Middlesborough and Barrow has been continuously decreasing for a good while past. The raw iron branch, at least, is in a materially better position than would appear from the course of prices and the attitude of buyers; and the present anxiety to avoid forward orders is due much more to the influence of the "ring," which is monopolising Scotch warrants, than to any real unsoundness in the position. The finished iron and steel branches have, of course, suffered severely from the financial misadventures of the South American markets, but it is reassuring that the Arbitration Board has refused to raise ironworkers' wages, and that a resumption of Continental and American enquiry is reported by the Sheffield steelmasters. The failure of the attempt to establish tin-plate manufacture in the United States is also good news for the iron and steel trades, no less than for tin mining. Apart from the immediate present, therefore, iron and steel do not present a gloomy outlook, and any rise in values in this branch would, of course, communicate itself to the other metals. In these also the relations of supply and demand are favourable to the interests of mining. The copper market should respond more freely to the continuous increase of consumption now that the last relic of the syndicate has been disposed of by recent sale in Paris. The threatened increase in the output of tin has so far failed to "come off," and the fact that the tin-plate manufacture of Wales still "stands where it did" is an important influence of good on tin mining under British auspices. The metal markets generally must benefit from the removal of a burden in the shape of the fall of fuel prices from their former inflated level, and there is nothing in the present prices of other commodities to prevent consumption from resuming its natural course of expansion after its forced quietude of the last eighteen months.

Mining is therefore very well placed for benefiting from any amelioration of the conditions which at present burden the elasticity of the stock and share markets. There have been several indications of late that the burden of these is lessening in severity, and they are not in themselves so serious as many persons believe. South American speculation has never absorbed any large share of the ordinary investor's capital, and the transfer of these securities to firmer holders is steadily proceeding. Moreover, the recovery of countries so young, and so full of resources, must necessarily be rapid. The trade of Australia is acquiring firmness with the cessation of reckless enterprise, and the progress of African development adds another hopeful feature to the situation. As the present quietude in British trade is much more a temporary depression than a real upset of credit, the financial position may be expected to improve rapidly under comparatively slight stimulants to activity. The upward movement in American trade is, of course, the most promising item of the situation. The prosperity of agriculture will extend to all the other industrial interests of the States, and this country will feel immediately the beneficial effect thereof. Even if the McKinley Act entirely stops our trade with that market, English capital is so largely interested in the mining, metal, and other industries of the Republic that a corresponding recovery on this side is inevitable. The resumption of railway building, which is promised, will, in itself, materially help forward the expansion of American trade. The mining market, therefore, if it has to battle with difficulties at the moment, may look forward to a considerable improvement in the early future.

THE AFFAIRS OF WEST ARGENTINE, LIMITED.

IT is some considerable time since we last drew special attention to the affairs of West Argentine, Limited, and as much has happened since then we propose in the present article to bring matters down to date. The company now owns its original properties in the Republic from whence it derives its name, as well as another and, seemingly, far more important one in Colorado, in the vicinity of some of the richest mines of modern times. Firstly, let us deal with the property in the Argentine. This remains precisely in the same position as it did when we last wrote. An European assistant is in charge of it, who is just keeping the property together, whilst the directors are allowing time to elapse, in the possible event-

ality that circumstances may again conspire to render its working desirable. They have obtained from the Government an extension of a couple of years in which to hold all their concessions in consideration of the large amount of capital expended upon them, and the small returns that were latterly obtained. Shareholders must, of course, regret that the plan suggested about a year ago for the consolidation of all the Argentine properties has fallen through, but whether the time will ever come for the threads of that proposal to be again gathered up remains to be seen. For the moment suffice it to say that the properties are being held intact for the shareholders.

Turn we now to the Silverledge property in the Red Mountain district of Colorado, in which the company is deeply interested, and on which the hopes of the shareholders are at present centred. It is well known that the Argentine Company entered into an arrangement on even terms with the holders of the bonds securing the Silverledge Group of Mines. The bondholders were unable to carry out their agreement in respect to the payments which became due on June 1 last. It was secured, first that all the machinery put upon the mines was reserved as the explicit property of the West Argentine Co., irrespective of the bonds. This was one of the advantages Mr. Jennings secured by his visit to the States early in the year; and the second was that two portions of the property which were released by the payment of June 1 should be separated entirely from the bond and vested direct in the name of the company. Thirdly, Mr. Jennings secured the Yellow Jack claim, which runs up close to the Silverledge, with every appearance of the good ore coming into it. Hence the object of his visit was accomplished by giving West Argentine shareholders a distinct hold of these properties, quite irrespective of what might happen under the bond. It is difficult to see how better could have been done for the company than this, but the shareholders have now to face the consolidation of these properties by clearing off the bond altogether. The amount still remaining is about 6,000*l.*, and it can be liquidated by carrying out the plan which was projected when the property was first taken up, that is, by forming a definite company to own the whole. The purchase consideration is fixed at 130,000*l.* Of course, this would, after meeting the necessary expenses, be divisible between the West Argentine shareholders and the bondholders, but seeing that the bondholders failed, and thus necessitated the creation of debentures by the West Argentine Co. in May last, the company has secured what is practically the whole of the balance of the purchase-money for West Argentine, except some 5,000 or 6,000 shares, which go to the bondholders, but the whole balance is at the disposal of the Silverledge syndicate and the vendors. This syndicate was formed at the time the company took up the Silverledge business to represent the half interest taken by West Argentine and the half interest which, under the original agreement, would have gone to the bondholders in virtue of the joint arrangement which the West Argentine shareholders sanctioned at their first meeting. They have about 106,000 shares at their disposal, and of these it has been mutually agreed that two shall be given for every 1*l.* of the first 16,000*l.* guaranteed, and two shares in addition to every 1*l.* of the first 30,000*l.* subscribed, so that a shareholder who first guarantees and then takes up the shares will be entitled to four ordinary shares for every 1*l.* he puts into the proposed new company. His fresh cash subscription is protected by a 10 per cent. preference, which will continue until such time as he has received the whole of this subscription back again, after which all shares will rank alike. This offer will be made to all West Argentine shareholders, thus putting them all on equal terms. They, therefore, have the opportunity given them of re-establishing their entire holding in what promises to be a sound undertaking. The estimates which have been afforded by the report of Mr. Jennings, already circulated amongst the shareholders and alluded to at the meeting, show that with the character of the ore as it appears to be at present a profit of 600*l.* per month (no very serious drain on the resources of a company in a district which has become so famous in mining circles) would suffice not merely to pay the 10 per cent. but also to afford a dividend of 6*d.* per share on the whole of the ordinary share capital of the company. Every improvement in the character of the ore would mean so much more profit, and when we think of what mines in the vicinity have done, and how only this week the shares of Yankee Girl on market rumours have risen from 9*s.* to over 15*s.*, the views of Mr. Jennings cannot be considered outside the mark. There is, indeed, another mine not far off which paid its own purchase-money in a single month. The character of Silverledge ore gives reasonable ground for hoping that as explorations proceed the company may drop into similar ore; but even if they do not, that which is in sight is amply sufficient to provide the preference dividend on the new issue of capital, so that, as mining ventures go, this would appear to offer as safe a security as one could reasonably desire. It is obvious that the shareholders who take to heart the words which were addressed to them by the chairman will send in their guarantee papers as soon as possible. The guarantee forms sent to the shareholders should be filled up and returned to the secretary not later than Jan. 8.

COLAR CENTRAL PROSPECTS.

THERE is no reason in the heavens above, or the earth beneath, that we can give why Colar Central should stop working. With mines

round about it that are successful in almost the highest degree; with others still that are approaching success; with its own shafts a considerable depth; with its mines equipped in every respect, and with signs of encouragement not a few, it would be folly to think of either suspending operations or arresting them altogether. Whatever the shareholders may think of Colar Central, and some of them we have reason to know have well-nigh despaired, that feeling is by no means held by the board. Let any shareholder read with care the closely-reasoned speech of Mr. Malcolm Low, and he will take heart again, for he will find therein grounds for expecting better things of Colar Central in the near by and by. It would be an act of mining cowardice and financial suicide to abandon the works at the present interesting stage which they have reached. Such a thought must be dismissed, and the board must, with renewed energy, devote themselves to what we cannot but call their hopeful task.

CAYLLOMA SILVER.

AFTER the speech of Mr. George Hopkins at the meeting on Tuesday last, shareholders must have been convinced (if they were not already convinced) that they have a property of extraordinary richness, which only needs good management to make it a complete success. The property is situated in Peru, and is 16,000 ft. above the level of the sea. The ore which the company has already sold in England has averaged 65*l.* a ton, but, as the chairman was careful to point out, this is selected ore of a high grade. The principal difficulty, though not the only one which the board has had to contend with, has been the proper method of treating their ore, and the conclusion they have arrived at is, for the present, to concentrate their ores and send them over to England for further treatment, rather than to spend large sums of money in machinery that might not prove effective. The prospects of this concern seem to be extremely good.

SUYAPA SILVER CONCESSION, LIMITED.

THIS company, if we mistake not, will very shortly make the hearts of its shareholders glad by placing them in possession of a return for their money. It is very seldom that a mining company, within two years of its inception, finds itself in the happy position of being able to make regular shipments of ore, and yet this appears to be the case with the Suyapa Silver Concession, whose property is situated in Honduras. The company was incorporated in May, 1891 and now, in Dec., 1891, the chairman is able to announce that next month they will be able to make regular monthly shipments of concentrated ore. This result has been achieved, too, by the expenditure of the comparatively insignificant sum of 5,000*l.* The meeting on Wednesday, needless to say, was unanimous in its approval of the policy of the board. The results achieved reflect the greatest credit on the directors at home, the staff abroad, and especially the consulting engineer, Mr. Fowler, who has made two visits to the property.

GOLDEN FEATHER AND GOLDEN GATE.

IT is undeniable that the season of 1891 has passed without the above-named concerns blossoming into anything like substantial returns. Shareholders have been somewhat disposed to blame Col. McLaughlin for his telegrams, his letters, and his report; but perhaps they will be less harsh in their criticism when they read the temperate and candid explanations of Mr. Pechey at the one meeting, and Mr. Hodgkinson at the other. The colonel has had to face the biggest work that has ever been undertaken in alluvial mining, and has advanced matters to this position, that he is quite ready to deal with the bed of Feather River when the weather is favourable. It is unfavourable at present, and the season is closed until May next. This is no doubt a great disappointment, but it is not any more in the power of "Oroville's only colonel" to control the elements than it was within the means of the shareholders at their meeting to dispel the fog that enveloped them. The colonel must have another chance, and the shareholders who listened to the explanations which were given at both meetings are determined that he shall have it. So too, are the directors, who have not, for one instant, lost faith in anything that the colonel has said or done. We must, therefore, look to the results of next year for Golden Feather, but though the chances of success are just as favourable for Golden Gate that success will probably be longer delayed.

CENTRAL MONTROSE.

THE yield of gold on this company's estate last year was about 1½ ozs. to the ton—a return which is highly satisfactory. The crushings were affected by a drought, but steps are being taken to increase the water power available for milling purposes. This power will be transmitted by electricity and the installation can be made at a cost of about 6,000*l.*, though negotiations are in progress by which a large part of this expense may be spared. The results for the first eight months of the current year show 3,425 tons crushed, and 2,695 ozs. of gold yielded, which realised 10,390*l.* The average has, therefore, fallen off, but nearly 1,500 more tons have been crushed. Looking at the meeting as a whole, we are led to believe that the prospects of the company have distinctly improved, and that it is steadily advancing towards a dividend-paying position.

TRANSVAAL GOLD EXPLORATION AND LAND CO.—REMARKABLE FACTS.

THE impression with which the shareholders left the meeting of this company on Tuesday is also shared by the market—that this company is about the best of its kind in South Africa. Most Kaffir companies have had to tell a tale of woe at the periodical meetings. Some of them have lost half their capital, and others even more, whilst not unfrequently the shareholders have been chastised by the whips of debentures or by the scorpions of re-constructions. Not so the well-managed company of the somewhat long name (which might be improved by abridgement) which heads this article. The anticipations in which the directors indulged a year ago have been fully realised. A dividend of $7\frac{1}{2}$ per cent. has been paid, and a reserve fund created. Mr. Farmer, the chairman, said, "We are more certain to-day of the good prospects of the company than we have ever been before," and the facts warrant the statement. Theta mine is opening up brilliantly. Driving westerly, ore has actually been found equal to 18 ozs. to the ton. In stripping the overburden, the removal of which was expected to be wholly in the nature of dead work, ore of sufficient value was found to more than pay the expenses of clearance. Other parts of the property where mining is being carried on also show exceedingly well, and altogether the underground position is sufficiently strong to warrant the board in ordering more plant. Without the transport facilities, which are to be provided, the cost of dealing with the ore has been reduced from 70s. to 50s. per ton. Three thousand tons of ore are at surface, and 10,000 tons in sight, as well as 12,000 tons of tailings. Our report of the meeting, which will be found in another column, and particularly the chairman's speech, literally bristles with interesting facts, all tending to prove that the property is one of no ordinary value and importance.

NEW GOLD HILL PROSPECTS.

THIS company is in a somewhat tantalising position. It has vast resources of low-grade ore, but it has not the process by which to treat it profitably. The greater part of the attention of the board has been directed to finding one. They thought at one time salvation would have come by way of the Gold Ores Reduction Co., but they seem to have altered their opinion. As Mr. Holland pointed out, the initial expense of setting up the plant that would be required for any of these processes is the great drawback. This fact, however, remains, that, given the process, the company has almost unlimited resources upon which that process can operate.

POSITION OF VOGELSTRUIS.

AT the meeting of this company on Wednesday, the chairman very properly directed his attention to the financial position, which he described as critical. The bondholders have intimated that they will require by Jan. 10 the repayment of their bonds with the bonus accruing. They are not unfriendly to the company, but they will not stand idly by and see the shareholders doing nothing. If the shareholders will take no steps (and as a matter of fact they have taken none since last March, when the position was first explained to them) to save what has every appearance of being a property as valuable as it is extensive, it will pass from them. The discussion rambled a good deal in the earlier part of the meeting, but got into the right channel towards the close. We can assure the chairman that attempts to raise money on mining properties by preference shares, especially when a mortgage debt already exists and takes priority, are futile, and circulars with invitations of this kind are only so much good ink and paper wasted. The only way of raising money for mining properties nowadays is by the drastic method of re-construction. In this case he who subscribes has a further run for his money, and he who does not must regard his interest as lost. A committee was appointed to consult with the board, and we trust that the result of their labours will be the summoning of a meeting to submit a reconstruction scheme imposing a moderate assessment upon all the shareholders. Under these circumstances there is a good chance of Vogelstruis property being preserved for its shareholders, whilst the position of the debenture holders will also be improved, for they will have a lien on a property with working capital at its back instead of upon one with practically no resources whatever.

REPORT OF MEETING.

RUSSELL MINES, LIMITED.

STATUTORY MEETING—THE LATEST NEWS.

THE first ordinary general (statutory) meeting of the Russell Mines, Limited, was held at the Offices, Drapers' Gardens, London, E.C., on Monday, 21st inst.

Mr. Thomas Stephens

presided.

Mr. EDWARD ASHMEAD (secretary) having read the notice convening the meeting,

SHARES WELL TAKEN UP.

The CHAIRMAN said: Gentlemen, this meeting is called in accordance with the Act, which provides that a general meeting shall be held within four months after the registration of a company. No resolutions will be submitted for your approval, and there are only two points which the directors have to report upon to-day. Firstly, as

to the shares applied for and allotted; and, secondly, as to the work in progress at the mine. By the terms of re-construction laid down in the agreement, dated Sept. 8, the capital of this company was fixed at 25,000l., in 100,000 shares of 5s. each; and on Sept. 9 the shares were offered to the shareholders in the old company on the following terms:—One share in this company to be credited with 4s. 6d. paid up thereon for every fully-paid share in the old company, subject to the memorandum and articles of association of this company, and provided the same was accepted on or before Sept. 16. In compliance with the circular of Sept. 9, 90,209 shares have been applied for and allotted, and 4s. 6d. has been credited as paid up thereon. A further call of 3d. per share has since been made, and well responded to. There are 9,791 shares out of the 100,000 unallotted at this date, as some of the shareholders did not take up the shares offered them, consequently they cease to have any interest in the mine, and the shares are in the possession of the company.

DEVELOPMENTS.

Now with regard to the developments proceeding at the mine—I will read the report of Capt. George, our manager, and I think you will agree that it is of a most satisfactory character. It is dated Dec. 16:—

"In handing you a report on the progress made since the formation of the present company, I would first remark that considering the very heavy floods at the time, and, consequently, the great influx of water in the mine, I think in forking we were most successful, and more especially so, seeing the pitwork had all been recently fixed throughout the shaft. Since that was accomplished, and the bottom cleared of the stuff, the shaft has been sunk on the course of the lode, now 8 fms. below the 80-fm. level. When cross-cutting at that level we intersected a small lode, or branch, about 6 ft. before reaching the main lode, both underlaying in the same direction. In sinking below this has come out into the shaft, and has had to be carried down with the lode, thus making the shaft wider than necessary, but the horse between the two is getting smaller; hence, I think, as it wears out, and the two become united, we shall get an improvement, of this we have already an indication, as the samples broken from the bottom of the shaft yesterday, contained more tin than we have seen before throughout the sinking, and although not yet enough to set a value on, it certainly looks most encouraging for deeper working. In consideration of the preparatory work that had to be done, making the shaft secure for men working below, putting down rods, sinking lift, &c., I think the progress hitherto made has been satisfactory, and from present appearances I calculate to continue from now at the rate of $4\frac{1}{2}$ fms. per month, and the indications fully justify our expecting good results on getting down to the junction of this with the south lode. I am pleased to say that all our machinery and recent erections are answering very well.—W. GEORGE."

AMPLE PUMPING POWER.

Now, you will remember that for some months before the re-construction the works at the mine were suspended, and the shaft soon became full of water; consequently, when we decided to resume operations, we had first to drain the shaft and deeper levels, and although there has been continuous wet weather in that district, perhaps more so than in most other parts of the country, we found little difficulty in pumping out the water, and I believe we have not since had any trouble in keeping the shaft perfectly clear, and work has been carried on without let or hindrance of any kind. Now that the deep adit is communicated to Hamilton's shaft, I think our present pumping power will be sufficient enough to take us down to a considerable depth. The course of tin ground passed through in the 80-fm. level was first discovered about 6 fms. west of Hamilton's shaft, so that at the point we commenced to sink below that level the lode was without value; indeed, it was small and unproductive, but during the last few weeks it has greatly improved in size and character, with two good regular walls. Capt. George says the lode is 4 ft. wide, producing saving tin work for the stamps, and if it continues to improve in the same rate as it has in the last 2 or 3 fms., I fully believe we shall have something of value before we reach the junction. This improvement in the shaft indicates that the tin ground in the 80-fm. level west will hold down and probably improve in value, in which case, when we get to the junction of the two lodes, which we expect to reach by the end of Apr. next, we shall have 25 fms. of backs to take away, we trust, at a fair profit. So little has been done in the south lode that I will refer to it only to say that we think this will prove of value for copper. The great point however is, as Mr. Hamilton says, who is on a visit to his son, and went to the mine on Saturday last, "We must have patience and get the shaft down to the junction as quickly and cheaply as possible."

No questions were asked, and a vote of thanks to the chairman closed the proceedings.

BECHUANALAND EXPLORATION CO.

THE directors' report states that the right has been secured to select 150 additional claims in the Mashonaland Goldfields, and a further grant of 100 claims has also just been made as the company's share of the reward offered by the British South Africa Company for the first 50 stamps sent into the country, its battery being one of the first, if not absolutely the first, to be erected. This makes a total of 350 claims, in which Messrs. Mosenthal will be entitled to a half interest. A considerable amount of work has been done on the various reefs, and in the majority of cases shafts have been already sunk to the depth required under the mining regulations of the British South Africa Company. The 5-stamp battery has also been erected at Hartley Hill, and reports of the trial crushings of quartz obtained from the company's claims in that district are shortly expected.

HOLLOWAY'S PILLS AND OINTMENT.—Influenza, Coughs and Colds.—In diseases of the throat and chest, so prevalent in our changeable climate, nothing so speedily relieves, or so certainly cures, as these inestimable remedies. These disorders are too often neglected at their commencement, or are injudiciously treated, resulting in either case in disastrous consequences. Whatever the condition of the patient, Holloway's remedies will restore, if recovery be possible; they will retard the alarming symptoms till the blood is purified and nature consummates the cure, gradually restoring strength and vital nervous power. By persevering in the use of Holloway's preparations, tone is conferred on the stomach and frame generally. Thousands of persons have testified that by the use of these remedies alone they have been restored to health after every other means had failed.

REPORTS OF MEETINGS.

WEST ARGENTINE, LIMITED.

THE BOARD SEE THEIR WAY TO BRING THE COMPANY TO A SUCCESSFUL ISSUE, AND GIVE REASONS FOR THE FAITH THAT IS IN THEM.

THE annual meeting of West Argentine, Limited, was held on Wednesday at Cannon-street Hotel,

Mr. W. Paisley

presiding.

The notice convening the meeting having been read,

REGRETTABLE ILLNESS OF MR. HOPWOOD.

The CHAIRMAN said: Gentlemen, I should like to say, on behalf of my fellow directors, how much we regret that our chairman (Mr. J. T. Hopwood, J.P., D.L.) is not able to fill the chair to-day in consequence of indisposition. I am certain that you will, with me, wish him a speedy recovery. Mr. Hopwood is present to-day, but he is not well enough to take upon himself the fatigue which necessarily devolves upon the chairman conducting the affairs of this meeting. Now, in the first place, it will be my duty as chairman of the meeting, to call your attention to the balance-sheet, which, together with the profit and loss account, shows exactly the present position of the company. And I regret to say I cannot state that the position at present is a very rosy one, so far as regards the immediate results from the West Argentine proper. At the same time, I believe when you have listened to what I shall say, that you will come to the conclusion that although our past history may not be a history of success in mining enterprise, yet that in the future, with the assistance and support of the shareholders, the board do see a hope of bringing the affairs of the West Argentine Co. to a successful issue. (Hear, hear.) Looking at the accounts I think you will be struck by the fact that we have not been an extravagant board.

EXPENSES GREATLY REDUCED.

The entire expenses in connection with the management of the company is considerably less than 900*l.*, including salaries, rent, printing, and stationery and directors' fees. I feel certain that the shareholders will agree that the amount of the directors' fees—336*l.*—is a modest sum, having regard to the enormous trouble and anxiety entailed on the directors in managing the affairs of this company. I may add that for the last six months your directors have worked for nothing at all. (Applause.) In passing, I should just like to refer to our present position with regard to our Argentine property. At the present time we are not carrying on any mining operations there. The property is in charge of a gentleman in our employment, and he is taking active steps to preserve our interests in the Argentine; but, at the same time, we must tell you that, so far as mining operations proper are concerned, they have entirely ceased there. It must not, however, be taken for granted by the shareholders that we admit that our property in the Argentine is of no value. On the other hand, we believe that in the Argentine, sooner or later, we may have a most valuable asset, but as things are at present we do not think we should be wise in spending your money there, when we have more immediate prospects of a return from a property in the Colorado district and the United States. Now, you will have received this morning a circular containing the scheme which we are anxious to set before you with respect to our property in Colorado. You will be conversant as to how we became possessed of an interest in that property.

COLORADO PROPERTY.

If you remember, about 18 months ago, in consequence of what took place at a shareholders' meeting, the directors entered into negotiations with gentlemen who were interested in a property in Colorado, and they secured on your behalf a substantial interest in the Silverledge district. The terms upon which they secured that interest were considered at the time to be fair and reasonable; and in accordance with the authority which you have from time to time given to your board, they have, to the best of their judgment and ability, set to work to develop the property which they acquired in that district. In accordance with the authority given to the board, they have spent upon the property there something between 4,000*l.* and 5,000*l.* And in the first place, I may tell you that the expenditure of that money has proved to the Board that the company possess in the Colorado district a most valuable mining property. The original intention of the board was to place a concentrating plant on the property for the purpose of working the low-grade ore found in considerable quantities. Before the board did that it was considered advisable that they should have the report of some independent expert with respect to the value of the property, and after some considerable time Mr. Argall, a gentleman who was then resident in Leadville, was instructed to inspect and report upon the property. Now, that gentleman's report, for the moment, entirely altered the policy of the board, because he recommended that instead of our putting up a concentrating plant we should sink the shaft on the property to a greater depth, the object being to endeavour to prove if we had in our Colorado property valuable shipping ore, instead of working the lower grade ores, which were undoubtedly proved to exist. In consequence of that advice the board set to work, and they have sunk the shaft to a depth of between 300 ft. and 400 ft. In the course of sinking that shaft we have from time to time met with valuable shipping ore, but not to any considerable extent. Still, we are led to believe, from the evidence which the adjoining mines afford, that when we reach a depth similar to the depths reached by the New Guston, Yankee Girl, and other celebrated mines, we shall obtain ores of equal value to the ores which these mines are now yielding in such abundant quantities. These sinking operations went on for a considerable time, until it was found that the available funds possessed by the company were exhausted.

PRESENT PROGRAMME.

Now, what we are anxious to do at the present time is this: We are anxious, if possible, to form the company, which is set out and fully described in the circular which has been issued, for the purpose of developing the Silverledge property; and you will hear more fully from Mr. Jennings, who will follow me, about our prospects there. In the scheme put before you in the circular the authorised capital is

fixed at 180,000*l.*, of which 50,000*l.* is to constitute preference shares to carry a priority of dividend at 10 per cent. per annum, until such time as 20*s.* per share shall have been paid upon them. The circular also sets out how the balance of the shares of 130,000*l.* is to be disposed of. I should just like to explain briefly how the proposed scheme will work. The nominal capital is 180,000*l.* You will have to take from that 50,000*l.* for working capital, which will leave at the disposal of the company 130,000*l.* of ordinary shares. In the first place we have to ask the shareholders of the West Argentine Co. to guarantee to subscribe 16,000*l.* at least of the preference shares, because we feel that before we could attempt to carry out this scheme in Colorado we should have at least 16,000*l.* of these shares guaranteed. From the 130,000*l.* of shares you will have to take 32,000*l.* to provide the proposed bonus to the guarantors, which will leave 98,000*l.* Then under the terms for the sale of the property, 24,000 fully-paid shares have to be allowed to the original owners, thus leaving a balance of 74,000*l.* We propose at the present time to issue only 30,000 of the preference shares, and those who apply for the 16,000 shares required to be guaranteed will receive as a bonus two ordinary shares for each preference share so applied for, which will leave 14,000 shares of the balance unapplied through the new company, and this will be divisible as follows: To the West Argentine, three-fifths; and to the bondholders two-fifths. Now, I intend to call upon Mr. Jennings to say something with regard to our prospects in the Colorado district, but at the same time I may remind you that we already possess the strongest possible indications of the value of the mine. I think, if you will read the report of Mr. Jennings, you will see it is conclusively shown that the property is capable of yielding immediate returns; and if the shareholders will assist us in this matter, the board, so far as they can judge, believe we shall at once have a property which will prove satisfactory to the shareholders. (Applause.) I do not know that I can add anything more to what I have said, and I will now conclude by moving that the report and balance-sheet be adopted. (Applause.)

Mr. J. T. Hopwood, J.P., D.L., seconded the motion.

VIEWS OF MR. JENNINGS.

Mr. JENNINGS pointed out that the amount of West Argentine capital expended on the Silverledge Mine was only 5,000*l.*, and this amount would be secured to the company by the issue of 5,000*l.* preference shares as part of the purchase consideration. The position which the directors had acquired for their shareholders was infinitely better than that originally obtained. The shareholders were then content to acquire one-half, which would have been 53,000*l.* Now, they have the opportunity of securing no less than 101,000*l.* out of 106,000*l.*, the balance of the purchase consideration, after paying the original vendors the amount stipulated for under the bond. The board's policy was to afford those shareholders who supported them by guaranteeing the minimum amount of 16,000*l.*, the largest share in the division of the share consideration. By guaranteeing and taking no more than their proportion of 20 per cent. of their holding in West Argentine, they would secure as many Silverledge shares as they now hold in West Argentine. His object, in consenting to the board's urgent request to go out to Colorado—to which he agreed with very great reluctance—was to make the position of the company as safe as possible. In that object, he was most cordially assisted by their legal adviser, Judge Campbell. The result was the securing of certain proportions of the claims, absolutely freeing them from the danger of forfeiture in the event of the final payment due under the bond not being met. He noticed that there was a strong probability of good ore making in the direction of a claim that was not included in the arrangements—The Yellow Jacket. Accordingly, he took care to tie up that claim for the company, and since his return it had been transferred to the company. When the arrangement was entered into, the mine was developed to the point at which it was clear, that the addition of a mill would at once make it a paying concern. He knew now what he did not know then, that the mill it was then proposed to erect was already within a mile of the company's property. That very mill was now at work on the Robinson Mine. They lost it—and why? Because under the advice of an independent expert employed by the board, the directors very properly deferred erecting the mill until they had done a little more development. It was a fatal mistake, but it is very easy to be wise after an event. It was a lost opportunity, which had never since been recovered; because the capital which should have furnished the mill went into the mine. Yet the result had come out all right; because the mine was now three or four times better worth the mill than it was when the company started. (Hear, hear.) There was then ore in sight that would have paid for the mill. That ore was there still, but in greatly increased quantity. In addition, the deposits of much richer ore had been met in increasing frequency as depth had been reached, leading to the reasonable hope that their future actuals would be much better than their present estimates. He concluded by saying that he did not profess to be a mining expert, but he had communicated to the board all the information he had been able to gather from gentlemen on the other side who were competent to form a reliable opinion.

DISCUSSION.

Mr. FERGUSON supported the policy of the directors. He believed that in the Silverledge they had got a very good thing.

Mr. TAVERNOR considered that the scheme that had been laid before the shareholders would recoup all former losses.

In reply to questions,

The CHAIRMAN pointed out that the yield of New Guston and Yankee Girl, which were in the same district as their property, had been immense. The one had given 80 and the other 45 per cent. Ores, of course, differed, but, judging from their neighbours, the yield from the West Argentine property, in regard to the Silverledge, was likely to be very great indeed. The sinking of the shaft had disclosed ores of great value, sufficient, at any rate, to justify the opinion that the West Argentine Co. was in the very district from which great returns had already been made. The Silverledge Syndicate was promoting a new and definitive company, and the policy of the West Argentine directors was to secure in Colorado the best possible advantages for their shareholders—to bring them in immediate returns for their investment. He sincerely trusted that the shareholders of the West Argentine would not allow the opportunity to slip of securing the very valuable property in Colorado which they had now at their command. At the invitation of the Chairman, Mr. Jennings explained that the vendors to the new

company were the Silverledge Syndicate, which was formed at the time we first became interested in the Colorado property, and represented the joint interests of the West Argentine and of the bondholders. The bonus shares the syndicate were able to offer were fully protected, they were only a re-distribution of the purchase consideration amongst existing proprietors, giving more to the subscribers of new capital and less to those who refused to act in their own interests. Shareholders might guarantee any amount irrespective of their holding in West Argentine, but if they, as a body, did not care to protect their own property by furnishing the needful, they must prepare for the mortification of seeing others reap where they have sowed.

The motion of the CHAIRMAN for the adoption of the accounts was then agreed to unanimously.

On the motion of the Hon. ALAN DE TATTON EGERTON, M.P., seconded by Major COTTON, Mr. J. T. Hopwood was re-elected to the directorate.

The proceedings concluded with a vote of thanks to the chairman.

CAYLLOMA SILVER MINING CO., LIMITED.

A CLEAR STATEMENT OF THE COMPANY'S POSITION—A RICH AND EXTENSIVE PROPERTY.

THE ordinary general meeting of the shareholders of this company was held at the Cannon Street Hotel, London, E.C., on Tuesday, Dec. 22, 1891, to receive the directors' report and statement of accounts to June 30, 1891, and for the transaction of the general business of the company.

Mr. George Hopkins, C.E.,

presided.

Mr. GEORGE M. BOWEN (secretary) read the notice convening the meeting, and the minutes of the previous meeting were read and confirmed.

PRELIMINARY WORK.

The CHAIRMAN said: Gentlemen, the directors regret very much that they have not been able to lay these accounts before you at an earlier date. You have already had the reason given for that in the circular we addressed to the shareholders some time in the autumn. It happened in this way; our accountant was one of the first of the staff who went out with instructions to get the accounts into order, and to attend to them only, but, unfortunately, very soon after his arrival, our temporary superintendent in charge of the mines, Mr. Sothers, was compelled to resign his office through ill-health, and the management for the time fell upon the accountant. We have written over and over again and cabled for these accounts, but, up to a very recent date we had not succeeded in getting them, and even now we have not all the information we should like to have had, but such as we have we place before you to-day. Now, gentlemen, from the report you will see what we have done with reference to getting the property vested in the company, with the appointment of the staff, and the sending out of the necessary machinery. The property is, as you are aware, a very extensive one, consisting, I think, of no fewer than 78 pertenencias, and the directors concluded they could do nothing until the whole of the property was properly transferred to and vested in this company. For that purpose our agents in Lima obtained the assistance of a solicitor, who attended to that matter for us, and the whole of these pertenencias are properly recorded in the Government Padron de Minas, which gives us

A COMPLETE TITLE TO THE PROPERTY.

I will just mention that recently we have defined the extent of that property by putting up land marks, so that the extent of our own property is now exactly defined, and agrees with the entries in the Government record. Now, we have been a little unfortunate, and have met with some disappointments in the selection of our staff, notwithstanding that we took every care we could in making personal enquiries, and ascertaining the qualifications and character of all the gentlemen we sent out. In spite of that, some of them did not come up to the standard that we expected. I think we may safely say we have now a very able and efficient manager in the present superintendent, Mr. Lucas. Of course, the situation of the mines affects considerably the health of persons who are there to manage it, and it is not everybody who can stand the climate and the great elevation at which these mines are situated. Mr. Lucas, however, has been accustomed to live at a high altitude, as, previous to his coming here, he was manager of the Potosi Mines, in Bolivia. I think they are about 12,000 ft. above the level of the sea, whereas we are about 16,000 ft., which, of course, is a very trying atmosphere for many persons to live in. Mr. Lucas is a man of considerable experience and is a first-rate metallurgist and mechanic, and we have every hope and expectation that at last we have

SUCCEEDED IN GETTING A GOOD MAN

to take charge of our property. We have also a very good man in his brother, whom we have sent out to erect and look after the machinery. The directors had the opportunity for several months of meeting Mr. Lucas, because we engaged him to design and superintend the construction of a good deal of the plant and machinery in England, and having done that we thought it advisable to send him out to superintend the construction of the machinery, and to look after it when it was completed.

TREATMENT OF THE ORE.

Now, the ordering of the machinery is, or rather was, as you will readily surmise, a troublesome matter. Every expert that we consulted had a different opinion as to what was the proper machinery to send out. We had only some small specimens of ore, and it was very difficult to say what was the most suitable machinery for dealing with it. We had bulk samples sent over. We consulted metallurgists at Manchester and in London. Some of it was sent to Mr. Lackhardt in San Francisco to report upon; in fact, we took every pains before ordering to ascertain what was the right and proper method of treating this ore. Mr. Lucas himself could not make up his mind; in fact, I think at this moment he is not quite certain as to what will be the proper method of treating

it until he has tried it. Under these circumstances, we had to act with very great caution, which occasioned some delay. We were urged by people at the mine and in Peru to send out stamps. Well, we were not quite satisfied that stamping was the proper method of treating this ore, and we were very careful about sending them out. We did, however, send out a battery of 30 stamps, because in doing that we could not do much harm, but we also sent out other means of crushing the ore, the particulars of which I need not go into, and also machinery for treating the ore by chlorination and roasting. Until this machinery has been at work some little time, and the ore has been properly tested, we shall not know positively what is the best and most economical way of dealing with the ore. Now, as to the transportation of the machinery, that was a troublesome task, but, thanks to our agents on the other side, I think I can say that scarcely a piece of machinery of any sort has gone astray, and that everything, or nearly everything is safely delivered at the mines. You know it is easy enough to send out by ship as far as Mollendo, and easy enough to transport from there to Sumbay, but then comes a long transport by mules, which necessitates the machinery being constructed in such a way that it can be transported on mule-back along the road. Formerly it had been the habit to make Pampa de Arrieros the point of departure, and thence transporting everything by road across the Pampas; but our agents and managers have pointed out a far better road by utilising the railway from Mollendo to Sumbay, which is about 70 miles beyond Arequipa, and then to strike across the Pampas to Caylloma. It is a shorter and a better route. You will possibly remember that in the report of the experts who examined the mines previous to the company being started they spoke of the old road, and advised that it would be desirable to improve it, and to spend something like 10,000*l.* upon it. The directors, however, could not bring themselves to that view of things. We have spent a few hundred pounds on this new road from Sumbay, and we have established a depot there, so that we have no trouble now in transporting our goods and machinery from that point to the mines, a distance of something like 80 or 90 miles.

A VALUABLE PROPERTY.

Now, with regard to the mines, I said a little while ago they were extensive. I am pleased to be able to say that all our information tends to this, that they are as valuable as they are extensive. Although we have volumes of letters describing the work done at these mines, it is quite impossible for you to understand these works without the aid of a map. We know that there has been a large amount of development work done since the formation of the company, or, rather, since we were in legal possession of the property, and I am sorry I have not the means of bringing those development works clearly before you, but there are a great number of mines, and there has been a large amount of work done upon them. The fact is the property is almost too large for any one company to work, and to work it all effectually it would require a very large capital and a very large staff. Now, you will see from the table in the report showing the sales of ore in England what the value of ore is. Of course, you will understand that what has been sold in England is selected ore, ore of a very high grade. It would not answer to send over any other than ore of that description, on account of the freight and heavy expenses. However, taking the whole quantity sold up to date, I think, if I am right, it

AVERAGES ABOUT 65*l.* PER TON.

Now that is, of course, very rich. We have occasionally some small samples that are even richer than that; in fact, we have ore which has either arrived, or is on its way—a small sample of 14 sacks of about 1 cwt. each—which assays about 2,780 ozs. of silver and 103 ozs. of gold to the ton. I hardly like to mention those figures because it would land you in a visionary place, but those are facts. Whilst I am dealing with that part of the subject, I am anxious to remind the shareholders of this, that in selecting this ore for export we have left behind us on the dumps a very large quantity of lower-grade ore, which is too low to export to England, but not too low to treat in our mill. In our balance-sheet we have taken no credit for that. We have simply put in the actual amount of money that the ore sent over has realised, but there are thousands of tons of good ore already mined and brought to surface, on which all the expenses have been paid, and are included in the costs on the balance-sheet, although no credit is taken on the other side for them.

THE MILL.

With reference to the mill that is being erected at San Ignacio, which is about 5 or 6 miles from the mine, and at an elevation of about 13,000 ft. or 3,000 ft. below the mine. The reason for selecting that was that we might get an ample water power. Coal is very dear, and we intend to use steam as little as possible. We have no wood, and the only fuel we know of is peat or turf. Therefore the selection of the site for the mill where we could get water power was a very important matter. We have sent out turbines, steel pipes about 2 ft. or 2 ft. 6 in. in diameter, and I think that, so far as we can judge, the mill and all the reduction works—the tinias (amalgamating pans), which we sent out from here, will all be up and at work I hope in, say, six months from this time at the outside. The whole of our machinery has arrived in Peru, if not at the mine; and from the last reports which we have received the work is going on very fast, the buildings are being covered in, and the whole progressing rapidly. Although I say six months as an outside figure, I hope the mill will be ready in less time than that.

PRESENT POSITION.

Well, gentlemen, my duty to-day is to tell you what has been done, and how we stand at this moment, and not to indulge in any prophecies or hopes as to what will be in the future; but at the same time I think I am warranted in stating this, that so far as we can see, and so far as we have heard from every person that we have sent out to the mines, there is a perfect consensus of opinion amongst them that you have exceedingly valuable mines. All that we have to wait for is proper machinery to deal with the ore, of which there is abundance, and the more extensive opening up of the several mines. Our last report from our superintendent, which only came, I think, on Friday, we thought it would be as well to put into type for you.

AN IMPORTANT INTIMATION.

Mr. HENRY STOKES then read the paragraph, which was as follows:—

"EL TORO.—The end on gallery 3 towards the north looks very well, and is producing some fine ore. In about 15 to 20 days this end should communicate with the winze (already down) from gallery 2, and then I expect to extract larger quantities of good export ore. This communication effected, I shall at once put down a winze on the rich bunch to prepare for gallery 4. Main shaft sinking rapidly, and should be connected with gallery 3 about end of this month. It will then be pushed to gallery 4 (some fifteen metres deeper than the Cuchilladas tunnel), and there we shall soon open up the lode in a healthy manner."

The CHAIRMAN, continuing, said: That is an important paragraph, because the owners of the Cuchilladas mine which is close by are getting very rich ore indeed, and when the owners of that property get a short distance further (some 90 ft.) they come into our property, and we shall get that rich ore, and what he alludes to here as to going down in depth is also very important. I said that the climate was a trying one to live in, but, of course, that observation only applies to Europeans. The natives, who are accustomed to that elevation, have no difficulty whatever, and the whole of our workmen are natives. It is only the superintendent and the staff who are English.

A RAILWAY FROM THE MINES TO THE MILL.

There is one point I had forgotten to mention, and that is that we are going to construct a narrow gauge railway between the mines and the mill, a distance of about 6 miles, to convey the ore from the mines to the mill, and which line will almost run down by gravitation. The gradient over the whole length will be about 1 in 25, and perhaps in one or two places 1 in 20. I do not propose to detain you any longer. We have had a great deal of trouble and work, and, as I said before, we regret exceedingly that we have not been able to meet you at an earlier date. I think in the future we ought to be able to get our meetings in the autumn. Speaking for myself and my colleagues, we feel perfectly satisfied with the property. It is a difficult thing to manage a property so many thousand miles away, because you must rely on your manager. We have got over the difficulty of obtaining a good manager, and I think the future of this company is assured. I beg to move the adoption of the report and accounts.

Mr. H. STOKES (director), in seconding the motion, said: The chairman has gone so fully into matters that I do not think it is necessary for me to say very much. I might, however, make one remark in reference to the superintendent's report. The chairman asked me to read the paragraph referring to the mine El Toro. The manager there speaks of sinking the winze till he gets down to the level of the Cuchilladas workings. I have been for many years the agent of the Cuchilladas Co., and I am qualified to speak with regard to the value of their property. They have struck very rich ore indeed, and for the last six months they have been producing out of that one shaft and shipping ores of the value of from 4,000£ to 5,000£ sterling per month. If we get down to that level we have every reason to expect a continuation of the vein.

VIEWS OF A SHAREHOLDER.

Mr. MCANDREW suggested they should hold half-yearly meetings. He certainly thought a company with the capital of this one ought to meet oftener than once a year. It struck him since the company had been put in possession of their property progress had been very slow. In rather more than 12 months they had only been able to send forward 177 tons of shipping ore, and making every allowance for the imperfect state of the arrangements at the commencement of this enterprise, and further for the sickness from which the staff appear to have been suffering, it yet seemed to him a very poor result. He was not at all sure but that the company's agents in Peru were right in recommending the road to be put in order. That was a matter which might engage the attention of the board at some other time. It seemed to him taking down ore a distance of 80 or 90 miles on the backs of mules constituted a difficulty of so formidable a nature that they never could expect to get adequate returns from a mine which had cost so much. He wished to know whether the *perenenencias* were equivalent to an English freehold, and what royalty, if any, was payable.

Mr. DUNCAN GRAHAM did not entirely agree with Mr. McAndrew's remarks. His long experience in the Peruvian trade had shown him the slow progress which was to be expected in affairs carried on in that country. With regard to the road, he pointed out that when the mill was at work, and all the silver reduced to bullion, one mule could carry in bars the value of such a quantity of ore as would require over 100 mules to bring it down in its crude state as at present.

The CHAIRMAN, in replying, said that he very much sympathised and agreed with Mr. McAndrew as to the delay. The directors had been much annoyed about it, but it had arisen from a variety of causes, over which they really had no control. When the company was floated it was never expected they would get anything for the first two years—that is to say, it would take two years to get the machinery up to the mine and properly at work. Now, they had been doing this. They had to transport the machinery by road across the Pampas. With regard to the road, it might have cost 20,000£, instead of 10,000£, in order to bridge rivers and to make the road. Now the machinery was up they would only have to transport their stores, the expense on which would hardly be worth mentioning. With reference to

HALF-YEARLY MEETINGS.

the board would take that into their serious consideration. He did not know that it would be a judicious step to take. Their property was practically freehold, subject to the mining laws of Peru. The tax was \$30 per claim per annum. The taxes were all paid up to June, 1892. As regards the titles to the property, he thought they were equal to the freehold of this country as long as they kept the contribution paid.

The motion was then put to the meeting and carried unanimously.

The retiring auditors, Messrs. Hays, Akers and Hays were duly re-elected, and a vote of thanks to the chairman closed the proceedings.

SHEBA GOLD MINING CO., LIMITED.

A SATISFACTORY YEAR—DIVIDEND OF 1s. A SHARE.—BRIGHT OUTLOOK.

THE eighth ordinary general meeting of this company was held at Winchester House, Old Broad Street, London, E.C., on Tuesday, Dec. 22nd, 1891.

Wm. Garland Soper, Esq., J.P.

(chairman of the company) presided.

The SECRETARY (Mr. J. E. Booth) read the notice convening the meeting.

A SATISFACTORY STATEMENT.

The CHAIRMAN said: Gentlemen, the Sheba Mine is well, doing well, and looking well. At previous meetings I have entered into full explanations; but to-day lengthened speech is unnecessary. The report of the directors, and that received from the general manager, set forth the present condition and encouraging prospects of the mine. It will be gratifying to the shareholders to mark that when the 20-stamp battery was crushing at Fever Creek the cost of working was 67. 0s. 11d. per ton, as stated in the report presented to the meeting of shareholders on Jan. 30, 1890; and now that the 60-stamp mill is crushing at the Queen's River, the cost of working is 17. 4s. 11d. per ton—(Applause)—as stated in the report of the general manager, dated Oct. 26, 1891. In London the expenses have been diminished by 6367. 3s. 9d.

UNFOUNDED RUMOURS.

In the face of the specific statements made in the general manager's report, as to the ore both above and below the No. 5 level, the wildness of the rumour which was lately circulated to the effect that the ore in the Sheba Mine had given out is more than apparent. In fulfilment of the promise which your chairman has made, that he would keep the shareholders well advised on any serious subject, so that they should not sacrifice their shares on a "bear" attack, he cabled the manager on Nov. 13, quoting the rumour, and asking his reply. That reply was at once published. When it was made known the censors said they did not understand the meaning of the ordinary mining word "stopes." It is gratifying to us to be able to add that by written advices, dated Nov. 17, 1891, which contained the records of these cable messages, the intelligence was in reality yet more favourable, for the news transmitted was "No. 15 winze at No. 8 level, the ore is very rich," which thus proves the shoot ore to be at the very lowest point reached. We quote the incident in order that shareholders may again estimate at its real value criticism on Sheba mining operations. A second rumour was subsequently started that, although now we may be working in good ore, soon the good ore will be finished. As shareholders, form your own opinion upon the report of the general manager. If you cannot trust that report, whence are you able to obtain more reliable information? Does not that report indicate that should the returns fall off in one month they are likely to pick up again in the next month? The board will be disappointed if we do not run along at near one ounce to the ton: in fact an effective commentary on these November rumours is the November output. (Applause.)

THE AERIAL TRAMWAY.

As to the aerial tramway, we are sure the shareholders have not overlooked the passage in the report of the General Manager which says:—"The system is good; the mechanical construction in many respects is bad; but these defects can and will be overcome." Now, a contract being in existence between Mr. Pohlig and the Sheba Co., until the contractor has either fulfilled that contract, or stated he has done all he can do, we cannot proceed ourselves to make the tramway a thoroughly reliable means of transport. Ever since its start stoppage has occurred for some few days; but while it is working sufficient ore is brought to the mill so as to keep the stamps running with fair continuity, although not to their normal power. When the strengthening of the line has been made one may reasonably hope for better results. It may be asked what course we intend to adopt with the new tailings and the concentrates? As to the tailings stored from the crushings at the new battery, an arrangement has been made with the Ores Extraction Co. for a trial treatment of 250 tons; and on the outcome of this test, either the process will be relinquished or we shall buy plant, pay a royalty, and work the tailings ourselves. (Hear, hear.) As to the concentrates, 10 tons are now here; and when the result of their reduction into gold has been ascertained, the board will determine whether all the concentrates shall be shipped home or treated at the mine.

THE ACCOUNTS.

We must now ask your attention to the accounts. You will observe the annual accounts are rendered, as to profit and loss, separately for the two six months. The first six months closes our chief outlay; the second six months enables you to judge, while the quartz is being actually won and realised, the probable outcome of revenue and expenditure. In my statement made to you on Aug. 5, 1891, I foreshadowed the deficiency for the first half of the financial year as likely to be 21,556£; but I regret to have to say that this figure has unavoidably become 26,257£. In the same statement I estimated the net revenue for the six months ending Sept. 30, 1891, as likely to be 33,500£; but I am pleased to say that this figure has happily totalled 38,633£. (Applause.) So that our estimate has been verified in actual results, with about 500£ in favour of the Sheba Co., and has been exceeded in the six months' working by no less than 5,133£. Deducting the deficiency of 26,205£ from the revenue of 38,633£, we have the surplus declared in the balance-sheet on Sept. 30, 1891, of 12,428£. (Applause.) As to depreciation, we have written off, as mutually agreed at our meeting on Jan. 26, 1891, in no instance, not even on new buildings and machinery, less than 10 per cent., and, on old works, even more than 10 per cent. You will note that the total amount written off for depreciation is 7,3027. 13s. 2d., which places our profit and loss account on

AN ABSOLUTELY SAFE BASIS.

We now turn to the balance-sheet. You will observe that we have made a further issue of 3,993 shares since Sept. 30, 1890. The sales

were necessary at the time in view of the cash demanded for further capital expenditure. But although we have been obliged to issue these shares, you will note (as by page 3 of the report) that we have purchased debentures, non-convertible, to the extent of 7,210*l.*, and convertible to the extent of 1,700*l.*, making a total of 8,910*l.* The sales of the shares were made at a premium of 5*l.* 5*s.* on the 3,993*l.*, and the purchases of the debentures were made, not at the price fixed for their redemption, viz., 105*l.*, but at the strict limit of par 100*l.* Both of these transactions are favourable to the Sheba Co. The non-convertible debentures have all been bought since Sept. 30; and hence only the purchase of the convertible debentures appears in the balance-sheet. You will observe the expression, "Bill payable, 4,000*l.*" We may explain that this is a draft (which was on the water at the time of the balance-sheet) for expenses during the month of Sept. We may add that we

MEET ALL OUR DRAFTS AT SIGHT;

and they, therefore, are in point of fact, cash payments. Among the assets you will note we have included "Shafts, drives and winzes, 2,000*l.*, and mine development, 4,676*l.*" These pertain to the sinking below No. 5 level, and, therefore, are strictly capital expenditure in that from ground below No. 5 level we have not yet won any gold. The estimated stock of 11,000 tons of tailings, you will notice, has not been valued in the balance-sheet; and possibly some of the shareholders may not unjustly consider that there should have been some value assigned. The directors considered this undesirable as a matter of policy; and we hope the shareholders will accept our assurance on this point. The item "debtors, London," is chiefly made up of an over due amount of 3,514*l.* 15*s.* 5*d.* from the purchaser of the tailings. The money was not paid on Oct. 17 last, because the purchaser contends that we had absolutely guaranteed 9,000 tons weight, whereas we never made such a guarantee, but only sold 9,000 tons for 20,000*l.*, and, failing this quantity, agreed to refund a proportionate amount of the price. On Nov. 27 the Court refused to allow the defendant to defend the action unless he paid into court the sum of 2,981*l.* 15*s.* 5*d.* In my last statement I emphatically reminded shareholders that our auditors would have to adjust the question of the

CAPITAL AND REVENUE ACCOUNT.

As regards capital monies, there was, on Sept. 30, 1891, a balance in hand of about 17,000*l.*, which has since been decreased by the purchase of 7,210*l.* debentures, leaving a nett balance of about 10,000*l.* in view of contingencies of capital expenses for the present year. This sum of 10,000*l.* is part of our deposit at the Alliance Bank. As regards revenue monies, you will note that the nett balance of 12,428*l.* was scarcely sufficient to pay a 2½ per cent. dividend for the close of the financial year ending on Sept. 30, 1891; but at the date of issuing the report there was sufficient revenue cash in hand to declare an *ad interim* dividend of 2½ per cent. This, therefore, the board then recommended should be distributed. We are, however, now in face of the following facts:—October—3,190 o*z.*s., 12,453*l.*; less draft for this month to cover ordinary and capital expenditure, 6,000*l.*; leaving 6,453*l.*; November—3,730 o*z.*s. (in transit), say, 14,730*l.*; less draft for this month to cover ordinary and capital expenditure, 4,500*l.*; leaving 10,230*l.*; making a total profit of 16,683*l.* (Applause.) On the 16th inst. we wired the general manager to cable the capital expenditure during the month of November. Taking, therefore, October and November, there must be added 3,100*l.*, being capital expenditure included in the above drafts, and making

A TOTAL PROFIT OF 19,783*l.*

Of course, from this must be deducted:—Two months' debenture interest, 1,500*l.*; London expenses, say, 500*l.*—2,000*l.* The summary of the position, is, therefore, as follows:—Balance on Sept. 30, 1891, 12,428*l.*; Oct. and Nov. profit, 19,783*l.*; deduct—current expenditure, 2,000*l.*—17,783*l.*; total, 30,211*l.* These figures, you will note, are exclusive of December. In view of the profit to the end of Nov. being 30,211*l.*, and seeing that there is a sum of 10,000*l.* available as working capital, the directors recommend that instead of an *ad interim* dividend of 6*d.*, there be paid on Jan. 1, 1892, an *ad interim* dividend of 1*s.* per share to all shareholders on the register on Dec. 17, 1891. (Applause.) There are only two or three other points on which we shall have to trouble you in connection with finance. First.—It is only right we should explain to you that the heavy drafts for Oct. and Nov. were caused by the purchase of materials for the sinking of the Sheba Low Level shaft. You may reasonably ask why these expenses were not deferred for a month or two. The fact is, in South Africa transport, as we are all too well aware, is a most important factor in the general manager's expenses; and had he not bought these materials at that time he must have paid considerably more for them. Secondly.—In addition to the above we are put to serious cost by the employment of so many men and boys on the aerial tram. Thirdly.—As to the further purchase of debentures, the directors must be guided by circumstances. We thank the general manager, whom we are sorry to hear is ill, his staff and men for their skill and attention to the interests of the mine. We also congratulate the shareholders on the Sheba Co. having commenced its dividend-paying career. I now beg to move that the report and accounts be received and adopted. (Applause.)

Capt. W. N. LISTER (director) seconded the motion.

VIEWS OF SHAREHOLDERS.

Mr. MUIRHEAD: Mr. Chairman, gentlemen, I think we ought to congratulate ourselves now that we have arrived at a dividend-paying stage. There are one or two points I wish to refer to, but as we meet under somewhat depressing circumstances, as regard the weather, I will endeavour to be brief and to the point. The first thing which suggests itself to me is this—that the accounts, on consideration, are much more promising than at the first blush. In the first place, our revenue has been earned in seven months, whereas our expenses have been going on for the whole 12 months. I observe no value has been put on the tailings this time. The chairman tells us that is in consequence of politic reasons, but I do not think we ought, therefore, to conclude that the tailings are of no value. On the contrary, we must put them as an asset. Estimating those tailings at a value of 15,000*l.*, being 15,000 tons at 1*l.* a ton, that is equal to 6*d.* a share. So that if the chairman sees his way to pay 1*s.* (and I hope he will enjoy his Christmas dinner better for having given

us a whole turkey instead of half a one) you may be pretty sure that the company might really pay 1*s.* 6*d.* I would suggest the board should keep in hand a round sum of money, say 25,000*l.*, so that we may not at any time be at our wits ends for money. I think the tailings ought to be regarded a good cash asset, because although we have not in our first bargain received what we expected, still, on a fair estimate, they are a good asset. Therefore, at the present time I reckon we have got 30,000*l.* after paying this 1*s.* dividend in the shape of tailings and in cash. Still, gentlemen, we have to look to the future for "frequent and abundant" dividends.

A SHAREHOLDER'S ESTIMATE.

If we have ordinary luck in the next 12 months, presuming we crush 40,000 tons, I calculate we should receive 20 per cent. in dividends. The chief value of the Sheba Mine, however, is that it increases in richness as it goes down. That seems to me to be the most important fact of all. It would be very comfortable indeed if we knew exactly how much quartz we have in the Sheba Mine. That is impossible to tell, but what we can do is to try and get an intelligent opinion as to the amount of quartz there. I would ask the chairman whether he considers it a very "wild" estimate for me to put the amount of quartz which is below the No. 5 level at a 1,000,000 tons. We have 4,000,000 tons above the No. 5, and if my estimate is true we have at least 5,000,000 tons altogether. That being so, we can afford to say to our critics that

5,000,000 TONS IS "ENOUGH TO GO ON WITH."

We have had our full share of rumours this last year. I am sure you will agree with me our hearts have alternately risen into our mouths and sunk into our boots, first about the quartz giving out, and second, that we were going to amalgamate with some of our neighbours. We wish our neighbours every possible success, but, at the same time, I do not know what they have done for us. We have won our position by the expenditure of time, labour, and money, and, personally, I do not propose to divide up whatever advantages we have got with any of our neighbours for the present. (Hear, hear.) Let us try and get some dividends first. We have been waiting for five years for this period, and the directors should bear in mind the sacrifices the shareholders have made, and keep the

SHEBA MINE FOR THE SHEBA SHAREHOLDERS.

The last point is one that is rather delicate. It is, in fact, the remuneration of the directors. I do not know why I should say anything about the remuneration of the directors, except that I always like people to be well paid who attend well to their duties. I can speak personally of the chairman as a very hard working director. I observe by the articles of association 200*l.* per annum is to be the remuneration. I do not think that is enough, and I would suggest that the chairman should be allowed, or rather requested, to draw 500*l.* for himself, and the other directors to divide 1,000*l.* amongst them. I am sorry to observe one of our directors is absent, as, I understand, through a domestic affliction, and I desire to express my sympathy with him at this time, which I am sure you will all share.

A SHAREHOLDER'S CRITICISM.

Mr. LEWIS said he could not speak with so much satisfaction as Mr. Muirhead had done. The first thing which struck him, on looking at the profit and loss account, was the matter of the tailings, in which they had had to refund 7,435*l.* 4*s.* 7*d.* He (the speaker) objected at the last meeting to the 8,000 tons of tailings being valued at 24,000*l.*, and was answered by Mr. Soper that every merchant in the City of London was allowed to reckon his assets at a valuation. He was glad to see, however, that his system had been adopted this year by Mr. Soper. The next thing he wished to speak about was the income-tax. How was it that an income-tax of 737*l.* had been paid, and on what? The income-tax was charged on the first six months of the year where there was a loss made. 737*l.* was a big amount. The company had produced 290,000*l.* worth of gold, and the dividends paid amounted to 45,000*l.*, so that it had cost 250,000*l.* to earn 45,000*l.* How much did it cost to get the yield in October and November? Then there were 277 tons of concentrates valued at 4,432*l.*, and 10 tons valued at 500*l.*, which was about 10 o*z.*s. to the ton. He wished an explanation of that. The speaker then referred to the value of the machinery standing in the accounts, and could not understand how it was that one year it was increased and the next decreased. He also wished to know why the expenses of obtaining the Government grant had been put down on the credit side of the balance-sheet as an asset as it was not realisable. Were the races and other things still worth what was paid for them?

Mr. FREEMAN: I think we are indebted to our manager for a very comprehensive and miner-like report upon our property. He has gone so fully into details that there are very few points wanting explanation. With the material before him he might have given us a more glowing account of the mine, but he evidently has preferred to let

FACTS SPEAK FOR THEMSELVES.

What I consider one of the principal paragraphs is that in reference to the tramway. We have heard a lot of talk as to the non-success of the aerial tramway, and it is therefore very gratifying to have our manager's positive assurance that when the alterations in progress are completed, there will be no doubt as to its working capacity. This should at once set our minds at rest when rumours are circulated that the tramway has broken down. I must also congratulate our manager upon the provision he is making for a reserve of quartz at the mill. When this reserve has accumulated, it will enable him to effect any repairs to the tramway without stopping the mill. I cannot too highly commend the decision of the directors and manager for the policy they have adopted in pushing on the development below No. 5 level, for it is in this direction the wealth of Sheba extends. Already a very large body of rich quartz has been developed in this direction—sufficient to keep our mill running for many years—and with the excellent plans issued with the report, there should be no difficulty for shareholders to follow future developments. There is one fact that will commend itself to the shareholders in connection with the sinking of No. 15 winze, and that is the foresight in the purchase of the Sheba low level property. There can be no question but that we have a very valuable mine, which, with judicious management, should give us steady and increasing dividends from now onwards. (Applause.)

Dr. GIBBON said he believed it was a fact the aerial tramway could not take the amount of ore the mine was capable of sending to it. He had heard the mine was perfectly blocked with this stuff. He also heard that the Oriental mill had been shut down and their tramway had ceased to work, and he therefore would suggest that the directors of this company should take that one temporarily until they could erect another tramway or get this one into proper order so that it could carry sufficient stuff. He strongly urged upon the chairman and directors to negotiate with the Oriental Co. for their mill and their splendid steam tramway, which would carry any amount of stuff at a very small expense. If the directors would take this into their consideration, he thought it would be very much to the advantage of the Sheba Co.

THE CHAIRMAN'S REPLY.

The CHAIRMAN in replying, said: I am sure we all appreciate the very succinct and clear statement which has fallen from Mr. Muirhead, but as we are the guardians of your interests, I am sure he will scarcely expect me to say what number of tons may exist under our No. 5 level. The shareholders know everything that we know. The plans are before you. The depth, and the width, and the length of the lode have been stated by the general manager, and, therefore, it is for every gentleman and every shareholder to form his own opinion as to the total number of tons below the No. 5 level. I do not wish you to think I am desirous of pouring iced water upon any expectations of the shareholders, for the directors themselves consider that the Sheba property below the No. 5 level is more wealthy than was the Sheba property above it. (Cheers.)

THE TAILINGS.

I now come to the question of the tailings. My worthy friend, Mr. Lewis, has twitted me with respect to the statement I made about that matter at the last meeting. I uphold my statement, and double underscore it. There is this difference, and only this difference. When a man in London or Manchester, in his balance-sheet, values his assets he knows exactly what stock he has, but we, as directors, can only receive the accredited report of the general manager. A certificate was issued, and signed and sent home to us, giving 8,000 tons as the tailings. I put it to every gentleman here, Were we not justified in including those 8,000 tons, and valuing them less than we thought they would come out? With respect to the concentrates, these figures, coupled with the tailings, of course, are more or less estimates, but, so far as we can gather, we believe they will be fully maintained; but, as I said in my speech, the 10 tons here are now being actually sold, and when they are sold we shall know better their accurate value. I now come to the suggestion of Mr. Muirhead with respect to the retention of about 25,000%, and I take it what he wished to impress upon the directors is that they should observe a strictly

SOUND FINANCIAL POLICY.

I am glad he has brought the matter up, for it gives me an opportunity of making a statement. I wanted to see the actual cash in London, or on the very shores of London, before we declared a dividend, which would uphold the dignity of the Sheba Co., and not cast the slightest reflection as to the future. That is why I pointed out that these returns are made exclusive of December. If Mr. Muirhead's estimate of 15,000 tons of tailings, worth 15,000%, is correct, then we do stand at the present time with 25,000% as working capital. Now, with regard to the income-tax. We are bound to pay the income-tax commercially on the figures shown in our profit and loss account. There was a large profit in one year, and there was a large loss in the next, but as you all know we have to return to the income tax commissioner the full amount the first year, but when we get to the third year we shall be able to take the average. It is a matter of misfortune that our profit should have been so much greater on paper than it was in fact, but now we shall have the advantage of part of the income tax practically paid in advance.

VALUE OF MACHINERY.

The next thing is the machinery. I suppose machinery has a happy knack of increasing in quantity as well as decreasing in quality, especially when you are prospecting and conducting extensive developments. Our machinery is not a fixed quantity. I was astonished that Mr. Lewis had not already noticed the figures, for I really expected a compliment rather than a criticism to-day. The machinery in transit in last year's account was 25,330%. That has vanished and gone into the stock of plant and machinery, but instead of being increased by 25,330%, the whole amount has been written down by 13,773%. 8s. 9d. As regards the Government grant, if we have to pay so much more money to buy the capital on which we are to earn future dividends, is not that capital an asset? We have to pay for our Government grant, and it is an asset, and appears as such. As regards the question of amalgamation. When I first, at your request, accepted this responsibility, one of my first efforts was to endeavour to arrange an equitable understanding with the Oriental Co. For reasons best known to themselves, the Oriental Co. closed their door, and speaking as a Sheba shareholder (not as a Sheba and Oriental shareholder), I take it from the ringing cheers which supported the remarks of Mr. Muirhead that it is not your desire I should go again and knock at that door. (Hear, hear.) What on earth have we to knock for? In answer to my friend Dr. Gibbon, who is an Oriental shareholder, as well as a Sheba shareholder. I also want to know what advantage we are to get. Your report tells you that the cost of your transport is 1s. 11d. per ton. Dr. Gibbon very kindly, but not very accurately, said we should have a very cheap transport by the Oriental Co. Would it surprise Dr. Gibbon that the cost of transport by the Oriental Co. is 7s. 9d. a ton? If, therefore, the expense of transport be a consideration you can judge which is in the better position. Their mill may be larger than ours, but it is not built so substantially. The Oriental Co. have alleged a claim upon the Sheba Co., and until the Oriental Co. absolutely withdraws that claim we, as directors of the Sheba Co., can have no dealings with them. (Applause.)

REMUNERATION OF DIRECTORS.

Now, with respect to the remuneration of the directors. I am instructed by your legal friend Mr. Crisp that it is informal to pass any resolution on the subject here to-day, but I take it it is your wish we shall be thus remunerated. We shall, with many thanks, accept your suggestion, and trust to you not to challenge those entries in the

accounts during the next year. Allow me to say how much we sympathise with one of our directors who has lost his daughter. Well, gentlemen, that is all I have to say, but I trust there is only a bright future for the Sheba Co.

The motion was then put to the meeting, and carried unanimously. The CHAIRMAN then moved the re-election of Mr. Arthur Chambers, the retiring director.

Mr. ARNOLD seconded the motion, which was carried unanimously.

Mr. FREEMAN moved the re-election of the auditors.

Mr. BUTLER seconded the motion, which was carried unanimously.

Mr. CONELLY proposed a vote of thanks to the chairman, directors, manager and the staff. He wished also the meeting in this vote to give their sanction to the proposed increase in the fees.

The motion was carried by acclamation.

The CHAIRMAN having briefly replied, the proceedings closed.

CENTRAL MONTROSE ESTATE AND GOLD MINING CO.

DROUGHT HINDERS OPERATIONS—SCOTT'S REEF YIELDING WELL—NEW CRUSHING POWER WANTED—LITIGATION RESULTS IN FAVOUR OF THE COMPANY.

The first ordinary general meeting of the shareholders in this company was held at Winchester House, London, E.C., on Tuesday.

Genl. Sir R. J. Meade, K.C.S.I., C.I.E.,

presided.

Mr. WM. CURTIS THOMSON (secretary) read the notice calling the meeting, and the report was taken as read.

ACCOUNTS.

The CHAIRMAN: Gentlemen, the directors' report, which is in your hands, explains the cause of the postponement of the annual meeting to this late date. I will refer to this subject by and by. As regards the accounts submitted to the shareholders with the report, they do not appear to call for much from me in the way of explanation. I may, however, state that they are for nearly 14½ months, viz., from Oct. 18, 1889, to Dec. 31, 1890. The revenue charges during this period were more than met from the income realised from Dec., 1889, to Dec., 1890 (inclusive), and after writing off a sum of 1,324l. 12s. 4d. for depreciation of plant, &c., a balance of 2,275l. 18s. 7d. remained at credit on Jan. 1, 1891. The balance-sheet for the same period shows that 12,935l. 6s. 2d. was expended on capital account—less the amount written off for depreciation—leaving 11,610l. 13s. 10d. as the nett expenditure under this head. The stores and materials in stock, paid for out of capital, form an asset to the amount entered, viz., 1,836l. 19s. The arrears due, noted as 665l. 2s., have been reduced to 380l. 2s., and proceedings have been taken against those still in default. The drought which prevailed for a large part of the year seriously affected the milling out-turn, which, but for it, would have shown a considerably higher figure. The average yield of gold per ton was good, being about 1½ oz., though the ore crushed during the later months of the year was found to be of somewhat lower grade than that previously milled. The report explains what was proposed to be done to supplement the existing water power available for milling purposes. The possibility of increasing the water supply was first considered, but it was found that the drainage area was so limited, owing to the high level of the Montrose farm as compared with the surrounding country, that no increase of the water supply was practicable. There seemed then to be but one mode of obtaining more power, viz., by steam, and, after full inquiry, the requisite arrangements were made to provide it accordingly, but at the last moment it was found that coal could not be laid down at the mine at the cost estimated until the means of transport were improved, and this project had to be put aside. The question of adopting electric power was then taken-up, as the only remaining alternative, but the application of electricity as a motive power was apparently unknown in the Transvaal, and the cost and difficulties attending its installation would be so great that the whole question required the fullest inquiry and consideration before the company was committed to its adoption.

ELECTRIC POWER.

At length, however, your directors were satisfied that the success of the measure might be relied on, and an agreement was drawn up with the Weltevreden Co. for our cutting a water-race on the bank of the Queen's River, 4 miles from Montrose on the property of that company, for the installation of the dynamos, and it was proposed to execute the same, and to commence work at once on the race, which has already been surveyed and pegged out, when the action of the Gold Estates necessitated an entire suspension of the project. The estimated cost of the scheme was about 6,000l. A proposal has lately been made by another company to supply electric power to this company on terms more favourable than the above, if the scheme can be carried out and inquiries on the subject are in progress. This proposal, if adopted, would save this company the large expense attending the installation of the electric power, and substitute an annual charge per horse-power required, and it would obviously be to the advantage of the company to get what it needs on these terms. Now that the Gold Estates suit has been disposed of, this important matter shall be dealt with without further delay. I should, perhaps, explain here that Scott's reef, from which ore has hitherto been brought to the mill, is on the more elevated part of the Montrose farm, while the mill is necessarily on the lower part, for the command of the water supply, and some distance from the reef. The transport of the ore is, therefore, a laborious operation, and the cost is stated to have been 2s. 9d. per ton in the year under review. It has since been much reduced. (The larger quantity of ore crushed this year has reduced the average cost of transport to about half that sum per ton.) The adoption of electric power would save this labour and cost, as its use would enable us to work one or more batteries at the reef itself, while the water power would, in such case, be available for the three reefs near the present mill. During the period under review the ore brought to the mill was almost wholly taken from the western slopes of Scott's reef, and its average yield of gold was much higher than that

of the ore since milled from the eastern stopes. The reef was lost for a time, but the manager was confident that he would find it again, and on 3rd Nov. he reported that he had done so, and that it was 5 ft. wide and very strong, but that the gold was not so free as was expected. We have since had a cable from him saying that the ore from the lowest level had turned out very satisfactorily, and that he had resumed milling, which had been stopped owing to the water supply having fallen off, and the ore being of low grade.

CURRENT YEAR'S RESULTS.

The accounts for the current year cannot be given in detail to this meeting, as they are not complete, and, of course, are not audited; but I can say that in the first eight months, 3,425 tons of ore were crushed, yielding 2,695 ozs. of gold, which realised 10,390*l.* 3*s.* 10*d.* The average yield was 15.74 dwts. per ton, considerably less than the average yield during the same period of the year under review, but the number of tons crushed being 1,477 in excess of that in the first eight months of 1890, the gold realised 2,693*l.* more, showing that a large crushing of ore of moderate grade will yield a larger return than a small crushing of higher grade ore, and so proving, if such were necessary, the vast importance of having the means of treating the large quantities of ore of inferior grade which we know are ready for milling at Scott's reef. As far as can be ascertained from the accounts received for the current year, the capital expenditure during the first eight months was 2,348*l.* 14*s.* 3*d.*, to which has to be added a payment of 1,051*l.* 3*s.* 11*d.* on account of legal and other expenses in connection with the Gold Estates action. A further payment will have to be made on this latter account, and we cannot say, as yet, how far the judgment, with costs in our favour, will recoup us a part of this expenditure. The revenue expenditure, under all heads, during the first eight months of the current year, was 5,983*l.* 11*s.* 6*d.* The total of both classes of expenditure, omitting legal charges, was 8,332*l.* 5*s.* 9*d.*, against 10,390*l.* 3*s.* 11*d.*, realised for gold sold, leaving a surplus to credit, on the eight months working, of 2,057*l.* 18*s.* 2*d.* The surplus on the revenue account was 4,406*l.* 12*s.* 4*d.* The shareholders will see from these figures that, notwithstanding the obstruction to the development of our property, so unfortunately caused by the action of the Gold Estates, the whole of the expenditure for the first two-thirds of the current year has been considerably more than covered by the receipts, and that this obstruction being now removed, and the adoption of electric power for our crushing purposes being decided on, we may look for a vastly speedier progress towards an increased out-turn of gold, which will admit of the payment of a dividend, than has hitherto been practicable. I will only add, as regards the judgment in our favour against the Gold Estates, that we have as yet no information of its purport, and are therefore unable to give any explanation on this head. I shall be happy to answer any questions that may be put to me, and before proposing the resolution which I will have to put to the meeting, I will only say that

THE QUESTION OF MAKING A FINAL CALL

has been under our consideration, and we think there are certain advantages in making the call which render it desirable that it should be made, but we have not yet decided whether it shall be made or not. You all know that there is a final call of 5*s.* a share due, and in consequence of that call not having been made, as was originally intended, the full amount payable to the parent company has not yet been paid up—there is a balance of 7,000*l.* odd. The parent company has agreed to allow that balance to remain unpaid on their receiving interest for it at the rate of 4 per cent. The 5*s.* a share is not absolutely required for the purposes of the company, but there are certain reasons which appear to make it desirable that it should be paid. I will now move the following resolution:—"That the directors' report, with the audited accounts, made up for the period from Oct. 18, 1889, to Dec. 31, 1890, be received and adopted."

Mr. J. S. PRINCE (director): I beg to second that.

The CHAIRMAN: I omitted to mention that we are now taking steps to increase the stamps at the mill. Our manager has informed us that he will be able to work for a certain portion of the year with the present water power. The present water power at times is quite sufficient to work 15 heads of stamps, but for a considerable part of the year it falls off, and will not work even 10 heads of stamps. If this can be successfully carried out, it will largely increase the yield during the period of the water supply being sufficient for the purpose.

Mr. ROBSON: What was the total amount paid to the vendors for this mine? I thought they were only to receive 80,000 shares fully paid. Was there a cash payment in addition to that?

The CHAIRMAN: The vendor company was paid, I think, 80,000 fully-paid up shares, and a cash payment of 45,000*l.*

IS A CALL NECESSARY.

A SHAREHOLDER: I see no reason why a call should be made, unless it is wanted to meet additional expenditure.

The CHAIRMAN: The present state of the finances of the company will not admit of our carrying out this electric power scheme which we propose to adopt without a considerable expense. The cost will be 6,000*l.*, and we have not at present the means available; but I may say that we are in no way committed to making the call, and we have no wish to do so if it can be avoided. The call will only be made if it is clearly in the interests of the company to make it. I trust the shareholders will understand that we all quite realise the great difficulties there are at the present moment in making a call from any shareholders, and we have no wish whatever to impose those difficulties.

Mr. PENTON: I am one of the original shareholders, and as far as I, personally, am concerned, I would rather pay up the money at once than have a liability resting upon me of 5*s.* a share. I have, however, the fullest confidence in leaving that matter in the hands of the directors. It would certainly be better for us to pay the money and have our affairs brought to a state of efficiency, rather than keep our sovereigns in our pockets and starve the property.

THE COST OF ELECTRIC POWER.

A SHAREHOLDER: How much will the electric power cost the company?

The CHAIRMAN: I stated that it is estimated to cost about 6,000*l.* We have, in the first place, to cut a water-race which is of considerable length—I think about three-quarters of a mile on the right bank of the Queen's river—and that, of course, will be an expensive job in itself. The rough estimate for cutting that race is 1,250*l.* Then there are other expenses which will have to be met, and these will probably

increase it to 1,500*l.* or 1,600*l.* Then the installation of the electric power will have to be provided for, and the arrangement we propose to make is this—that an engagement shall be entered into with some electric power company to provide everything for carrying the electric power from the dynamos to our mine, and that we shall not be called upon to pay anything for that work until the electric power is working satisfactorily and successfully. The total cost of the whole, in round figures, will, we think, be very close on 6,000*l.* I ought, perhaps, to add that we have got an alternative scheme—to supply us with electric power at an annual charge of so much per horse-power that we require. If we can get that scheme carried out it certainly will be the best.

MORE INFORMATION WANTED.

Mr. FRANK EDWARDS: I think the directors ought to let us known fortnightly what is going on at the mines. I was an original shareholder in the old company, and unfortunately I am in this; but I have never heard a single thing of what was taking place at the mines, except what one sometimes sees in the papers about a "satisfactory crushing."

The CHAIRMAN: A report of the gold crushed is sent to a number of paper the moment it is received. Any shareholder who wishes for further information can always get it at the office.

Mr. EDWARDS: But we never hear anything about the development of the property. There is an item in the accounts of 2,782*l.* for transport, which amounts to considerably more than the item for development, viz., 2,747*l.*

The CHAIRMAN: We shall consider your suggestion as to giving fuller reports to the shareholders. Our object, of course, is to save unnecessary expense.

Mr. STOBART: The directors should take 200*l.* a year less. The half of these companies are ruined by the expenses.

Mr. TAYLOR: I notice in the accounts an item of 245*l.*, for consulting engineer's fees. I do not think there is any need for a permanent consulting engineer, seeing that we have a very good man at the mine in Mr. Hawkins.

Dr. LISTER: Seeing the report is only up to Dec., 1890, I think an approximate statement should be issued so as to show us the position of the company up to this date. Is there any profit, and what has been done during the current year? How much available cash have the directors without making a further call? I would suggest that the report and balance-sheet to the end of the year should, in future, be submitted in March.

Mr. ATKINSON: Would you kindly tell us what amount the directors have drawn in fees this year?

The CHAIRMAN said he was sorry that Dr. Lister had not been present during his opening remarks, when he fully explained the various points raised. He then briefly recapitulated them.

ACCOUNTS TO BE PRESENTED EARLIER.

Dr. LISTER: Will this year's report be issued in March next?

The CHAIRMAN: I think we can furnish it by April, when we hope to have the ordinary meeting. In reply to Mr. Atkinson, I beg to state that during the year under review the directors drew their full fees in accordance with the articles of association. They were working steadily during the whole of the time, and doing their utmost for the benefit of the company; and no company can expect a body of gentlemen to work as directors without receiving the payment, which the articles of the company authorise their receiving. You may depend upon it that if there is any reason for the directors considering their position in that respect in consequence of the difficulties of the company, they will not be at all backward in doing what is right to meet the circumstances of the case. (Cheers.) The period for which these accounts are given is close on 15 months.

DIRECTORS' FEES.

Mr. STOBART: What are the fees?

The CHAIRMAN: 1,000*l.* a year.

Mr. STOBART: And what is the dividend you have paid your shareholders?

The CHAIRMAN: This is the first year.

Mr. STOBART: I happen to know a company, the fees in which are 500*l.* a year, and they pay their shareholders 8 per cent. on a capital of half a million. You have a capital of 100,000*l.*; you do not pay anything, and you pay twice the amount of fees. You ought to take half the fees, in my opinion.

Mr. EDWARDS: I think the directors might meet us to a certain extent.

In reply to Dr. Lister,

The CHAIRMAN said: The call of 5*s.* will only yield 17,000*l.*, and the amount due to the parent company is 7,000*l.* We will do nothing that is likely to be inconvenient to the shareholders.

Dr. LISTER: Is there sufficient development to keep the 10 stamps going for a certain time, so that we may have a regular monthly yield?

RESERVES OF ORE.

Mr. P. TARBUTT (consulting engineer): There is one very rich shoot of ore which is about 200 ft. long, and that has been supplying the 10 heads which we have now got. Above the 280-ft. level, which was our lowest level until last week, that had all been worked out, but there were 22,000 tons of reserves of low-grade ore. That ore is of a quality that will not pay in a 10-head mill, but it will pay very well in a 20 or 30-head mill. We have water-power which will drive about 10 heads all the year round, and we are going to put up an additional five. The whole crux has been to get an extra horse-power to drive another 20-head of stamps. We could then work the rich ore in our lowest level, and our poorer ore also. I am the consulting engineer, and I consider I have earned my fees very well indeed—very much better than I could have done had I been in the Transvaal. Our whole difficulty has been the want of power. I happen to be a director of the neighbouring company, the Weltevreden Co., who have a very large water-power, and through my influence there I succeeded in getting

A VERY ADVANTAGEOUS AGREEMENT.

with that company, whereby we get for a very small annual cost about 60 or 70 h.p. of water-power. I think the company, on the whole, have had a very good 200*l.* worth out of me. If you get up these additional 20 or 30 heads of stamps, and you can crush four times the amount of ore you are now crushing, I think you will have

reason to be very thankful that I have been instrumental in bringing that about for 2000. a year. The water is 4 miles off, and we have to transmit the power by electricity.

The resolution was then put to the vote and carried unanimously.

A PROPOSAL WHICH FINDS NO SECONDER.

Mr. ROBSON: I beg to move that there be not more than 2s. a share called up until after the next ordinary meeting.

Dr. LISTER: After what we have heard from Mr. Tarbutt I shall oppose that. We must not tie the hands of the directors and starve the mine. We have a great deal of low-grade ore, and it is necessary that we should have a certain number of stamps to make it pay. I quite approve of leaving the matter in the hands of the directors, asking them to make the call as little as possible, but not to starve the mine.

Mr. TWENTYMAN (director): We ought certainly not to be hampered. What would be the effect of such a resolution as that proposed? We have been working for a number of years with a 10-stamp battery. Fortunately, we have been able to secure ore sufficient to pay our expenses, and leave a small profit. Is it your wish that we should continue work in that way? Are we not justified in your interests, when we see that we have the means of paying you a handsome dividend by laying out a little additional capital—are we not justified in doing so? I am a very large shareholder, and it is my interest, as well as yours, that we should make the very best of this property. I believe it to be

A VERY EXCELLENT PROPERTY.

I think there is sufficient ore, but up to the present we have not been able to prove that we have a very large extent of rich ore upon Scott's reef. At any rate, we have proved that there is a very large quantity of ore there, and we only want additional power to crush that ore. With regard to the dividends that are being paid by a great many mines in the Witwatersrandt—upon what are those mines paying dividends? What is the percentage that they get on that ore? It is only in consequence of their having 100 or 150 stamps that they are able to pay those dividends. I hope the resolution will not find a seconder.

A SHAREHOLDER: Is the title to the estate clear now? I suppose there is no further court to which they can appeal?

The CHAIRMAN: The title is quite clear. There is no appeal against the judgment of the High Court in the Transvaal.

Mr. Robson's proposition fell to the ground for want of a seconder.

Mr. ANSDALL proposed the re-election of the auditors, Messrs. W. Wescott and Co.

Mr. CROSBIE seconded, and the motion was carried.

A CLOSING WORD OF WISDOM.

A SHAREHOLDER: I beg to propose a vote of thanks to the chairman and directors. I have attended a good many gold companies' meetings, and I find universally when gentlemen get a little disappointed they begin to find fault with the directors, and to cry out upon their fees. All such gentlemen, I think, should buy Consols. (Hear, hear.)

The motion was seconded and carried, and the proceedings then terminated.

SUYAPA SILVER CONCESSION, LIMITED.

THE COMPANY NOW IN WORKING ORDER — REGULAR RETURNS EXPECTED FROM JAN.—GOOD PROSPECTS.

The second ordinary general meeting of the shareholders of this company was held at Winchester House, Old Broad Street, London, E.C., on Wednesday, Dec. 23.

Mr. H. W. P. Clinton

presided.

The SECRETARY read the notice convening the meeting.

APPOINTMENT OF MANAGERS AND STAFF.

The CHAIRMAN said, gentlemen, as regards the balance sheet, I do not think I have very much to say. I feel that the work that has been done has been done very economically. In fact we have studied economy in every way, and I think if it had not been studied, very much more money might have been expended with no better result than that at present obtained. I will leave the balance sheet, and I will just give you a few words concerning the history of the company from its inception up to the present date. The report which you have had for several days shows you that the company was registered on May 28 last year, but it was not until Nov. 22 that the property was transferred to the company. Although there was practically no doubt that the transfer would be completed in due course, we were careful not to spend any of the funds of the company until we knew for certain that the concession was clear from all claims of third parties, and that it was duly vested in the company. I think you will agree that the board acted properly in adopting this course. The staff arrived in Honduras in Jan. in company with Capt. Michell as general manager. I may here say that during the delay in the transfer of the concession, the board, on their own responsibility, retained the services of Capt. Michell, as in him they considered they had a capable and economical miner, and a trustworthy and honest man, and I am pleased to state that after 12 months' probation they have no reason to depart from the opinion they then had. I regret to say that shortly after arrival at the mines, Mr. Clemo, the reduction officer, who had been sent out with the staff, died, as subsequently ascertained, unfortunately in an unfit state of health when he left this country, and that his death, though perhaps accelerated by the change, was in no way due to the climate. He left, I am sorry to say, a widow and several children unprovided for, and though, of course, no compensation could be demanded, the board, in the interests of humanity, thought it only right that a small sum should be paid to the widow to alleviate somewhat her distress. It became necessary, therefore, to send out a new reduction officer from this country, and, after very careful enquiry, the board selected and sent out, in Oct. last, Mr. Greenfield. They believe him to be a very capable man, and I am pleased to say Mr. Fowler, who met him on his return from the mines, holds the same opinion. The delay in returns has certainly, to a great extent, been caused by the un-fortunate death of Mr. Clemo,

as, although there has been ore to treat, there was no competent person to attend to this department.

PRELIMINARY OPERATIONS

After making an inspection of the property, Captain Michell proceeded to repair and make roads, build the necessary houses and offices, and to erect the machinery which had been sent out from this side. His first work on the mines was to unwater and cut down the Guadalupe shaft, which was a work of very great importance. This shaft has since been sunk to a further depth of 60 ft., and levels have been driven on the north-west and south-east to a considerable distance. I will ask Mr. Fowler, who has just returned from the property to give you a better description of the workings, and I will, therefore, refrain from making any further remarks on this work. I must, however, allude to one matter, which is a source of great satisfaction to the board. When Mr. Fowler first reported on the property, the Santa Teresa vein had not been discovered. The discovery of this vein is of very great importance, since it is not only large in size, but rich in quality, and a large body of ore not previously reckoned upon will now be available. You will have noticed in Mr. Fowler's report that a fault had appeared in this vein when he left the property in Oct. last, but I am very pleased to state that in a letter, dated Nov. 7, 1891, from Captain Michell, the following passage occurs in connection with this vein:—"I followed the course of the wall for more than 9 ft. without striking anything of worth." "We had not driven more than two ft. further before we struck the rich lead of (Galena) silver ore, and the men broke two boxes of ore therefrom, and brought down to the office, which was by far richer than anything I have yet seen in any other part of the property." This is certainly very satisfactory news.

THE TREATMENT OF THE ORE.

Now, gentlemen, we come to the most important question of all, viz., treatment of ore. After going into the matter most carefully with Mr. Fowler, the directors have come to the conclusion that the most profitable arrangement will be to concentrate the ore at the mines and ship it to Europe, instead of smelting on the spot. Mr. Fowler has given you careful estimates, showing you how much greater profit there will be in carrying out this suggestion instead of smelting at the mines. The board considered that they could not have a better authority than Mr. Fowler, and his estimates it is confidently hoped will be verified. The necessary machinery is now being erected for concentrating the ore, and we hope next January regular shipments will commence, and that speedy returns will be made. I must now refer to another matter which is not of importance however at the present moment, but which will be most important to the company in the future.

TRANSPORT TO BE FACILITATED.

I refer to the railway which is to be built on the Pacific Coast, to Tegucigalpa, which must come within three miles of our mines. The present total estimated cost of raising, treating, and shipping the ores from the mines to Europe is, per concentrated ton, 97. 12s. Of this amount the cost of transport from the mines to the coast (which ground will be covered by the railway) is no less than 47. 15s. per ton. I think, therefore, we may hope for a reduction of at least 27. per ton in the transport to the coast after the railway is built. I need hardly point out to you that this is, in itself, a very considerable revenue to the company. In conclusion, gentlemen, I can only say that we have left no stone unturned to make this company a success. We have worked very hard, and I think I may also say we have worked our consulting engineer very hard, and we hope in the coming year our work will bear fruit. I must take this opportunity of recording the very valuable services which have been rendered to this company by one of my colleagues, Mr. Matras. Mr. Matras is so bound up with business in Central America, and his knowledge he has freely given to the company, and his assiduous attention to the business of this company has given it an advantage which I feel no concern of a similar nature possesses. I will now ask Mr. Fowler to give you a few words in respect to his recent visit to the properties. I shall also be pleased to answer any questions that any shareholders may like to put to me, and I will then move the resolution adopting the report and accounts.

Mr. FRAS. FOWLER (consulting engineer): Gentlemen, it gives me very great pleasure to report to you the result of my latter visit to your property, as well as of the visit I paid last year, and, further, to be able to state that the prospects are extremely bright. As Mr. Clinton has just said, there have been considerable delays. That is almost inevitable in opening works in a foreign country, where you have to do all your travelling and transporting on the backs of mules, as it is almost impossible to get a wheel wagon. But besides that, the unfortunate death of Mr. Clemo threw everything back, as what we wanted was the reduction of the ore. We have got a large quantity of ore out, which I now estimate at 500 tons on the dump, which would give very good results. The ground is geologically of a volcanic formation, and there must always be a considerable number of faults in it. Two of these faults took place during my visit last Oct. We were going all along the Teresa lode booming it, but one day, unfortunately, we struck a fault. However, I was quite certain that the fault could not exist long, because by the indications I knew there could be no great throw on the lode. That has proved to be the case by later advices. There was also a fault in the Guadalupe Mine, but we have heard since that the ore has been struck again, and struck richer than ever. As to the

PERMANENCE OF BOTH VEINS

I have not the slightest doubt. They are true fissure veins. We can trace the Guadalupe lode for 2 or 3 miles, and the Teresa I was also able to trace a good distance up the mountain. I fully believe at the commencement of next year we shall be turning out fully what I stated before—30 tons a day. They are now commencing to concentrate the ores. That is a very important matter. It has been the cause of the wreck of a large number of mines in the world. That spending of large sums of money in machinery, and then having nothing to spend on the mine. The machinery will follow the mine. The mine does not necessarily follow the machinery. That is my policy. It required a good deal of study on my part, but I came to the conclusion before going out that the proper method of treating the ore was to concentrate it and send it to England. It would save us a vast amount in putting up roasting and other machinery. So I decided only to have

some jiggers and very simple machinery to concentrate the ore, and reduce it from 4 or 5 tons down to 1 ton, and bring all the silver over in the concentrates, instead of in the base bullion, or lead. I have given calculations in my report which I think will show you we shall actually do it much cheaper by that means than the other. It will cost from 9% to 10% a ton.

A GOOD STAFF AT THE MINES.

Altogether I think you can congratulate yourselves upon the staff you have out there. They are very steady men, and very economical—almost too much so. I met Mr. Greenfield half way up the country on my way back and spent some time with him. We had a talk on what is to be done in the future, and I came to the conclusion that he was a very able man, and I think we are fortunate in having obtained him. A few tons of the concentrates were to be sent home before Christmas, so I suppose they are on their way now, but by Jan. next we shall be having a constant influx from the mines. The veins all run into the hills, so I am working the mine by galleries and not sinking. I do not say we shall not sink at all. If we come to a rich place we shall sink down upon it. There is plenty of stuff in sight. I do not think in our lifetime we shall exhaust any of these mines. (Cheers.)

QUESTIONS.

The CHAIRMAN then moved the adoption of the report and accounts.

Mr. TYNDALE WHITE (director) seconded the motion.

Mr. GAZELLE asked for an explanation of the amount charged as directors' fees. According to the articles of association, the total directors' fees should amount to 800% per annum, whereas the amount charged was 693% for something like six months.

Mr. SHEFFIELD NEAVE asked what the company had got in return for the expenditure of 5,000% in London and Honduras? How many cubic feet of clay had been excavated.

Mr. CHEYNE asked when it was expected the company would be in a dividend-paying position?

CHAIRMAN'S REPLY.

The CHAIRMAN: I will now reply to the questions which have been asked. The directors take their fees from allotment, which accounts for the odd shillings and pence. We were working from May of last year up to the date when these accounts were made up, and, therefore, the shareholders had the benefit of one year and three months' work for about 10 months' pay. With regard to the amount of the fees I think the labourer is worthy of his hire. We have devoted an enormous amount of time to this concern, but we have arranged amongst ourselves that we will not draw any fees in this company after this year until substantial returns are made. (Cheers.) More than that I do not think we are justified in adding. With respect to the question of Mr. Sheffield Neave, I am afraid I cannot say the number of cubic feet that have been excavated. The only way I can answer it is by describing the amount driven on the different lodes and the tunnels, and also the depth of the shaft. I believe Mr. Fowler gives these particulars in his report.

Mr. FOWLER: With regard to the amount of clay and rock which has come out of the workings, it is a matter of calculation. The Clinton tunnel has been driven 326 ft., and will be completed at 400 ft. We have run about 150 ft. on the Teresa vein, and about 130 ft. north-west and south-east on Guadalupe, 20 ft. on the San Luis, and 90 ft. to 100 ft. on the Quemasones, which is a most promising vein. There has also been a good deal of work done upon the La Cruz. As to the clay, we have assays from 7 up to 200 ozs. to the ton. I think we shall have something valuable in that clay.

Mr. SHEFFIELD NEAVE: My object in asking that question was to ascertain whether you are satisfied with the amount of work which has been done for the expenditure of 5,000%.

The CHAIRMAN: It is remarkable to us that the work has been done so cheaply. Of course, the buildings and machinery are included in that sum. There was another question as to the dividends. I can only say myself we are going to be

A DIVIDEND CONCERN AS FAST AS POSSIBLE.

We shall begin to obtain regular and continuous shipments of ore in Jan., and the more tons we get in hand the earlier we shall get into a dividend-paying position. One does not like to make any exact promise as to the dividends just now, other than to say that the sooner we can give you them the better we shall be pleased.

The motion was then put to the meeting and carried unanimously.

The CHAIRMAN proposed the re-election of the retiring directors, Messrs. A. R. Heath, M.P., and E. Matras.

The motion was duly seconded, and carried unanimously.

The auditors were then re-elected.

Mr. FREDK. SEEL proposed a vote of thanks to the chairman, directors, and consulting engineer.

Mr. ARCHER seconded the motion, which was carried.

The CHAIRMAN having replied, the proceedings closed.

BRATSBERG SMELTING AND REFINING WORKS, LIMITED.

THE PROPOSAL TO AMALGAMATE WITH THE BRATSBERG COPPER CO. APPROVED—LATEST REPORT FROM THE SMELTING CO.

AN extraordinary general meeting of the Bratsberg Smelting and Refining Works, Limited, was held on Monday at Guildhall Tavern, Gresham Street, E.C., for the purpose of considering, and if thought fit passing the following resolution:—"That the draft of the agreement intended to be made between the Bratsberg Copper Co. Limited, and the Bratsberg Smelting and Refining Works, Limited, now produced and read to the meeting, be, and the same is, hereby approved, and that the directors be, and they are hereby authorised to affix the seal of the company to an agreement in the terms of that Draft."

Mr. J. B. Ball

presided.

OBJECT OF THE MEETING.

The CHAIRMAN in opening the proceedings stated that the meeting was simply a formal one, but that a special meeting would be held on the 29th inst at which the scheme of amalgamation would be submitted. He then called upon the secretary to read the circular sent out with the notice convening the meeting.

The SECRETARY (Mr. C. E. Riddell) read the following circular, which was addressed to the shareholders of the Bratsberg Copper Co., Limited, and the Bratsberg Smelting and Refining Works, Limited:—"Gentlemen,—In sending you the annexed formal notice of a meeting to be held on the 21st instant, for the purpose of cancelling the existing agreement between the two companies, I am directed to inform you that the object the directors have in view is an amalgamation of the two companies on somewhat altered terms to those originally proposed, and that they have been advised by counsel that the preliminary step in carrying out such an amalgamation must be the cancellation of the existing agreement. It is proposed to hold further meetings at as short a date as possible, at which the scheme for amalgamation will be submitted to you."

The CHAIRMAN said: Gentlemen, I may say that it is not proposed to cancel the whole of the agreement, but only those clauses in it which refer to the terms upon which the Smelting Co. were entitled to amalgamate with the Bratsberg Copper Co. I will now ask the solicitor to read the agreement.

The SOLICITOR then read the agreement.

A SHAREHOLDER: Will you please say what clauses are to be cancelled.

The SOLICITOR: The clauses to be cancelled are 4 L. and 5 of the agreement of 27th Feb., 1889.

The CHAIRMAN: We do not propose to cancel any others. It is a long agreement which provides, among other things, the terms on which the Smelting Co. shall amalgamate with the Copper Co. I beg now to formally move the resolution.

Mr. F. HODGKINSON seconded the resolution which was carried unanimously.

LATEST REPORT.

The CHAIRMAN: That concludes the business of the meeting, but I will read you the last report, which we have received from the Smelting Co. which came this morning. It is dated Dec. 14, and is as follows:—"Report No. 120 for the week ending Dec. 12. Coke has now arrived, and a portion has already been driven up to the smelting works, where operations will be commenced to-night, and we hope to have a successful run from now till Christmas. All the tanks are now empty at the electro department, and all hands are busy overhauling and repairing same, so as to be ready for a fresh supply of copper. We dispatched to you during the week 4 tons 5 cwt. 1 qr. 16 lbs. electro copper, which we hope will arrive safely and that the weights will agree. We shall have a parcel of battery mud ready for shipment at the end of this week." A letter came by the same post from Mr. Smith, dated the 16th, which states: "I beg to inform you that smelting operations yesterday and to-day have been highly satisfactory, and that Bergernd has managed the convertor with great success." I should mention that Bergernd is a Swede who is in our employ there, and he has charge of the convertor now. The letter goes on to refer to an accident which happened to our manager which luckily is not a serious one, but which may keep him in the house for a few days. It seems that there was a fall of snow from the roof which fell on his head and stunned him.

MR. MORSE: Do you mind giving us some particulars of the scheme?

The CHAIRMAN: The arrangement which you have just authorised is the cancellation of the agreement by which you were to get four fully paid-up shares of the Copper Co. for each 1% share in the Smelting Co. That arrangement was arrived at when the Copper Co.'s shares were 5s., and it was then looked upon as an arrangement which was in all probability to be carried out. Things looked hopeful at the time, and 5s. was taken to be the price for the Copper Co.'s shares, which it was thought would induce the shareholders of the Smelting Co. to take them over. Things, however, have altered for the worse to this extent that the Copper Co.'s shares are lower than 5s., and therefore it was not to be expected that the Smelting Co.'s shareholders would take those shares. Then it was thought that if an amalgamation were to be arrived at it must be on the footing of not giving ordinary shares to the shareholders of the Smelting Co., but that those shares should have a preference sufficient to make them attractive to the members of the Smelting Co., and the preference which has been suggested is this, that those shares are to bear a 3 per cent. accumulative preferential dividend, and that they shall also be entitled to rank equally with the ordinary shares for the ordinary dividend of the Copper Co. That, I think, you will consider not unreasonable, because the Smelting Co. had already, by agreement, a preference dividend of 10 per cent. before any dividend would come to the shareholders of the Copper Co. Then it was also thought that it would only be right, as the shareholders of the Smelting Co. were being asked to provide a sum of money in this scheme, that they should have a preference over the assets of the company in the event of the company winding up. We are in this position:

THE POSITION.

We want money both for the Smelting and the Copper Co. The Smelting Co. is, of course dependent on the Copper Co., for if the Copper Co. came to grief the Smelting Co. would not have the ore to smelt, and its valuable machinery and plant would be of very little use. Therefore, it was thought, in asking the shareholders of the Smelting Co. for this money, it was only right that they should have a preferential charge upon the assets of the whole of the two

companies in the case of winding-up. Well, then, as regards the amount to be paid up upon the shares. We have endeavoured to make that as easy as possible. The matter stands in this way: we have liabilities to meet in Jan. and Feb., and we must have money from some source or another. I have, with the sanction of the directors, borrowed 1,000*l.* from a personal friend to carry us on for the present, but that kind of arrangement cannot go on to any great extent, and we felt compelled to submit such a scheme as this for the benefit of the shareholders. We have made the payments as easy as we could, namely, 3*d.* upon application, 3*d.* upon allotment, 6*d.* on Feb. 28, 1892, and 6*d.* on Aug. 31, 1892. One cause of our want of funds is the fact that this copper, although it is a very fine copper, takes a considerable time to produce. It takes two months from the time the ore in a dressed state is delivered to the smelting works to the time when the fine electrolytic copper is turned out from the depositing works.

This concluded the meeting of the Bratsberg Smelting and Refining Works.

LATEST REPORT.

Report for week ending Dec. 12:—Coke has now arrived, and a portion has already been driven up to the smelting works, where operations will be commenced to-night, and we hope to have a successful run from now to Christmas. All the tanks are now empty at the electro department, and all hands are busy overhauling and repairing same so as to be ready for a fresh supply of copper. We despatched to you during the week 4 tons 5 cwt. 1 qr. 16 lbs. electro copper, which we hope will arrive safely, and that the weights will agree. We shall have a parcel of battery mud ready for shipment end of the week.—T. F. SMITH.

BRATSBERG COPPER CO. LIMITED.

PROPOSALS OF THE BOARD ADOPTED BY THE SHAREHOLDERS

AN extraordinary general meeting of the shareholders of the above company was then held,

Mr. J. B. Ball

presiding, to pass the same resolution as that passed at the previous meeting.

OBJECT OF THE MEETING.

The CHAIRMAN, I think all I have to say for the moment is that it is not proposed to cancel the whole of the agreement between the two companies, but only those clauses which deal with the rights of the Smelting Co., to amalgamate with the Copper Co. and also the terms upon which the Copper Co. are to purchase the Smelting Co. We have had a meeting of the Smelting Co. just now, and the resolution to be proposed at this meeting was unanimously passed by the shareholders. I will ask the solicitor to read the agreement.

The SOLICITOR having read the agreement,

The CHAIRMAN added: We thought it only right that the country shareholders should have the right to vote on this matter and we have had a very large number of proxies sent in, in favour of it. In fact, I cannot see myself how there can be any objection to it on the part of the shareholders of the Copper Co., but that is for you to decide. I will now simply propose the resolution.

Mr. F. HODGKINSON seconded the resolution.

Mr. ROBBINS: What advantage is the proposal to the Copper Co. The CHAIRMAN: It will put the Copper Co. in funds.

Mr. ROBBINS: We shall have to pay a further call upon our shares.

The CHAIRMAN: No, not the shareholders of the Copper Co.

Mr. ROBBINS: The Smelting Co. will have to pay.

The CHAIRMAN: Yes, but there will be no call upon the shareholders of this company.

Mr. ROBBINS thought the proposal would greatly benefit the

shareholders of the Smelting Co., but it would shut out the Copper Co., from looking forward to any dividend at all.

EXPENSES WILL BE REDUCED.

The CHAIRMAN pointed out that the proposed amalgamation would reduce the expenses of the company both at the works and in London. The board had proposed a scheme which they believed was fair to the shareholders of both companies. The great advantage of the scheme was that it would find a certain amount of money which was absolutely necessary to carry the concern on. If they had followed the course of the copper market, they must know that the price of copper had been very low, and that had affected their finances, and it was necessary to have more capital to go on with. That capital would be found by the shareholders of the Smelting Co., which they would all admit was a great advantage.

Mr. BELLINGHAM said he was opposed to the scheme, and thought the company had better go into liquidation.

Mr. HODGKINSON stated that it was certainly to the interest of both companies to amalgamate. If they wound up the debenture holders would get all the assets, and the shareholders would be left with nothing. They had a fine property, and their smelting works were now working to perfection, and he was sure it was the best thing for all concerned to amalgamate.

Mr. ROBBINS moved as an amendment, "That the shareholders of the Bratsberg Copper Co., Limited, have an equal opportunity with the shareholders of the Bratsberg Smelting and Refining Works, Limited, to subscribe an additional 1*s.* 6*d.* on the new shares to be created in the new companies, and that all such subscribers be entitled to 3 per cent. dividend in the same way as it is proposed to give preference to the Smelting Co." The object of that amendment was to put them all on one footing, and would be a more equitable arrangement than the proposal of the directors.

The CHAIRMAN said that he was advised that it was not competent for him to put such an amendment, but he had not the least doubt that there would be some preference shares at the disposal of the liquidator. It was extremely likely that some members of the Smelting Co. would not care to take up their shares, and those that were not taken up could be offered to the shareholders of the Copper Co.

The resolution was then put and carried.

A vote of thanks was then given to the chairman and the proceedings terminated.

LATEST REPORT.

Mining report for week ending Dec. 12—Hoffnung Mine: No. 2 adit level has somewhat improved since last report, but is not yet worth $\frac{1}{2}$ ton per fm. There are, however, good indications of a speedy change. No. 1 rise is yielding $\frac{1}{2}$ ton per fm.; but the ore in No. 2 rise does not appear to lengthen as we had hoped, it having been found for some time only in the western end. The winze sinking in the bottom of No. 2 adit level is now yielding $\frac{3}{4}$ ton per fm. At No. 3 level the lode remains poor. It is, however, of an average size, and spots of ore are frequently found, but otherwise its composition appears wanting in quartz to be congenial for ore. The rise in the back here is worth $\frac{1}{2}$ ton per fm., and the winze sinking in the bottom about the same value. We hope to be able to report on No. 4 level next week. At Murchison's section the trial level is worth from $\frac{1}{2}$ to $\frac{3}{4}$ ton per fm., and a winze which we have recently resumed from the shallower mid level is worth $\frac{1}{2}$ ton per fm. Johannes Mine: The eastern level on Howard lode is unproductive; but the western end is improving, now worth about $\frac{1}{2}$ ton per fm. The rise maintains a value of 1 ton per fm. In all 97 miners employed during the week. Surface work and remarks: An almost continuous downfall of snow has made it costly to keep the tramroad open between the sorting and dressing houses, otherwise surface work has gone on with regularity.—J. D. HOLMAN.

REMINGTON STANDARD TYPEWRITER. A WORD TO BUSINESS MEN.

You cannot afford to do your writing in the old way. The work of our machines is plain and business-like, obviating all mistakes in reading. Several copies can be made at one writing by the use of carbon paper. Excellent letterpress copies can be taken.

Our New Model Machine has been adopted in all the Departments of the Government service, and is being very generally introduced by all leading business houses. Does not this argue that the Typewriter should be worth something to you? The machine can be furnished with special keyboards to suit any purchaser's line of business. Write for full information.

SUPPLEMENT.

The Mining World

ENGINEERING RECORD.

ESTABLISHED 1871.]

SATURDAY, DECEMBER 26, 1891.

[ESTABLISHED 1871.]

REPORTS OF MEETINGS.

GOLDEN FEATHER CHANNEL, LIMITED.

MR. PECHEY RE-AFFIRMS HIS FAITH IN THE PROPERTY, AND HIS CONFIDENCE IN COL. McLAUGHLIN—EXHAUSTIVE STATEMENT BY MR. KIRKPATRICK AS TO HIS VISIT, AND THAT OF MR. HARVEY TO THE PROPERTY—BRILLIANT PROSPECTS FOR NEXT SEASON.

THE second ordinary general meeting was held at Winchester House, on Tuesday, "for the purpose of receiving and considering the balance-sheet and the report of the directors, and electing auditors in the place of those retiring."

Mr. J. T. P. Pechey

(chairman of the company) presided.

Mr. ELLIS (a director), in the absence, through illness, of E. Harvey (secretary), read the notice of meeting.

The CHAIRMAN, who was heartily cheered, said: Gentlemen, I have to move the adoption of the report and accounts. In the former document we have endeavoured to summarise as briefly as possible the work that has been carried on since the formation of this company. Somewhat over a year ago at our statutory meeting, I pointed out that this great undertaking in which we are engaged has

BOTH A PRACTICAL AND A SPECULATIVE SIDE.

Perhaps you will just allow me to read two or three lines from the report of my speech in the MINING WORLD made in connection with that meeting:—

"It seems to me that this undertaking has both a practical and a speculative side. It has a practical side, inasmuch as the construction of this dam and aqueduct comes well within the scope of the engineering science of the present day, and require alone elaborate surveys and calculation, and the expenditure of time and money and labour to complete the work successfully. It has also a speculative side, because in years gone by many of the operations on this Feather River have been successfully, if imperfectly, conducted, but have yielded millions upon millions to the world's store of gold."

Will you pardon me if I say, in passing, that I think the low price of our shares and the distrust and doubt which, undoubtedly, do seem to exist in the mines of some honourable proprietors, are simply due to the fact that they utterly fail to appreciate this position, and to understand that in a mine like this, and in all mines which are not taken over as going concerns, there must be a large amount of construction work to be carried out before any returns can possibly be hoped for. (Hear, hear.) Now, gentlemen, in reviewing the history of this company, and the work that has been done up to the present time, we have to deal mainly with what I have called the practical side which embraces the construction of a great head-dam, of about $1\frac{1}{2}$ miles of canal rock with cement walls, and the establishment of an elevator upon the bed-rock in the bottom of the river preparatory to sluicing off the auriferous gravels. I think we may well congratulate ourselves to-day that this great engineering work—the greatest that has ever been carried out in the history of alluvial mining—has been completed on a solid and substantial basis, and on the lines laid down and actually within the cost as estimated in the original reports upon which the company was formed. I have said they have been carried out in a solid and substantial manner. Will you allow me to occupy your time for a moment while I give you the answers to questions submitted to our emissaries before they went to the mine, which will give you an idea of the enormous work that has been done.

1. Does the Miocene ditch carry more water at all times than is required for the proper working of the Feather claim?—A. No. Original capacity of ditch was 3,000 ins., but on its purchase by the Thermalito Colony and Water Co., the waters were turned into another ditch on a considerably lower grade, so that the old Miocene ditch was practically abandoned, and only put in order by the Golden Feather Channel, Limited, to carry 1,000 ins.

2. Is the Feather canal likely to be silted up by *débris* carried down from the Golden Gate claim by the winter floods, if so, what precautions have been or can be taken to prevent the Golden Gate *débris* from entering the Feather claim to any appreciative extent?—A. No, or only to a very limited extent this season, and not at all hereafter. The Golden Gate claim forms a perfect hold-back, and the wash of the winter floods will be almost entirely broken by the Feather head-dam.

3. To what extent will the excavations made this year in Feather claim be filled up by winter floods?—A. To a very limited extent. It can be cleared out by two weeks' work.

4. What are the works made in Feather claim (outside head-dam and canal) this year, which will facilitate working in 1892?—A. All the work under way. It would be impossible to segregate it as entire works are to accomplish the mining of the claim.

5. What is the nature of the *débris* in the Feather claim, that is,

fine silt or sand or coarse gravel, &c., &c.?—A. A regular river *débris* composed of fine silt, coarse gravel and boulders.

6. In what manner is the *débris* prevented from choking up the upcast pipe of the elevator?—A. By the enormous power of the inlet water. It is of course understood that the larger boulders are forked from the bedrock sluices.

7. How many cubic yards of *débris* can the elevator lift per hour to the required height?—A. 100 cubic yards.

8. What is the height to which the elevator is required to lift the *débris*?—A. 45 to 50 feet.

9. At what disadvantage, if any, is the Feather claim placed by placing the foot-dam at Rich Gulch instead of at the lower extremity of the Feather claim?—A. No disadvantage; on the contrary it is an advantage as we have undoubtedly struck the deepest point in the river above the present foot-dam, and can therefore rapidly work up stream.

10. What is the average depth of the *débris* in the Feather claim?—A. I estimate it at from 10 to 15 ft.

11. What is the greatest and least known depths of the *débris* respectively?—A. Probably 20 and five ft. respectively.

12. What is the estimated depth of the pay gravels in the Feather claim, based on data afforded by former workings or otherwise?—A. Three to 10 ft.

13. What is the average width of the *débris* in the Feather claim?—A. 70 ft.

14. What is the estimated width of pay gravel in the Feather claim.—A. Unknown.

15. Is the Feather foot-dam to be left in place during the winter?—A. Yes; it is thoroughly strengthened by having been decked, and also rip-rapped with the massive boulders excavated from the elevator pit, and is now solidly backed up on the down-stream face by the *débris* dumped from the elevator sluice, which was used in sinking the pit.

16. What is the earliest date at which the river can be turned into the canal in any ordinary season, so that the canal shall carry the whole river at that date?—A. Probably in May.

17. What is the natural fall of the river between (a) head-dam, Feather, and foot-dam; (b) foot-dam Feather and lower extremity of Feather claim?—A. $5\frac{1}{2}$ ft.; (b) 1 ft., the river here being in the flat reach of the valley.

18. Give the following dimensions:—Feather (a) head-dam; (b) canal; (c) foot-dam; (d) sub-flume; (e) sluice; (f) average width of claim on river-bed?—(a) Across top, 125 ft.; depth, 44 ft. from top of protection timber to bedrock; width across bottom, 84 ft.; height of falling shutter, 7 ft.; steps back one in two from top of nose; wasteway, 68 ft. 6 ins.; 6,500 cubic yds. (b) Width at entrance, 73 ft.; average width, 54 ft.; depth, 10 $\frac{1}{2}$ ft.; grade (average), 1 ft. 6 ins. per 1,000. (c) Across stream on top, 80 ft.; bottom, say, 60 ft., but following irregular slopes of river banks can only be averaged; up and down stream, width on top, 16 ft.; on bottom, 28 ft.; average height, 28 ft.; 1,000 cubic yds. (d) 1,000 ft., 8 ft. wide; 5,000 ft., 10 ft. wide; average depth, 3 ft.; grade $1\frac{1}{2}$ ins. to 50 ft. for first 1,000 ft., and $\frac{3}{4}$ ins. for balance. (e) Sluice will average 4 ft. (f) Unknown.

19. Give the number of cubic yards of masonry in canal walls?—A. 10,000 cubic yds.

20. Give the number of cubic yards of rock excavated in Feather canal.—A. 60,000 cubic yds. of rock, gravel, boulder and earth.

21. Give number of yards of rock used in Feather head-dam?—A. 2,500 cubic yds., with some 4,000 cubic yds. of heavy boulder wash.

22. Give number of yards of rock used in Feather foot-dam?—A. About 1,000 cubic yds.

23. Give detailed specification of lumber in Feather head-dam in cubic feet and running measure?—A. 500,000 ft., board measure. See lumber vouchers in London office. The framing is composed of massive 8 by 10, 10 by 10, 10 by 12, and 12 by 12 timbers, solidly bolted together and to the rock banks of the river and its bedrock, and made part thereof by concrete and masonry abutments. The lower bays are filled with concrete, and from there up to the deck sheeting solidly packed with rock and heavy boulder wash. The sheeting is formed of 3 by 8 by 16 ft. lumber, and the dam is practically imperishable.

24. Give detailed specification of lumber in Feather sub-flume in cubic feet and running measure?—A. 220,000 ft., board measure, with 8,000 linear ft. of posting.

25. Give description of pumping machinery used in Feather claim, and the pumping power of each pump?—A. Hydraulic elevator. Lifting power of elevator, with 1,000 ins. under 480-ft. head discharge 540,000 gallons per hour.

26. Is it possible to run two sluicing elevators simultaneously in Feather claim?—A. No.

27. What leads you to believe that Feather claim can be worked for eight months of future years?—A. Known capacity of the canal and the permanency of all works.

Now let us turn for a moment to what we may term the speculative side—the results we hope to obtain from the washing of this river bed. I need hardly say that of this we have no practical experience on a large working scale. The great difficulties and delays,

entirely unforeseen, which have attended the sinking of an elevator to the dead rock through some 50 ft. of sand, gravel, and enormous boulders, have carried us on so late into this season that we must look to next season's work for any large returns. (Hear, hear.) We cabled out to Col. McLaughlin asking him to give us something for to-day, and his cable is the only note of regret I have to strike in my statement. He telegraphs as follows: "Continuous storms; raised river and again filled claim Dec. 19; if it is possible will drain claim and make clean-up. Owing to interruption and limited extent of ground work, and not having reached lower gravels, returns will be insignificant. After clean-up will dismantle claim. Weather indications are unfavourable with snow in mountains, rendering further work useless this season." I do not feel surprised or disappointed by that cablegram, as I know from experience in California that we may expect to have great storms between Dec. 15 and Dec. 29, but in this case we had hoped to run on till Jan.

A SHAREHOLDER: When was that cable received?

The CHAIRMAN: Yesterday; but it has been in possession of the directors only before this meeting. I was saying, the work had been carried out in a solid and substantial manner. The rainfall of Nov. 5, which filled the Golden Gate claim, and stopped all work there, passed harmlessly through the canal of this company, and the storm of Dec. 2, which filled up our claim, was all pumped out within a few days, and Col. McLaughlin expects again to pump out the claim in order to clean-up. We have the river even in abnormal floods, almost absolutely under control. I confess, gentlemen, I do not like these cables being so frequently sent out to the shareholders, and wish we could put a stop to them altogether, but will be glad to take your opinion on the subject. Some of the proprietors are always clamouring for them, and others say they are a perfect nuisance, and you must remember this, that there are

OTHER PEOPLE WHO GET CABLES BESIDES OURSELVES.

There is no question about it—I have known it from time to time. News comes from California in a few hours, and it is very easy for anybody to put himself in communication between Oroville and San Francisco, and find out what is going on. That almost forces us to send out these cables, but I fancy we should be better without them. I should like the meeting to say whether it will be necessary or advisable to do more in the future than send them to the newspapers and the Stock Exchange. Reverting to the general question, it is a great satisfaction to us to think that this enormous construction work has been absolutely completed, and when the season commences, as it probably will do in May, we shall not have to construct any great head-dam or foot-dam or flume to carry the river, but all our work will be in perfect order. The elevator will be left through the winter firmly bolted to the bed-rock, and we shall have

EVERYTHING READY TO COMMENCE NEXT SEASON,

when I have not the faintest doubt as to what the result will be. It is true we have not obtained any great thing in the way of results, but a great deal of prospecting has been done. It has yielded about 150 ozs. of gold, and at the close of the meeting I shall be glad to pour that out into a pan, so as to show you the character of river bed gold in California. It is not often seen nowadays—(laughter and hear, hear)—as very little such river bed mining is going on. I want to read you an extract from a letter placed in my hands two months ago by a Californian in London, who received it from a mining friend out there. Both of them have been interested in river mining, and this is what the friend says with regard to Feather river:—

"As to the richness of the river bed, there can be no doubt as to that. Men here, whom I have known for years, tell me what they saw in 1857, when the river was flumed, and they are men whom I know to be reliable. They had only a few days to work on the rich bottom ground, and they took out about three-quarters of a million dollars, and where they left off, when they were driven out by high water, there was about 4 or 5 ft. of gravel at the bottom that was yellow with gold, and thousands of dollars were taken out hourly." That is but one testimony out of many as to what is left in the river. Coming to the accounts—the balance-sheet has been prepared by our auditors, Messrs. Pixley and Co., who, I am sorry, are not here. I have a note from Mr. Pixley, in which he says, "The accounts are very clear, but I understand that one or two questions have been asked as to the deduction of 680%, expenses in London representing interest and transfer fees from the London expenses account. The only other way of dealing with it would be to include it amongst the liabilities, but I have found, after many years experience, that to do so is far more misleading to the shareholders: and as it appears in the face of the accounts what the exact London expenditure has been, I think the account are as clear as they can possibly be made." I am glad Mr. Pixley wrote that note for it would have been most absurd to have placed the amount amongst liabilities. Let me ask you to remember that when this company was formed we set aside a fund of £60,000 as working capital. The estimated cost for construction of dam and canal and walls was \$250,000, or equal at the rate of exchange to something like 52,000%. The accounts are made up to Sept. 30, but to the beginning of this month I think the cost of construction account has been about 48,000%, mining 6,500, and London expenditure 1,481%.—and we have a balance in London and California of over 4,000%. (Cheers.) I think that is

A SATISFACTORY STATE OF THINGS.

and shows that we stand in a very fair position. I ought to tell you that as far as I can see the work has been most economically carried out. I have personally checked every voucher and every account, and may add—I believe the work has been expeditiously done according to the colonel's estimate (and we have always found him most accurate in his financial estimates). That 4,000% will carry us over to the commencement of returns next season, but, if by any chance we should want 2,000% or 3,000%, you need not trouble as we shall not make any appeal to you, it will be provided for. The vendor's agent himself would be quite ready to give us that money.

JUSTICE TO COL. MCLAUGHLIN.

I do not know what Col. McLaughlin has not done for this company. I hear that purchases for the benefit of this company have cost him personally \$70,000, and I know of land he has bought which probably would run up to \$70,000. That shows the colonel's feelings for the shareholders, not so much in this company, but in the Golden Gate, and he has acted so that everything might go on as smoothly as pos-

sible. I have now endeavoured to put all matters before you as we have seen them in accounts and report published from time to time from the other side. I know you are all very anxious to hear what our friend Mr. Kirkpatrick and our valued secretary, Mr. Harvey, have to say as to the results of their visit. I regret very much to say that

MR. HARVEY IS UNABLE TO BE WITH US TO-DAY.

(Hear, hear.) While in Oroville he experienced a recurrence of an attack of malarial fever, and he is absolutely unable to be here. I was with him for an hour yesterday, and found him hardly able to speak, so that it would have been the height of folly for him to have come out on a day like this. I am wonderfully pleased with

THE GRASP MR. KIRKPATRICK SEEMS TO HAVE OBTAINED

in the short visit he made to California. They were only at the mines 10 days, and he seems to have everything perfectly at his fingers' ends. I think we owe a debt of gratitude to Mr. Kirkpatrick and to Mr. Harvey for having, at the mere cost of their journey, in this inclement weather travelled 10,000 or 15,000 miles just for the sake of spending 10 days on the property, and coming back and reporting to us. (Cheers.) One word in conclusion: I do not want anyone to go away with the idea that we (the directors) have in any shape or way lost confidence, either in the mine or in Col. McLaughlin. There has been a great deal of silly nonsense written about that gentleman. (Hear, hear.) I grant you that now and then some of the cables have seemed to be of a non-understandable kind, but when I have talked over with Mr. Kirkpatrick one or two things I have not understood, he has made them in a moment as clear as daylight. Some shareholders were exercised about the message in which he said he fully expected to have returns by August 31. What was the position in which Col. McLaughlin found himself when he sent that cable? Just this: Before he could make any returns he had to bolt his elevator to the bed rock in the very bottom of the river channel. He was sinking through many feet of sand, gravel, and boulders, enough to dismay anybody, and came down to what he thought the bed rock, and began to fix his elevator, for you must open space large enough to give you room to work. He was then about 30 ft. from the surface debris, when all in a moment the rock went down, and he has had to follow it nearly another 30 ft. before he could finally reach bed rock, and that meant just three months' delay. Now you will understand why occasionally a cable as reported to you may be a little non-understandable. The colonel always sends those cables just as the position appears at the moment.

CONFIDENCE IN THE COLONEL.

We have the most absolute confidence in him. (Loud cheers.) I hear from all my friends in California, but one record of him, which is this—that he is one of the most honest and straightforward men that can be found in the world. (Loud cheers.) Then as to the mine. I have been taken to task for the remarks I made at the statutory meeting. I have been told I expressed too high an opinion, but after seeing the results carried on, and after reading carefully the colonel's exhaustive report, and consulting for hours with Mr. Kirkpatrick, and cross-examining him as to other details—after all this, I declare here and now that if I had to make that speech over again I should use every word I then used. I do not think I can do better than close these remarks than by reading the words I used at the last meeting.

"I do honestly and firmly believe, as an old Californian who knows a great deal of the character of its rivers, that we have in this Golden Feather Channel not merely one of the most successful claims, but the most successful of any mining company which has ever been placed before the English public." I now formally move "That the directors' report and balance-sheet as circulated amongst the shareholders, be received and adopted." I will ask Mr. Kirkpatrick to second the resolution and read his report.

VIEWS OF A VISITING DIRECTOR.

Mr. KIRKPATRICK said: In accordance with the wishes of the directors of this Company, Mr. E. Harvey and myself left London on the 7th Nov., and, travelling straight through without stopping, reached Oroville on the 20th Nov., where we remained until the morning of the 1st Dec., reaching London on the 16th Dec. The points of interest to the shareholders, to which our attention was directed, were:—(1) the cost of the works; (2) the stability of the head-dam; (3) the capacity and efficiency of the elevators; (4) the prospect of results to the shareholders. All these points are very fully dwelt on in the report since forwarded to London by Col. Frank McLaughlin, and thus the necessity is obviated of more than a brief *résumé* of the result of our investigation. (1) Cost of works.—We found these to have been carried out with the utmost efficiency and with great economy. The making of some 10 miles of well-graded roads through our property, over what was previously an impassable mountain, reduced the expense of haulage of material to a minimum. The materials, timber, cement, iron work, &c., were purchased on most favourable terms, and the building of the head-dam, foot-dam, walling, &c., together with the excavation of the canal, has been completed at a figure which no engineer not thoroughly acquainted with the locality, and enabled to command the best labour, could have believed possible. In fact, many experts who have visited these claims have expressed their astonishment, when informed of the actual cost, that such splendidly efficient results should have been obtained at so small a cost. It is certain that no contractor would have attempted the undertaking at anything approaching the sum expended by this company. By a system of electric wires, the dynamos of which are worked from the water-power of the river, the whole of this, as well as the Golden Gate property, has been brought into instant communication, not only with the office, but also with Col. McLaughlin's bedroom in the hotel, so that every morning, as soon as the men are at work he receives telephonic reports from every part of the property, the most distant being the upper station on the Miocene Ditch, 30 miles, each station being also able to communicate with every other station. The advantage of this, as well as the use of the power for electric lighting at all points where required, has greatly facilitated and economised operations. The head-dam, details of which are to be seen at the office, is practically as permanent a structure as London Bridge, while the retaining walls of the canal, built of

masses of cemented rocks, excavated in constructing the canal, will remain long after the traditions of their object have been forgotten.

WORKS DESCRIBED.

The foot-dam, which is not intended as a permanent structure, serves its purpose perfectly in preventing the backing up of the river water into the claim. From the water of the Miocene ditch is obtained the practical control of the river, the *débris*, and the pay gravel. The water is the property of Col. McLaughlin, and is lent by him to the company until the claim is cleaned out, after which he has loaned it to the Golden Gate Co., thus overcoming the difficulty he encountered in dealing with the *débris* of that claim in the great pools opposite the Rook and the Indian ravines. The elevators, both for pumping water and raising gravel, are no new invention. They have been used for some years with great success where water was very "quick," or where it was impossible to get the gravels into the sluices by gravitation. They work perfectly. The capacity of the water elevator has been proved within the last few weeks to be equal to draining the mine in 48 hours after the rain-flood ceases. The capacity of the gravel elevator is, with its 460 ft. of pressure from the reservoir of the Miocene ditch, equal to raising 2,400 cubic yds. in 10 hours, or equal to 3,600 tons; so that it can raise upwards of 8,000 tons in 24 hours, an amount enormously in excess of our requirements. Of course, the actual results are limited by the size of the feeding sluice, which is again controlled by the elbow-room in the pit in which the elevator is bolted to bed-rock. At present there is only room for a length of 60 ft. of sluice, and that only 2 ft. wide, so that at present the feed cannot exceed, if it can equal, half a ton per minute, but as fast as the face of the gravel is eaten away the sluice will be extended, and greater quantities of pay dirt fed to the elevator. The fall or grade of the Feather claim is only 9 ft. from the head-dam to the present foot-dam, and the bottom of the bed-rock in the pit is deeper than any point in the river-bed between those points. On either side the mouth of the sluice is boarded tight in the shape of a funnel, so that all the dirt sent from the face must find its way into the sluice, it has no other escape.

THE ELEVATOR.

The perpendicular "raise" of the elevator is 54 ft., the angle at which it is inclined to the point of delivery into the upper sluice requiring 78 ft. of pipe. The upper sluice is 180 ft. long at present, and will be lengthened as the dump requires and permits. The elevator is "packed" round the lower 20 ft. with hundreds of tons of huge rocks removed from the channel of the river by derricks, and dropped by them into place, so that it will be quite unnecessary to remove it during the spring floods, and all danger of "silting-up," &c., is amply provided against; thus, after the subsidence of a flood from the melting snow in the mountains in April and May, a very few hours will enable work to be resumed. With regard to the contents of the claim, the quantity of gold in the pay gravel can only be a matter of surmise. That it is very large is proved to demonstration by the results already obtained from the high rim-rock and the poorer top gravels, of which a small patch, about 100 ft. long by 12 ft. wide and 2½ ft. deep, has been prospected by rocking. Rocking is prospecting, not mining. The cost of production by rocking means an outlay of 10¢ for a result obtainable for 10¢ by the elevator, and however gratifying it may be to the shareholders to have ocular demonstrations of the large results obtained during our stay by a gang of Chinese, with an average of four rockers at work per day, it is bad economy and bad mining. Rocking is only used to prove, or in other words to sample, ground which can be moved by any cheaper method, such as we possess by the elevator. We brought home with us 153 ozs. of river gold, valued by our bankers at Oroville (Messrs. Rideout, Smith & Co.) as merchantable at \$18.30 per oz., or—\$2,893.23. Weighed at Messrs. Lloyds' bank to-day (17th Dec.) in the sealed bags in which we brought it home, it weighs 620¢, sovereigns English money. Nearly the whole of this parcel was taken out by the Chinese gang during our stay, with never more, and often fewer, than five rockers at work during the day, superintended by two American mining foremen, who took over the gold at dinner-time, and again at the close of the day's work, each day, and handed it each evening to Mr. Sanborn, the head engineer. We carried it each evening to the office and weighed it, and on the last day of our stay took the total to the bank, where it was weighed, valued, sealed by the manager, and counter-sealed by Colonel McLaughlin in our presence. We brought this home chiefly as unimpeachable evidence of the value of the top gravel of the claim, and as a complete answer to the ignorant, fatuous, or malicious statements that have been promulgated in London as to the wealth of the property. You must distinctly understand that our prospects of returns in the course of the next six weeks depend on weather. If fine, you may look for a large dividend; if stormy, and it is necessary to close for winter, the few days' sluicing will not give much, as it is all top dirt and preparatory washing to get the face of the mine into shape. In this case returns will not re-commence until about May. Delays there have been, no doubt very disappointing, but delays are inseparable from an undertaking of such magnitude, by far the boldest river mining venture ever yet attempted in California, if not in the world.

VALUE OF THE PROPERTY.

And now you possess a property of enormous value, with every detail for extracting its wealth perfected, and with a staff, from Col. F. McLaughlin down to the last labourer on the mine, picked for his special capacity in the work he is set to do—a staff, I venture to say, that could not be surpassed in California or elsewhere. No one is permitted to visit the mine without a special pass. No labourer is permitted to leave the point at which he is employed. No fermented liquor is allowed on the claim, and instant dismissal follows on the infraction of this rule.

CONDITIONS OF WORK.

The result is that 600 men have been employed on highly dangerous work, much of which has been on the face of precipitous rocks going down sheer 40 ft. to 60 ft., without one single life being lost. No man on the claim is in a position to give any reliable information as to what results are being obtained, except the two foreman miners, Mr. Sanborn, the head engineer, or Mr. Martin, who is in charge of the elevator, who report direct to Col. McLaughlin. Mr. Sanborn has most ably carried out the work agreed on between

Col. McLaughlin and Mr. Hammond Hall, who you will remember made the survey. Mr. Martin, superintendent of the elevator, Messrs. Tuhey and H. Turner, as foreman miners, Mr. D. A. Smith, in charge of the construction of the dam, and Mr. R. Smith deserve your thanks for the energy they have displayed in carrying to success so gigantic an undertaking, under a temperature all through the summer and autumn months often 114 degs. Fahrenheit in the shade, while in the river-bed it was often up to 150 degs. Fahrenheit. Nothing but the untiring energy of these gentlemen, directed by the ceaseless supervision of Col. McLaughlin and Mr. Geisse, could have placed you in the position of splendid success you now occupy, and much as we were disinclined to undertake so arduous a voyage at this season of the year, we are amply repaid for our twelve thousand miles trip, completed in forty days, by being able from personal examination of every detail connected with your property to enable you to put at proper value the false rumours that have been so industriously circulated, and to confirm the statements made in the prospectus as not only justified but even surpassed by the present condition of your mine. After the Feather claim has been cleaned up, the water rights created by the permanent head-dam will continue to yield large dividends to the company. The town of Oroville is situated so low that in times of heavy flood the Feather river flows through its streets. The country below and beyond Oroville is exceedingly fertile wherever water can be obtained for irrigation. An acre of ground worth \$20, becomes immediately saleable for \$200 when water can be brought on to it. The orange, lemon, citron, vine, olive, pomegranate, peach, and other fruits flourish, for all of which there is a near and ready market in the city (San Francisco), and the average return per acre of an orange plantation after six or seven years' growth is \$1,000 per acre from the irrigated lands of the valley. The exact survey line has not yet been determined, but this will be done during the present winter. We went over the ground, and the grade is clearly sufficient to produce the desired result. Added to this, the head of water from the end of the canal will afford any amount of power for milling machinery at Oroville.

WATER RIGHTS.

These water-rights will, therefore, remain a large and permanent source of profit to the shareholders, for water in such a climate is invaluable. This, gentlemen, is what we have to report to you on the points we were requested to investigate. Perhaps you may wish to ask our views with regard to the prospect of dividends in the coming year. When the Cape claim was worked in 1854-5, the part just close to our head-dam yielded (with much less efficient means of saving gold, an average of about 5,000¢ per 24 hours, and from evidence we obtained while putting in the foundations of the head-dam, it is certain they did not crevice the river bottom. Their head-dam went away in a sudden flood, before they had time to do this. You may therefore fairly estimate that our returns from the re-commencing operations, after the spring floods (say about the end of May) will, at least, average as high and probably higher than that figure. So that from May to the end of Sept., you will receive the capital of the company many times over in dividends. This is the opinion of the best river gold miners on the spot, and they are by far the best judges. We know that Ridwell's Bar, a few miles above, yielded \$55,000,000, or nearly 11,000,000¢ sterling. That Long's Bar, which is on the upper side of the Golden Gate head-dam and adjoins it, yielded upwards of \$10,000,000, or 2,000,000¢ sterling. You must form your own opinion—I give you the data. Of course those who have not got shares and wish to buy them, will discredit any estimates; but having seen what I have seen, and heard what I heard, I am inclined to the belief that Gates and Feathers claims, are fully as rich, and capable of being much more efficiently worked than were these old claims. The Feather claim is now perfectly equipped in every detail. (Cheers.)

The CHAIRMAN: You do not wish us to understand that the whole of the river bed is equally valuable?

Mr. KIRKPATRICK: I am inclined to think that you will not even find it equally rich, but in some places you will take out 20,000¢ in a day. I have not a doubt about it. These estimates are the estimates of the best men out there, but those who want to buy shares cheap will discredit my statements. We have now in the Feather claim

A PERFECTLY EQUIPPED UNDERTAKING.

and the moment the floods are over the preparatory work will not take a week, and we shall go to work in May with nothing to stop us until the end of Sept.

The CHAIRMAN, in reply to a further question as to the telegram, said it reached him at 12 o'clock yesterday, but he was not in the office when it came. It ought to have arrived this morning. It was not shown to anyone, and never left the office except to be sent to him.

A SHAREHOLDER: How many days' sluicing have there been?

The CHAIRMAN: On Dec. 8 we had a cable saying we would be sluicing on the evening of the 9th, and the storm occurred on the 19th, which filled the claim. It is evident there cannot have been more than a few hours' sluicing. The storms must have extended over several days to have filled the claim. He would be working on the upper portion which consists entirely of *débris*.

VIEWS OF SHAREHOLDERS.

Mr. CUFF: I think what we have heard is satisfactory. You have asked our opinion with reference to the cables. Now, I think they might be considerably reduced and many of them dispensed with, whilst the postcards might be given up entirely. At the same time, I think the news you receive of importance should be communicated to the papers and the Stock Exchange. I was sorry at the light manner in which you spoke of our being able to get more capital, supposing all our own is expended. I hope you will carefully avoid putting this company in the power of any one individual or bank. If you run short of money you had better come to the shareholders although I hope it will not be necessary. (Cheers.)

The CHAIRMAN: I am glad to hear that expression of opinion about the cables. It will justify us in not sending out as many cables in the future as we have done in the past.

A SHAREHOLDER: Any cable of sufficient importance to send to the Stock Exchange should be sent to the shareholders.

Mr. HOPKINSON: I think the fuller and more frequent information the shareholders receive from head-quarters, the less likely they

are to pay attention to absurd rumours got up to disquiet their minds. It would be most undesirable for the shareholders to be continually interrupting the work of the office by making calls, so that the more frequently we get information through the post the better. even when there is no news, for no news is very often good news. (Laughter.) I think we ought to have a card every week. I suppose that the re-opening of the mine in May depends upon the fall of snow during the winter. What will be the difference of time supposing we have a mild winter like the last or a severe one like the year before? Mr. Kirkpatrick: At the end of May the canal will be able to carry all the water, or if not it will within a fortnight's time whatever may have been the weather during the winter.

The CHAIRMAN: I understand you to leave the matter in our hands, for if you can trust us at all you can trust us to deal faithfully with you in the matter of information.

WHY WORK FOR NOTHING!

A SHAREHOLDER thought that the directors might forego their fees. Mr. HOPKINSON: I should be very sorry to take my time from my business to sit for hours discussing the matters appertaining to this company, and then to be told I am not to be paid for it. Our directors are business men, and I protest against the unfairness of asking them to give up their time to earn money for us without payment. (Cheers.)

The CHAIRMAN: I must have attended at least 150 meetings, formal and informal, for this company.

Mr. J. H. A. SMITH: In the colonel's report (Nov. 30) he states that he has obtained \$2543 of gold, and says: "All the work mentioned will be done with the elevators in one hour." Does he adhere to this estimate?

The CHAIRMAN: He has not been at work at the bottom of the gravel from which he expects the good returns.

Mr. SMITH: Then you do not adhere to the estimate.

The CHAIRMAN: We do not until its conditions are fulfilled—that is until we get into the pay gravel.

The report was unanimously adopted.

On the motion of Mr. HUSBAND, seconded by Mr. SMEDLEY, the auditors, Messrs. Jackson, Pixley, Browning, Husey and Co. were re-elected.

Mr. HUSBAND: In the event of this company requiring more money, I hope heed will be given to the opinion of Mr. Cuff, that in no way should the property be pledged, or that our destinies should be committed to hands in which we desired them not to be placed.

The CHAIRMAN: I thought I had made that clear, but you may depend upon it we shall do nothing to jeopardise your interest or our own.

THANKS TO MR. KIRKPATRICK AND MR. HARVEY.

Mr. W. A. ELLIS (director): I propose a resolution which will be received with cordiality by everyone, and that is a warm vote of thanks to Mr. Kirkpatrick and Mr. Harvey for having gone out in the interests of this company to report to you on the state of affairs at the spot. I do not think we could have selected any better representatives for the purpose, or those who could have brought us back a more lucid report.

A SHAREHOLDER: I second that motion, and wish to add to it the sympathy of the shareholders with Mr. Harvey in his illness.

Mr. HEWITT (director): I support this resolution, because I am probably better able than anyone here to estimate the value of the services these gentlemen have rendered. I, personally, on a previous occasion, travelled to Oroville from London, and inspected this mine intending to make the acquaintance of Col. McLaughlin, so that I might be better able to form an idea as to the trustworthiness of our manager and the prospects of the mine, and as you know I made a very favourable report of my impressions. In my footsteps Mr. Kirkpatrick and Mr. Harvey have followed, and I know the immense amount of exertion and strain, especially at this time of year, that falls upon any gentleman who undertakes a journey of that description. These gentlemen were merely recouped their actual expenses. I think we should give them a hearty vote of thanks, more especially as

MR. HARVEY HAS BEEN STRUCK DOWN IN THE COMPANY'S SERVICE,

and is in a most dangerous condition at this time, consequent upon his exertions on our behalf.

The motion was carried by acclamation.

COL. MCLAUGHLIN NOT FORGOTTEN.

The CHAIRMAN: We must not separate without a vote of thanks to our colonel. I have the most implicit faith and confidence in everything he says and does, and I am sure when we meet again next year we shall be praising him up to the skies, whilst those who have been ready to criticise him will either apologise or be silent. I propose a hearty vote of thanks to the colonel and his staff for the energy and ability with which they have conducted the difficult operations of the past year and a vote of confidence in him.

Mr. BORWICK: I second the resolution as one who has been to the mine and seen the stupendous pressure brought to bear upon Col. McLaughlin by day and by night to protect the lives of the employees, the property of the company, and to advance the interests of the shareholders.

Mr. KIRKPATRICK returned thanks, and the meeting closed.

The gold mentioned in the chairman's speech was then exhibited to the shareholders.

GOLDEN GATE ALLUVIAL SYNDICATE, LIMITED.

STATEMENT BY MR. KIRKPATRICK—THE POSITION OF THE COMPANY—SOME RECENT STATEMENTS SATISFACTORILY CLEARED UP.

THE third ordinary general meeting of this company was held at Winchester House, Old Broad Street, London, E.C., on Tuesday, Dec. 22.

Mr. Frank Hodgkinson (chairman of the company) presided.

In the absence of Mr. Harvey, through illness, Mr. ELLIS read the notice convening the meeting.

The CHAIRMAN: Gentlemen, after listening to the long and exhaustive speech by Mr. Pechey, at the Golden Feather meeting, and the report of Mr. Kirkpatrick, I think there is not much more to say. I will, therefore, call on Mr. Kirkpatrick to give us his report.

MR. KIRKPATRICK'S REPORT.

Mr. T. S. G. KIRKPATRICK said: Mr. Chairman and Gentlemen, in accordance with the request of the board, Mr. E. Harvey and myself left London on Nov. 7th, reaching New York on the 15th, and, proceeding the same afternoon to California, reached Oroville on the 20th, making the entire journey without a single stoppage on the road. The reports sent over lately by Col. Frank McLaughlin, together with his answer to a series of questions propounded to him from London, so completely cover the whole ground that, beyond confirming those reports, little remains to be noticed. Unfortunately, we arrived too late to see the dry river-bed, as a heavy rainfall at the mine, the day we left England, had rendered it necessary to open the flood-gate at the head-dam to relieve the flume. We found the head-dam an extremely well-built and, for our purposes, practically permanent construction, which, with ordinary care and attention, will last for the next twenty years or more. It is so thoroughly safeguarded by precautionary wing-dams and other contrivances that all danger of sagging out by the action of the back-lash of the water flowing through the waste-gates or side-dam during the spring floods is entirely avoided.

THE DÉBRIS DIFFICULTY.

As you are aware the *débris* in the claim was found too difficult to clear out by hand labour, the small stuff running like quicksand and filling up as fast as it was taken out, and other methods will have to be resorted to to clean up the claim. That its contents will prove extremely rich when the lower pay gravels are reached is placed beyond doubt by the results of prospecting the poor upper gravel removed in working down to the deep pit. We have brought home 39 ozs. of gold dust, weighed and valued by our bankers at Oroville (Messrs. Rideout, Smith and Co.) at \$18.30 per oz., equal to \$710, which were taken out by panning in a few days just before the mine was flooded. This gold, as you will see, is of heavier and better quality (though obtained under precisely similar circumstances) than that of the adjoining Golden Feather claim, and, from a very close examination of the river banks, I have no hesitation in saying that, length for length, the Golden Gate will, in all likelihood, prove richer than the Golden Feather claim. The crevices crossing the river, and forming bars and hold-backs for gold, are more defined and more strongly grouped than in the Feather claim, in addition to which Golden Gate contains two deep pools, which have been fed for ages by the Rock and the Indian ravines, ravines which since 1850 have been worked over and over again, always profitably, and from which hundreds of thousands of dollars have been obtained by the workers. The impossibility of bottoming the cesspools, as mentioned above, prevented the reaching of the rich pay dirt, but

OF THE WEALTH CONTAINED IN IT THERE CAN BE NO POSSIBLE QUESTION,

unless every experience obtained in river mining is to be treated as worthless. Foiled in his attempt to succeed by hand labour, but never beaten, Col. McLaughlin has placed at the disposition of the company the Hendrick's reservoir his own private property, and also the Miocene water, also his own property, now loaned to the Feather Channel claim so soon as that claim is cleaned up; so that the results expected from the Golden Gate river-bed deposits are only temporarily postponed pending the clean-up of Golden Feather, while the value of those results is assured, both by the prospecting in the claim itself as well as the already achieved success in the Golden Feather. Meantime, as soon as he has taken down and stacked for winter the Golden Gate flume, Col. McLaughlin proposes at once to

ATTACK AND DEVELOP THE GREAT QUARTZ LODE,

which crosses the property, of which he made mention when here last year. This great lode is situated a few yards back from the precipitous ravine of the Golden Gate Channel on the north side, and was located three years ago by Messrs. Perkins and Light, under the impression that the Golden Gate claim did not extend beyond the river itself. They ran in a tunnel on the course of the lode 60 ft., put up a rise to surface 35 ft., and sank a winze 40 ft. on the incline of the lode, which is an angle (roughly) of 75 degrees, finding the lode, even at this shallow depth, paying expenses. As soon as the Golden Gate Alluvial Syndicate secured its property, Col. McLaughlin gave these gentlemen notice to quit, but they continued to work until the production of the title under the United States Patent, and the threat of forcible ejectment, proved to them the wisdom of a compromise, and the colonel permitted them to remove the buildings they had erected, and the plant and materials they had accumulated on the ground, in consideration of the developments they had made.

THE WORTH OF THE LODE.

The lode is about 4 ft. 6 ins. wide, and accompanied by a beautiful floodao, with two very defined walls, and intrinsically worth, if the present indications are confirmed, far more than the whole money expended by the company on its river works. Seen below water level, at the dry-bed level of the river, it is highly mineralised, but, as the *débris* was not removed, its course to the opposite side of the canon was not traced—on both sides the mountain rises rapidly. Owing to the prohibition of hydraulicking there has been, this year, a rush of prospectors for gold quartz veins in the immediate vicinity of Golden Gate, and several sets are now turning out very remunerative. An insignificant sum spent in development will soon resolve its value, and it may become an important factor in the company's possessions. With water power within a few feet, and everything at hand to work at a minimum cost, it is even at this moment a large asset, so that although the shareholders are temporarily disappointed in realising an immediate return for their outlay, as they were led to hope, the future of the results from the river-bed is placed beyond doubt, while meantime there is every probability of solid returns from the quartz lode filling up the interval which must elapse before the Feather

claim is cleared out, and the Miocene water diverted to Golden Gate. The thanks of the shareholders are due to Messrs. Dyer and Hartman for their energy in carrying out the works planned by Col. McLaughlin, who, with Mr. Geisse, has been unwearied in his endeavours to arrive at success, which is only now temporarily postponed, but which is secured by the diversion of the Miocene water. (Cheers.)

THE FUTURE OF THE COMPANY.

The CHAIRMAN: We sympathise with you very much in the disappointment we have all sustained, not only this year but last year. This company was organised on a basis of 50,000 shares, and we had to issue 15,000 extra on our first failure, and 15,000 more last year, which makes the capitalisation 80,000 shares, or 80,000%. If you look amongst the share lists of many companies you will find that that is comparatively a very moderate amount, so that we have plenty of opportunity of even increasing our capital when the time comes, that capitalisation to 100,000%, and so far as I am concerned I may state that a friend of mine has stated his willingness to underwrite the whole of it. As regards the quartz lode, I knew Col. McLaughlin long before this company was formed, and he always spoke of the quartz lode favourably, but, he said "It is nothing to the river bed. I do not know that there is anything in these accounts which needs explanation, but if anyone requires information, I will be glad to give it to the best of my ability. The largest item is the expenses at Oroville, but that extends over three years. The position at the present time is this—we have 6147. 16s. 3d. on current account, and 2,000% on deposit. We have husbanded our resources to the best of our ability. We have not had extravagant fees; they have only been 167. 5s. a quarter to each of us, and we have not taken any fees for the last quarter, because we felt it would be better to wait until the company was in a better position. Col. McLaughlin says it will take about 300% a year to watch the works, and prevent them being attacked by fire in summer, and other evils which might befall it. It will need a watchman to be there night and day. I am sure he has done everything he can to make this thing a success. We all share the great disappointment, and I am afraid it has carried a great deal of ruin into many households. I will now move the adoption of the report and accounts.

Mr. ELLIS (director) seconded the motion.

FAITH IN THE PROPERTY.

Mr. PECHEY: I came on this board two years ago, because I believed, and I still believe, that we have a most valuable property. I confess it has been a great disappointment to me, and to my friends who followed me, to find that owing to difficulties that could not be foreseen we have not been able to get any returns. I have lost my money, but I am not going to sit down like a child and cry over spilt milk. I was aware, and I impressed upon my friends, that it was a speculation, but I did not think it was going to turn upon this question of *debris*. I thought the colonel would be able to master the *debris*. The speculation I always had in my mind was the gold, but the result of prospecting has proved to me most conclusively that

THESE BEDS ARE ENORMOUSLY RICH,

and if we can only work them we shall reap a harvest beyond our wildest dreams. I do not think I can add anything to what the chairman has said. I sympathise with you also, but we must look at it as business men. We went in as a speculation. I am, perhaps, the largest loser in this room, but all I can do is to accept the situation, and believe in time to come we shall bring this thing to a grand success.

THE WATER QUESTION.

Mr. HOPKINSON: In the second page of the report it states that some arrangement may possibly be made between the two companies as regards the water. I wish to know what Col. McLaughlin means by stating such arrangements could be made. Is there any time during the working of Golden Feather when they will not require the water?

Mr. ELLIS said that in the Golden Feather Channel Co., Limited, at the present moment they had not made their canal the extreme length of the property, and what Col. McLaughlin meant was that at the expiration of the clean-up of the portion of the river bed, he would then turn his attention, while he was extending the canal, to the Golden Gate, and let this company use their water.

Mr. PECHEY said he was inclined to think what was meant by Col. McLaughlin was that the shareholders in Golden Feather, who, he assumed, were shareholders in Golden Gate, would, out of sympathy for the delay and the loss to the Golden Gate Co., allow them to use the water during the extension of the canal, but he (the speaker) as a shareholder in Golden Feather thought that as that company had a right to the water they had a right to use it.

The CHAIRMAN said he thought the interests were identical, and it would be a matter of negotiation, if the opportunity offered, to lease or allow the Golden Gate to have a part of that water whilst the extension of the canal was taking place.

A SHAREHOLDER: How do the board propose to work the company when the water is at their disposal?

The CHAIRMAN: I think I stated that when the time came there would probably be an issue of shares, and that there were parties here who were willing to underwrite the whole of them.

A SHAREHOLDER: What will be the charge for it?

The CHAIRMAN: I have not heard.

The motion was then put to the meeting and carried unanimously.

DIRECTORS FOREGO THEIR FEES.

A SHAREHOLDER: You stated that the directors had not taken their fees for the last quarter; are we to understand that the directors are not going to take any fees for the time we are not at work?

The CHAIRMAN: We do not propose to take any fees until the company is put upon its legs, and in full working order. I think then we ought to have fees. (Cheers.)

Mr. ELLIS: I have been asked to take the chair for a minute or two while I propose the next resolution. The retiring director is Mr. Frank Hodgkinson, our chairman, and I beg to propose his re-election.

Mr. PECHEY seconded the motion.

Mr. ST. STEVENS: What interest does the chairman hold just now?

The CHAIRMAN: I hold my qualification, and on the books there are something like 1,000 shares in my name. I suppose if any director holds his qualification it is quite enough.

A CHARGE.

Mr. ST. STEVENS: The reason I ask is that I have seen that gentleman before now walking up Broad Street, I have seen him talking to brokers, and I have known the shares go down two or three points in a quarter of an hour. It would please a great many shareholders if the chairman would leave the board, because it is a fact which cannot be denied that the chairman has during the last six months trafficked in these shares to a very large extent. I am a miner, and it is a profession I am proud of, but it has pained me exceedingly to see the property depreciated and become the toy of outside jobbers and inside brokers, simply as a ball thrown to and fro according to the trafficking. It is all very well for the chairman to say we have only 167. 5s. a quarter, when he can make 200% in a few minutes. (Hear, hear.)

THE CHAIRMAN'S DEFENCE.

Mr. HODGKINSON: I am very glad the gentleman has brought this question up, and I am here ready to answer it. As regards the number of shares, I have answered the question already. You will find, if you look, 1,100 shares in my name. As regards the number of shares you say I have been trafficking in, I may tell you I have been examining the record myself, and I find the last sale I made of Golden Gate shares was 200 on 12th Mar., 1891, at 2½. Now, answer that.

A SHAREHOLDER: It is easy enough to "bear."

The CHAIRMAN: Yes, but I have never been a bearer of the shares; but there are some shares I sold in May for a friend of mine. That is the last transaction I have had. I have perhaps bought 50 or 100 shares, and sold them at perhaps 2s. profit; but with that exception I have not made another transaction. You, gentlemen, have no doubt been reading the different papers that have been sent to me, but I did not think it was necessary for me to go to an editor and make an explanation. If any questions were to be asked I would answer them *circa voce*. It is stated I had trafficked in 11,500 shares. It is perfectly true that Col. McLaughlin came over here, and had a great many parties who had assisted him to establish the title and other purposes, to whom he had promised to give shares when the company was started. These 11,500 shares he asked me to take charge of as a friend. I suppose it would have been better if I had been deceitful and put them in the name of a nominee, but I did not take that precaution. As regards information, there has been a great deal said about getting information and being seen at brokers' offices. Are you not seen at brokers' offices? Is a director not to be allowed to sell any shares if he subscribes for more than he wants? I have been

UNJUSTLY TREATED.

I have bullied the shares, but I have never beared them.

Mr. ST. STEVENS: I am very pleased to have drawn such an explanation.

A SHAREHOLDER asked whether the chairman's dealings covered seven and a-half pages of the register.

Mr. HAWKINS thought they ought to do justice to the chairman by accepting his statement. He had stated he had not sold any shares since a certain date, and that ought to be sufficient.

After some further discussion on the point, Mr. ST. STEVENS said: I am very pleased indeed to hear the chairman's statement, and I have very great pleasure in seconding the resolution that he be re-elected. (Cheers.)

The motion was then put to the meeting, and carried with one dissentient.

The CHAIRMAN thanked the shareholders, and Mr. St. Stevens for his frank announcement. He liked to see a man say what he had got to say openly, and give the person a chance to answer it.

The auditors were then re-elected, and the proceedings closed.

NEW PIERREFITTE MINING CO., LIMITED.

RE-CONSTRUCTION SANCTIONED—LARGE RESERVES OF ORE.

AN extraordinary general meeting of the above-named company was held at the Offices, 154, Palmerston Buildings, London, E.C., on Monday, for the purpose of considering and, if thought fit, passing the resolutions following, viz.:—

"1. That it is desirable to re-construct the company, and accordingly that the company be wound-up voluntarily, and that Oliver George Browne, of 154, Palmerston Buildings, aforesaid, be and he is hereby appointed liquidator for the purpose of such winding-up." "2. That the said liquidator be and he is hereby authorised to consent to the registration of a new company, to be named the 'New Pierrefitte Mining Co., Limited,' with a memorandum and articles of association to be prepared with the privity and approval of the directors of this company." "3. That the draft agreement submitted to this meeting, and expressed to be made between this company and its liquidator of the one part, and the 'New Pierrefitte Mining Co., Limited,' of the other part, be and the same is hereby approved, and the said liquidator be and he is hereby authorised, pursuant to section 161 of the Companies Act, 1832, to enter into an agreement with such new company when incorporated in the terms of the said draft, and to carry the same into effect with such (if any) modifications as he thinks expedient."

Mr. W. G. Ashby

presided.

Mr. J. R. COOMES (secretary) read the notice convening the meeting.

A TECHNICAL OBJECTION WITHDRAWN.

The CHAIRMAN: Gentlemen, you will remember that on Nov. 18 last there was an extraordinary general meeting of the shareholders held in this room in order to pass certain resolutions to enable the old company to be transferred to a new one. At that meeting one shareholder was a dissentient, and as he took a technical objection to the proceedings of the board of directors, it was thought advisable to withdraw those resolutions at that meeting and to call this meeting to-day. I am very pleased to say that since that meeting negotiations have been opened with the gentleman in question, which have resulted in his withdrawing all opposition to the scheme. That being the case, and it having been fully explained to the shareholders

what the object of the meeting was, I need not detain you by making any further observations on that head. I think, however, it would be very well and proper for me to read a letter received from our manager, written on Nov. 29 last. It is as follows:—

IMPORTANT LETTER FROM THE MANAGER.

"Gentlemen, at your request I hereby have the honour of handing you a short report on your property at Pierrefitte. North Mine Pierrefitte: There are two main lodes in this mine, known as the 'old' and 'new' lode. Old lode: This ore body is again divided into the 'blende' and 'galena' lode. The latter has been worked from the surface to the No. 3 level (some 300 ft. in depth) for an average length of 150 ft., at which point the stopes were stopped to work on the richer discoveries which had meanwhile been made. The levels on this lode have been extended 200 ft. further, and have proved the lode to continue this distance, carrying on the average, 5 per cent. of lead ores with occasional pockets of solid galena. This block of ground, measuring 200 ft. long by 200 ft. deep by 3 ft. thick, representing, say, 10,000 to 15,000 tons of crude ore, constitutes the reserve actually opened up on the 'old' lode. This ore, though perhaps not very rich, is payable. The average assay for silver of marketable ore at this point is 27½ ozs. to the ton. Besides this, we have just cut the 'old' lode in No. 4 level by a cross-cut from the 'new' lode. Nothing really definite can be said of this point just now, but barring quite unforeseen circumstances, this cross-cut opens up. (1) 100 ft. by 100 ft. by 3 ft. of better class ore, say from 7 per cent. to 10 per cent. of galena or crude ore, and assaying in a marketable state 30 to 35 ozs. of silver to the ton. The estimated tonnage here is 2,500. (2) As soon as the level is driven the same distance as those above, there will be 200 ft. by 100 ft. by 3 ft., or say 5,000 tons of ore similar to that mentioned in the first calculation.

"NEW LODE.

"The new lode was first struck in No. 4 level. It is, unlike the old lode, a small, well-defined regular ore body, carrying very rich lead ore from wall to wall, for a length of about 200 ft. It is, in consequence, very cheap to work. This lode has been exhausted between No. 4 and No. 3 levels for the distance above mentioned, namely 200 ft. Above No. 3 the lode appears to die out. On driving further west on this lode another rich shoot of ore has been discovered. This one, although not quite so rich in silver, is very massive and of excellent quality. The extent of this shoot is not yet known. The tail of the No. 4 drive is still in good ore, and No. 3 is being pushed on through the intervening poor piece of ground to reach this second make of mineral. It is not possible to calculate the quantity of ore at this point, as its extent in height is yet unknown, but it is expected that it will reach at least to No. 3 level 100 ft. above. No. 5 level has been put in to cut the lodes 130 ft. deeper than No. 4. This level is now within 150 ft. (by survey) of the rich shoot of ore in the new vein. A winze has been sunk from the No. 4, which will enable us to work out about one-third of this ground before the 150 ft. are driven. To explain this, allow me to say that the shoot dips to the west, or away from the direction we are driving to cut it, so that although we are actually under the ore, in No. 4 level, the winze from this point has only carried ore with it for 30 ft. where it passed out to the west. We have thus 30 ft. by 200 ft. by 3 ft. of ore opened up and ready to break. This represents about 1,500 tons of very pure lead ore, averaging between 50 and 60 ozs. of silver to the ton. As soon as No. 5 has been extended the necessary length, 5,000 tons of ore will be opened up, if the shoot of ore remains the same length as above. Throughout the whole of this mine there are large quantities of blende ores. Owing to the irregular shape of the deposits, it is not feasible even to approximate their tonnage, but I can say there cannot be less than 10,000 tons now in sight, and as many more almost certain to be found by very little work.

SOUTH MINE.

The lode in this mine is of an average width of 30 ft., carrying blende and galena ores. The length of payable ore is 60 ft. The lead ores in this mine are very massive, and rich in silver, assaying in places as high as 70 ozs. to the ton. The ground has been stoped out to No. 3 level. No. 4 level is within 100 ft. of cutting the lode, and will open up 270 ft. of backs. This represents an approximate tonnage of 30,000 tons of ore, always supposing that the reef holds as good below as it has above. In the old stopes there are large quantities of blende ores which can be worked as soon as the machinery is ready. My opinion of these two mines is that they are only in their infancy, and that the ore bodies now worked will be found to continue both downwards and to the west. The lodes are by no means regular, either in dip, direction or width, and works of research may therefore occasionally be momentarily disappointing, but by keeping these well ahead as you are at present doing I may safely say that your output will go on increasing for years to come.

MACHINERY.

The plant at the dressing floors is in good repair, and in thorough working order. By the addition of a few biddles we could work night and day, and thus have a capacity of treating nearly double the ore we at present have at our disposal. The treatment of blende ores has hitherto been confined to handpicking and jigging the 'mine-fines,' and has not been able to keep pace, either with the actual output, or with the development underground. We have, therefore, large stacks of ore already broken, as well as the reserves in the mine. The blende ore contains magnetic iron, which, owing to its specific gravity, cannot be estreated by washing. I have, therefore, made some experiments with an electro-magnetic separator, which have been entirely successful. Works capable of treating 80 to 100 tons a day are now in hand, and I expect to have them finished by the end of Feb., unless the weather stops work.

ESTAING MINE.

Level No. 1 has been driven on the course of the lode for 300 ft. carrying galena and blende in payable quantities for nearly its entire length. The last 20 ft. of this drive are in exceptionally rich ore. A cross-cut to the south has been put out, and has just cut another reef, the value of which cannot yet be determined. Level No. 2: To cut the lode at 120 ft. lower than No. 1, is now being driven with all speed. I have a very high opinion of this mine, and think it will

prove a permanent and remunerative investment.—H. L. LAURENCE Manager."

I think it is a matter of congratulation to the new company, that they are enabled to take over such a mine as this on the report of our manager. We have no reason at all to doubt his capability of giving this opinion, but, as directors, of course, we cannot take any responsibility for the statements that he may make in it, although at the same time we have not the slightest doubt that all he has said will be fully carried out. It now only remains for me, gentlemen, to move the first resolution. As I stated just now, in consequence of having been able to make arrangements with our dissentient shareholder. We are now going to proceed under the 161st section, and not as we had previously intended to have done.

Mr. SPREATE (solicitor): Perhaps it would be well for me to state that as the opposition of the dissentient member is withdrawn, the re-construction will be carried out under the 161st section of the Companies Act, 1862, instead of in the way proposed at the last meeting. Under the present arrangement the shares in the new company will be issued direct to the shareholders of the old company instead of to the old company as was previously intended. All profits up to that date will belong to the old company.

Dr. S. W. T. WILLIAMS: You are going back, then, to your original scheme?

Mr. SPREATE: Yes; it is very preferable under the circumstances.

The CHAIRMAN: It will enable us to declare a dividend out of the profits made up to Dec. 31 this year.

Mr. BULLIVANT seconded the resolution, which was carried unanimously.

The CHAIRMAN then proposed the second resolution.

Mr. F. MORTON, jun., seconded, and the motion was carried unanimously.

The CHAIRMAN next moved the third resolution.

This was seconded by Dr. WILLIAMS, and carried unanimously.

INFORMATION UP TO DATE.

Mr. BULLIVANT: Perhaps, Mr. Chairman, it would be well to let the shareholders of the company have the fullest information we can give them up to the present time. You have heard read the manager's report of Nov. 29, and it would also be well to take a view of what we may expect for the next year. In a report from the mine dated Nov. 19—10 days previous to the one you have already heard—the manager says:—"For general information, I may briefly state that you can safely take the profits for the next year or two to be about an average between this year and last, as far as the lead ores are concerned. The new blende works ought to yield an additional 50% a day profit over and above the working expenses." That is a very important feature. "If the profits on the lead ores are equal to what they have been in past years"—I should say that our profits on those have been over 18,000%—and if the blende ores yield the profit, as he says, and I have no doubt they will, for he tells us we ought to be dressing, when the blende works are going, as much as 20 tons of dressed ore per day, which ought to yield fully the profit which he gives. Then there is another feature, the value of which each shareholder will be able to estimate for himself. We sent our last ores to be assayed in the usual way to Dr. Morgan, but the buyer was not satisfied with the return of silver he gave and requested for his own satisfaction that the sample should be sent to Johnson and Matthey for assay. It is satisfactory to us to be able to say that Johnson and Matthey have given 2 ozs. more silver than our buyer thought was in the ores. They write "Herewith we have the pleasure to hand you our report upon your sample of galena. We presume that you are aware that

THE MINERAL CONTAINS GOLD.

As, however, you have only requested us to assay for silver we furnish report accordingly." I need not say that we have sent the remainder of the sample to Johnson and Matthey to report upon the gold it contains. What it may be we do not know; but we live in hopes that it will be something worth having. With respect to Sir Robert Harding's objection last meeting, it may be thought perhaps a little inconsistent on his part; but, as trustee, I do not think that Sir Robert Harding could have acted differently to what he did. He had taken a responsibility upon himself which he was not at all anxious to increase; but he saw his way, provided he could sell a certain number of his shares so as to give the estate the benefit. I am happy to say that he offered them at such a price that I and my friends were only too anxious to purchase them. We consequently have purchased his shares. But to give you an idea of what our mine has done in the past, we have just to consider the shares held by Sir Thomas Dakin at the time of his death—about 3,400. I have no doubt that at that time they would have been glad to take 1% a share. Since then—three years ago—they have received dividend between 5,000% and 6,000%, and their shares to-day are worth 20,000%; so that the estate has not much suffered by the trustees acting in the way they did, and not disposing of them at the time.

The CHAIRMAN: The dividends you refer to were payable on the increased capital.

Mr. BULLIVANT: The increase in the shares to 4,000 was effected by dividing the unissued shares amongst the shareholders, so that the profits have been between 5,000% and 6,000%, and the value to-day would be at least 20,000%. I may say with respect to this Estaing Mine, that the manager says:—

"A level has been driven on the course of the lode 300 ft., carrying galena and blende in payable quantities for nearly its entire length. The last 20 ft. of this drive are in extraordinarily rich ore."

This is a separate mine altogether from that which we have been working, and it is one of the mines which Mr. Charlton surveyed amongst many others, and he said, no doubt, if it were worked it would produce good results. It is very important for us to know that after the little development that has been done since he was out there that this mine is turning out so richly. It leads us to hope that the other mines on which he has reported favourably will also turn out equally well; but that is entirely separate from the mine that we have been working, and that has yielded such large profits.

The meeting then closed.

THE NORTH-EASTERN BULTFONTEIN, LIMITED.

THE IMPROVED POSITION OF THE COMPANY—24,000,000 LOADS OF DIAMONDIFEROUS GROUND ON THE PROPERTY—DIAMONDS INCREASED IN QUANTITY AND QUALITY—LATEST TELEGRAPHIC ADVICES—THE AFRICAN REPRESENTATIVES SPECIALLY THANKED

THE ordinary general meeting of the North-Eastern Bultfontein, Limited, was held at Winchester House, Old Broad Street, in the City of London, on Tuesday, to receive the directors' report and statement of accounts to Sept. 30 last, and to transact the general business of the company. The transfer books of the company will be closed from 15th to 22nd inst., both days inclusive.

Mr. C. J. Posno

presided.

Mr. PERCY H. HORLEY (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN: Gentlemen, in meeting you to-day

MY TASK IS MUCH MORE PLEASANT THAN IT WAS A YEAR AGO, and before we attempt to arrive at the full meaning of the figures before us it may be useful to recollect in what position we were when we met last year, when the first work, which was mainly undertaken with the object of the systematic development of the property as a whole, was suddenly arrested by pretensions set up by rival claimholders, supported by a mining board, whereon no claimholder *other than themselves held a seat*. To what extent we were injured by this trouble, now happily ended, you will in some measure gather by looking at the statement dealing with the first half of the year under review. It shows expenditure, and no useful work, if any, to compensate for the heavy outlay, but we maintained the efficiency of the works, kept our staff together, and asserted the valuable rights we had *bona fide* acquired. During the second half-year when we were not so oppressed, and whereof it may be said that it was our first period of quiet possession, we made rapid strides. We produced diamonds, value 20,742*l.*, as against 8,800*l.*, whilst at the same time we increased our reserve on the floors by a value of 25,277*l.*, as against 1,075*l.* for the earlier period, and for the first time we earned a profit. We have now 93 claims cleared from all unprofitable top out of a total of 671 claims, and such 93 claims, or most of them, are in full operation at this moment, whereas presently a much larger number of claims will be available for profitable open quarrying. Turning to the balance-sheet, we find, on the credit side, that purchase cost of the 671 claims is 63,150*l.*, and that we have laid out no less a sum than 78,715*l.* 9*s.* 2*d.* on improvements, whilst diamonds on hand, diamondiferous ground on the floors, the cost of excavating the 93 claims in the open down to the blue, &c., account for 72,923*l.* 5*s.* 1*d.* Thus, we have spent full 150,000*l.* on the property—but what is the result—the result is that we have satisfied ourselves that we possess in the open 93 extremely valuable claims, equal, at least, to such as have changed hands at prices varying from 2,000*l.* to 4,000*l.* per claim amongst claimholders—the result is that we have other 578 claims, wherein the shafts and tunnels have proved the existence of blue ground at a depth of 600 ft. or more below surface. What lowest estimate can we put on such 578 claims, is it 500*l.* per claim? We would not willingly take any such price for them, for presently they may prove to be worth as much as the 93 claims, which are certainly low priced at 2,000*l.* per claim. If we reckon 578 claims at 500*l.*—289,000*l.*—and 93 claims at 2,000*l.*—186,000*l.*—and add the value of blue on floors—30,000*l.*—we find value, 505,000*l.* for an outlay of 150,000*l.*, which, added to cost of claim property, say, 70,000*l.*—gives a total cost of 220,000*l.* to what we have demonstrated to be worth at a most moderate computation half a million, and may, indeed, be likely to prove itself to be of much greater value when further developed. On the debit side of the balance sheet there is for capital paid up, 93,000*l.*; for balance of purchase money, 59,000*l.*; for claim rent and sundries, 15,000*l.*; for premiums realised on shares, 62,000*l.*; making up the total of 229,000*l.* If you approve of our suggestion to utilise this 62,000*l.* derived from premiums, there will remain no debit balance on revenue account, and we shall begin the new financial year with a clean slate, with 33,000*l.* to spare available for various purposes. There would then only remain some arrears, and the unpaid portion of the purchase-money to provide, but as a result of representations we have made to our landlords, they have consented to let the unpaid 46,433*l.* 6*s.* 8*d.* stand over (68,150*l.* less 21,663*l.* 13*s.* 4*d.* paid), and to receive for such unpaid balance of purchase-money 6 per cent. debentures, to be paid off in a period not exceeding 10 years, and forming part of an issue not exceeding 200,000*l.* Thus we shall have ample time accorded us, and I trust that you will agree that our landlords have behaved liberally towards us. The accounts in your hands are for the year ending Sept. 30 last—at that date there were shares issued, 92,868. I am happy to inform you that the balance of 7,132 shares has been placed, and a further sum realised over and above the par value of the shares. One of our largest shareholders has lately visited our property, and has expressed himself immensely pleased with our prospects. We have also a report from the company's consulting engineer, Mr. H. C. Pauling, which I think you will consider most encouraging. This report was made last month, and, therefore, brings us, so to speak, to the present day. Mr. Pauling says "Your company possesses

A LARGE BLOCK OF 671 CLAIMS

connected by your own tram line, with good floors, adequate offices, buildings, &c., and plant and machinery sufficient to haul and floor up to 30,000 loads per week, with washing gear capable of treating 18,000 loads per week. You have nearly 250,000 loads of diamondiferous ground on the floors, some of it poor top blue and mixed ground; but a large proportion of clean good blue. The existence of the mine has been proved by extensive underground workings which, at a depth of 500 ft. and 600 ft., have already proved 300 claims within the confining walls of the country rock. The greatest depth worked by any other company in Bultfontein does not exceed 480 ft., which is 160 ft. less than has been reached in the north-eastern Bultfontein. Three blocks of claims have been cleared, available for open working, viz., 15 claims at 70 ft. below surface, 23 claims 100 ft. below

surface, and 50 claims on the 140 ft.-level; the last two blocks adjoin each other and there is now an exposed face of blue ground of over 200 ft. in depth on one side of this block down in the open mine. From these workings it can readily be calculated that the company has proved over

24,000,000 LOADS OF DIAMONDIFEROUS GROUND

in the property. The company has won 39,118 carats of diamonds coming principally from yellow ground and *debris* which had to be removed to get to the blue in your open workings. The blue ground the company has washed is 23,000 loads, which yielded 6,400 carats, being an average of 22 carats per 100 loads, and valued at 20*s.* per carat, or, say 4*s.* per load; the total cost of winning and washing this blue-ground including claim rent, administration, and all South African charges is from 2*s.* 9*d.* to 3*s.* per load; by working to your full capacity this cost will be reduced. The result has, therefore, to the present shown a profit of over 1*s.* per load, and please note that the representations from your managing director and from your mine manager show that the full yield was not being obtained, as the ground washed was still to a great extent unripe. The manager of your mine, whose experience of the three mines of Kimberley, De Beers, and Bultfontein is second to none on the fields, is of opinion, which seems to be confirmed by his last washings, that the other clean blue on the floors, and especially the blue he is now placing there from the 140-ft. level of the open workings, will give a yield far exceeding that as yet obtained, and he also holds this opinion in regard to the blue ground on the 600-ft. level. The last advices from Kimberley show that they confidently expect the yield will be from $\frac{1}{4}$ to $\frac{1}{2}$ carat per load. Well, gentlemen, since this report was written, we have had

TELEGRAPHIC ADVICE

of 900 loads of blue of the 140-ft. level, yielding 350 carats, and a test washing of 20 loads of screenings of blue of the 170-ft. level, yielding 13 carats of diamonds, and we may therefore assume that the advices received from our local administration, as examined and reported upon by Mr. Pauling, were well founded, and stand confirmed by actual subsequent events. It is a feature that our yield per load has increased with depth. Commencing with 12 to 15 carats per 100 loads at the top, we have now obtained the splendid yield of 2,900 carats for 6,900 loads. In other words, we have steadily risen to 42 carats per 100 loads from ground only 140 ft. below surface. Our labour bears fruit. Another great feature is that the quality of the diamonds has kept pace with increase of quantity. Our thanks are due to our representatives in South Africa—Mr. Griffin, Mr. Gouldie and Mr. Mercer. I trust I have said enough to explain our position, past and present, but if I have overlooked any important point I shall be happy to supply such further information as shareholders may wish to obtain and I shall be able to furnish. I now beg to move, "That the report and statement of accounts as rendered be and are hereby received and adopted."

Sir GEO. R. PRESCOTT seconded the motion.

A SHAREHOLDER said that he supposed it was only proposed to utilise the premiums received on the issue of shares in the way that the chairman had mentioned.

The CHAIRMAN said yes, the premium only.

Col. ODDY asked up to when the rental was paid.

The CHAIRMAN said up to the end of Mar. last.

The motion was carried.

Baron ELANGER said that he had now to propose the re-election of Mr. C. J. Posno as a director of the company. In moving this resolution he hoped that he would not be accused of partiality, but he knew how much the success of the company was due to the efforts of Mr. C. J. Posno. (Hear, hear.) There could be no doubt now as to its success, and this was confirmed by the telegram that they had heard read. He was confident that they could look forward to

VERY GOOD DIVIDENDS

now Mr. Posno was one of their largest shareholders, and in looking after the interests of the shareholders he was looking after his own. He (the speaker) asked the meeting to give a unanimous vote, and to re-elect Mr. Posno as a director, and he hoped that that gentleman would long preside as the chairman of their company. (Hear, hear.)

Col. ODDY seconded the motion, which was carried.

Mr. WINKEL moved the re-election of the retiring auditors of the company, Messrs. Deloitte, Dever, Griffiths and Co.

Mr. ABRAHAMS seconded the motion, which was carried.

The CHAIRMAN said that he had now

TWO VERY PLEASING DUTIES TO DISCHARGE;

the first of these was to ask the meeting to pass a very cordial vote of thanks to their representatives in South Africa—(hear, hear)—who had worked wonderfully well in the face of the great many difficulties that they had had to contend with. They had devoted much time, trouble and attention to the affairs of the company, and he, therefore, asked them to pass a very cordial vote of thanks to the gentlemen he named in his speech, viz., Messrs. Griffin, Gouldie and Mercer. The second pleasing task that he had to perform was to thank Baron Elanger and Col. Oddy for moving and seconding the vote of thanks to himself; also for their kind expressions, and to the meeting for carrying the resolution. He assured the shareholders that in the future, as in the past, his best efforts would be devoted to obtaining a continuance of the confidence that had been reposed in him. The directors had at heart the establishment of the permanent success of the company. The calculation to which he had referred in his speech had been quite upset by the telegraphic advices that they had received. He had arrived at a value of half a million, but now that calculation was not worth the paper it was written upon, for, instead of taking that, they had 93 claims of the value of 2,000*l.* a piece. It seemed now probable that the whole lot were worth an average of 2,000*l.* per claim.

Mr. BROWN: Why 2,000*l.*?

The CHAIRMAN said that that was the figure that he based the calculation upon that he made a few minutes ago.

Mr. BROWN said that many of the adjoining claims of other people were valued at 5,000*l.* a-piece, and perhaps this company's might be equally valuable.

The CHAIRMAN said that might be so, as the telegram showed that they had a yield of 42 carats of diamonds per 100 loads.

Mr. BROWN seconded the vote of thanks to the South African representatives, Messrs. Griffin, Gouldie and Mercer.

The motion was carried.

Col. ODDY moved a vote of thanks to the chairman for presiding that day, and to the directors for their services.

The motion was seconded by a SHAREHOLDER, and unanimously carried.

The CHAIRMAN briefly responded.

The proceedings then closed.

LATEST CABLE.

Telegraphic advice for last week, ending 19th inst., announces 6,000 loads washed, yielding 2,550 carats of diamonds; increase of blue ground on floors, 3,200 loads.

THE NEW GOLD HILL CO., LIMITED.

PLENTY OF LOW-GRADE ORE ONLY WAITING A SUITABLE PROCESS TO TREAT IT—EARNEST CONSIDERATION OF THE BOARD GIVEN TO THIS POINT.

THE third ordinary general meeting was held at the Cannon Street Hotel, on Tuesday, to consider the accounts and the directors' report, and for the dispatch of the ordinary business of the company.

Major-Genl. E. F. Lloyd

(chairman of the company) presided.

Mr. RICHARD L. HOBBS (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, in formally moving that the report and balance-sheet to Aug. 31, 1891, be received and adopted, I will make a few remarks that may possibly give you some further information than that contained in this report and statement of accounts. Turning first to the balance-sheet at Aug. 31 last, you will perceive that our issue of share capital remains the same as the year previous. Upon the partly paid shares, an amount of 6d. per share only has been called up since the date of our previous balance-sheet of Aug. 30, 1890—which produces the sum of about 4,770*l.* (less calls, not yet received of some 470*l.*), placed about 4,300*l.* at the disposal of the company for working the property—certainly, not a very large sum to spend on opening out a large mine such as Gold Hill. A very considerable amount of development work has, however, been done with this money, which has permitted the expenditure of 4,46*l.* at the mine after deducting a small amount of gold realised, as you will see on reference to the credit side of the balance sheet—in addition to this expenditure a further outlay of rather under 850*l.* has been incurred under every head in England, after deducting the loss in exchange of 150*l.*, which, of course, is an item connected with the mine in America. You will observe on the debit side the item of 990*l.* 1*s.* 8*d.* due to sundry creditors—this is of course, mainly running accounts since discharged. You will also notice that shareholders have not paid their calls up in full, there being an amount of 473*l.* owing, a fair proportion since received. Passing to our report: Finding that we could not get on without a properly qualified mine manager we, last Jan., set to work to try and find one—as funds would not permit a high salary, and a man, to be of any use, would have to be trustworthy as well as efficient we experienced some difficulty—however, after full enquiry the Board came to the conclusion that Mr. R. Eames appeared to your board to be in every way suitable, and Mr. Eames seems to have given his careful attention to the work at the mine in the direction of efficiency and economy. His report which deals pretty fully with details of the operations, has, no doubt, been read by all. As expected, our serious difficulty has been, and I am sorry to say, still is, how to treat the large quantity of low-grade, refractory ore that there is at Gold Hill, in a profitable manner. We have investigated some processes, but could not satisfy ourselves that they would be satisfactory—so, on Mr. Eames taking charge we instructed him to make a thorough investigation into the nature of the ore, and report on its most economical mode of treatment—this he did, his report being sent in July, and from which I will read you a few extracts. After giving these suggestions full consideration—the directors came to the conclusion that they would not be justified in incurring more than a small extra outlay on trials, and the work done up to now is as stated in latest reports from the mine, dated Nov. 28 and Dec. 5, the new mill or rather new arrangement of mill will we hope, be in operation early in Jan., and the result of first crushings looked forward to with much interest by all. You will see by the report that our last manager's sanguine anticipations as to the quantity of rich ore discovered in the 160-ft. level have not been realised. The fact appears almost assured that the Roanoke and Southern Railway will pass through our land, on which they intend erecting a station. These advantages are obvious, and at some future date should add materially to the value of your freehold property.

"I have the following to submit for your consideration regarding our ores, and the treatment of same:—The present outlook is that we must look to the large mass of low-grade ore for permanent profit, and on this class of ore base operations. Amount of ore exposed: We have exposed in the Old Field, Barnhardt and Randolph Mines at least 30,000 tons of this low-grade ore. Should we be fortunate in the development of such rich bodies as have been found in the past, our success would be the greater, as it has been my endeavour to adopt a method whereby both rich and poor ores could be treated at the same cost. We have exposed and mined some high-class ore, but as it is limited at present, it is pertinent that operations should be based on the low-grade mass. Character of the ore: The ore is an argillaceous slate with some quartz, and contains sulphurets of iron and copper, carrying free and combined gold. Silver is with the gold as an alloy. Having investigated carefully such parts of the mine as are open, I take pleasure in referring you to the enclosed assays and determinations which, by the way, are few as compared with those made, but represent only the average, omitting any of a high character such as come from the rich shoots. In consideration of the low-grade of ore in the mine, the first step is concentration, which must be done simultaneously with the saving of whatever gold is free. To this end I have arranged my method, so that it will not cost more than 10 c. per ton in this connection. Value of the low-grade ores: The assays with other tests and trials have enabled me to give the average value, as follows, of the gold, silver, and copper:—Gold per ton of 2,000 lbs.,

\$230; silver per ton of 2,000 lbs., \$0 25; copper per ton of 2,000 lbs., 59 lbs. at 10 c., \$5.00; united total value per ton, \$7.55. Sulphuric acid: In the same connection and at very little additional cost sulphuric acid could be manufactured, and this should be used in the manufacture of fertilizers. Fertilizers: A separate company could be formed for this purpose, thereby making a market for the acid, which would add to the profit of the mine. In this connection fertilizers could be made for \$15.00 per ton and sold for \$25.00 or \$30 per ton. The cost of extracting the united values of this ore would be much less in proportion than the gold and silver alone. As the same management and nearly all of the manipulations would be done by men connected with the milling department. For this reason and the profit, I would advise the erection of the entire plant for cost of which I refer you to the enclosed estimate. Should you wish to recover the gold and silver alone, it would be necessary to adopt the "milling plant" only. Should you adopt the Hunt and Douglas method and the milling plant there, the item of \$1,000 for furnace in the milling plant would be omitted. Time to erect: The erection of the plant complete would take six months, the milling plant alone three months, and this last I must recommend the adoption of at once, as we cannot treat with any degree of success on our old mill owing to the lack of proper appliances and the cost of operating. New mill and works: I would propose to erect the new mill in close proximity to the Barnhardt shaft and pumping engine. The boiler would be stationed with the Barnhardt boiler, and the engine as near as possible, in order that the same engineers and firemen would operate both the mill and pumping works, while the addition of a small amount of fuel to that used for pumping would run the mill engine. The boiler I propose using is one of the two at present mill. The stamps are 10 of the 20. The crusher is one that we have on hand, and will be perfect with some repairs. The concentrators are two at the present mill. The other two we should purchase with other requirements enumerated on estimate. This would leave the old mill with boiler, engine, stamps (10), and crusher ready for operation if necessary. The immediate erection of the new mill is necessary for the milling of the good ore we have mined and exposed. Should you decide against the erection of the copper-extracting part of the plant for the present, please bear in mind that we can store the concentrates made for the future treatment, and that they will add to the value of the property. The Chilian mill we have on the property, and it will be used in re-grinding any of the concentrates and residue Tailings: You have several times called my attention to the treatment of tailings, and from your remark I judge you are under the impression that you have a quantity. This is not so. 500 or 600 tons will cover the amount that will pay to re-treat in the new mill. In looking over the estimate you will see that it is impossible to make the low-grade ores pay unless the united value of gold, silver and copper be extracted. Sulphuric acid is only to be made in case it can be used in the manufacture of fertilizer, although the furnace is necessary in connection with the copper extraction. A great deal of sulphuric acid could be sold in this state if concentrated. This would cost \$5,000 in addition to the \$15,000. This concentration of acid would cost but little in connection with the other works, and be another source of profit. The points for your consideration are, Will you base operations on the low-grade mass? If so, then you must adopt the plant, including the "milling" and Hunt and Douglas process. Will you go into the manufacture of fertilizers? If so you must adopt the acid making plant, otherwise the acid will be lost. This would cost, including the concentration plant for acid, \$20,000, and should give an estimated profit of \$20.00 per day. The milling and hand-drilling plant will cost \$17,000, and give an estimated profit of \$32.40 per day of 24 hours on 20 tons of ore. Should you conclude to go on the same lines and work the mine for gold alone, depending on the discovery of more high-grade ore, then the milling plant is all that is necessary, and will cost \$6,000. Sale of concentrates: Our concentrates from the low-grade ore will not bear transportation to reduction works unless in the immediate vicinity. By the accumulation of a lot, no doubt some works would be induced to erect near here. The concentrates from our high-grade ores we can treat to better advantage than by sale, so far as we know at present. In conclusion, I have to say that so far as low-grade ore is concerned this is a copper, instead of a gold mine, and that many thousands of tons have been worked for gold, which was only half the value of the copper contained. Let me assure you I have given this matter diligent thought and consideration. When I have found myself deficient, I have consulted high authorities, and am fully prepared to undertake the work which will prove more of a success than I have figured, owing to the fact of my omitting in the estimates any high-class ore. I have only to say that unless we strike large bodies of rich ore, my methods are the only known ones by which we can make a profit. Should you decide to erect the entire plant I would advise that we begin at once the mining of ore, in order to keep 500 to 1,000 tons ahead of the mill. During this work I would also advise the driving of the 300-ft. level towards the Old Field, as I feel confident we shall find some high-grade ore in that direction. Pending your decision regarding the matter of new mill, &c., I shall confine work to mining and repairs.—RICHARD EAMES, jun., Manager."

"Dec. 5, 1891.—New mill: The past week we have roofed in the amalgamating house, 24 by 63, and done some boarding up, with braces, window frames, &c. Have also cut up an old boiler we had to be used as a water-tank at the new mill. The battery frame will be put up next week. Then the ore floor, crusher and tables, with rockers, which will complete the job. Mine: Four men have been engaged in cleaning out the Old Shoe shaft, and have reached a depth of 33 ft. To this depth on the south-west the ore has been stoped out, but on the north-east end it is standing, and is good ore. Near the surface, where we first prospected it and got a return of 1 oz. to the ton by assay, it is very good, but small. As we go down the veins seem to make larger yet not so rich. But every foot we sink develops pay ore; hence I feel the importance of getting to the bottom of this old shaft, and opening up new stopes in time for the mill. From all I can learn, this shaft is about 50 ft. deep, and as it is about 50 ft. south-west of the Mauney shaft, we should have enough ore in sight to run us all winter, provided it holds good. Have not made any assays this week, because I wanted to have a good pile of ore to take my samples from, so that they would represent the value of the bulk of ore. Upraise: Two men have broken 10 tons of good ore this week, making the total height above the 140-ft. level of 24 ft.

No upward progress is made, because they have been breaking ore from the wall. The vein is about 2 ft. in width, and is turning out some good ore that is worth between 4 and 6 dwts. to the ton. The 380 ft. : In this level four men have sunk 2 ft. in depth by 14 in. in length by 3 in. in width on the foot-wall of the vein, which is 2 ft. wide and fine-looking ore. The vein is left standing until such time as it will be required at the mill. This ore will turn out well, as it is showing free gold and a strong vein that will turn out several hundred tons of ore, and there is no doubt that some of this ore is rich, as it is in the shoot of ore that was so rich near the surface. I am making all calculations to start the mill Jan. 4, 1892, for a regular business.—R. EAMES, jun., Manager."

DIFFICULTY OF TREATING THE ORE.

Mr. HOLLAND (director): I beg to second the motion for the adoption of the report. I think that document gives you pretty well the position of affairs at the mine as far as we understand it. We have concentrated our attention as much as possible on the opening of the mine, and particularly the treatment of the ore, because of the difficulty its refractory nature presents to the successful extraction of its gold contents. More than one process has been under our consideration and, indeed, is so at the present time. But of all these different processes, although they claim to be successful, the directors cannot think any of them come up to expectation. At all events, they do not seem to be adopted on a sufficiently large scale at any of the other mines to justify us in spending your money in erecting the plant, which is, of course, necessary to put any of them into operation. The report of Mr. Eames, read by the secretary, puts in a nutshell the position that so far he himself, since taking charge in May last, has not discovered anything in the mine beyond low-class ores. These, he considers, are as valuable for copper as for gold. Of course that means a very low value indeed for gold. So far he has not discovered high-grade ore; but I need not say that in mining, which is one of the most speculative things one can embark in, he might any day come across a body of rich ore, and that possibility is more to be looked upon in the light of a probability, from the fact that in old times, when these mines belonged to American proprietors, that is, before the Civil War in 1860, they extracted a large amount of gold from high-grade shoots of ore. Therefore, it seems to me that there is not only a possibility but a probability that if we can go on working the mines we may come upon similar shoots almost any day. The Barnhardt Mine, upon which we are working now, is not deep, and the section of the plan exhibited on the wall shows the work that has been done. I think there is a probability of meeting rich courses of ore, but we can only hope that may be so. The property had a good record in old times, and we are endeavouring to justify it by our experience. We are practising extreme economy with efficiency. A strike of high-grade ore would soon put a different complexion on our affairs, but it seems to me our policy is a true one—to persevere in the development of the property, and when any one of these new processes come to a commercially successful issue to adopt it. There is a fair prospect of obtaining additional capital, supposing the cost of this plant should exceed the uncalled capital. Only quite recently I observed an account of a new process for treating refractory ores which had been discovered in New York, and I wrote to the secretary asking him to communicate with our manager on the subject. Our attention is being constantly directed to different processes, and we hope before long something may be found to extract this gold to a profit. (Hear, hear.)

QUESTIONS.

Mr. HUTTON: In paragraph 6, you have an assay given by Johnson and Matthey as much as 11 ozs. per ton, in which there was so great a difference as to bring those 11 ozs. down to $\frac{1}{2}$ an oz. It appears to me that in this mine you have this established fact, that there is a large quantity of low-grade ore—a quantity almost illimitable; but you have not the means of turning it into dividends by extracting the gold. It must be amalgamated with copper and other substances. Then, I believe, it is of a slaty or slippery character, which is also an adverse feature. I gather that the tailings work on tribute has only realised about 90%. What are the daily wages in North Carolina? I know that in the West we are paying \$3 $\frac{1}{2}$ to \$4 per day. As to the balance-sheet, it seems to me that the only source from which you can pay the creditors (990%) is from the instalments in arrear owing by the shareholders of the Gold Hill Mining Co., Limited, 1,105%. 18s. 8d.

NO MORE ABOUT EDISON.

A SHAREHOLDER: Some time ago I saw that Edison had started some idea for treating the Carolina ores by electricity. Has anything come of it?

Mr. WHITEHEAD: Cannot these refractory ores be treated in a simple manner by chlorination works, which are used in different parts of the world, and have emanated from America? Why, then, are we to come here to find a process? I bought my shares on the report issued by your former manager, who stated that the ore was worth \$30 per ton, and the profit in treatment would be \$27. Where is that body of ore of which he spoke?

PROFESSOR HUTCHISON'S FAITH IN HIMSELF.

Prof. HUTCHISON said that if the board were not prepared to answer these questions he could. He disputed the fact that America had made all these inventions. Chlorination, for example, had been extensively tried for the last 25 years on North Carolina mines. Ores of this class required to have the copper first of all calcined, and other rebellious elements dealt with. The cost of dealing with the copper and converting it into chloride had shut up the Salisbury Chlorination Works. He had come here to advocate his own process—that of the Gold Ores Reduction Co. (Laughter.) It had done somewhat for this company. He had been at Gold Hill spot twice—in Feb. and in June—and could say that its low-grade stuff was better than that produced by some other mines he knew. He had spent 10% of his own in dealing with 2 tons of this ore, but he treated it not as a gold, but as a copper ore, and Mr. Hobbs now had the ignot of copper he gave him. He differed largely from Mr. Eames, who was a young man with but little experience. He condemned the management of that gentleman (particularly the removal of stamps) from all points of view, and predicted that Mr. Eames would make a good return, because he would scrape up

what was at the bottom of the stamps that had been changed. If he had to deal with this company he would put up a cheap plant and treat it as a copper ore. He should not have come here but that he found in the report no mention of what the Gold Ores Reduction Co. had done, and personally he had made more assays in a week than Mr. Eames had done in five months. He was the only man in America who could treat this ore successfully. (Laughter.) He maintained that the new Russel property was a success. The last cable stated they treated 230 tons of stuff, and got 6 ozs. by ordinary amalgamation, whereas his furnace extracted 12 ozs. of gold from 96 tons.

Mr. SMALE said that the expenses in London were very large, and exceeded the gold return. He also thought the directors might work for nothing, and wished to know how many meetings they had attended. £12,000 had been spent in two-and-a-half years.

A SHAREHOLDER: I cannot agree with Mr. Smale. How can he expect business men to give their services for nothing? and as for the product of the mine—it was its prospective value they were all looking to.

Mr. DAVISON: It would be satisfactory if you could assure us that if the crushing, which the present manager proposes to begin on Jan. 1, were satisfactory you would let him go on, but if not that the work should be stopped until you have an independent opinion. I was received by you very politely at a board meeting the other day, and mentioned that I knew a suitable expert with whom I thought I could arrange for a visit to the mine. He was going to America on other business, and, therefore, considerable expense might be saved. I am convinced his opinion would be received with great confidence by the shareholders.

CHAIRMAN'S REPLY.

The CHAIRMAN: What you say is exactly what we proposed to do two or three months ago, and we have been casting about to find an able professor who will report upon the mine, but the terms are exorbitant. One of them asked 600%, and that requires consideration. We have treated no tailings at present. The wages run from \$3 to \$1 $\frac{1}{2}$ a day. We have heard nothing more about Mr. Edison's proposals. As to the assays, there are four or five named, which ranged from 1 oz. to 11 ozs., and why the result was small is that our plant was badly arranged. We hope to overcome all that by certain changes we are making.

DIRECTORS' LABOURS AND PAY.

Mr. BOYLE (director): As to the question of directors' fees—I think that if directors put their names to the prospectus of a new company, and on the faith of them induce the public to invest their money, they are perfectly right not to take fees, and the shareholders may fairly ask them to abstain, but the present case is totally different. We are all losers by this company, and we are not original directors. The whole of the old board resigned, the consequence being that Mr. Holland and Mr. Tregellas, and myself, were asked to take charge of the company's affairs—the chairman joining us later. Other shareholders were invited to do so, but declined. I agreed, because I hoped to save my own money, and to do something good for my fellow shareholders. I have been to Gold Hill this year, and only charged the 25% actual cost from New York and back. I did all I could to find out the state of the case, and made a report to the board. One of the things I pointed out was that the mill was in the wrong place, and I did not require to be a mining expert (which I am not) to see that. That is the reason we have shifted it. I found a very large quantity of low-grade ore, and do not think Mr. Eames is correct in saying there are only 500 tons of tailings. The great thing we have to find is an efficient method for treating our

LARGE STOCKS OF LOW-CLASS ORE.

That is a thing we ought to decide about with great care, but it is constantly occupying our attention. I think you will agree that the directors act wisely in not rushing into the first process which is presented to them, and which is, of course, claimed to be successful. (Cheers.)

The CHAIRMAN: We have board meetings every fortnight, and more frequently when necessary.

Mr. HOLLAND said his seat was quite at the service of Mr. Smale if he would only favour him by taking it. He would have confidence in a report from the gentleman who Mr. Davidson had in his mind. In fact he asked him to go to Gold Hill more than two years ago, but his time did not allow him to do so. If Mr. Davidson could bring this visit about he would be doing the company a service.

A SHAREHOLDER: Would it not be to our advantage to have a sample of the tailings sent to this country for experimental treatment.

The CHAIRMAN: Five tons are on their way.

Mr. HOLLAND: As to what has been said about Mr. Eames: If we appoint a manager whom we consider to be capable, and who comes to us with excellent testimonials as Mr. Eames did, we are bound to follow his recommendation. It has still to be proved whether Mr. Eames is right and that proof ought to be forthcoming shortly.

Mr. HUTTON: I should be sorry if any gentlemen should devote their time to my service without getting a moderate remuneration. (Cheers.)

The report was unanimously adopted.

The CHAIRMAN proposed, and Mr. HUTTON seconded, the re-election of Mr. Tregellas as a director, which was carried. That gentleman assured the meeting that he had done his duty, and would still do so while he remained on the board, though Mr. Smale was welcome to his seat if he wished to have it.

Mr. Alford, the auditor, was re-elected unanimously.

THANKS TO THE BOARD.

Mr. GOODWIN: I have been a shareholder in this company for eight or nine months, and have been disappointed because I bought my shares under a misconception. I came here with the idea that this was not a properly managed company, but my views have totally changed. I think, with the ordinary energy you are displaying, you will yet make this company a success, and I hope to see it so. The shareholders wish you in your labours every success, and know that you will give the company your best efforts. I beg to propose a vote of thanks, sir, to you and to your colleagues.

Carried unanimously.

The CHAIRMAN briefly replied, and the meeting closed.

THE BRITISH SOUTH AFRICAN CO.

A TERRITORY LARGER THAN FRANCE AND GERMANY COMBINED
—REMARKABLE EVIDENCES OF WEALTH.

THE first annual meeting was held at Cannon Street Hotel, on Tuesday.

His Grace the Duke of Abercorn, C.B.
(president of the company), presided.

Mr. C. H. WEATHERLY (secretary) read the notice of meeting.

EXHAUSTIVE STATEMENT.

The CHAIRMAN said: Gentlemen, in rising to move a resolution adopting the report and accounts, I desire to express the real pleasure your directors have in meeting so large a body of their shareholders. When I tell you that there are upwards of 5,000 names upon the company's share register, and that no public issue of shares has been made, and no prospectus or circular of any kind sent out by the directors, it must, I think, be clear that the great undertaking in which we are engaged is recognised as of national importance and interest. I quite admit that shareholders meeting in the city of London constitute a body eminently practical, intent more upon the praiseworthy desire to secure and support a dividend earning investment than actuated by any high political or philanthropic motives; but I am sure you will allow me to remind you that the objects of this corporation are not wholly commercial. To us has been entrusted, by the express terms of the Royal Charter and the deed of settlement engrafted thereon, and by the action of her Majesty's Government, the administration of vast territories in Africa under British influence, and to us has been granted authority "to make laws and ordinances, to impose and levy taxes and raise revenue. These powers of government are given under the belief, which we intend to prove has not been misplaced, that by the incorporation of the British South Africa Co., an organisation is established which will tend to the suppression of the slave trade and to the opening up to the emigration of Europeans, and to lawful trade and commerce, all the enormous territories within the field of our operations. It is no doubt true that these powers of government and administration may, on terms, be taken over in course of time, and when by successful administration and development we have demonstrated fully the value of our possessions, the time will have arrived for the British Government to assume direct authority, or for some form of self-government to be conferred on the occupying community.

NEW SHAREHOLDERS AND OLD.

I may also remind such of you as have recently become members of the company—and I recognise that numerically you are a large majority—of which is well known to original members, viz: that we have always recognised that the heavy responsibilities undertaken by the company could not be considered, as likely, to become remunerative for some time. Although the company was incorporated somewhat more than two years since, this is our first general meeting. The deed of settlement provides for an annual meeting, but the first should be held during the present year. We have advisedly delayed calling the meeting until the latter part of this month, in order, that, if possible, we might have the pleasure and satisfaction of reporting to our shareholders the conclusion of important and very protracted and delicate negotiations, affecting the vital interests of the company upon which we have been engaged, and also in order that when we met you, as long an interval as possible might have elapsed since the commencement of vigorous prospecting operations in Mashonaland. The report sets out in such detail the circumstances under which Her Majesty was pleased to grant the Charter incorporating the company, that it is unnecessary for me to detain you by a recital of facts now well known and which make history, but I may tell you it was so recently as 1887 or 1888 that Mr. Cecil Rhodes, the present Prime Minister at the Cape, and our managing director in South Africa, conceived the grand idea of marking red and securing for the British flag the vast territories north and south of the River Zambesi, then no-man's-land or anybody's-land so far as European Governments were concerned. The scramble for Africa had not then commenced, and it is well that before it had commenced Mr. Rhodes' foresight had secured the choicest portions for the British Crown. In furtherance of his aims the mineral concession from Lo Bengula which, with the interests gathered round it and acquired by its owners, formed the basis of the application for a Royal Charter, was obtained in October, 1888, and the Charter was granted a twelvemonth later, assurances having been given to Her Majesty's Government that not less than 700,000*l.* was forthcoming for the purposes of the company. Accordingly,

OUR CAPITAL WAS FIXED AT 1,000,000*l.*

Those mainly instrumental in the application for the Royal Charter and in the formation of this company were, of course, those who had at great cost and personal risk obtained the concession, or were otherwise interested in the country north of Bechuanaland, and it was arranged that this company should have absolute control over all such interests and interests that might be acquired, on the footing that the net receipts resulting from the operations of this company in Africa should be equally divided. The money risked by the concessionaires and others who initiated the movement for the development of Matabeleland was very considerable—some 50,000*l.*—and it is not to be forgotten that the adventurous spirits who first entered the country with a view to its development by white men, did so with their lives in their hands. Besides the cash outlay, other financial liabilities were undertaken. I do not suppose anyone in this room would be prepared to risk loss of life and loss of property without the prospect of very substantial profit if the adventure proved successful, and in the circumstances an arrangement for an equal division of net receipts was fair and reasonable. It submitted both the subscribers of the capital of this company and the founders to a common object and a common interest, namely, the development of the company's territories, and made the profits of each dependent upon success. In the early summer of last year when, for reasons to which I shall shortly allude, the company was embarking in large and expensive enterprises, involving immense outlay, it was suggested that, in view of a possible increase of capital, the rights of those entitled to the moiety of the net receipts for which this company has to account, and who were then incorporated under the title of the United Concessions Co., Limited, should be

acquired by this company for a 1,000,000*l.* to be satisfied by the issue of fully-paid shares of this company, so that if at any future time it should be found necessary to increase the share capital of this company by, say, another million cash, the receipts to be derived from the operations of the company would be available for dividend upon the entire capital, instead of a moiety of such receipts only being so available. The agreement referred to in the report was accordingly entered into, but it was made conditional on the sanction of the shareholders in the companies affected, partly because in a matter of such importance it is only right that the shareholders should be consulted, and also because many of those interested in this company, and some of your directors, are also interested in the United Concessions Company. The agreement was made subject to this confirmation before Dec. 31, 1891, but last year it was deemed expedient to extend the period for confirmation to the 31st of this month.

THERE IS NO IMMEDIATE INTENTION TO RAISE FURTHER FUNDS

by the issue of new shares, and in these circumstances, and for other reasons, it has been deemed better to extend the date to Dec. 31, 1892. Consequently, the agreement will not be submitted for confirmation to-day, and the policy involved in it does not come up for discussion. As you are aware, the expedition for the occupation of Mashonaland was organised in the early part of last year. Unfortunately, the diplomatic contests for African territories commenced just afterwards, probably stimulated to some extent by the evidence of value our adventure afforded to outsiders. The convention between this country and Germany respecting African possessions was made in July, 1890, and in the same month a semi-official communication appeared in the *Times*, which was the first intimation that negotiations were on foot between England and Portugal affecting the south of the Zambesi. As you know a convention was ultimately made by Her Majesty's Government with Portugal in June last. Engagements respecting Africa have also been entered into by Her Majesty's Government with France and Italy. With these treaties, and rumours of treaties in the air, it was essential that active steps should be taken to effect a complete occupation of territories we desired to secure and retain, and that we should not be content to proceed slowly and with merely commercial interests in view. Instead of gradually developing the country over which we had acquired rights and concessions which, it was thought, fairly precluded the possibility of rivals among white men, it became evident that it would not do for us to rely upon concessions with native chiefs alone in the face, particularly, of claims arising from new readings of International law, and we were compelled to effect something approaching complete and immediate occupation of large territories likely to be in dispute. Thus it has come about that we have had to expend in a little more than a year and a-half sums intended to meet an expenditure to be spread over several years, and which, though gradual, would have been amply sufficient for opening up and settling our colony, while side by side the requisite and necessary expenditure could have been made for developing the mineral and other resources of the territories. These observations apply with greater force to the south of the Zambesi, but also to some extent to northern Zambesi. During the

NEGOTIATIONS BETWEEN ENGLAND AND PORTUGAL

we were untiring in our efforts to secure the retention within the sphere of British influence of the territories we considered legitimately British, although we did not succeed in obtaining as much as we believed to be England's due, yet, no doubt, as the result of our exertions, and the proof of *bona-fide* occupation, we supplied both north and south of the Zambesi, the territories assigned to Great Britain have been considerably greater in extent than was anticipated when first the treaty negotiations commenced. I may instance Manicaland as a proof of this on the south side of the Zambesi and the Stevenson Road north of the Zambesi. This unexpectedly rapid outlay has not been without some advantages. Work, which would otherwise have been spread over a long period of time, has now been effected within the first two years of our existence, and the Matabele tribes, seeing our energy and the magnitude of our operations, recognised that it was useless to oppose us, and now there is very little likelihood of any interference from that quarter. We have established settled Government throughout the country, with all its requisite machinery, such as the appointment of administrators and magistrates and other officials, and the establishment of postal and telegraphic communication, so that now the commercial development will be upon a much larger scale, and much more rapid than originally contemplated. Our outlays have been large, but I am glad to be able to state that in the opinion of the board our present resources, including uncalled capital, are sufficient to meet the anticipated expenditure for two years from the date at which the balance-sheet is taken, namely, Mar. 31, 1891. It is reasonable to contemplate, and we do contemplate, that by the end of these two years, say the spring of 1893, our undertaking will be self-supporting. We have not sufficient particulars of the accounts since Mar. last to enable us to speak otherwise than in general terms, but we know where the great strain has been, and we know that this pressure will not continue, and is not likely to be renewed. The two largest items have been the maintenance of an exceptionally large police force, and expenditure in sending enormous food supplies from the south. Our report mentions the reduction of the police force to 200. Letters received by this week's mail point to a still further reduction, and to 150 men being sufficient for the permanent staff. As to the sale of food supplies sent up country, while we do not reckon on profit we look for the return of our outlay. I will read you a letter received by this week's mail from our South African secretary who is now at Fort Salisbury.

FOOD SUPPLIES.

"From the Acting Secretary, Cape Town.

"A large number of waggons are coming into Salisbury with food, and from calculations we have made, based on advices received from Major Tye, of what he will have already forwarded before Mr. Selous arrives at Tuli, we estimate that the actual number of additional waggons still necessary to complete the amount desired to be in the country will be about 44. Major Tye's first convoy of 32 has now reached Salisbury. Manica is provisioned for 300 men for eight months from the 1st. Oct., with the exception of three waggon loads of food going off

in a few days. Mazoe and Hartley Hill have also received considerable consignments, and more will be sent to them now that Major Tye's waggons are arriving. Victoria, owing to the new gold discoveries, will receive double the amount of food previously determined upon. By the end of November we hope there will be far larger stocks of food at all the centres than would be required by the existing population till the month of June next year. You may confidently anticipate, therefore, that unless Mr. Selous telegraphs that there are great difficulties in finding transport, there will be no recurrences here of last year's troubles. The very large stock of food coming forward causes a great deal of work and anxiety as regards the checking of its distribution and sale. I enclose copy of a letter addressed to Assistant Commissary Reid, with instructions regarding the checking of the issues of meal and meat, and pointing out some corrections which, on his figures being checked, were discovered in this office. The return in question was Mr. Reid's weekly state of provisions at Salisbury, showing what was on hand and what was advised, and the issue and sale of food during that week from his store. I am glad to say that the Commissariat reports come in regularly, and are rendered in a business-like and satisfactory manner. The prices at which food is being sold return a considerable profit to the company, and I hope after a consultation with Mr. Rhodes to reduce the price charged at the mining districts, where the reduction would be of considerable benefit to the mining population without interfering with local tradesmen, none of whom have as yet gone there.—F. R. HARRIS, Secretary.

Salisbury, Oct. 15, 1891."

REVENUE BEGUN.

Already there is a revenue of some 10,000*l.* a year collected from various sources in Mashonaland. As the country is opened up these receipts must increase. A very modest addition will make the civil administration in Mashonaland self-supporting, and put us in a position certainly as favourable as could be cited by any British colony two years after its creation. While, therefore, you must expect that your uncalled capital will be required, we see no reason why you may not dismiss any fears you have entertained of financial difficulties. The next anxiety is, no doubt, as to the prospects of the railway being made from the east coast through the Portuguese sphere into Mashonaland. You are aware of the obligations entered into by Portugal with Great Britain regarding this, and if you desire I will later on ask our solicitor to read and explain to you the various public documents on this subject. But it is sufficient for me to state that Her Majesty's Government are alive to the urgent importance of the line being made without delay, and that if negotiations now pending do not result in practical and possible arrangements, resort will be had to the terms of the Anglo-Portuguese Convention. We regret we are not in a position, as we hoped to be, to state to you to-day that the negotiations are finally and satisfactorily concluded. No efforts are being spared by your directors. As to the gold prospects, I need add nothing to the emphatic statements in the report before you. Later advices support the views there expressed. We hear of rich reefs found here and there, and of excited hopes, but we prefer to deal with the prospects as a whole. We receive, of course, an immense variety of reports and much gratuitous advice and many opinions, some of value from experienced miners, though not experts, and some from mere amateurs, whose qualification to speak is based on a scamper over the country, occupying a few months' time, during a portion of which the pursuit of game rather than gold has been the immediate excitement. You are aware that there have been difficulties with Portugal respecting rights claimed by that country on the east coast, and that there have been some collisions, but no serious importance is attached to these, and we have not dwelt upon them in the report. At the same time it is right to point out that the prospect of troubles of this character has prevented many of those who were members of the expedition last year turning their attention to prospecting work. The pioneers, as well as the police force, are liable to military duties in case of need, and it was not until July last that prospecting was commenced vigorously and in force. We are satisfied with the reports that have come home as to the gold, and are confident that as real work proceeds payable gold will be found. You are no doubt disappointed that more has not been done in respect of gold development. We are sorry for your disappointment, but we cannot own to the same feeling, for those who have charge of the business of the company know full well that the time has not been sufficient. I will read you a letter dated Oct. 7, received from our South African secretary, who is now settled at Fort Salisbury, which explains the latest views there.

GOLDFIELDS.

"From the Acting Secretary, Cape Town.

"Mr. Beit has written me two private letters, reporting very favourably on the recent discoveries of gold reefs near Victoria, which he visited and inspected. I am very glad also to inform you that Messrs. Robert Williams and Maund have returned from the Umniati region, where they have purchased properties. They speak in very strong terms of regret that this region should not have been visited by Mr. Rolker, and as they have returned with specimens taken by themselves from this district, I attach the greatest credence to their report. Lord Randolph Churchill has also made arrangements with Messrs. Frank Johnson and Co. for prospecting the Lomogunda and Victoria regions, whither a number of people are now turning their attention, and, altogether, since my last report gold matters have undoubtedly taken a turn for the better. Disappointments in connection with Mazoe and Hartley are now clearly explainable, in my opinion, by Mr. Rolker's researches, which show as follows—that these two regions being the nearest to Zumbo, the ancient centre of Portuguese exploitation, have been more considerably worked; and generally speaking, the presence of old workings, if carried to any depths, indicate that the best part has already been extracted. The quartz in these places has been of a sufficiently soft nature to allow of its being crushed with their crushing stones. The dense forests in Lomogunda's have prevented that district from being so thoroughly explored, and Mr. Williams informs me he has already seen cases in the Umniati region where the soft layer only has been extracted, leaving, in one instance, 6 ft. of hard and very payable quartz. The Victoria region is apparently virgin ground, and Mr. Beit's letter speaks in a very marked degree of the amount of visible gold which he has seen on the surface. In view of the number of prospectors who have already signified their

intention of visiting the Victoria Goldfields, and of the probable rapid increase of the mining population of the district, Mr. Vigors, a late member of the police force, and a gentleman who is personally known to Mr. Beit, who speaks highly of his qualifications, has been appointed Mining Commissioner at Victoria, and left Salisbury on Monday to take up the duties of his appointment. You will bear in mind a fact which is not often remembered, that very little prospecting, indeed, has been done in this country by the new comers. The pioneers were not freed until about Oct. 15 of last year, and few in number as they were, they were again called for service in the early part of Nov. in connection with the incidents which led to the arrest of Gouveia and d'Andrada; on their being released from this duty, the rainy season commenced and all prospecting ceased, and was not renewed till May, when they were again called up in connection with the Portuguese attack on Umtali; in fact, when I arrived here on July 25, the prospecting parties had only left Salisbury about a fortnight previously. What Mr. Rolker has inspected has been the result of only a few months' prospecting, and that, confined, unfortunately, as we now know, to pegging out claims over old workings and *débris* heaps left by the ancients. Mr. Perkins informs me that he does not know a country where gold is so universally found as in Mashonaland. It only wants, in my opinion, prospecting systematically and properly carried out to discover payable reef in some one or other of the many areas where gold can be found. Of this, the present results, though very disappointing, render me most confident. You cannot, however, realise, unless in the country, how absolutely essential it is to us to have a cheap and easy means of access to the East Coast. I enclose mines office weekly reports.—F. R. HARRIS, Secretary."

Salisbury, Oct. 7, 1891."

As regards

AGRICULTURAL PROSPECTS.

I need add but little to what is stated in the report. The deputation sent by Cape colonists was very successful, and that it should have been possible for such a deputation to survey the country is a signal proof of the great advance made since our occupation. I believe such a step with a view to colonisation is entirely unprecedented. It is a great satisfaction to be able to report the conclusion of the negotiations that have assured to this company the power to make a land settlement, and to grant leases and make sales. Town sites have already been selected at Salisbury, Hartley Hill, and Umtali, and no doubt a town site will be selected at Victoria without delay. In connection with these sites, occupation grants are made, each producing 12*l.* per annum. The alternative grants are made of these town sites, the system so well known in the United States being adopted, whereby alternate blocks are reserved to the company. I am told that the calculation made in our report, based on an average value of 3*d.* per acre throughout for 80,000,000 acres, is absurdly low. I am very glad to hear it, and so must you be. The criticism appears to be well founded. I am quite prepared to find that long before any substantial sales are made any offer to purchase at 3*d.* per acre will be laughed at as ridiculous. As evidences of real occupation and settlement, and that our territories south of the Zambesi are enjoying the blessings of civilisation, I may mention that ordinances have been prepared for the constitution of sanitary boards while the postal arrangements are so advanced that registered letters can be sent from Fort Salisbury, and a parcel post is about to be established. We expect shortly to bring our countries within the Postal Union and to arrange for the issue of money and postal orders. What has been done for the extension of the telegraph system has been fully explained in the report. You will agree that there can be no better aids to the development of a new country than the maintenance of telegraphs and the construction of railways. I have already spoken of the railway to the East Coast. The returns of the Kimberley Vryburg section opened in Dec., 1890, have exceeded the most sanguine expectations, and it is probable that even with the East Coast route open, the traffic returns for the Vryburg Mafeking section will produce a substantial profit. We may expect shortly to hear that steps have been taken for the commencement of this section, and it is to be borne in mind that when the main trunk line from Cape Town to Kimberley and Vryburg is thus extended to Mafeking, it will be the natural route for the productions of the western portion of our territories, and I am not afraid to own that I anticipate the time when this main line will be extended to the Zambesi. The report of the Colonial Deputation, already referred to and mentioned in detail in the report, ought to set at rest any obstacles to a settlement on the score of health. It seems quite obvious that any fever cases occurring on the high land have been caused by disease contracted in the low country, and, in many cases, I regret to say, by reckless exposure and want of reasonable care. Dr. Rand, the medical man, who has been so long in Mashonaland, wrote a letter under date, Oct. 7 last, which I think it will be useful to read.

HEALTH AND CLIMATE.

Fort Salisbury, Mashonaland, Oct. 7, 1891.

"I wish to put on record that the experience of last year shows it is in the highest degree dangerous for prospecting parties, transport riders and others, to leave Tuli *en route* for Mashonaland after the middle of Dec. and before the middle of Apl. Setting aside the physical difficulties of swollen rivers and heavy roads, there is absolute danger to life, for the fever of the low country between Tuli and Victoria is, in the rains, of a very grave type. Men arrived here in Apl. and May in a shocking condition as to general health, broken down and discouraged, when only upon the threshold of their work. This country suffers for this, being blamed for most of the sickness contracted *en route*. Further, per wagon there is no gain in point of speed, for many people who left Tuli in May arrived up as soon and often sooner than those who had left in the previous Dec. or Jan. It is much better that this fact should be made clearly known; it will save many lives and will spare the country much ill-apportioned blame.—R. F. RAND."

I will not trouble you with any observations respecting the territories north of the Zambesi. Nyassaland is not within our field of operations, but it is administered by the energetic Mr. H. H. Johnson, C.B. This gentleman has also the care of our country north of the Zambesi and is doing good work. He has only been in the country a few months, and it is too soon to say much as to the future. We believe there are large areas capable of bearing a white population, and this

view is borne out by the knowledge of what has been done in Nyasaland by the Scotch traders and missionaries. With regard to the accounts, I do not think I need trouble you with any observations. They are sufficiently clear. The balance-sheet is taken as at Mar. 31 last, a date somewhat distant, but inevitable, having regard to distance of our possessions and the time occupied in communications. We calculate that with our uncalled capital, and other assets in hand, including the food supplies, taken at cost, we have, as I have said, sufficient funds to carry us on to the spring of 1893. With regard to the food supplies, the expenditure on which has been enormous, I have already given you the views of our South African secretary.

CONCLUSION.

Gentlemen, it does not occur to me to add any more, but I shall be happy to answer any questions. We are confident of the intrinsic value of the properties in our charge that they will well repay fostering care. As it has been in the past, so it will be in the future, our earnest endeavour to safeguard the interests entrusted to us, with equal loyalty to Her Majesty and our shareholders. (Loud cheers.)

VIEWS OF THE DUKE OF FIFE.

His Grace the DUKE OF FIFE, K.T., who was received with cheers, said: I have very great pleasure in seconding the adoption of the report. After the exhaustive report which has been circulated, and the admirable statement of my noble friend in the chair, I feel that I will best consult your convenience if I refrain from making a speech. I may be allowed to say that I have never before been on the board of any public company, and should not have accepted the pressing invitation I received to join this board had I not believed, and did I not still believe, that this company has in view a great imperial object. (Cheers.) It means to secure for Great Britain one of the last great unoccupied places of the world, and one of the few in which a European population can thrive. (Cheers.) You have heard and read a clear statement of the extraordinary amount of work which this company has accomplished in the short space of two years. Every step forward in a remote country naturally necessitates a considerable outlay of labour and capital. Had that expenditure been stinted, hundreds of valuable lives might have been lost, instead of the very few which we have to deplore. Any hesitation, any stepping backward upon our part, would have had a most fatal effect upon the natives, who are naturally very much impressed by the steady resistless advance of the white man. The large expenditure which has been incurred is really true economy in the long run, because it has secured for us the perfect acquiescence of the natives—even of the warlike Matabele, with whom we have worked in perfect harmony. Some mistakes might possibly have been made, but my only wonder is that they have not been more numerous and more important, and that no fatal blunder has been committed, when you consider the gigantic task which this company has undertaken and accomplished. There are, of course, some hasty and impetuous individuals who expect that the day they land upon African shore they are going to tumble upon ready-made El Dorados, and they seem to think that this gigantic territory which our report tells you is

LARGER THAN FRANCE AND GERMANY COMBINED,

is going to be surveyed, mined, and the produce brought to market in the space of a few weeks. (Laughter.) I think as practical men we may to-day dismiss these dreams. (Hear, hear.) From authentic and absolutely reliable resources, we know that this country possesses large, fertile and healthy districts, and I believe that when there has been a sufficient time to test its mineral wealth and develop its railway communication, it will be found that the British South Africa Co. has made a vast and a valuable addition to the dominions which acknowledge our Empire's flag. (Loud cheers.) I have now great pleasure in seconding the adoption of the report. (Loud applause.)

A CORRECTION.

The CHAIRMAN: I want to draw your attention to a slight error in the balance-sheet, under the head of concessions. The Baines' concession, 10,046*l.* 11*s.* 2*d.* ought also to have included Sir John Swinburne's interest.

Mr. BERGTHEIL, who was indistinctly heard, was understood to say: I have listened with great delight to the chairman's address, for I have had a long experience of South African affairs. Thirty years ago England had not made up its mind in regard to South Africa, and many districts, now worth large sums of money—as, for example, Kimberley, might then have been bought for a 5*l.* note. While out there I have met Livingstone, and fitted out at my own expense an expedition, the experiences of which were published in a book at Cape Town. I have also assisted Mr. Baines and Mr. Mowatt, and discussed about these territories, which are now under our direction, with many of the German missionaries. I remained in the colony of Natal until it became English, and introduced the first emigrants there. I was a member of the Legislative Council, and assisted in making the first laws for that colony, and for these reasons I ask a patient hearing to-day. I prophesy good for the future of this company if conducted on the lines put down by the noble lord, and

A FUTURE UNEQUALLED BY ANY OTHER COLONY.

It has all the materials for a great success which will do honour to England and to all connected with it. Many of you have dealt in gold mines, and not all of you have been successful; but I will tell you how that has come about. Companies were started at the Cape, at Natal, and in the Transvaal, with small sums of capital—15,000*l.*, 20,000*l.*, and 50,000*l.*, and were doing well, but these same enterprises came to be floated over here with a cypher added on to each of them, and no wonder they came to grief. These companies were presided over, not by such a board as we have here, but still by men who respected their own position at the time. They came to first meetings like this, and held out golden prospects of fortunes to be made, but the difference between the prices paid and the sums at which the companies were brought out, has gone into the pockets of promoters, speculators, and others. It was unfortunate England did not hear soon enough of the Transvaal. I endorse every word that fell from the chairman as to the difficulty of colonising such a territory. When I joined the Natal Legislative Council the income was 4,000*l.*, and you know, or have an idea, of what that income is now.

ONE THING IN THE REPORT FRIGHTENS ME,

and that is the attempt to water our stock. We have subscribed one million sterling, and I object that this should be watered for any reason. How are we to get dividends if you go on watering the capital? That is my only objection to your report. I have given you the warning, and if you do not heed it, the day of reckoning will come when you will have abuse, and not praise, from your shareholders. (Cheers.)

Mr. GILBERT ELLIOT: I am a holder of 1,500 shares, and I read at page 19 of your report:—In 1890 the United Concessions Co., Limited, was incorporated, and took over the Rudd Concession and assets connected therewith, thus becoming entitled to the moiety of the net receipts resulting from the operations of the Chartered Co. in Africa, which, in view of the formation of this company, it was agreed the owners of the Concession should receive in exchange for the rights acquired from them by the British South Africa Co. That was equivalent from taking away from me half of any dividend you might earn. Perhaps that was right, perhaps it was wrong, I do not know; but this I do know, that a great transaction of that sort should have been put before the shareholders long ago. My interests and yours have been largely affected by the way in which the fully-paid shares have been issued. Only about 400,000 some time ago had been issued as fully paid up, but in this report I find upwards of 600,000 shares have been issued. During the time when 300,000 shares were issued they stood at a premium of over 2*l.*, and the shares subsequently issued were placed at a time like that. The people who got them at 1*l.* were able to sell them at 2*l.* and over, and that is why we have seen the shares of the Chartered falling from 2*l.* 10*s.* recently down to 1*l.* 5*s.* at this moment. This issue ought not to have been made without communication to the shareholders. The directors have allowed this great concern to fall into a watered condition; first, in regard to allotting to the United Concessions Co. a moiety of our profits, and then having made such an indiscriminate issue of shares that the market falls more than 100 per cent. This is the first time shareholders have had the opportunity of expressing their opinion, and a great deal has been done in the issue of shares which ought not to have been done.

THREATENED OPPOSITION.

Mr. BENNETT (solicitor): I represent the Matabele Co., which is interested in the agreement by which your capital has been doubled, and by which at the present time the Rudd and Rhodes Concessionaires are only entitled to, or claim to be so, half of any receipts have taken out their capital by taking 1,000,000*l.* of your shares. When that agreement comes forward for discussion, I wish the noble lord to understand that my friends protest against it, and, if necessary, take the matter to a Court of Law.

VIEWS OF THE SOLICITOR.

Mr. HAWKESLEY (solicitor to the company): I shall be very happy, if you wish it, to give such explanations as are in my power. The capital of this company, as the noble president has told you, is 1,000,000*l.* Of that capital, the first sum subscribed was 250,000*l.*, the whole of which was subscribed in absolute cash at par. At the time when the company was incorporated by Royal Charter, negotiations were on hand with a company well known in Scotland as the African Lakes Co. It was part of the scheme under which Her Majesty granted the Charter, that the territory north of the Zambesi, in which so much good work has been done by the Scotch missionaries, should in course of time be brought within the field of the operations of this company. That step has been taken since the incorporation of the company by an Act of Her Majesty's Government.

AFRICAN LAKES CO.

In connection with these operations this company has absorbed the African Lakes Co. on a basis which will be apparent at once to you when I explain that for every fully-paid share of 50*l.* in the African Lakes Co. this company has issued to the shareholders in that country 50 fully-paid shares in this company, taking in exchange a transfer of the shares in the African Lakes Co.; so that amongst your assets at the present moment you hold practically the whole of the shares in the African Lakes Co., and, of course, the assets to which that company is entitled. In a very few weeks—probably almost immediately after the turn of the year—the requisite steps will be taken for putting the African Lakes Co. into liquidation. The capital of that company, I think, was 30,000*l.* or 35,000*l.*—no very substantial sum. To that extent you will observe, fully-paid shares were issued without the actual sovereigns being brought into the coffers of the company, but something which your board think equivalent to the sovereigns—the assets of the African Lakes Co. That is a transaction by the board to which I apprehend no gentleman in the city will take exception. You have confidence in your board that they have got a fair equivalent for the shares they issued. Another operation, also, took place, to which it so happens it was necessary that the chairman should be asked to call your attention in the balance-sheet. You will find in the balance-sheet, under the head of "Baines' Concession," a sum carried out of 10,046*l.* 11*s.* 2*d.* That should have been, as the chairman has explained, "Baines' Concession and Sir John Swinburne's interests." Now, among other assets acquired, and which Her Majesty's Government stipulated should be acquired before this Charter was granted, was a Concession which had never been heard of, although granted many years ago, to the well-known traveller, Baines. That concession was in the hands of clients of my friend, Mr. Bennett, who has just addressed you, and which subsequently was vested in a company which is known as

THE MATABELE CO., LIMITED.

Now, in connection with the incorporation of this company, as I told you, the Government insisted upon the founders of the company acquiring that concession, among other concessions or rights which might interfere with the due exercise of the powers granted by Her Majesty. Negotiations ensued, with the result that the Baines' Concession was acquired by the founders of this company on these terms:—That the owners of the Baines' Concession should have issued to them 5,000 shares in this company, not with a liability to pay 1*l.* per share, but with no liability at all, the shares being issued as fully paid. In addition the owners of the concession stipulated for, and were accorded, the right to apply and subscribe for 10,000 fully-paid shares at par, paying cash for those just on the same footing as the

250,000. first subscribed when the company was formed. I don't think Mr. Bennett suggests that the 5,000 shares issued for that concession were issued without adequate consideration being received by this company. The directors consider they obtained adequate consideration, and I think that will be the general opinion. That is the only other case in which shares have been issued fully paid without the cash being received.

BAROTSI CONCESSION.

I think, though, there was one other case, and that was under the Barotsi Concession, in which shares were issued fully paid practically in the same way as for the Baines' Concession. I see nothing to which any exception can be taken with regard to those issues of shares as fully paid without the sovereigns in each case going into the bank of the company. Whether Mr. Elliot is under the impression that any other shares have been issued otherwise than against cash, I don't know; but he referred to shares being issued, and thereby watering the capital of the company. With the exceptions to which I have referred, no shares whatever have been issued by this company except against, in the cases of those shares which are already fully paid, the receipt by this company of 20s. per share sterling, or, in the other case, against 3s. and a liability on the part of those to whom the shares were allotted to pay 17s. when called; and, when I see around me so many well-known gentlemen, I do not doubt that when that 17s. is called it will be readily paid. Reference has been made to the statutory meeting. I should, perhaps, explain that this company is not under the Limited Liability Acts, and, therefore, is not under any obligation to hold a statutory meeting within four months of its incorporation. The president explained to you that under our deed of settlement the first annual meeting required to be held was to be held in the year 1891, and I venture to think, with great respect, that he has shown very good reasons why we have nearly arrived at the end of that year before troubling you to come here. I must deal with the question of

THE UNITED CONCESSIONS CO.,

I suppose, although there is no resolution to be submitted with reference to the conditional agreement. That transaction, I think, can be explained, and, I hope, as clearly as I have endeavoured to deal with the other points. As you have heard from the president, in his speech, the persons who submitted to Her Majesty the proposal that a Royal Charter should be granted were necessarily and obviously persons who were already interested in the territories dealt with by the company. No one can suppose that any gentleman in the street is going to take the trouble to incur the expense requisite to start a company unless he has got some interest already in the country to be dealt with by the company. That was the position here. The application to Her Majesty for a Charter was made by those who were the founders of this company—that is to say, the persons who obtained the concession which is so well known now in the City as the Rudd Concession, and other incidental and concurrent rights in the territories in question, north of British Bechuanaland. Now, then, do you suggest, or does any gentleman except Mr. Elliot, and possibly Mr. Bennett, suggest that the owners of those rights were to give them to this company for nothing whatever, and were themselves to subscribe their 20s. for every share that was issued to them? The proposition will not bear argument. What was the proposal that was made? Nobody could tell at the time of the application for the Charter what possible value in sovereigns to put upon the asset which the founders of the company had—that is upon the Rudd Concession.

THE BASIS OF THE CONSTITUTION.

Now, what was the scheme which is at the very basis of the constitution of this company? That the net receipts resulting from the operations of the British South Africa Co. when constituted by Royal Charter should be divided into shares. There was nothing to guide the founders. They said, "We will put in our assets; you put in your money." When they said, "You will put in your money," they put it in themselves to a very large extent, but said, "As against the money put in we will put in our assets, and we will divide what comes out of that common pool in equal shares." Now, you will observe that the amount to be put in was not to be less than 700,000l., which was to be available before the Charter was granted. That was the arrangement—half to the owners of these interests and half to the persons who subscribed the capital of the company. That is the position to-day. But gentlemen who have foresight, as I think you will agree, Mr. Cecil Rhodes has, if anyone has—(cheers) have said the position is this: You may have the Chartered Co. expending its 1,000,000l., and then when it wants more money it has either to issue debentures or borrow capital or issue shares—in whatever form it may be deemed expedient to raise the money. What has it to offer? It has to offer a moiety of the net receipts, which would be alone available for providing income on the existing 1,000,000l. and on the new capital. Assume for a moment that we issued a further capital of 1,000,000l., always against cash—disabuse your minds of any fully-paid shares being given away. There is no watering of such a character. If more money is required, and we issue 1,000,000l. capital next year—which God forbid?—what is the result. The Chartered Co.

HAS TO OFFER 50 PER CENT. OF THE PROFITS.

50 per cent. of the profits would then have to be divided between shareholders representing 2,000,000l.; the other 50 per cent. would remain, and go to those gentlemen who put their assets in as an equivalent to the first 1,000,000l. subscribed in cash. The proposal that was made in 1890, and which is still a conditional proposal, and will be brought forward sooner or later for your confirmation, is that the owners of the 50 per cent. represented by the assets put in would take their 50 per cent. without any deduction, although those who subscribed their 1,000,000l. would have to divide their 50 per cent. with the subscribers of the additional capital. Is it not foresight to say, "Before that time comes put us all in one boat; issue shares representing the second 50 per cent., and then, when further capital is required, the 100 per cent. will be distributed among the whole of the shareholders, and not the 50 per cent." That is the whole story connected with this United Concessions Company, and on the first opportunity which your directors have had they come before you and tell you candidly the steps that they have taken in your interests. This is the first time we have issued a report. You have heard the chairman say that this is the first time anything in the

shape of a piece of paper has been issued by this company giving any information whatever. I express my regret that the conditional agreement is not going to be submitted to-day for confirmation. It cannot be submitted, because of the wording of the report, and also because the time for its confirmation has been extended with the concurrence of the other parties to the agreement until Dec. 31, 1892. Any time before that date when it is deemed expedient you will be called together and asked to confirm or reject that scheme. I do not think there is any other point to allude to.

REPORT UNANIMOUSLY ADOPTED.

The CHAIRMAN: I beg now to move: "That the report of the directors and the balance-sheet of the company to Mar. 31, 1891, be, and the same are hereby, approved and adopted."

The motion was then put and carried unanimously.

The CHAIRMAN next moved: "That Lord Gifford, Messrs. Alfred Beit, George Cawston, and Horace Farquhar be, and the same are hereby, re-elected directors of the company."

Mr. ALBERT GREY seconded the motion, and it was agreed to.

Mr. BULLOCK moved the re-election of Messrs. Cooper Brothers and Co. as auditors of the company at a remuneration of 200 guineas.

MR. RHODES' THANKS.

Mr. F. R. THOMPSON: I beg to move a special vote of thanks to Mr. Cecil Rhodes. You do not know what he has gone through during the last few months. As one of the original concessionaires, I have been addressed by several shareholders, and within the last 10 days I have received 40 or 50 letters congratulating me on my forecast being so true. Through Mr. Rhodes going to Moshonland, everything has been satisfactorily arranged.

Mr. C. WILLIAMS seconded the motion.

The CHAIRMAN: We all know the work Mr. Rhodes has done in South Africa in connection with this company, and therefore it is unnecessary for me to do otherwise than put this resolution.

The motion was then put and carried, as was also the vote of thanks to the president and board.

The CHAIRMAN: I may say that I feel it a distinguished honour to be the president of this great company, and I also accept the great responsibility connected with the working of this company. I have only to add that it will always be the duty and pleasure of myself and my co-directors to do everything possible in our power for the welfare of this company, and to promote the interests of its shareholders, and not only that, but to uphold the integrity of Her Majesty and the Crown over those possessions which have come now under her dominion. (Loud cheers.)

This closed the meeting.

ZOUTPANSBERG EXPLORATION AND GOLD MINING CO., LIMITED.

FULL EXPLANATION OF THE COMPANY'S POSITION.

THE ordinary general meeting of the above company was held on Wednesday, at the Cannon Street Hotel,

Capt. V. Lovett Cameron, R.N., C.B.

(chairman of the company), presiding.

The SECRETARY (Mr. Thomas F. Dalglish) having read the notice convening the meeting,

The CHAIRMAN, in moving the adoption of the report and accounts, said: Gentlemen, most of you have doubtless read the report which has been submitted to you, so that I need only briefly refer to its chief points. In the times of depression through which we have been passing there has, as you are well aware, been no chance of realising any of our properties beneficially, either by sale or by floating sub-companies to work them, and, as you will gather from our engineer's report, it would not have been of advantage to spend money on further tentative working. Your board in this respect have been content not to spend money on further development of the properties, being advised that when the market improves they should prove valuable assets. Whilst, therefore, your directors have continued to watch over these properties, they have been carefully noting the work done by their neighbours, realising that whilst other people are proving their own properties, those of this company are practically undergoing the same process without expense to us. We know that the work done on the Eersteling farm adjoining the Frischgewaagd and Waterfal properties, and the reports of mining and crushings in the Murchison range and the Klein Latabi district strengthen the hopes as to the future of the Zoutpansberg mining properties belonging to this company. You are aware that the Bultjes Co. has been prospecting, at considerable cost, the Eersteling farm. The chief reefs of this property being the continuation of our reef, known as the Fair Maid of Perth, the result of their work will certainly enable us to arrive at some fairly definite conclusions as to what the Fair Maid of Perth reef is likely to turn out with deeper sinking.

MURCHISON REEFS.

With regard to the Murchison range, the news in respect of some of the reefs within this district is very encouraging, and mining activity there appears to be only retarded by the present enormous cost of transport. There is now every probability that this drawback will be removed, as there are great hopes from the construction of the Silati Railway, which is shown in the map that has been sent to you and which we understand it is intended to complete within two years from the present date. This line, when finished, will render the Zoutpansberg district the most accessible of all the gold mining districts in South Africa, as it is nearer to Delagoa Bay than Johannesburg is.

EFFECTS OF A REVIVAL.

I need not remind you that a revival of mining speculation and enterprise in this part of the Transvaal will be of material assistance to us in realising the properties we have in the district. Our own agents, who are taking charge of our property, may, having the great advantage of being on the spot, be able to find advantageous openings, enabling this company to participate in the expected revival of mining activity. At present the directors feel that they are acting with proper caution in not doing more than paying the necessary

licenses which are, and will continue to be, reduced, as far as possible, to a minimum, and putting on the property caretakers, who are keeping the board informed of, and in touch with, what is going on amongst their neighbours. In regard to the Klerksdorp property, lying in the Potchefstroom district, we told you last year that we were advised by our engineer that, through the reduction of working expenses, claims of this description might possibly soon be worked to advantage. In confirmation of this opinion it will be of interest to you to know that we are considering proposals which have been submitted to us to lease these claims. These proposals have come from people on the spot who are best likely to know the value of properties in their immediate neighbourhood. Whether these proposals result in business or not, it is at least satisfactory to know that our policy of holding this property, without incurring any further present expenditure in development, has also been the right one. During the course of last year the directors carried out arrangements by which Mr. Gemmel and Mr. Mitchell, two of the local committee of this company, were despatched to Mashonaland, feeling that it was most desirable, and would certainly be satisfactory to the shareholders, that this company should not be behindhand in participating in the mining enterprise which was being diverted to the north; and, at the same time, that it would be of great advantage that the prospectors of this company, who are large shareholders themselves, should have an opportunity of carrying on the special business for which the company was originally formed, *ie*, that of exploring, prospecting and obtaining first-hand, through the company's own prospectors, good mineral or other properties.

CONFIDENCE IN THOSE ON THE SPOT.

Your directors have the fullest confidence, from their knowledge of Mr. Gemmel and his associate, that they will not take up any properties unless they have proved them to be rich and payable. This expedition was organised by the Murchison Crown, &c. Co.'s joint account with this company. An arrangement was also made to locate 100 claims in Maica, by virtue of a concession from the Mozambique Co., accounts from this district being very encouraging. The directors have only just heard that Mr. Gemmel has returned from Mashonaland and Manica, and they await his news. If he has located any claims there for the company, it may be considered as a sure sign that payable gold reefs have been discovered, which, on the other hand, should he have returned without locating anything, there will be no cause for regret, as in the present state of the mining market it would be the height of folly to incur expenditure in prospecting properties in the remote and undeveloped districts of Mahonaland, unless those properties were of an exceptionally good and promising nature. While the year just passed has not proved favourable for realisation of properties, it has certainly been one in which there have been opportunities of obtaining interests which at other times would not have been available. Our agent in the Transvaal has had before him proposals of all kinds, the examinations of which would have entailed much labour. Offers of properties containing coal and oil have been made, and the properties have been inspected, journeys undertaken into Zululand and elsewhere, while the many re-constructions that have taken place among the Randt Mining companies have been carefully inquired into, so as to see if there was an opportunity for this company to intervene on favourable terms. Some of the properties were not deemed good enough; for others the prices asked were too high. But all this work has not been thrown away, for an amount of available information has been accumulated, which will enable your board to make the most of the opportunities which may occur in future, as we now know pretty accurately the real value of these properties, and might either acquire them at a moderate price or assist their present owners in their development and sale.

KATANGA BUSINESS.

Whilst, however, no business was taken up through the agents in South Africa, your London directors have been fully occupied with the investigation and negotiation of the Katanga business, which I will now proceed to relate to you. You are aware that the original object of this company was to explore through their prospectors the northern parts of the Transvaal and districts to the north of the South African Republic. The Goldfields of South Africa acquiring Lobengula's Concession (followed by the formation of the Chartered Co.) precluded this company obtaining any foothold south of the Zambesi, and beyond sending a mining expedition to locate claims in Mashonaland, as I have related above, there was nothing that could be done in that quarter. The board, however, after much consideration, determined upon the policy of securing interests in some large tract of African territory for this company, a territory, if possible, which should combine trading and traffic resources in addition to those of mining.

RESEARCHES NORTH OF THE ZAMBESI.

In furtherance of this object they made careful investigations into the native territories north of the Zambesi, seeing that all territory south of the Zambesi had been practically acquired by the Chartered Co. The result of these researches led them to fix their attention on the still unexplored dominion of the Congo Free State, and ultimately through the Murchison Crown Co., in whose business we have a half interest, we joined hands with a group which negotiated at Brussels, through me, for the acquisition of the south-easterly portion of the Congo Free State. After very prolonged and arduous negotiations, which occupied me personally for eight months in Brussels, Paris, and Berlin, assisted also by others of the directors, we were at last successful in securing, in combination with a group of influential Belgian companies, banks and capitalists, the concession of Katanga, in the Congo Free State. With the main particulars of the constitution of the Katanga Co. you have from time to time been fully acquainted, and I think you will agree with me, and from the information I am able to give you with regard to this country, that we have secured from the Zoutpansberg Co. a very important stake in South Central Africa. In the first place I must ask you carefully to note that the capital of the Katanga Co. with all its possessions, commercial, transport, agricultural, and other rights, both above and below the surface, is only £120,000, whereas the capital of the Chartered British South Africa Co. is £1,000,000, which it is alleged carries only half the net receipts from the mining rights of the territory over which Messrs. Rudd and

Rhodes may, at the time, have obtained concessions. Further, Katanga will give large returns irrespective of mining undertaking.

CHAIRMAN'S TESTIMONY AS TO VALUE OF THE COUNTRY.

You will see from the map the extent of its territory, and be able to compare it with that of the Transvaal and of the British South Africa Co. Mashonaland territory, and get some idea also of its size from comparison with England. Of the country I can speak from personal knowledge, and I can bear witness to its value. It is known as the best ivory-producing country in Africa, and the diversion of the ivory of this region from the east to the west coast has been one of the reasons of the remarkable increase of exports of ivory from the Congo. Coffee and spices grow wild. Gums, oils, drugs and fibres can be collected, and only require sufficient means of transport to be exported at a profit. Of indiarubber alone there is an enormous supply. Transport is, as we all know, one of the great needs of Africa. In 1886 the carriage by porters alone past the Falls which divide Stanley Pool from Matada was unorganised, and the exports from the Congo for the last six months of that year was as follows:—Ivory, 18½ tons, value 14,932*l*. above falls; palm oil, 461½ tons, value, 8,310*l*.; palm kernels, 1,018 tons, value, 23,610*l*.; indiarubber, 18 tons, value, 3,02*l*. above falls—17,952*l*.; weight, 36½ tons, between 13,000 and 14,000 loads. Now, within the last six months of 1891 the exports were:—Ivory, 180½ tons, tenfold increase, value, 186,755*l*. above falls; palm oil, 2,304 tons, tenfold increase value, 45,04*l*.; palm kernels, 6,530 tons, tenfold increase, value, 70,520*l*.; indiarubber, 123½ tons, tenfold increase, value, 22,400*l*. above falls—29,155*l*., 303 tons, equal over 113,000 loads, or six times over the last figures I have just given. In 1887 the Congo Free State undertook the organisation of transport, and 2,000 porters per month were supplied. In 1890 the number had risen to 7,000 per month. What the numbers now are I cannot tell, but two fresh routes have been opened in order to engage more tribes in the work, and establish new stations in order to supply them with provisions.

TRANSPORT.

This is still insufficient, and although they have locomotives running over 26 kilos of the railway between Matada and Kinchassa, the worst portion of the line, it has been found necessary to devise other means to cope with the great increase in trade, and a waggon transport will be established during the ensuing year. A further proof of the marvellous progress that has been made is that 34 steamers are now running above the cataracts on the Congo, and if you will open your maps you will find the points upon which steamers are regularly trading. Two of these steamers, the *Rio des Belges* and the *Auguste Beernaert*, are now the property of the Commercial Syndicate du Katanga, a company constituted by the Katanga Co., joint account with Haut Congo Co. to open up the resources of Katanga. Care in selection of the agents, development of the resources of the country, and the provision of economical means of transport are what is now required. Transport by men amounts to about 7*s*. a ton per mile; by waggon in rough country, 3*s*. to 4*s*. a ton per mile; on good roads, 7*d*.; by rail, from ½*d*. to 2*d*.; by water it is comparatively infinitesimal, and it is a matter of vast importance, that in the Congo River and its tributaries, the Katanga Co. possess some of the finest water-ways in the world. With regard to the mineral resources of Katanga, the copper found there is carried hundreds of miles north, south, east and west, supplying the wants of the natives, who prefer it to brass.

KATANGA COPPER.

Here is a piece of Katanga copper which was given to me when I was in the neighbourhood. Numerous minerals and metaliferous deposits exist in Katanga, and all those who have been in the country report the presence of gold, quicksilver, and coal. With such good prospects before us of returns from above and below the soil in a country, which, unlike the Transvaal and the territories south of the Zambesi, contains large tracts of fertile and productive land independent of mineral wealth, I think that we may well look forward to development, which will bring us all in most ample and satisfactory returns, and that when the country has been opened up, and this commerce which the Katanga Co. is initiating will do effectually. Towns and plantations will be formed, and the enormous landed property of the Katanga Co. will be immensely valuable. We shall then reap a commensurate return on our participation in this business, and meanwhile obtain satisfactory returns in the trading operations. The commerce which may be expected in Katanga in the near future cannot all come down the river Congo, even with the facilities which the construction of the Congo railway will offer. It will also take another route to the south, and it is in connection with this important development that your directors have, in combination with other companies, been studying a business which, when the plans are ready, will be offered to the shareholders of this company and the others interested, affording them a similar opportunity of coming in on the ground floor, as was done with the Katanga Co. In conclusion, I have one word to say on behalf of the directors. We have done our very best to secure to this company such an interest as will, we trust, give it the means of obtaining very large return for a comparatively minute outlay. We feel sure that you will agree that through the participations of the Murchison Crown Co. in this great undertaking, this company carries out the purpose for which it was formed, and we shall be well satisfied if the result of our labour and arduous work in effecting it is that you continue to give us your cordial approval and co-operation, and that in case during the year a further proposal is made to you to take part in the matter I have alluded to, *viz*., in connection with the business of developing this vast and important territory, we trust you will give such proposal, which will not be pushed forward until well and carefully examined into and matured, your best consideration and support. (Cheers.)

Mr. WM. YEOMAN seconded the motion, which, after a few congratulatory remarks from Mr. THORN and Mr. SISTERSON, was carried unanimously.

The retiring director and the auditors, Messrs. Cooper Brothers and Co., were re-elected.

Mr. PIXLEY moved a hearty vote of thanks to the chairman and directors.

Mr. THORN seconded the resolution, which was carried with acclamation, and the proceedings terminated.

THE CAPE COPPER COMPANY, LIMITED.

PROFIT OF 70,000%.—PROGRESS OF THE MINES DESCRIBED, AND REASONS FOR RAISING FURTHER CAPITAL GIVEN—VIEWS OF THE BOARD UNANIMOUSLY ADOPTED.

THE fourth ordinary general meeting was held at the Terminus Hotel, Cannon Street, on Wednesday, to receive the reports and accounts for the year ending Aug. 31, 1891.

Notice was also given of the following resolutions:—

"1. That the capital of the company be increased by the creation of 75,000 shares of 2*l.* each, to be called preference shares, to which there shall be attached the special rights and privileges following, that is to say—(a) The holders of such preference shares shall be entitled to a cumulative preferential dividend at the rate of 6*l.* per cent. per annum on the capital for the time being paid-up on such shares respectively. (b) Whenever the profits of the company, available at any time for distribution by way of dividend, shall be more than sufficient to pay the preferential dividend aforesaid, and also a cumulative dividend to the same date at the rate of 6*l.* per cent. per annum on the ordinary shares, the holders of the preference shares shall be entitled to participate in the surplus of such profits *pari passu* with the holders of the other shares in proportion to the capital paid up from time to time on such preference shares. (c) The aforesaid preference shares shall rank as regards capital in priority to the other shares. 2. That the said preference shares shall be issued on such terms and conditions as to payment as the directors may determine, and shall be offered in the first instance to the existing shareholders as nearly as may be in proportion to the capital held by them respectively, such offer to be made in such manner as the directors may determine."

Mr. Edmund A. Pontifex

(chairman of the company) presided.

Mr. J. C. LEAVER (secretary) read the notice of the meeting.

PROFIT OF 70,000%.

The CHAIRMAN: Three or four circumstances have combined, as misfortunes generally do, to somewhat retard the current of our prosperity, to the even flow of which we have been for so many years accustomed, that we are inclined to resent even the most temporary check. Still a profit in these bad times—in a year which I heard a city magnate characterise on Thursday last as being the worst he had known in the whole course of his long experience—a profit I say of 70,000*l.* is not to be altogether despised. In the previous year we made a profit of 106,410*l.* The decrease in the present campaign has been caused by an increase in our costs and a diminution in our returns, together with a lower price of copper. Besides this there is the accidental circumstance which is alluded to in the report, namely, the richness of the stock of ore having been over estimated in the previous year. This had to be liquidated in the present year by carrying the deficiency to the suspense account, which otherwise would have been largely available for the general purposes of the company. The total costs in 1889-90 were 5*s.* per unit on the Swansea assay; during 1890-91 the total costs were 6*s.* 4*d.* a difference of 1*s.* 4*d.* per unit, amounting in the aggregate to 18,781*l.* The returns from Ookiep were 24,583 tons in 1889-90, and in 1890-91 they were reduced to 22,974 tons. On the other hand, at the Trial Mines the returns increased from 308 tons during the year ending 1890, to 711 tons during the year ending 1891; showing a net decrease on the total output of about 1,200 tons, and resulting in a decrease in value of 17,855*l.* This amount of 17,885*l.*, together with the increase in the costs of 18,781*l.*, makes a difference in the profit and loss account of 36,666*l.* Of the decreased value of the returns the greater portion was due to the lower price of copper.

OUTPUT.

The diminished quantity of ore accounted for 6,000*l.*, and the lower price is responsible for 11,885*l.*, making a total of 17,885*l.*, which is the amount I have given above as being the total figure of the decreased value of the returns. The loss in the value of the stock which remained out of the raisings of the previous year is due to the selling assay being so much lower than that at which it had been returned from the mines, and to the fall in the price of copper, which occurred before it was all realised, amounting together to the sum of 26,328*l.* This loss, together with the law costs paid in the current year of 3,842*l.*, totals up to 30,170*l.*, and has been carried to the suspense account. These law costs, added to those incurred during the previous year, amount to 5,442*l.*, and, as you are aware, were incurred in respect of the litigation with the Société des Metaux, which resulted in our recovering, in one way or another, an amount of 45,000*l.* The increased mine costs to which I have alluded are due to our having performed a greater amount of exploratory work at the trial mines, and also to the very considerably increased costs of interest and discount, which has been entailed upon us by our disproportionately small amount of working capital for the extended operations which we have been carrying on. The total costs at the Trial mines during the year ending 1890 amounted to 15,341*l.*, as against the sum of 24,247*l.* expended in the present year, and our charges for interest and discount have been increased from 8,538*l.* in the former year to 12,028*l.* in the latter. I should wish to call your attention particularly at this moment to this large increase in the costs of interest and discount, because it has an important bearing upon the matter I shall presently have to bring to your notice, namely, that of our proposed increase to our working capital. Our railway costs have also increased from 16,458*l.* in 1890 to 24,296*l.* in 1891, and the freight, insurance and other charges have increased from 31,519*l.* in the former year to 34,576*l.* during the present year. After making sundry deductions for savings effected in other directions, chiefly in the cost of mining at Ookiep, it results in a net increase of costs of 18,781*l.* for the year 1890-1891. Of the increased costs, which amount to 1*s.* 4*d.* per unit, 7*d.* per unit is due to our having raised a less quantity of ore, the fixed charges having to be divided over a smaller area. The fact that we have raised less ore is not so much attributable to any falling off in the productiveness of the mines, but resulted from the "Fool's Paradise," so to speak, that our people over there have been in as to the richness of the ores that were being raised. Generally speaking, and subject, of course, to the capabilities of the mine, they are instructed to send away each year, as nearly as

possible, a uniform quantity of ore, and, thinking that they had fulfilled this requirement, they economised their resources for future use.

ASSAYS ERROR.

Directly the error in the assays came to our knowledge, steps were taken to remedy it, and all cargoes that have since arrived have turned out by the assays at Swansea to be fully equal to the assay reported from the mines. You will have observed from the report that the bottom levels of the Ookiep Mine at length look more encouraging than heretofore. Although no material quantity of ore has yet been found in these levels, sufficient has been seen to show that the cougenial ground continues in depth. In other respects, too, this mine continues to yield satisfactory results. Notwithstanding the very large quantities of ore that have been extracted from the different levels the reserves are only between 3 and 4 per cent. less than when reported on last year. The superintendent, at page 26 of his report, expresses the opinion that, taking the position of the mines as a whole, we are now in a better position than at the corresponding period of last year as regards reserves. You are perhaps aware that our present superintendent, Mr. Kitto, in addition to his other qualifications, is a technical miner of considerable experience. You will have observed that our other mine, Spectakel, is presenting a decidedly encouraging appearance. So also are our Trial Mines, but they have been doing this for so many years that one hesitates to rely too confidently upon them. The smelting in the colony of the poorer class of ores has been carried on with regularity, but we have not yet obtained quite the successful results that we think we shall eventually reach.

RAILWAY.

Turning to the railway, we have been very anxious, as you are aware to adapt the mountain part of the railroad to steam traction and thus to avoid the great expense and risk attaching to animal power. Two mountain locomotives are now at work, and we hope shortly to achieve this result, but if the mules are to be entirely dispensed with, a third locomotive will be required.

TILT COVE PROPERTY.

Coming now to our recently acquired property in Newfoundland, it is gratifying to find that the East Mine at Tilt Cove is opening out large quantities of ore of a quality admirably suited for our purposes at Briton Ferry, supplying, as it does, sulphur gas of high strength to the chemical works. As you are aware, we shall henceforth receive one half the profits arising from these works. The quantity of ore which we are already raising from this mine is about 47,000 tons per annum. The development which we are pushing forward, will, doubtless, enable us to add largely to this amount. It is satisfactory to find that we are making gradual and large reductions in the cost of mining and smelting in Newfoundland. In the past year these costs amounted to 10*s.* 6*d.* per unit. During the present year we have already reduced them to 8*s.* per unit, and we have every confidence that in time we shall be able to make still further reductions, and so in the end bring them down to the cost at which we work at the Cape. Until these reductions in our costs are effected we shall be unable to make any very considerable amount of profit from this property unless copper should rise above the very low price at which it is now selling. Had copper remained at the price at which it was ruling when we took over the property, the Tilt Cove Mines would already have been adding very considerably to our profits. I am glad to say that the labour difficulties at the Briton Ferry Smelting Works, to which I alluded in my remarks last year, have now subsided, although they affected us unfavorably during the earlier period of the year now under review. The fall in the price of coal which appears now to have set in may also be expected, materially to help us during the current year, as well at these works as at the Cape and at Tilt Cove.

INCREASE OF CAPITAL AND ITS OBJECTS.

In the notice convening the meeting you are informed that we propose to lay before you some resolutions for an increase of capital by the issue of 75,000 preference shares of 2*l.* each, carrying certain rights and privileges. A glance at the accounts will not only inform you of the motive which induced us to recommend this addition, but will show you the desirability for doing so. You will observe in them that the amount of liabilities at the date of the closing of the accounts was 294,233*l.* This is a large increase over the previous year, and a still larger one over the amount which usually existed previous to the re-construction of the company in 1887. The last account of the old company shows the amount of liabilities at 157,474*l.*, which is 136,758*l.* less than those appearing in the present accounts. Moreover, we then had in hand an undivided profit of 84,813*l.*, whereas, in the present accounts we have only 20,697*l.* remaining undivided and thus being available as working capital. This forms a diminution in our resources of 64,116*l.* In addition to this we have during the same period, that is to say since the re-construction of the company, increased the value of our fixed assets to the extent of 109,683*l.* which amount is made up as follows: Increase in landed estates, 2,800*l.*; Briton Ferry Smelting Works, 19,290*l.*; Colonial Smelting Works, 14,290*l.*; Tilt Cove Establishment, 47,810*l.*; in respect of lease of offices, 1,090*l.*; total, 85,350*l.*, after deducting decrease of stocks of tools, &c., 5,667*l.*, we get 79,683*l.*, which, added to the 64,116*l.*, being the lessened amount of profits in hand, makes a total of over 123,000*l.* Adding to this the value of our large stock of ore, the increase in our liabilities is fully accounted for. Although these liabilities have lately considerably diminished, and by the realisation of our stocks of ore will be still further reduced, it remains the fact that they are somewhat undesirably large as compared with the amount of our working capital. Especially it is undesirable that this should be the case in troublous times, such as those through which we have lately passed when every sound man of business felt it to be a wise thing to diminish his commitments, so as to hold a larger amount of cash capital at his disposal.

ADVANTAGES OF MORE CAPITAL.

These considerations, as I have said, render it desirable that we should have a larger reserve of working capital. This becomes all the more so when it is considered that if you strain your resources the cost which it entails is more than proportionately increased. The savings which we shall be able to effect by the increase of our working capital will

be so material that I believe the larger amount of share capital on which dividends will have to be paid will very little affect the dividend payable on the existing shares. I do not pretend that it is actually necessary that this additional working capital should be provided, but it is wiser and safer that it should be, especially as it will greatly obviate the necessity to retain profits, adding to our working capital money which otherwise would be available for dividend purposes. If difficulties were to arise at some future critical financial period you might blame your directors for not having asked you to provide in time a sufficient margin for safety. This we now suggest you should do. We have not considered it necessary to offer any very extravagantly favourable terms as regards preference dividend to subscribers of this additional capital, because the security for the safety of the capital is so unusually good. The floating assets alone should be more than sufficient to liquidate any liability in respect of these preference shares, and the subscribers to them obtain the advantage of priority of realisation by the stipulation that these shares shall rank as to capital as well as to dividend in preference to the ordinary shares. The only other advantage that they will receive is that their preferential dividend will be cumulative. By this is meant that when the preference shares have got 6 per cent. the ordinary shares get their 6 per cent. before the preference shares get any more, and that if the full 6 per cent. were not earned in any one year the deficiency would be compensated in future years. If the dividend profits amount to 6 cent. or more, then both shares will participate alike, and the ordinary shareholders will not, in that respect, suffer by the preference given to the new issue. With these observations, gentlemen, I beg to move the adoption of the report and accounts. (Cheers.)

Mr. JOHN GALSWORTHY : I second the motion.

FALSE RUMOURS.

Mr. TABBUSH : We have been told outside that the mine is very nearly exhausted.

The CHAIRMAN (surprised) : By whom ?

Mr. TABBUSH : The Stock Exchange in Paris, and everywhere.

The CHAIRMAN : I cannot be responsible for Stock Exchange canards. Certainly it is not worked out, or we should tell you.

Mr. TABBUSH : Why are the shares so low ?

The CHAIRMAN : Because the price of copper is low.

Mr. TABBUSH : Is it true that the mine is nearly exhausted ?

The CHAIRMAN : Distinctly, it is not true. I have explained over and over again that the bottom levels for a series of years have not resulted in enabling us to make large discoveries, but the upper levels have so extended laterally that they have made amends for the present poorness of what is below. The estimate of the reserves are between 3 and 4 per cent. of the quantity they were estimated at last year, notwithstanding the large production that has taken place during the current year. Hence there is no reason to fear that the mine will be exhausted for some time to come at all events.

BRITON FERRY WORKS.

Mr. GRAHAM : I notice that the amount for the Briton Ferry Smelting Works is increasing, but at no period have I heard from you any detailed statement as to the working of that property. You have never kept any distinct account of it to show whether it is working at a profit or loss. I should like to know if you can give us any information as to that.

The CHAIRMAN : It is difficult to answer that question categorically. It is a separate establishment, and the profit would altogether depend upon the value placed upon the ores sent to it. This we cannot get. The ticketings at Swansea used to give some guide to prices, but these have been discontinued. Looking at the matter broadly, they are enabling us to get a better price for our copper than we should otherwise have received. From that point they are an unqualified success. During last year the costs ran up somewhat unduly, and Mr. Leaver went down and made an exhaustive examination of all the facts. We made some changes in the personnel, and the costs have been reduced to as low as those of any smelting works in the country. But for these works our profits would be very much lower than they are at the present time.

A SHAREHOLDER : What revenue is accruing to this company from the carriage of Namaqua ore. I see you have carried 5,116 tons. There must be a large corresponding carriage to Ookiep for the Namaqua Co.

The CHAIRMAN : The total amount received is between 11,000 and 12,000, and is called in the accounts carrying for the public.

The SHAREHOLDER : Does that include shipment from Port Nolloth ?

The CHAIRMAN : No ; we charge for that also.

The SHAREHOLDER : Are there any rentals in Ookiep from the stores ?

The CHAIRMAN : I think you will find everything in profit and loss account No. 2—rent account, 844.

The SHAREHOLDER : Does that include stores ?

The CHAIRMAN : It gives the accounts generally. During 20 or 25 years it has been

MY PLEASURE TO SERVE WITH MR. GALSWORTHY,

who retires by rotation from the board to-day, and who I have great pleasure in proposing as a director. It would be impossible to find a more competent director, or one who has devoted greater time and attention to your business, than he has. He was one of the pioneers of the company, and his interests are as warmly bound up in it as are those of any of us.

General BOWEN seconded the motion, which was carried unanimously.

Mr. GALSWORTHY returned thanks for the kind terms in which the chairman had proposed the motion, and said : As I have your confidence now, I will endeavour in the future, as in the past, to merit it. The company will always have my best exertions.

Mr. W. B. Peat was re-elected auditor at the increased remuneration of 75 guineas, instead of 50, it being explained that his work was now considerably increased.

SPECIAL RESOLUTIONS.

The CHAIRMAN, in moving the special resolutions given above, said : In my opening remarks I think I explained the position fully. We have recommended this step to you with a considerable amount of reluctance. It is much pleasanter to give shareholders dividends

over a small area of capital than it is over an area that has been increased, but, as I have pointed out, the savings we can effect by the increase of our working capital, and the disadvantages which are sustained by not having sufficient at command, are so great that it will make little, if any, difference to you, and will be a great element of safety in the conduct of your affairs. We do not recommend this lightly, but we had a very anxious time to go through during the past year. At one time it was almost impossible for many people to get a large amount of bills discounted, and if we were placed in any trouble of that sort you might justly blame us hereafter for not having foreseen it. This capital will depreciate the value of the existing shares to an exceedingly small extent, if at all, and on that ground and on the others specified, we recommend you to pass the resolutions.

Mr. GALSWORTHY : I second the motion.

A SHAREHOLDER : Is the dividend the final one for the year, and were two of them passed ?

The CHAIRMAN : The last dividend was the final one for the year. That explains one reason why we recommend this increase of capital. We are obliged to retain a certain amount of profit to have sufficient working capital.

Mr. MARCUS : Do I understand that you took away two dividends and used them for the purpose of the company instead of declaring them ?

The CHAIRMAN : We did not take them away ; we did not have them to divide—except on paper.

Mr. MARCUS : Then you used money for working capital which otherwise you would have paid to us.

The CHAIRMAN : Certainly. The bills under discount are very large, and with this working capital we shall require to discount a less amount.

TILT COVE.

Mr. MARCUS : Would it not be far better to give up the Tilt Cove property. The Cape Copper got on very well by itself without it. It may be useful, but at the same time I do not see why Cape Copper should be injured by it. It appears that there has now been expended on Tilt Cove about 47,000, and we require more capital to organise and work it, and, under the circumstances, it would be far better to get rid of it. If a mistake has been made in taking it, let us own it and get rid of it at once. There is plenty of property belonging to Cape Copper, which might be developed instead of working a property unknown to us. It is all very well for these reports to come forward about the Tilt Cove property and its production, but it is surprising to me if it is so good that it was hawked about by people in London who did not sell it, and who ultimately put it on to this company. Cape Copper has always held its own, and it is very unfortunate that since we have taken over Tilt Cove we now find ourselves requiring fresh capital. It was a great mistake ever to have increased the number of our shares. We had 20,000 shares and I say that they ought to have been kept at that number, and that if you desire fresh working capital it should be

RAISED BY DEBENTURES.

You have issued 60,000 of debentures unknown to the shareholders, though, of course, you have the power. When you got that power you made the promise that you would not abuse it, but you have raised these debentures, which none of the shareholders knew anything about—I did not, for one. If this is in your power then I say raise 90,000 more debentures, and make them re-payable in five years, paying off every year 20,000, which the company could do without feeling it. But to raise 150,000, by preference shares will permanently increase the capital, and there are already 300,000 shares. Our property is one of the finest in the world. I have known it ever since I was a boy, and I know its extent and value. But it will be suicidal on the part of the directors to put 75,000 preference shares on a depressed market like the present, when the prosperity of this company depends wholly upon copper. The value of that metal, I believe, will increase, and every year you will see that we shall not only have 45, but 55, and 65, a ton for our copper, and then what will be our position ? I propose that if you want to increase the capital you should do so by debentures. The shareholders will not feel it if we have the increased prosperity, which I expect next year will commence.

Mr. McIVOR : When were the debentures issued ?

The CHAIRMAN : As a temporary measure for security for advances—those advances will be paid off out of the proceeds of the capital now to be raised. The debentures were issued as collateral security.

A SHAREHOLDER : I agree with the last speaker, to whom the meeting is very much indebted for his remarks. I do not see why at this moment we should burden the shares by the additional 75,000, which are to have preference, and which may in the long run be found to be the only ones worth having. (Oh!) You take great credit for having

DISTRIBUTED 27s. 6d. PER SHARE IN DIVIDENDS IN FOUR YEARS

which would give 7s. a year and thought you were justified in so doing, but the facts show that you were not, and that during those four years the shareholders have been receiving more dividends than were earned.

The CHAIRMAN : Certainly not.

The SHAREHOLDER : If the proposition of the last speaker does not raise the money, then the shareholders might voluntarily forego dividends until a sufficient amount of working capital has been accumulated.

The CHAIRMAN : We have no objection, but I fancy the shareholders will not like it. (Hear, hear.)

The SHAREHOLDER : It is the course adopted by the telegraph companies, who from time to time increase their plant and property by debenture issues which have been paid off, they have strengthened, without permanently charging, the value of their property, and have conducted themselves like reasonable men of business.

Mr. MARCUS : I beg to propose "That instead of increasing the capital by 75,000 preference shares you issue debentures at 6 per cent. lasting for seven years, and repayable in five equal instalments."

The CHAIRMAN : What proportion would you take of them ?

Mr. MARCUS : That is my business.

The CHAIRMAN : You could not place them.

Mr. MARCUS : The public and the shareholders will no doubt take them.

Mr. TABBUSH: I second the amendment, because if you issue debentures you can pay them off and issue them again.

The CHAIRMAN: I do not think you will get debentures placed, but you will get the preference shares, and we should propose to offer to each shareholder his proportion. We shall not force them on the market. You will get the capital in that way, but not in the other. We see with a certain amount of discomfort the large indebtedness we have incurred, and as wise men must provide against it.

Mr. McIVOR: You do not seem to have tried debentures, and you have already placed 60,000 of them without the shareholders knowing it.

The CHAIRMAN: We have given them as security to our agents for the large amount of extra accommodation we require. They are not in the market, but are for collateral security, and we pay 5 per cent.

Mr. MARCUS: They have never been offered to the shareholders.

The CHAIRMAN: My good sir, you may have them all. (Laughter.) As to Tilt Cove, it is only responsible for about 40,000 out of the total amount. That was considered fully and carefully when we decided to take the property, which you did for special reasons that I can recapitulate if necessary.

Several old Tilt Cove SHAREHOLDERS said they considered it a bad bargain for them.

The CHAIRMAN: So do I, and am prepared to support that view.

Mr. BOSANQUET: As a Tilt Cove shareholder I grumbled about it very much. With regard to the issue of preference shares, it will be better to make it by the proposals of the board, because no sooner, in my experience, have shareholders issued a lot of debentures than they complain about them, and wish to convert them into shares. I do not think shareholders realise what a burden and strain it is upon the annual resources of a company to have to provide a sinking fund for a large amount of debentures which have to be paid off within a short period. It is very unfair to the shareholders that they should have to be mulcted of their income for the benefit of a succeeding generation, and great difficulty will be found in placing debentures. The

PREFERENCE SHARES, I THINK, WILL BE TAKEN BY SHAREHOLDERS

in self defence, as the issue will relieve the financial pressure under which the company labours at the present time, and will effect a very substantial saving in such charges as interest and discount, which are a constant anxiety to the directors, and drain upon the profits. Very likely those savings will go a long way, if not all the way, to pay the 6 per cent. Although I might under other circumstances sympathise with the debenture view I think the board should be supported, and let every shareholder make it a point to take his proportion.

OBJECTIONS TO DEBENTURES.

The CHAIRMAN: Mr. Bosanquet has called attention to a most important consideration. If you issue debentures you must forthwith commence a sinking fund for their repayment, and in that case the annual reduction from the dividends of the present shareholders will be very much greater than it will be if the money be raised in the way proposed. True, our successors will get the benefit nine or 10 years hence, but some of us may not live so long, and the disadvantage to the present race of shareholders will be infinitely greater by a debenture than a preference share issue. The matter, however, is in your hands, and we only wish to carry on the business in the best way we can.

JUSTICE TO MR. PONTIFEX.

A SHAREHOLDER: The chairman's name is a household word. The shareholders all know that name, and the works of that gentleman. There is every confidence in him, and I believe the plan he has proposed is the best. He gives every information he possibly can, and, from my point of view, I think his proposal decidedly the best, and that the amendments should be withdrawn. Debentures will be a millstone round the neck of the shareholders.

RESULT.

The amendment was then put, only three hands being raised in its favour.

The original resolution was put and carried unanimously, the chairman stating that circulars announcing the proposed issue of preference shares would be posted on Thursday. Shareholders would have the option of subscribing till Jan. 9. The proportion was one in four.

A cordial vote of thanks to Mr. Pontifex for presiding closed the meeting.

THE VOGELSTRAIS GOLD MINING CO., LIMITED.

SHAREHOLDERS APPOINT A COMMITTEE TO AID THE BOARD IN ARRANGING A RE-CONSTRUCTION SCHEME SO AS TO SAVE THE PROPERTY.

The third ordinary general meeting was held at the Cannon Street Hotel, on Wednesday.

Mr. J. S. Prince
(chairman of the company) presided.

Mr. C. LEWIS BENNETT (secretary) read the notice of meeting.

CRITICAL FINANCIAL POSITION.

The CHAIRMAN: Gentlemen, as this report deals so fully with the position of our company, there is little left for me to say or to explain, and, therefore, the few remarks I propose to offer will be confined, principally, to our financial position, which I am sorry to say is a critical one. In consequence of the shareholders not having adequately subscribed for the preference share capital lately created, the debenture-holders have given notice that they require payment of their debenture bonds, with the bonus accruing thereon, amounting in all to 75,000, on or before Jan. 10 next. Now, gentlemen, as we have no funds, it is obvious that

THIS PAYMENT CANNOT BE MADE,

unless you decide to take up the balance of preference shares, and

thus enable the work of the company to be proceeded with. I believe that the debenture-holders (some of them are present and can speak for themselves) would be still willing to defer the payment of their bonds for another period of three years, provided this balance of shares be taken up. It must be plain to you that the debenture-holders could not look on while the company was doing nothing. Therefore, unless the amount be subscribed, there will be nothing else left but that the property should pass out of our hands. I may state that we have received a letter from Mr. W. H. Struben, one of our large share and debenture-holders, making a proposal for the re-construction of the company, the salient point of which is that the debenture-holders should accept 75,000 fully-paid shares in a company to be formed; but as this proposal was not likely to meet the views of the debenture-holders, nothing has come of it. We have also received, from Messrs. Lace and Tompson, our agents in the Transvaal, another proposal for re-construction, failing which they say an offer might be made to purchase the property. We immediately replied to say they should cable any offer they might receive, but up to the present we have had no communication from them, and we are not very sanguine that any substantial offer will be forthcoming.

Mr. BENNETT (secretary) here read the letters received from Mr. H. W. Struben, dated July 6, and Messrs. Lace and Tompson.

GOOD OPINION OF THE PROPERTY ON THE SPOT.

The CHAIRMAN: These letters prove that on the spot they have a good opinion of the value of the property, but, being entirely in the hands of debenture-holders, we were unable to put forth the respective schemes suggested. I have merely laid them before you to show you that there are people on the spot who have no mean idea of the value of what we own. Indeed, we believe that with judicious management and moderate outlay the mine may be made payable, and I think this opinion is borne out by the letters read. Your former mine managers have worked the property on the assumption that payable ore would be found at comparatively shallow depths, but the experience gained on the Randt has gone to prove that payable quartz must be looked for in deep sinking. Had the board been in possession of funds deep sinking would have been their policy. Your property lies upon the main and south reefs, and if by carrying out this deep sinking or low level working we should not meet the success of other companies it would be surprising to us. The revenue from the Farm and Township, I regret to say, has fallen off very considerably during the present year, but I think that as matters improve in the Transvaal, and population increases, there should be a good revenue from that source. We might also in course of time be able to dispose of certain parts of the property which is very large. The only point before us seems to be the ordinary business, and the question of subscribing the preference shares. Upon the latter

THE VERY EXISTENCE OF THE COMPANY DEPENDS,

and I would ask you to weigh well the issues before coming to any conclusion. I now propose the adoption of the report and accounts.

A SHAREHOLDER: I understand most of the shareholders are in South Africa.

The CHAIRMAN: No, I think the bulk of them are here, or if not they are represented here.

A SHAREHOLDER: At the last meeting Sir Donald Currie spoke very highly of the property, which he described as being near some of the most successful mines on the Randt.

VIEWS OF A SHAREHOLDER AND DEBENTURE-HOLDER.

Mr. MERRIELES: I do not know, sir, if I correctly understood you to put it to the meeting, that if the shareholders were prepared to find the preference capital you have an understanding with the debenture-holders, that they would continue the arrangement formerly proposed. That scarcely would tally with the definite letter you have received from them requiring the prompt repayment of their money. As a debenture-holder, not speaking for the rest, I may say I think, and almost feel sure, the chief debenture-holders have no desire whatever to depart from the position taken up by Sir Donald Currie last time, and would in no way wish to foreclose or seize the property in any way. They wish the shareholders to have the most ample time to carry out the scheme, by which they will be able to save their property. The proposal was put to a meeting of shareholders last Mar., and, as you have now informed those present, nothing has since been done save the subscription of a few paltry thousands. In the face of that the debenture-holders sent the intimation to the board that they must have their money. I am not prepared to say (I only speak as a small debenture-holder) on my own part, much less for others, that the time will be extended, for otherwise that means absolutely withdrawing the notice already received, and the one action would nullify the other. If, however, the shareholders show an active desire to save their property, the debenture-holders will put no obstacle in the way of their doing so.

The CHAIRMAN: I see no way out of the difficulty, except for the debenture-holders to give us a little more time, not actually to withdraw their notice, so as to ascertain whether the shareholders will subscribe for the balance of preference shares. It is quite clear we have no proposition, and are not in a position to make one, unless the preference shares are taken up so as to give some guarantee to the debenture-holders that we will protect the property for our mutual advantage. The debenture-holders cannot stand by forever, and it is obvious things cannot remain in their present position.

ALTERNATIVES.

We must either take up these preference shares or allow the company to go into liquidation.

Mr. CHAPMAN: I understand Mr. Struben did not agree to the issue of preference shares, and how do the board propose to carry out that plan in the face of his possible opposition?

The CHAIRMAN: I admit there may be some difficulty in that, but assuming Mr. Struben did not take up preference shares, it is possible those that would be taken up without him would be sufficient to carry on the work. I do not think he will throw difficulties in the way of the shareholders, who have sunk a large sum of money in this venture. I think he would stand by and let the matter go through, though, of course, I cannot answer for him positively. The directors have caused a document to be drawn up, which the shareholders present might sign, stating what they would be prepared to do in the way of sub-

scribing for preference shares. We must have something substantial to go to the debenture-holders with if we want further consideration from them. We have only had 3,500 shares applied for.

Mr. LEWIS: Perhaps there is no money capacity among the shareholders, and even if the debenture-holders took over the property they would require to find capital to work it. I think they will deal with us leniently.

WHAT THE DEBENTURE-HOLDERS HAVE DONE.

Mr. MOLTENO (director): The debenture-holders have come forward on two occasions—originally, in subscribing the 60,000*l.*, and then when debentures became due, and certain of their number did not continue them, and it became a serious question whether we should be able to find the money the other debenture-holders took up the debentures of those who would not renew them. It now

REMAINS FOR THE SHAREHOLDERS TO ASSIST THEMSELVES, and if they do not feel inclined to do so they will be entirely at the mercy of the debenture-holders.

Mr. MERRIELES: I will speak now as a shareholder, and as such should be glad to see these debentures extended if there was any real prospect that the shareholders would come forward to complete the subscription of the 50,000*l.* preference capital. I do not think that we can say the time allowed has been too short, because this matter was before the meeting in Mar. last, so that nine months have elapsed without the shareholders helping themselves whatsoever in any way. Therefore, as a shareholder, I could not complain if the debenture-holders took action, but I believe they are willing to wait if the shareholders mean business.

The SECRETARY: The form that has been drawn up is this: 'To the directors of the Vogelstruis Co.:—Gentlemen, we hereby request that you will allot to us respectively the number of preference shares of your company set after our signatures hereto, and we respectively agree to accept such shares, or any less number which you may allot to us, and we authorise you to place our names on the register in respect to the shares so allotted.'

The CHAIRMAN: We want the sympathy and aid of the debenture-holders, and propose that we go before them with this document signed as a proof of the willingness of the shareholders to help themselves. It is either this or liquidation.

A SUGGESTION.

Mr. TURNER: I do not think there is the slightest prospect of the shareholders taking the preference shares, but are the resources of re-construction entirely exhausted?

The CHAIRMAN: From what we hear the property is likely to fetch more than the debenture debt.

Mr. FULLER: I suggest that a deputation should wait upon the debenture-holders, and ask them to give us further time; that another general meeting be called, and meanwhile the deputation and the directors formulate a plan of re-construction. Other companies have re-constructed with not half the prospects of this one. (Cheers.) We have about 600 English acres, and if the debenture-holders sold three-fourths, and allowed a portion of their debentures to remain upon the remaining fourth, I think there would be a reasonable chance of solving the difficulty. The property is too large for us, and always has been. I have been to it, and know it, and believe it to be good.

Mr. TURNER: I quite agree with that; it would be better if the property were sold in sections. It seems pitiful not to be able to help ourselves. It seems quite certain that this mine will turn out well later on, and it seems a pity the shareholders should not try and do something more.

Mr. MOLTENO: I do not think the debenture-holders will divide their interest, because there is no security that the property will fetch the whole of their money, and then who is to select the parts to go to them and to be retained by us. I have no doubt the

DEBENTURE-HOLDERS WILL GIVE US TIME

if we are in earnest, but it is not fair to them to wait for the speculative chance of the market improving.

The CHAIRMAN: We have no money to pay current expenses, and any delay should not be for longer than a month. If even the shareholders subscribed 25,000*l.*, I think the debenture-holders might be satisfied. The Chairman then proposed the adoption of the report and accounts.

Mr. MOLTENO: I second the motion.

TRIBUTE TO THE LATE MR. JOHNS.

A sudden attack carried away our late chairman, who so often presided over us, and whose loss has been severely felt by the board. He was a most assiduous director, and was never absent from any meeting. We actually had a meeting in his room a week or two before his death, around what proved to be his death-bed. In addition he had been an original member of the board, and was acquainted with the history of the company since its foundation, and was, therefore, our most valuable director. (Hear, hear.) We have also to express our

GRATITUDE TO OUR PRESENT CHAIRMAN,

who came forward, at our earnest desire, of course, with the hope that the 50,000*l.* would be subscribed, and that this would become a flourishing company.

The CHAIRMAN returned thanks for the kind remarks of his colleague, and said he almost wished he had not taken the position, because the apathy of the shareholders had never given him a chance of doing the real service for them he thought he could render when he became their chairman. The only means of saving the property was by subscribing this money.

The report was adopted; and on the motion of the CHAIRMAN, seconded by Mr. MOLTENO, Mr. Oats, who is now probably on the property, and is expected to return with a report, was re-elected a director.

Mr. DAVID M. CURRIE proposed, and Mr. LEWIS seconded, the re-appointment of the auditors.

RESULT.

Mr. TURNER moved, and Mr. FULLER seconded, "That a deputation be asked to wait upon the debenture-holders to request them to prolong their notice for repayment for a short time for the purpose of arranging a re-construction of the company, and that a com-

mittee be formed to propose some scheme for the re-construction of the company."

This was carried, as was also a resolution appointing the directors, with Messrs. E. F. B. Fuller, Charles Broad, and Wm. Bailey, the committee, to see the debenture-holders and arrange some re-construction scheme.

The cordial thanks of the meeting were voted to the chairman.

THE OURO PRETO GOLD MINES OF BRAZIL, LIMITED.

MINES GIVE A PROFIT OF ABOUT £1,000 A MONTH, AND ARE IMPROVING IN QUANTITY AND YIELD OF ORE—VALUABLE SUGGESTIONS BY THE BARON OBERKAMPF.

THE eighth ordinary general meeting was held at No. 6, Queen Street Place, on Monday, to receive the reports and accounts, to elect directors and auditors in place of those retiring, and for other general business.

Mr. Edmund A. Pontifex

(chairman of the company) presided.

Mr. HENRY WARD (secretary) read the notice of meeting.

NET PROFIT OF 4,808*l.*

The CHAIRMAN: Gentlemen, at the last annual general meeting of this company, which was held 12 months ago, I ventured to state that we were then within a measurable distance of the end for which we had been so long striving, namely, that we should be able to raise sufficient mineral, not only to cover our expenses, but to leave a considerable profit into the bargain. The accounts for the past year will have shown you that that anticipation has already to some extent been fulfilled. The gross profit earned by the mines during the 12 months ending June 30, 1891, amounted to 11,975*l.* 13*s.* 10*d.*; deduct from this the amount written off for depreciation, 2,305*l.* 9*s.* 3*d.*, and for interest, discount on debentures, and stamps, 4,861*l.* 6*s.* 5*d.*—7,166*l.* 15*s.* 8*d.*, and we find that we have made during the year in question a nett profit of 4,808*l.* 18*s.* 2*d.* During the first five months of the year we were making very much larger profits than we made during the remaining seven months. During the former period the mines were yielding a gross profit per month of 2,000*l.*, but latterly that profit has been reduced to one-half, owing to the quartz having become of a poorer character. Fortunately, however, there are evidences that it is again improving, and, indeed, it would appear that, as we seem to have cut the rich Gongo shoot in the lowest level, we may shortly hope to see even better results than those obtained during the first part of the period named. I may also mention that since the report was written a further improvement has manifested itself by the intersection, at the 315 level north-east, in No. 2 shaft, of the ore shoot which had crossed the shaft in the higher level at a somewhat flat inclination. This is the ore shoot referred to in the second paragraph of page 46 of Capt. Gifford's report. From the interesting table of returns from the mines for the past six years, which will be found on page 7 of the directors' report, it will be observed that the quantity of ore milled has continued to increase with considerable regularity.

EXTRACTION OF ORE.

During the 12 months ending June, 1886, we raised a little over 5,000 tons; during the succeeding 12 months, ending June, 1887, nearly 15,000 tons. In the 12 months ending June, 1888, nearly 21,000 tons; in the 12 months ending June, 1889, over 28,000 tons; in the 12 months ending June, 1890, nearly 32,000 tons; and during the year under review we have raised no less than 40,636 tons, which is a large quantity of auriferous mineral to be raised from any mine not having a greater number of shafts than we at present possess. The quantity of gold raised has correspondingly increased from 2,390 ozs. during the year ending June, 1886, to 12,364 ozs. during the year ending June, 1890; and, in the year now under review, to 11,948 ozs. The average produce of the mineral treated during the year has shown a slight falling off as compared with last year, notwithstanding our improved means of extraction. In the year ending June, 1890, the average was 7 dwts. 18 grs. per ton, and in the year ending June, 1891, the average was 7 dwts. 8 grs. per ton. The falling off is due to the cause I have just explained, namely, our having encountered a poorer zone of mineral. In the 12 months ending June, 1890, the total cost of working in Brazil amounted to 26*s.* 6*d.* per ton, and the total cost, inclusive of all general charges in England, to 27*s.* 9*d.* per ton. In the year ending June, 1891, the total cost of working in Brazil amounted to only 22*s.* per ton, and the total costs, inclusive of all general charges in England, to 23*s.* The average value of the gold realised was 17*s.* 8*d.* per ton of ore crushed, which leaves us a profit of about 5*s.* 7*d.* per ton, after deducting the whole of the expenses in Brazil and England. The accounts show that a debit balance was brought forward from last year of 9,580*l.* 8*s.* 5*d.*; this has now been reduced to 4,771*l.* 10*s.* 3*d.* This figure is arrived at as follows:—Balance brought forward from last year, 9,580*l.* 8*s.* 5*d.*; add amount written off for depreciation, 2,305*l.* 9*s.* 3*d.*; add interest, proportion of discount, and stamps on debentures, 4,861*l.* 6*s.* 5*d.*—16,747*l.* 4*s.* 1*d.*; less balance of revenue account, 11,975*l.* 13*s.* 10*d.*, leaving the balance, as mentioned above, 4,771*l.* 10*s.* 3*d.*, which will doubtless be wiped off altogether in the course of the current year.

GOOD DIRECTION ON THE SPOT.

That so large a quantity of ore could, with our present appliances, have been crushed in the 12 months reflects, I consider, very great credit upon the management of Capt. Gifford. By reference to Capt. Samuel Gifford's report, page 29, dated May, 1889, it will be seen that with the addition of the 20 stamps which we were then making to the Californian mill, and by substituting another set of Californian stamps for the wooden stamps then existing, he estimated we could increase our stamping power to 3,600 tons per month. We have not yet been in a position to replace the old wooden stamps as therein suggested, but they have been extensively repaired, and without such substitution we have been able to crush at Passagem 37,541 tons, or a monthly average of 3,128 tons, against the 3,600 tons per month, which, he estimated we might be able to do if the old stamps had been replaced by new ones. Our output of gold has been somewhat

increased by the assistance which we have derived from the small chlorination plant which Capt. Gifford erected with the means already at his command. It will be observed that 230 tons of the concentrated tailings yielded gold to the value of about 6,000*l*. The erection of the new chlorination plant was completed in Aug. of the present year—too late, of course, to have any effect upon the past year's accounts; but it is now, after having given some little trouble, in good working order, and we expect it will make an important improvement in our returns for the present year. We have suffered a good deal of inconvenience during the past year through the excessive delays at the Rio Custom House. Our agents, Messrs. P. S. Nicolson and Co., have done their very best to pass the goods through with a little more speed; but with no very beneficial results. As an instance of the delays experienced with the Rio Custom House, I may mention that the Government Mint itself was almost at a standstill, and could not ship the gold delivered to them, because they were waiting for assay materials which were delayed whilst passing through the Custom House.

BRAZILIAN IDEAS OF BUSINESS.

Speaking generally of our past operations and future prospects, although the development of the mine has been slower than could have been wished or anticipated, and the natural hopes of the shareholders to be in receipt of good dividends have been thus far disappointed, yet it is comforting to be able to assure you that the prospects of the mines now are infinitely better than they have ever been before. In regard to the mine, I will ask Mr. Taylor and Capt. Gifford to give you the information that they possess, which with their technical knowledge and experience they can do much more effectively than I can. The present low rate of exchange, due though it is to the disturbed condition of political affairs in Brazil, will be a great advantage to us during the current year. The present rate of exchange is about 14*½*d. per milrei. During the past year it averaged 20*½*d., as against 25d. for the previous year. Thus during the past year we derived considerable advantage from the fall, but during the current 12 months it will be of much greater importance. It must not, however, be supposed that the advantage we derive from the low rate of exchange is all profit, as prices in the country, to some extent, adjust themselves to such fluctuations, and especially is it the fact in the case of our European miners, who either remit a proportion of their wages to Europe, or have it paid direct to their families here. I am sorry that we should have to trouble you again to pass the resolution which was carried at the last annual general meeting for the reduction of our capital, but it is necessary to do so in order that future profits may be made available for dividends without deduction for previous excess of expenditure on opening out the mines. The necessity of the repetition of the process arises from one of the peculiarities of our English law, the expounders of which sometimes seem to care more for its letter than for its spirit. The articles of association require that the registered office of the company shall be deemed to be the registered address of our foreign shareholders. Overlooking this circumstance, our late secretary, Mr. Rowse, whose untimely death I am sure you will all most sincerely deplore, caused the legal notices of the proposed alteration to be served at the known private addresses of our foreign shareholders, thinking, not unnaturally, that it would be better to send the notices to those gentlemen where they would be sure to receive them than to another place where he was quite certain that they would never have the opportunity of knowing anything about them. When the reduction of capital came before the judge for confirmation he decided, however, that the proper course was to have stuck up the notices in the office in England, where the foreign shareholders would never have seen them at all; and because this had not been done the whole formality must be repeated. This, therefore, obliges us to ask you again to pass the resolution which you passed at the last general meeting. Referring you to Mr. Taylor and Capt. Gifford for any further detailed information upon the working of the mines, I have now the pleasure to propose that the directors' report and accounts, as presented to the shareholders, be received and adopted.

PASSAGEM MINE.

Mr. JOHN TAYLOR: I beg to second the resolution. You cannot fail to have noticed, from the carefully prepared plan which accompanied the report, that a great deal of work has been done in the Passagem Mine during the past year. The work in that mine is now spread over a great extent of ground. The total length from south-west to north-east is now close upon 800 metres—roughly $\frac{1}{2}$ a mile. The depth of the mine has also been further increased, and the No. 1 shaft is now over 430 metres deep, whilst the sinking is being vigorously continued. The drive of the bottom level was commenced in May, and it is satisfactory to note that this being the deepest part of the mine, a good body of ore is there being developed. The report, which was dated Aug., speaks of a large section of lode being exposed, and the more recent reports have continued to tell us that that lode was good in these levels, and also in the cross-cut from the north-eastern level. As this report shows, the drive of the levels should open out a very large amount of ore for stoping. The sinking of No. 2 shaft has been resumed, and is being pushed on smartly. We are led to think that that also may be a prominent point in the future development of the mine. Above, in the 365 metre level, a fine body of mineral of good appearance has been opened up. The recent advices are more especially favourable in regard to the two rises which you will see on the plan, numbered 24 and 25, above this level. In the level above, again, the 265, a considerable quantity of ore has been laid open from the south-western level. Rise No. 22 was carried to meet the stopes below the level above, the 215, and subsequent operations there have proved the continuation on each side of this rise of a strong, regular body of good quality ore, besides which there are veins described as of clean, pyritic ore, of very high yield, which are met with in the footwall—of course, adding to the average yield of the rock which is what we really now require. Did the average yield keep up to what we had some months ago our position, as you will readily understand, would now be much more favourable. This same body of ore has been cut lower in the cross-cut from the 235 level above—about 30 metres nearer to the shaft. You will understand that this is a considerable body of ore, which will form an important piece of stoping ground for the present year's campaign. In the 265 level north-east in the other direction, both above and

below, a great amount of work has been done in the neighbourhood of the No. 2 shaft, and

A LARGE QUANTITY OF ORE HAS BEEN OPENED UP.

The stopes, according to the more recent accounts, speak of a very fine body of tourmaline ore and pyrites, and the lode in the fore-breast fully maintains its size and appearance. This ore deposit has also been recently met with in a cross-cut from the level below (the 315-metre level.) In the 175-metre level above, again, in a south-westerly direction, a great deal more stoping ground has been opened up in the No. 17 rise. There is a considerable reserve of ore on each side of the rise, and it is noticeable that this shoot of productive rock is further in the south-westerly direction than it is in the lower levels. In the 120-metre level north-east, the total distance from the shaft is 300 metres, of which a considerable quantity has been done in the past 12 months, recently in a productive lode, which we have reason to believe is in Gongo ore—that is a continuation of the productive ground which was worked in the Mina de Gongo from the surface. This 120-metre level was a very important point north-east, and I am sure you will watch the future reports as to this place with great interest. The report of Oct. 21 in respect to this point, says, "The lode fully maintains its promising appearance," and also tells us that "a cross-cut was being driven in a good lode, which lays open the large body of Tourmaline ore seen upward in the old excavations." We have reason to believe it is intact nearly to the surface, and we should therefore open up here what I think is generally described as

AN IMMENSE RESERVE OF STOPING GROUND.

We realise what our agents tell us—the importance of pushing forward the 120 metre north-east which is being done, as the most recent statement tells us, with all speed. I do not think I need occupy more of your time with mining details as we have the advantage of the presence of our superintendent, Mr. Gifford, and I am sure he will be glad to reply to any enquiries you may make with regard to closer or fuller information on any particular point. I must have said enough to show that our operations have continued on a very extensive scale, and that in more than one important point, but notably the deepest point of the mine, and also that in its north-easterly extremity valuable discoveries of ore are continuing to be laid open. (Hear, hear.)

SUGGESTIONS FROM FRANCE.

The Baron OBERKAMPT: Gentlemen, I lately informed our honourable chairman of my intention of being present at this meeting, for the object of asking the board a few questions respecting the state of our affairs, and I sent him, in time for perusal, a memorandum of such questions. My friends in France, holders of a large number of shares (I have, on their behalf and my own, deposited over 10,000), begged me to be their interpreter at this meeting, and to intimate our views and desiderata. I can assure you, gentlemen, that I have no intention of introducing into this interpellation a factious spirit of adverse criticism, but a sincere desire of working with you for the success of our enterprise. I have three questions to ask you, or, rather, three categories of questions, respecting:—1. The state of the mine and works; 2. The management and financial situation; 3. The future prospects: what works should be done to bring the mine up to its full working capacity, the cost thereof, the time required and the means to be employed. 1. State of the mine and works: The shareholders have been much concerned to hear that an important falling off has taken place in the returns of the mine during the last 10 months. In fact, the yield which had been, in Sept., 1890, close upon 37*½*s. per ton, gradually came down to 23*½*s. in Sept., 1891, and that mishap, coinciding with the achievement of the chlorination furnaces, from which you anticipated a bonus of 8,000*l*. annually, has created a somewhat uneasy feeling. I have seen with pleasure, by Mr. Gifford's report, that of late the north-east portion of the mine in the Gongo direction has given you more satisfaction, but, on the whole, are you as confident that the visible reserves of paying ore are still such as to give us full security for a long future? Machinery plant: The 40 new Californian stamps have at length been completed. Are the chlorination furnaces also in full working order? because there have been vague rumours that these had not by any means, when worked on a large scale, come up to expectation. Can you reassure us on this question?

JUSTICE TO MANAGER.

By-the-bye, we can hardly realise the incredible delays which every phase of these works necessitates. I am certain that our honourable engineer, Mr. Gifford, does all in his power for the advancement of the work. I know that Brazil is "a slow country," and that the proverb, "Time is money," is totally unknown there. But still, is there not some means of curtailing such delays, by having over there foremen showing more enterprise and activity, or by some other expedient? Neither can we admit (and in this complaint Mr. Gifford's report meets us) the monstrous carelessness of our Rio Custom House agent. Our machinery and goods, when landed at Rio, are kept there for ages, and this is quite prejudicial to the company. That extraordinary agent, whose expenses show, by the bye, an appreciable item, ought to be at once replaced by a sharper and more active man, if possible an European, and I beg to draw the board's special attention to this question. Old 24/32 Brazilian stamps: Allow me to ask you why the 24/32 stamps have not yet been transformed. That improvement would give us an excess of at least 15,000 tons annually, and it is very regrettable that that operation has not been gone through at the same time as the putting up of the 40 new stamps. In a letter that Mr. Pontifex did me the honour of addressing me, he spoke of the limited means at the disposal of the board. This brings me, naturally, to the second category of my questions. 2. Management and financial situation: When, in Mar., 1889, you had voted and issued a loan of 60,000 *l*., in 3,000 bonds, your prospectus stated that the proceeds of this loan were to be specially assigned. (1.) To the achievement of the 40 Californian stamps. (2.) To the transformation of the 24/32 old stamps. (3.) To the boring of the Vertical shaft. Well, of the 3,000 bonds, you have by your own statement placed 23,36*½* *l*., say a nominal capital of 47,720*½* *l*.; deduct commission, 313*½* *l*.; charges, stamps, expenses, 199*½* *l*. 6*½*s.; discount, 8,419*½* *l*. 12*½*s. 3*½*d.—8,957*½* *l*. 18*½*s. 3*½*d.; showing 38,758*½* *l*. 1*½*s. 9*½*d. as nett proceeds of the bonds placed. The 40 stamps cost, 22,000*l*.; thus

leaving 18,758*l.* 1*s.* 9*d.* Was that sum not available? The chlorination furnaces cannot by any means have absorbed such money, and as the payment of outstanding debts was not mentioned in the special assignment of the loan, it strikes me that the transformation of the 24/32 should have been amply provided for.

RUMOURS.

Can you tell us why these resources have not been thus employed, and how they have been employed? because rumours have been afloat that a retired director has applied to himself 8,000*l.* worth of bonds, which, instead of being paid for in the regular way, were placed to the debit of his account, and still remain so to the extent of 5,000*l.* It seems to me that the shareholders are entitled to some explanations of this rumour, which, if correct, involves the responsibility of the board. Reduction of the capital: I now come to the financial measure the board has proposed, and had voted in the meeting of Dec. 22 last, respecting the curtailment of the capital from 400,000*l.* to 320,000*l.* We hear that through some legal mistake the matter has fallen through, and we are asked again to pass the necessary resolutions. Before this allow me to ask for an explanation. It is generally believed that the object of such financial measure is to make possible the distribution to the shareholders of the real profits actually yielded by the mine, by putting on the good side the balance of the profit and loss account. If such is the object, the profits of 1889-90, 4,659*l.* 0*s.* 4*d.*, and 1890-91, 11,975*l.* 13*s.* 10*d.*, together 16,634*l.* 14*s.* 2*d.*, ought to be available, and a dividend of even 1*s.*, two or three times repeated in the year, would create a more cheerful feeling on the market of our shares, which are, as you are aware, deplorably depreciated (20*s.* offered in Paris). Can you explain the proposed end of such measure? Can you tell us if, by the said measure, a dividend will become available, and when at hand? Touching the question of a dividend, I am sorry to say that we have been greatly misled on the other side. Half-year after half-year, month after month, I may say week after week, officious, if not official, authority led us to believe that that phantom, dividend, was on the eve of being distributed.

MONTHLY REPORTS DESIRED.

I quite admit that the board cannot be responsible for extra official information so recklessly spread abroad, but this was from such a source as to create sanguine expectations. Your shareholders abroad would thus be glad to have more frequent communication direct from the board. Why not issue a monthly report, as is done in some mining companies? This would be kindly received, I assure you. 3. Future Prospects, what works should be done. &c.: But all this is of the past, let me speak of the future. I do not quite know your intentions, but I should be much gratified by having the board speak to the shareholders the following frank and manly language, and say:—"We have before us a fine mining property, showing considerable reserves of low-grade ore. To make this a paying, prosperous concern, instead of a crawling, jogging on business, we must deal with large quantities. We mill annually 38,000 tons. This is quite insufficient, and if we have, during the past year, been making an appreciable profit, it is right to say that we have had in our favour an exceptional fall in the rate of exchange, which has dropped from 27 to 14. Though the state of things in that respect has no tendency towards a rapid rise, still we ought to profit by these favourable circumstances, and enlarge our machinery plant to such a scale as to defy, by its inexpugnable proportions, all chance of eventual mishap. We thus mill 38,000 tons. We must gradually get to mill 80,000, or even 100,000. To attain that end we must—1. Transform the 24/32 old Brazilian stamps into 40 Californian stamps. 2. Widely open out the Gongo Mine which shows such promising prospects, and start a new mill of 60 stamps. We leave aside at present the question of the Gongo Mine, to which we shall give our attention later on, as by degrees increased resources become available, and we will only speak of the 24/32. What transformation will give us an annual increase of 15,000 tons, from which, on a modest reckoning of 8*s.* profit per ton, we ought to expect a bonus of 6,000*l.* annually. These works will last 15 months, and the cost thereof will be 8,000*l.* This 8,000*l.* can be procured by placing the 514 bonds remaining from the loan of 1889. For this purpose, will you all lend us your help, each one according to his means and influence?" I believe, gentlemen, that such language would be listened to. I also believe that, in presence of the urgent necessity of the above works, it is expedient to lighten, as much as possible, the financial burden of the company, and I would propose that the 1889 loan should be re-imbursed in a period of 20 years instead of five from Dec. 31, 1892. I am persuaded that such a measure will find no opponents, and that the bearers of our bonds will have no cause for anxiety, having the freehold of Ouro Preto as security of 60,000*l.*

PROPOSAL SUMMARISED.

I therefore submit to the board the following measures:—1. To propose the reimbursement of the 1889 loan of 60,000*l.* in 20 years, instead of five, from Dec. 31, 1892. 2. To actively take in hand the placing of the remaining 514 bonds of the said loan of 1889. 3. To commence, as soon as practicable, and push on vigorously, the transformation of the 24/32 Brazilian stamps into 40 Californian. 4. Henceforth issue and send to the shareholders a monthly circular. Such are, gentlemen, the views of my friends abroad. I trust they may receive the sanction of this meeting, and I shall be happy to hear your opinion on these various points. Raposos: I have but a few words more to say about Raposos. What mine does not appear to merit, at present, our attention, considering the very limited means we can devote to it. The excess of expenditure over returns has been: 1889-90, 453*l.* 14*s.* 6*d.*; 1890-91, 121*l.* 3*s.* 11*d.* These are not, I admit, very important items. But why thus scatter our resources, when the development of Passagem is of such vital importance? I, therefore, propose the suspension of all expenditure in that quarter, except, of course, such as is necessary to maintain in order the works and machinery.

MANAGER'S VIEWS.

Mr. GIFFORD replied to the mining details indicated in the foregoing speech, and said: As regards the quantity of ore, there is no doubt we have sufficient to last for several years. As to the quality, it is a little difficult to prophesy, for all our levels are driven near the hanging-wall. The lode is of great width, and before we could express any definite opinion as to its value when opened out, we must have a little time to drive cross-cuts, and open out by means of rises, to further test its value, especially the Gongo

east. There is every reason there to suppose we shall have good ore. We pumped out the old mine some time ago, and, by making excavations in the bottom, found the tourmaline ore. It was impossible to proceed, because we had no means of bringing the ore to surface. We therefore preferred to drive the 120 level to cut the same ore in depth. When the shoot has been further opened out by cross-cuts, and the footwall has been reached, we can better tell what will be the quality of the ore. The mine is looking as well for quantity as it used to do. There was a diminution at the end of the financial year, but the developments of the past six or eight months have again placed us in a good position. The diminution was temporary, and all mines are subject to these fluctuations.

The CHAIRMAN: What means should we take to increase our returns?

PROJECTED IMPROVEMENTS.

Mr. GIFFORD: We should require first to change the old Brazilian mills for Californian mills. Had it not been for the erection of the Californian mills we have, we should have rather been in a bad position. Through being able to treat a large quantity, the returns of low-class ore are fairly good. With larger milling power we should require to erect further hauling machinery. The hauling machinery we have at present is that which was furnished at the commencement when the extraction was not nearly so great. The same water power we now have would work an additional number of stamps, and we might increase the production by 1,200 or 1,500 tons a month. To do so, however, it would be necessary to introduce rock-drills, partly for greater speed, and partly on account of the difficulty of obtaining labour. As to the chlorination works, we had considerable trouble to begin with, owing to details in mechanical construction, but the machinery is now working very well.

The CHAIRMAN then replied as to financial details, and read an abstract showing the debtors and creditors of the company, at the same time also showing what had become of the money raised by debentures. With reference to the amount of 6,068*l.* owing by debtors, I allude to (he said) it with great regret. Mons. Belloc, who has sent in his resignation as one of our colleagues, and who was largely interested in the mine, as well as being our banker in Paris, had in the latter capacity certain bonds entrusted to him to place in France. Of these he placed a great many, but some he did not place, and requested us to debit his account with them. This was not unusual, as we had advances from him. These, however, ran off, and the amount of his indebtedness remained. He did not place the bonds, but used them (I do not defend what he did), and I presume that is one of the reasons he has resigned. We were quite in order in entrusting the bonds to the banker of the company for the purposes of being placed by him in France.

The Baron OBERKAMPT: How many did he place?

The CHAIRMAN: All but the 14,000*l.*, which were taken in this country.

The Baron OBERKAMPT: Was not the money to be specially applied to the works at the mines, according to the prospectus?

The CHAIRMAN: It was to be applied to the general purposes of the company.

The Baron OBERKAMPT: When he took these bonds he should have paid for them, even although he was the banker.

The CHAIRMAN: He tells me in a letter received to-day he expected to be able to do it before this meeting, and he has, as a matter of fact, reduced his debt from 8,000*l.* to 5,000*l.*

The Baron OBERKAMPT: Why not issue a monthly report to shareholders?

The CHAIRMAN: The reports appear regularly in the mining papers, and as the foreign holders have share warrants, we do not know their names and addresses. We will, however, send the monthly reports to any addresses you can give us. As to the working of Raposos, it covered its cost last year with the exception of 190*l.* The great point is if you can help us to place the remainder of the debentures, and we shall then be able to carry out your recommendations. Many of the bonds placed in Paris were taken in payment of debts, so that we have been better supported in England in the way of debenture subscription in cash than we have in France where the greater part of the shares are held. With our present resources we can only do a portion of the work required to improve the mill.

WE ARE MAKING ABOUT 1,000*l.* A MONTH PROFIT

whereas at the beginning of last year we were making 2,000*l.*

The report was unanimously adopted.

Mr. FOX proposed the re-election of the directors, Messrs. Pontifex and Ward.

Mr. TAYLOR seconded the motion.

The Baron OBERKAMPT suggested that the appointment of directors should be deferred. Mons. Belloc had resigned and Mr. Ellissen was dead, and he wished the names of two French directors to be nominated in their stead.

The CHAIRMAN pointed out that in order to make the business of the company continuous it would be necessary to re-elect him and his colleagues, but the remaining vacancies might be filled up at the meeting held to confirm the resolution for the reduction of capital. They already had notice of the candidature of two French gentlemen, whom, however, they did not know, and a little time must therefore be given before they could elect them directors. Moreover, no notice had been given of any motion to re-elect them.

The meeting then re-elected Mr. Pontifex and Mr. Ward *nem. con.*, and also the auditors, Messrs. Spain Bros. and Co., at a remuneration of 30 guineas.

The CHAIRMAN then moved the following resolution:—"That the capital of the company, which now consists of 400,000*l.*, divided into 80,000 shares of 5*l.* each, fully-paid up, be reduced to 320,000*l.*, divided into 80,000 shares of 4*l.* each, and that such reduction be effected by cancelling the paid up capital which has been lost or is unrepresented by available assets to the extent of 1*l.* per share." He repeated the explanation as to its necessity he had given at the opening of the meeting.

The motion was seconded by Sir CHARLES CLIFFORD, and the meeting was adjourned till Jan. 21 at two o'clock, when the question of new French directors will be re-considered.

On the motion of Mr. FOX, seconded by the Baron OBERKAMPT, the meeting closed with a cordial vote of thanks to the chairman and directors.

BRITISH MINING INTELLIGENCE.

NEW MINERA.—Report for four weeks ending Dec. 18 :—The 275-yd. level—Stope west of No. 2 rise : Lode 5 ft. wide ; worth 3 tons lead ore and 1 ton blende per fm. Stope east of No. 2 rise : Lode 4 ft. wide ; worth 1½ tons blende per fm. The 295-yd. level—Stope east of winze : Lode 15 ft. wide ; worth 5 tons blende and 1 ton lead ore per fm. No. 1 stope west of winze : Lode 12 ft. wide ; worth 4 tons blende and 2 tons lead ore per fm. No. 2 stope west of winze : Lode 6 ft. wide ; worth 3 tons blende per fm. No. 3 stope west of winze : Lode 6 ft. wide ; worth 3 tons blende per fm. Driving west on north lode : This drive has become poorer, and is stopped for the present. The 315-yd. level : The level is being driven eastward from the main cross-cut, and is now in a lode 4 ft. wide ; worth 1 ton blende and a little lead ore per fm. The north lode is also being driven on from a point near the ladder winze, and the lode is 4 ft. wide, and contains some lead ore. Stope east of winze : Lode 6 ft. wide ; worth 3 tons blende per fm. No. 1 stope west of winze : Lode 6 ft. wide ; worth 3 tons blende per fm. No. 2 stope west of winze : Lode 7 ft. wide ; worth 4 tons blende per fm. Nothing has yet been found in the cross-cut south. Dressing : 1,026 tons blende and 263 tons lead ore have been dressed and sold up to date. The new floors are finished, and all surface erections are completed for the winter months.

FOREIGN MINING INTELLIGENCE.

INDIAN GOLD (Dec. 1).—Davey's tunnel : 8 ft. driven ; totalling, 464 feet ; assays, 6 dwts. 12 grs. Koorumber, No. 10 side stopes : 8 ft. 4 ins. stoped ; lode, 5 ft. wide ; have stoped this work and put men into better ground. No. 1, No. 2 and No. 3 pillars : About 110 tons broken ; on the whole low grade ore, occasionally a bit of good ground. Bottom pillars : Nearly 40 tons broken, of good comparative ore. No. 6 tunnel : 6 ft. extended, making 100 ft. 6 ins. from cross-course ; assays, 16 dwts. 8 grs. No. 6A stope : 7 ft. 4 ins. stoped ; lode, 6 ft. wide ; assays, 6 dwts. 12 grs. No. 6B, C, D and E, stopes : 20 ft. 8 ins. cleared ; width of reef, 6 ft. ; general quality of ore better than has been sent to mill of late ; assay of C. stope, 83 dwts. 1 gr. No. 11, north tunnel : 8 ft. driven, making 300 ft. from main cross-cut ; assays 19 dwts. 14 grs. End well mineralised at time of assay ; sample being taken, has since declined in value. No. 11, south tunnel : 4 ft. driven, totalling 2.9 ft. from main cross-cut ; has improved during the past few feet, and is giving off water. General operations proceeding satisfactorily. Water plentiful. Flumes, ditches and water tunnels in good condition.—PHILLIPS.

MOUNT ZEEHAN.—The manager writes for the week ending Nov. 6 :—Argentine section, block 2, main engine shaft : Sunk further 2 ft. 9 ins., making total from platt 12 ft., from surface brace 84 ft. ; country rock very hard, light slate mixed with siderite. I think it would be better to let this on contract. I am not pleased with the progress made here. South drive, No. 4 lode, 72-ft. level : Extended 8 ft., total from cross-cut 180 ft. Lode formation, 3 ft. 6 inches wide ; good second-class ore, and very much improved since last week ; 8 tons second-class ore raised, will average about 20 per cent. of ore. Queen extended section, block 5, underhand stope in air shaft, No. 2 lode : Stoped, 13 ft. ; total length, 21 ft. by 17 ft. deep ; lode formation, 2 ft., wide 10 ins., of which is solid galena, other part second-class ore. This shoot of ore looks well, and much more ore would have been raised but for the timbering which had to be done ; 5 tons 15 cwt. first-class ore raised and bagged, and 2 tons second-class ore raised ; average about 10 per cent. of ore. Montana section, block 9 : All work underground discontinued : only one man and boy dressing in ore at grass. All work here will cease after ore at grass is dressed in, until sinking of a main shaft ; 1 ton 10 cwt. first-class ore bagged. Total ore raised during the week : First-class ore, 7 tons 5 cwt. ; second-class ore, 10 tons.

MYSORE.—Report of mining operations for the month ending Nov. 30.—I am glad to say the rock-drills continue to do good duty, and the progress in the different bargains has been very satisfactory. The 890 cross-cut west of Rowse's shaft has been driven 17 ft. ; total distance 79 ft. We have intersected the lode recently met with in the rise in the back of this level, it is 2 ft. wide, presenting a strong appearance, and yielding stones of quartz, which contain a little gold, but the level will have to be extended further north to get under the rich run of quartz in the levels above. The 620 south of incline shaft has been driven 34 ft. 3 ins. ; total distance, 267 ft. 10 ins. ; the lode is 3 ft. wide, and assaying 2 dwts. Glen shaft : The 250 north of shaft has been driven 22 ft. 4 ins. ; total distance driven, 582 ft. 1 in. ; a cross-cut has also been put out east from the north end 33 ft., which intersected some small branches of quartz. These have been driven on east about 6 ft., and are found to be converging toward the main part of the lode, and must form a junction with it a little further north, which I think will improve the lode. Tennant's shaft : The 360 north of shaft has been driven 48 ft. 5 in. ; total distance, 747 ft. ; the lode is 1 ft. wide, and estimated to be worth 5 dwts. We have resumed the driving of the 360 south of shaft in a lode 1 ft. wide, yielding a little quartz, but not sufficient to value. The 290 north of Gilbert's has been driven 8 ft. ; total distance, 56 ft. ; the top half of this level is in old workings, and the other half is in a lode 3 ft. wide ; assaying 12 dwts. Schaw's shaft : The 450 cross-cut east of shaft has been driven 51 ft. 6 ins. ; total distance, 121 ft. 6 ins. at which point a lode has been met with 1 ft. 6 ins. wide ; assaying 1 dwt. 7 grs. I think this will improve in going north, as do doubt it is the same run of quartz there is in the levels above, about McTaggart's shaft : The 450 south of shaft has been driven 11 ft. ; total distance, 155 ft. ; the lode is 1 ft. wide, and assaying 1 dwt. 7 grs. The 320 north of shaft has been driven 6 ft. ; total distance, 205 ft. 6 ins. ; the lode is small and unproductive. The 320 south of shaft has been driven 11 ft. 6 ins. ; total distance, 285 ft. ; the lode is 1 ft. wide, and assaying 2 dwts. Stopes : The lode in stope in back of the 780 north of Rowse's shaft is 3 ft. wide, and assaying 2 ozs. 10 dwts. The lode in No. 2 stope in back of this level is 2½ ft. wide, and estimated to be worth 2 ozs. The lode in stope in back of the 700 north of Rowse's shaft is 4 ft. wide, and assaying 2 ozs. 2 dwts. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 2 ozs. The lode in No. 3 stope in back of this level is 2 ft. wide, and estimated to be worth 1 oz. The lode in stope in back of the 700 south of Rowse's shaft is 2 ft. 6 ins. wide, and assaying 1 oz. 12 dwts. 6 grs. The lode in stope in bottom of this level is 2 ft. wide, and assaying

7 dwts. 14 grs. The lode in stope in bottom of Incline shaft on wide lode is 2 ft. wide, and assaying 2 dwts. 14 grs. The lode in stope in back of the 620 north of Rowse's shaft is 2 ft. wide, and assaying 2 ozs. 12 dwts. 6 grs. The lode in No. 2 stope in back of this level is 1 ft. wide, and assaying 1 oz. 0 dwts. 2 grs. The lode in stope in bottom of the 620 south of Incline shaft on the wide lode is 4 ft. wide, and assaying 1 dwt. 7 grs. The lode in stope in back of the 550 south of Rowse's shaft is 3 ft. wide, and assaying 1 oz. 0 dwt. 6 grs. The lode in stope in back of the 550 south of incline on west lode is 3½ ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in back of the 550 north of Rowse's shaft is 2 ft. wide, and estimated to be worth 10 dwts. The stope in bottom of the 465 north of Rowse's shaft is 4 ft. wide, and assaying 2 dwts. 14 grs. The lode in stope in back of the 400 north of Rowse's is 4 ft. wide, and assaying 14 dwts. The lode in stope in back of the 400 south of Taylor's is 3 ft. 6 ins., and assaying 6 dwts. 12 grs. The lode in stope in back of the 400 north of Taylor's is 1 ft. 6 ins. wide, and assaying 12 dwts. The lode in stope in back of the 100 south of Plummer's is 3 ft. wide, and estimated to be worth 5 dwt., and assaying 7 dwts. 6 grs. The lode in stope in this level north of shaft is 2 ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in back of the 295 north of shaft is 2 ft. 6 ins. wide, and assaying 1 oz. 2 dwts. 6 grs. The lode in stope in back of the 295 south of Rowse's is 1 ft. 6 ins. wide, and assaying 1 dwt. 7 grs. The lode in stope in back of the 236 north of Rowse's is 2 ft. wide, and assaying 7 dwts. 14 grs. The lode in back of this level south of shaft is 1 ft. 6 ins. wide, and assaying 3 ozs. 5 dwts. 8 grs. The lode in stope in back of the 290 north of Tennant's shaft is 2 ft. wide, and assaying 6 dwts. 12 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 2 ozs. 17 dwts. 6 grs. The lode in the bottom of the 290 south of shaft is 1 ft. 6 ins. wide, and assaying 1 oz. 12 dwts. 16 grs. The lode in stope in back of the 180 north of shaft is 3 ft. wide, and assaying 2 ozs. 0 dwts. 6 grs. The lode in stope in back of the 235 south of Gilbert's shaft is 2½ ft. wide, and assaying 10 dwts. 2 grs. The lode in stope in back of the 295 south of shaft is 3 ft. wide and assaying 2 dwts. 14 grs. Rising : The rise in back of the 890 south of winze, north of Rowse's shaft, has been put up 25 ft. 9 ins. in a lode 3 ft. wide, and assaying 5 ozs. 6 dwts. 5 grs. The rise in back of the 290 Gilbert's, shaft, has been put up 9 ft. ; total distance, 30 ft. ; this has been communicated, and the men are now engaged bringing down skip road, &c., from the 235 to the 290. Sinking : Rowse's shaft has been sunk 21 ft. 8 ins., making a total distance of 95 ft. below the 890 level ; the rock is intersected with strings of quartz, and looking congenial for gold. The winze in the bottom of the 890 north of Rowse's shaft has been sunk 18 ft. 7 ins. ; total distance, 24 ft. 7 ins. ; the lode is 1 ft. 6 ins. wide, and assaying 1 oz. 2 dwts. The winze in the bottom of the 620 south of incline shaft on the west lode has been sunk 33 ft. ; total distance, 42 ft. ; the lode is 2 ft. 6 ins. wide, and assaying 1 dwt. 7 grs. Gilbert's shaft has been sunk 11 ft. 6 ins. ; total distance, 44 ft. ; below the 290 the lode is 1 ft. wide, but worth nothing to value ; the dip of the ancient workings is a little to the north of this shaft. I regret to say there has been no rain for the past month, and both our sets of tailings' machinery are again idle through scarcity of water for dressing operations. Other work is progressing in a satisfactory manner, and the health of the camp is very good.—J. GILBERT.

MYSORE REEFS (Dec. 2).—Fortnightly Report :—Harvey's shaft : This shaft has been deepened 9 ft. 6 ins., which now makes a depth of 19 ft. 2 ins. below the 520-ft. level. I am pleased to say the rock is changed, it drills much better, and is traversed with small branches and stringers of quartz ; a sample of same gave 3 dwts. 6 grs. of gold per ton. We have been cutting cistern plat, which has somewhat retarded the sinking, but I am hoping that when the cistern is fixed and the water taken up, we shall make better progress in sinking. Winze below the 520-ft. level has been sunk 3 ft. The quartz below the level is very much intermixed with black rock. A sample of the quartz, according to assay, gave 6 dwts. 12 grs. of gold per ton. Rise above the 520-ft. level has been put up 1 ft. 3 ins., and is communicated with the winze below the 460-ft. level. Winze below the 460 has been sunk 1 ft. and is holed. 400-ft. level south has been extended 13 ft. 3 ins., now 253 ft. from shaft ; the rock is extremely hard sterile. I have now put the men to cross-cut west. Cross-cut east of the 400-ft. level north has been advanced 13 ft., now 28 ft. ; small stringers and patches of quartz are being met with, but of no value. We have completed the cutting of the cistern plat and removed the men with the rock drill to drive the 520-ft. level north.—M. SCANTLEBURY.

NUNDYDROOG (Dec. 2).—Below I have the pleasure to hand you report of the work done for the month of Nov. :—Taylor's shaft sunk 19 ft. by one Italian, with two rock-drills ; total depth, 666 ft. 6 ins. The sinking was delayed here for a week owing to our having to repair the loading of the pumping engine, and during this time we put one of the machines to stope in the back of the 520 south—we stoped 5 fms. The 600 south driven 42 ft. 6 ins. by one Italian with a rock-drill ; total length, 182 ft., at which point we struck the big cross-course. The lode at the time was about 3 ft. wide, and the assay value, 1 oz. 2 dwts. 18 grs. We then commenced a winze in the bottom of the 600 north, and sunk 12 ft. The lode here is a very fine one, 4 ft. in width, and assaying nearly 24 ozs. per ton. The 600 north, distance driven 47 ft. by one Italian with a rock-drill ; total length, 101 ft. The lode is at present 1½ ft. in width, and the assay value 1 oz. 18 dwts. per ton. The 520 north winze in bottom sunk 28 ft. by one Italian with a rock-drill. The lode is about 1 ft. wide, and assays 1 oz. 0 dwts. 12 grs. per ton. We also stoped 5 fms. in the bottom of the 450 south, when we had to stop owing to our reaching the cross-course. The 370 north, driven 42 ft. by one Englishman with a rock-drill ; total length of level, 506 ft. 6 ins. ; there is no change here ; there is still a fair stream of water issuing from the end. The work done in the hand labour stopes is as follows :—The 520 north, No. 1 stope in back, ground cut 21 ft. ; size of lode, 1 ft. ; assay value, 2 ozs. 8 dwts. 18 grs. The 520 south, No. 1 stope in back, ground cut 18 ft. ; lode, 2½ ft. ; assay, 1 oz. 13 dwts. 18 grs. The 520 south, No. 2 stope in back, ground cut 6 ft. ; lode, 4½ ft. ; assay, 3 ozs. 2 dwts. 12 grs. The 520 south, No. 3 stope in back, ground cut, 21 ft. 6 in. ; lode, 3 ft. ; assay, 17 dwts. 6 grs. The 450 north, No. 1 stope north, ground cut

23 ft.; size of lode, 3 ft.; assay, 13 dwts. The 450 north, No. 1 stope south, ground cut 9 ft.; lode 6 in.; assay, 1 oz. 13 dwts. 18 grs. The 450 north No. 2 stope north, ground cut 20 ft.; lode, 2½ ft.; assay 1 oz. 7 dwts. 6 grs. The 370 south stope in bottom, ground cut 24 ft. 6 ins.; lode, 1½ ft.; assay, 3 ozs. 5 dwts. 12 grs. The 370 north stope in bottom, ground cut 21 ft.; lode, 2 ft.; assay, 8 dwts. 18 grs. The 370 north stope in back ground cut 12 ft.; lode, 1½ ft.; assay, 1 oz. 9 dwts. 6 grs. The 300 north stope in back ground cut 10 ft.; lode, 6 ins.; assay, 1 oz. 0 dwts. 18 grs. Kennedy's shaft sunk 10 ft. by three Italians with a rock-drill; total depth of shaft, 193 ft.; the water still hinders us, and the shaft requires close timbering also. The 160 south driven 9 ft. 6 ins., by 14 coolies; length of level, 20 ft. 6 ins. The lode is opening out here; it is at present 1½ ft. wide, and assays 10 dwts. per ton. The 160 north driven 6 ft. by 12 coolies; length of level, 24 ft.; the lode is not quite so wide here at present; it is 6 ins., and assays 9 dwts. 18 grs. per ton. The 160 north winze in bottom sunk 11 ft. by 14 coolies; the lode is about 1 ft. wide, and assays 1 oz. 0 dwts. 12 grs. per ton. Main shaft sunk 16 ft., making a total depth of 51 feet; we are getting into very hard ground here now. Mefaggart's shaft: We are re-opening this shaft for a water supply for the stamps; we are down about 25 ft. Health: The general health of the field is good. Mill samples: Rough quartz, through stonebreaker, 2 ozs. 13 dwts.; smalls, 2 ozs. 2 dwts. 6 grs.—F. W. GREY.

SOUTH-EAST MYSORE (Dec. 2).—Fortnightly report:—Since my last report the 600-ft. level north of the winze has been advanced 24 ft. 3 ins.; now 72 ft. 3 ins. from winze. The lode in the present end is very small, carrying 2 or 3 ins. of quartz; worth, according to assay, 10 dwts. 8 grs. of gold to the ton. I think the lode must be split, and the main part is to the east of the level. I have, therefore, suspended the end for the time, and put the men with the rock-drill to cross-cut east.—M. SCANTLEBURY.

THE MONTANA CO., LIMITED. PROSPECTS MORE ENCOURAGING.

Dec. 22.—The directors, while unable to report any striking developments during the past three months, are pleased to state that by the latest advices from Mr. Robinson, the prospects of the undertaking are of a more encouraging character than he has been able to report for some time, as will be noticed from the following information given in the latest reports received from the mine.

EXTRACTS FROM MR. ROBINSON'S REPORT OF NOV. 28.

The 1,600-ft. level: The lode is from 6 ft. to 10 ft. wide. As the development has not yet, except for a very short distance, uncovered the hanging wall, I am unable to state what the width will be on the average. The quartz, while of no commercial value, has, in my opinion, a much more healthy appearance than obtained above. It does not give the pearly refraction when exposed to a bright light that is characteristic of the hornstone encountered above. It is quite heavily sulphuretted with (copper-sulphide) chalcopryite, the mineral occurring in concentric rings, and shows from \$1 to \$2 per ton by assay. I had one assay going \$5 40c. The favourable feature of this development is, that the lode has assumed its normal position with reference to the 1,400-ft. level, and the walls show a normal dip, while the lode itself is strong and clearly defined. The Empire winze: The lode at this point

still continues in depth, is strong and persistent, but not large. On the north end of the winze the rich pay streak may be taken at 10 ins. in thickness, while on the south end it will range from 2 ft. to 3 ft., and an assay taken by Messrs. Richards and Henley gave a return of \$140 per ton. However, the average of the ore as milled may be taken at \$20 to \$30 per ton; probably \$25 would be a fair average.

EXTRACTS FROM MR. HENLEY'S REPORT OF NOV. 27.

Castletown, over Cruse South: We are getting a large tonnage of fair low grade ore from this stope. The value is mostly in gold, and it is a good ore to stamp. No. 1 south shoot over 2A: No material change in this stope. The vein is very wide and the ore low grade. Empire intermediate north: The vein at this point is about 5 ft. wide, between walls, and is filled with crushed slate. There is no change in the Empire stopes over the Intermediate or 400-ft. levels. The Empire winze is down about 95 ft., and we are drifting south on the vein; the ore is about 2½ ft. wide, going south, and assays \$25 to \$30 per ton; the vein continues vertical. The 1,600-ft. level: I stated in my last report that we had just commenced drifting on the lode north and south. The vein has now been opened up a distance of 25 ft., but we have not yet discovered anything that will pay. The highest assay has been about \$2, but I think the prospects for pay ore are much better than at any point below the 800-ft. level. The directors desire to inform the shareholders that Mr. Thomas Richards, who has had a wide and life-long experience in practical mining, has been engaged to visit the company's property in Montana with the view of investigating all the circumstances bearing on the several lodes, especially in the deeper ground, and advising with Mr. Robinson as to the work which should be executed with the object of restoring the prosperity of the undertaking. The directors hope to issue a report on Mr. Richards' return, giving the general result of his examination of the property.—THOS. NEAL, Secretary.

ELMORE'S WIRE MANUFACTURING CO.

The report of the directors from the incorporation of the company to Oct. 31 last deals principally with the erection of the company's works, which have been designed with a view to an output of 140 tons a week. They will, however, start with an output of about 35 tons a week, which can readily be increased to 70 tons, with very little additional expenditure to that already incurred. The company will be in a position to commence operations early in the coming year.

ESMERALDA, LIMITED.

The report of the directors is unfortunately not of so encouraging a nature as we should desire to see. The operations on the Durand Mine have not resulted in the finding of the orebody at a greater depth, which was anticipated. The present position of Esmeralda, Limited, is as follows, viz.:—The shares are now fully paid, and there is no necessity for raising further capital. Prospecting work is being done on portions of the property, and, within the last 10 days, an offer, which is now being considered, has been made for leasing a portion of the property owned by the company, but which is not being worked. The expenses are considerably reduced. The debenture debt of 13,000Z has been reduced to 1,388Z. In addition to the large properties owned in Esmeralda County the company now owns, as stated, one-fourth interest in Grand Central Silver Mines, Limited.

FOUNDED 1871.

BANKERS:—ALLIANCE.

"MINING WORLD" Stock and Share Agency.

CORRECT INFORMATION IS THE BASIS OF SUCCESSFUL DEALING IN MINING SHARES
THE AGENCY CAN COMMAND AND SUPPLY THIS TO INVESTORS.

GENERAL FOREIGN MINES.

Many of these deserve special attention. Profits may be secured by acting upon sound advice in Buying certain Shares, whilst losses may be avoided by timely sales.

INDIAN MINES.

The information possessed by the Agency is invaluable for those wishing to Buy or Sell Shares in this Market.

KAFFIR MINES.

Special efforts have been made to secure the best and most reliable information as to the management, resources, and prospects of South African Mines in which the profits and losses have been alike phenomenal.

GREAT CARE IS NEEDED BEFORE INVESTING.

Those doing business through the Agency are kept informed as to any exceptional news in connection with the Companies in whose Shares they are interested. Purchases can be made for forward delivery, and sales effected for Cash.
